(27:22) these lines behind them we'll come back to those as well I just want to do a quick re a brief showing in the video here to show us that we've got this smoke coming back behind the plane we can see this plane descending consistent with the witnesses sighting who's somewhere on a boat probably we can't see it because it's cropped out um and now the pattern the pattern here looks like it's scanning the plane almost we can only speculate but we can tell there's clearly purpose in this pattern

(27:48) now when the plane gets to where these clouds are the orientation changes and it becomes perfectly vertical and this appears that it's getting ready for something that's about to happen we can also tell on this video on the left it's like the the plane's off the screen so someone's manually tracking this video or tracking the plane and they're zooming in here and all of a sudden we're going to see the plane com in now a much zoomed in view notice the shake here as well the shake is very prominent

(28:14) because they've zoomed in like just like if you were zooming your camera on something far away it's going to be shaking a lot more than if you were not zoomed in you can see this heat signature I was talking about right in the belly of the plane as well and now we can very clearly see that this smoke seems to be coming off maybe even the side of the plane right here and not coming directly from the engines as well you can see this orb has a heat signature on it as well right here as well because of the pattern we were

(28:39) seeing from these orbs it seems almost impossible that there's any beans even a human or alien that's flying these These are being remote controlled this is some kind of computer program that's being run it could even be an AI That's running this I will leave it up to you guys to kind of speculate as to what you think you're seeing and I will tell you my opinions as much as you guys want um but we'll get to that in a little bit as well now notice this pattern here this circle ring pattern around the plane now

(29:06) get ready because we're about to see our main event something that I don't think anybody's ever seen before you see that zap you see how quickly that this zap happens here this

the plane just disappears entirely just completely gone and the video on the right the the operator Scrolls over to the right to show us there's no plane over there anymore now here is one of the frames where you can see the zap in the uh false color IR here so this satellite video is filming in a false color IR we be both these videos are at night time

(29:37) 2:40 in the morning this one's using a false color IR for tracking purposes because that's the point of the CER system the one on the left is using a thermal layer over the top of an electro IR Flier camera so this one we can see there's this cold event and I'll show these videos again in a little bit we'll go into more detail on them but I want to point out a couple things real quick the zap here accurately illuminates the clouds here in the foreground and the background you can't tell very well from

(30:03) this video but we have a single still that shows that the clouds are being accurately illuminated these are very detailed volumetric clouds so this is either an incredibly detailed hoax or this is what it would actually look like we also believe that the only reason why there's a zap is that the electrons in the area around this zap are being energized now what kind of event though are we dealing with here so this this is the version where now it's or I've just scrolled forward now the zap is gone the

(30:29) plane is gone the smoke Trail stops dead in its tracks if this smoke Trail kept going I would say this is a cloaking event but because the smoke Trail stops I think we have to rule out cloaking the other thing that we thought is well maybe this is an Annihilation event maybe this planes just being completely obliterated the problem with that is that Einstein's  $E = mc^2$  tell us that energy equals mass time the speed of light squared and the mass of a 777 is huge so what this means is that if this was an Annihilation event this would be

(30:59) like a nuclear bomb times a thousand or times 100 whatever you want to think it would be blowing up the whole screen here we'd be seeing these clouds getting blown away Etc so it doesn't seem to be an Annihilation event it's also not a black hole because if it was a black hole we would at least see the clouds get sucked in if not the whole earth get sucked in depending on the size of that black hole um so what we've left with is some type of uh teleportation event now what I like to refer to it is a super

(31:26) luminal spe event because this isn't a situation where we're not talking about Star Trek dematerialization or rematerialization we're talking about a scenario where the plane is achieving light speeds or Beyond and essentially moving so fast that we can't even see where it goes so I want you guys to think about that a little bit while I present some more of the evidence and then we'll get back into some more of the detailed uh evidence around those videos and looking at them in in a lot more detail for you guys as well but I

(31:55) hope that just kind of pegs your curiosity because when I saw these videos uh 3 or 4 months ago they seemed extremely compelling to me and I actually even remember seeing one of these videos back in 2014 well before I was even somebody who was interested in uaps or UAP disclosure so we actually do have absolute proof these videos come from 2014 including

thousands of witnesses who've seen them and it's potentially only in 2023 that we can even understand these videos to be real now before I get into that though I want

(32:25) to explain why this plane did not crash into the South Indian Ocean so a lot of the official narratives out there these official stories that you're going to hear on CNN and on TV you're going to say well this plane was a suicide route it crashed into the South Indian Ocean we have these iMat pings that say that crashed there I bet you didn't know that in the immat data which I've looked at myself I pulled it off of Victor's blog of the independent group of radio physics you guys can take a look

(32:51) yourself if you want there's a huge anomaly in the XL spreadsheets at 1840 UTC at the exact time where we think these videos happened at the exact time the official narrative says this plane turned into the South Indian Ocean there has never been reported by on by anybody except for me um now here's the problem with the crashing and why we know this plane didn't crash in the South Indian Ocean no debris field number one it is impossible not to have a debris field from a 777 crashing into the ocean as we

(33:20) talked about with the  $E$  equals  $MC^2$  this is a huge plane huge amount of mass This Plane would have left a giant debris field we would have seen it the very next day with our satellites heck **China** would have seen it the next day with their satellites most expensive search in human history searched above and below water the official search did not find one piece of the plane those pieces of the plane that they talk about were not found by the official search they were all found at least a year later by other independent sources there

(33:48) was no black boxes found they claimed they knew where this plane crashed but there was no black boxes found the black boxes have are rated for depths up to 20,000 ft the ocean isn't that deep over there they should have easily been able to hear it plus they transmit on a frequency that's completely distinct there's no reason why they wouldn't be able to hear it um there's several acoustic systems that would have heard the crash of a 777 into the South Indian Ocean the Sosa system the same system

(34:17) that heard that Titan sub pop by the Titanic the Navy lied about that for five days they knew exactly where that sub popped and they let there be oxygen counters on CNN and all the other cable news stations and then after 5 days said oh yeah we knew where that popped and they went and go picked up all the pieces this system was actually Declassified all the way back when the plane crashed that should have heard the plane crash Western Australia and Diego Garcia also have hydrophone systems they also would have heard the plane crash

(34:46) and none of them did in fact the Diego Garcia stuff there's even a story about 25 missing minutes of hydrophone data but before you get too excited the 25 missing minutes are not during the time of our videos um there is no acoustic detections consistent with a 777 crashing into the ocean now radar systems uh there is Indonesia who is right there where the plane turns in the South Indian Ocean India actually has joint bases at car nicobar and Port Blair which both potentially could have seen on radar as well as Thailand should

(35:17) have been able to see this plane none of them detect the plane going to the South Indian Ocean Australia has the Jornd system which TR that is a very large range radar system it also doesn't see the plane in the South Indian Ocean the location where they have this plane crashing is an active shipping route from Africa to Australia and they say it's crashes in early morning hours and yet there's no witnesses that see a plane or see a plane crash or find any debris Fields the official flight path has it

(35:44) running out of fuel a lot of people may say well the ocean's really big though well yeah but they literally searched everywhere the plane could possibly go there is nowhere else for the plane to go it can't fly to Antarctica it's not flying to the Atlantic Ocean there's actually not enough fuel the official narrative says it ran out of gas um there are four emergency transponder beacons that are all redundant that only activate when the plane crashes none of them activate Rolls Royce actually has their engines

(36:15) actually independently send information Rolls-Royce data was never made publicly available it would have either proven this plane went to the South IND the ocean or did not 19 families of the victims signed a joint statement begging the government to look into the fact that the passengers phones were still ringing for up to 4 days after the event this is not possible if you're in the South Indian Ocean it's not possible if the phone is off not possible if this phone is at the bottom of the ocean um the cell towers don't even reach out

(36:44) that far uh one of them even proved it on National Television as well so that's the reason why there's no chance that this plane crashed in the South Indian Ocean this is why they're not going to ever find a plane down there as long as they surver search now some people may say well they found some debris right that's that's true I bet you maybe didn't know that some of the debris that they found two pieces have very clear burn marks on them uh consistent with the fire event that we've put forth they

(37:11) searched with 42 planes and 39 ships from some people say as many as 25 different countries and N none of them find any of debris from the official search the debris the tiny bits of debris are less than 1% of the over all plane and it's completely consistent with both the fire event as well as this idea of super luminal speeds the plane went somewhere else on the planet Earth those could be pieces that fell off during the fire could be pieces that were just thrown into the ocean wherever This Plane showed

(37:42) up the flapper on the big pieces they used to make the whole situation go away was not matched with the unique serial number that matches it to the plane it was actually matched with a part number a lot of people don't know this the media doesn't tell you this if you just Google and check out flapper on missing serial plate MH370 it find a couple articles this is a piece this is a metal plate that's bolted on to the flap R it's just magically missing that would have you know def definitely ided it

(38:10) to the plane there was actually another plane an exact copy replica of MH370 purchased by GA tesis a 9M MRK purchased in October of 2013 that was also purchased from Malaysian

Airlines so there's a lot of different speculation terms of what that debris could be could be another plane it could actually just be MH370 according to the case that we've been putting forth here now I want to go ahead and show the cbers video okay because I don't think a lot of people realize that the US government is essentially scanning the

(38:44) entire world there is no way whatsoever we wouldn't have seen a debris field in 2014 or anytime in the future um and I think this is one of the things too that even before I dug into this case I knew that there was no way the US government did not know more about what happened to this plane so you guys can't hear the sound but the first thing this says is global persistent infrared surveillance and when we're looking at this just watch the video here I mean this is damning I couldn't believe we

(39:16) could find a video like this this is on locked Martin's website if you just Google cbers you're going to go ahead and you're going to find this video yourself just like we found it and this explains that why we would see a video like we see of the satellite video These on the outside are geostationary satellites meaning they're stuck in place they're 40,000 km away these are equipped with Hubble telescopes so these things have very good Optical capability these uh egg egg shaped a uh oblong

(39:44) orbits here these are your Millennia orbits these are actually your command satellites in the bottom left of our satellite video it says uh um nr22 which stands for National reconnaissance office launch 22 also stands for USA 184 this was sent up in 2006 which is the start of the cber system most likely it is one of our Command satellites that's relaying data through the Sig in system signals intelligence so we can see these scanning our low earth orbit satellites like USA 224 or 229 which we believe was

(40:16) in the right area at the right time uh are going to be very low earth orbit that means they're only about 900 to 1,000 kilom in the sky those are going to be very very close to the Earth and those are not even represented on the video now look at how big these scans are these things are scanning huge swath of the Earth at once this is how they're able to put together a Google video playback that can look in real time as well as it can uh record information to look back anytime they want so when I walk my dog sometimes I look up and say

(40:45) hi to the satellites just in case it might brighten somebody's day now part of the reason why we believe we're looking at the cbers in the in the satellite video is that six frames per second because if this is a computer program that's pulling data from all these satellites in real time and piecing together a Google Earth then is this computer program can only process so much but it's looking at very wide field of view and that's why you're going to have a low frame rate now again take a look at this look at the scanning

(41:10) of the entire planet 247 How could a debris field that would be visible from space from a 777 crash in the ocean not be detected it's just simply impossible and now at the end this is my favorite part blocking Martin we never forget who we're working for you got to love it couldn't be more ominous if you if you asked or if you tried now this video right here is your

your flyover so what did we do MH 370x we looked at all the satellites you can actually look up the historical trajectories amateur

(41:40) astronomers track the satellites they actually can't move satellites can't move because of their orbits they can change their like they can look in certain directions but they can't actually change their their orbit so this is our low earth orbit satellites take a look at the top of the screen 1830 1835 5 UTC we're looking for 1840 UTC that's the time we believe our videos are happening and what do we have here at 1840 UTC we have two satellites staring directly down at the coordinates that in the satellite video now this is

(42:10) a 1,000 diameter uh like kind of bubble we have here we actually believe that these things based on what we were looking at before can probably scan 3 4,000 kilm the actual location of the plane is right about where my mouse would be right down here based on the fact that they have cropped this larger field of view to just show us the plane in our video so this again is damning evidence absolute proof that the US government knows what happened to this plane they either know it went to the South Indian Ocean or it didn't go to

(42:37) the South Indian Ocean and potentially our videos are what really happened to this plane okay now let's talk uh briefly again about the fire scenario and why the fire scenario is the most prominent scenario um this won't take too long but again 487 pounds of lithium ion batteries skip two security screenings fire is corroborated by 19 Witnesses you have two pallets of unsafe batteries in the forward cargo Bays that are right next to our um main engineering uh compartment these compartments are designed to withstand flame sources up

(43:09) to 1700° fahrenheit 900° Celsius the the fire extinguishing gas can last for up to 3 hours but cannot permanently put these fires out which is why they're so dangerous the AC units may be flushing the smoke out of the back of the plane as we've seen our in drone video uh again the altitude is too low for cumulus cloud cumul or contrails contrails only form between 18,000 and above altitude and based on our cumulus clouds what we're seeing here is estimated to be somewhere between 5,000 to 10,000 ft probably close to 7,000 ft

(43:43) of this plane uh I've also got sources that people that have actually testified on the hill that are willing to corroborate that the plane could last wall and fire during one of these events for an hour and 20 minutes which we needed to and that it would glow orange as well um covering up the fire event if this fire event is real why this whole story of it going to the South Indian Ocean and the answer is because of what we see in the videos the technology that we see in the videos the idea that we can actually teleport a macroscale

(44:14) object of 77700 this explains why it would have to be covered up this type of technology is Breakaway civilization level technology whoever controls this technology controls entire planet so some of the things that you might be able to do with this technology if you apply it differently you can have faster than light communication you might even have force fields cloaking Fields would be possible um from a uh Power perspective you could have fusion power in a bubble you can have potentially free energy if you can use

(44:49) the energy of the SpaceTime itself the vacuum of SpaceTime you can actually have a system an open system that puts out more energy than you actively put into it now the next part is what I think true disclosure is really about which is the other thing that you could do with this type of Technology you could create doomsday weapons and I'm not talking about nuclear weapons I'm talking about the type of weapon that would allow a single uh person who is uh like let's just say a terrorist or somebody who has ill intent to destroy

(45:18) the entire planet with the push of a button this is what I think the reason for disclosure being covered up by the military would be you know yes there would be a lot of ontological shock if non-human intelligence is real um a lot of ontological shock obviously if we can teleport an object but the danger that goes along with it you know po potentially the reason for the fmy Paradox and the great filter is what that any sufficiently advanced civilization may just destroy itself with this type of Technology you might

(45:48) even be able to destroy an entire sun with this type of Technology now what I want to say about about the videos so I even had a hard time understanding these videos to be real I had so much ontological shock when I looked at these videos and tried to understand the implications of the technology that I actually asked my own parents if I was in some kind of Truman Show type situation where everybody was lying to me and this was some big hoax that was being perpetuated on me because that seemed at the time more plausible

(46:20) than there being this macroscopic uh phase conjugation event which we like to call it this super luminal speeds of the plane Unfortunately they told me no it's not a Truman show event so I had to deal with it um in order to understand these videos to be real we needed some prerequisites this is why we could not understand them would be real in 2014 we needed the 2017 DOD Navy UAP videos which showed us that Flier footage of what a Drone footage would look like we needed a 2019 Trump satellite picture if

(46:48) you go ahead and Google that you'll see that Trump posted a satellite picture of an Iranian uh rocket launch and this look looks very similar to the optical capabilities that we see in our video obviously it's a picture and not a video but videos are just accumulations of pictures stacked on top of each other turns out that satellite was reverse engineered very similarly to how we reverse engineered USA 229 and it turns out it comes from a satellite called USA 224 which was sent up in 2011 the same

(47:16) year as our satellite USA 229 is we need to understand some Advanced theoretical physics Concepts physics is just science public science at least is just catching up to the science of these videos we need to understand macroscopic Quantum coherence Bose Einstein condensates and potentially in the future a unification theory of quantum mechanics as well as general relativity unification of things that are very small as well as unification of things are very large bringing them together now if you understand the double slit experiment

(47:46) the greatest mystery in all physics you'll understand that this is where non locality the idea that the Universe can react faster in the speed of time this is where quantum tanglement

comes from as well as quantum teleportation which is a real thing in fact I think just a couple days ago they actually teleported a picture without sending the data so we know that it's possible to have objects or information move faster than the speed of light what we need to have happen is we need something of macro

(48:14) scale something that can be seen move faster than the speed of light and what is sci what is magic magic is just science that we have yet to understand so without all these oh and also then we also needed lk99 now whether or not you think that lk99 is real this is a material that is produced from copper and Lead came out of Korea and China that supposedly is a room temperature superconductor whether or not you believe that's real or not we need room temperature superconductivity in order to enable everything that we see in the

(48:45) videos and I'll dig into the science here in a minute for you guys um and then lastly we need to understand AI we need to understand that chat gpt is in daily use now we need to really understand that AI is actually out there and can be utilized for us because potentially what we see from that pattern is an advanced computer program it might even be mapping the plane it might even require quantum computers to pull off what we see in these videos now let's dig into some of the additional detail evidence related to

(49:13) the videos the videos date back to 2014 as proven from internet archives as well as people who saw them the satellite video perspective changes eight times so each perspective that we see in the satellite video is only a few seconds the satellite coordinates shift every time that that perspective shifts but not when the mouse moves those coordinates prove that the satellite videos happening in the nicobar islands the general atomics drone as we mentioned is either mq1 C or mq9 this drone cannot catch the plane it must

(49:43) have intercepted it we believe that it either came from car nicobar or Port Blair which are joint us India bases um there are alternative sources of these videos that were uploaded later on that are higher quality pointing to none of these being the original Source meaning that this would be a leak from somebody else as well um the video the mouse moves off the screen in the top left or top right and the bottom left of the satellite video indicating that it's a large field of view uh that has been cropped uh I'm just trying to read the

(50:21) other evidence here um reeside most likely the the account that uploaded this was called reeside a nan they most likely had to be told that what they were looking at was real because they didn't upload it until much later on the upload date and I'll go ahead and pull the videos up so we can watch once again I'm going to show the original uh r sideon on version actually I'm going to show the higher quality satellite version because it's easier to see the coordinates here so let me shift pull

(50:53) this up okay now in this version of the video you can see these coordinates on the bottom left you can see the nrl22 very clearly here as well um I'm just going down to my evidence here and so red decided on the description on this video says received March 12th 2014 just four days after the events of the videos it says uploaded or published May 19th 2014

the description is satellite video airliner and UFOs which would indicate that even potentially the the leaker of this video did not know what we were looking at

(51:33) they thought they were looking at UFOs non-human intelligence only potentially to be told later on that no maybe this is not UFOs maybe this is advanced technology that the US government or maybe one of their third party contractors actually controls and potentially the person that was leaking this thought well if I'm leaking a UFO video there's no damage here you know the reason why they would have cropped this and all this information is because this is the only way we would ever get the truth of what

(51:57) happened to this plane um what else do we want to put in here uh let's see I've already addressed a lot of this evidence yep so I'm actually going to switch over so what this means is that potentially the person that leak this information and leak these videos would be a US military operator notice there's six decimal places in the coordinates in the bottom left so this is extremely accurate this would require a separate Software System and that you would have to build build that in to have these

(52:26) coordinate shifts to that level of accuracy down there as well we've actually been able to map that out that's how we were able to determine it that this was actually in the nicobar islands when you look at it because um it shows perspective of going uh South into the East which is consistent with the left-hand turn we see of the plane in both videos now the high quality drone video is one I want to spend a little bit of time on here uh and this is really big because what we think we're looking at

(52:51) here is a Ron Electro IR camera and I want to talk a little bit about the science of what we see in these videos as well so when we see these orbs come out we're not looking at a metal ball here we're looking at a nonradiating barrier so early on when I saw these orbs I speculated that this would be super conductivity at play and what super conductivity is able to do especially room temperature super conductivity is create coherent matter waves uh which allow the electrons to cohere and when they here you can start to do stuff

(53:27) that's essentially like magic you can create energy levels that can uh break the swinger limit which allows these objects to completely displace themselves from space time so what we're seeing here is like a bubble just like you would see a bubble in water but you're seeing a bubble in space time itself allowing for these objects to Traverse through the air water o and space potentially all all three of the above um it also means that you can have mass reduction so when your mass is reduced to zero now you ignore gravity

(53:56) and that's what they seem to be doing here and not just that when we watch them getting pulled along here you can see that these are actually forward facing gravity engines that we're seeing here some kind of pulse laser that is being used here that is breaking down the fabric of SpaceTime in front of it as we see from these cold lines and I'm just going to switch to another video that shows it a little bit more clearly we were actually able to strip some of the thermal here so you can see the lines a little bit clear and

(54:23) you can very clearly see these lines are in front of the orbs in this video not behind them the only reason why they look behind them is because of the speed of the orbs which is matching the plane so this is very interesting because who would even think to fake something like this I'm pretty sure that all of you in the chat right now all the people watching most likely nobody is actually seen this type of event um from orbs that are out there or any UFO at least I had never seen them so if anybody has please get in touch with me

(54:49) because I'd like to know more about it now when we see this event happen we also see again the heat signature this has been described by Bob Greener who's looked into no low Power Nuclear reactions I did a podcast with him as the monopole and so if I might be saying this incorrectly because I'm just trying to get brushed up on my science but it's either coming out of the the kind of laser beam effect or that's breaking out space time is either coming out of that or directly or it's the inverse side of

(55:15) it I'll have to look into um understanding that just a little bit better but what we see here in the last few frames and I'm going to skip ahead here there's a few like there's actually this was the original video so there's actually this slow-mo version where you can see these orbs here um after we see the main event and then it actually shows a slow-mo of the final moments of the plane here as well which is very interesting you can still see these lines in front of the orbs and then we

(55:38) see them Converge on the plane this is what's causing the singularity here to happen is that they converge imagine like you were to take magnets and jam them together this is what would potentially cause this uh unification of the forces that they might say here that allows for this event to take uh hold and happen in the final frame as well we can see that this plane blurs and we can see actually that the orbs flatten so the orbs are creating an azth which you just think of like a line or a circle connecting them where there's a very

(56:14) powerful electromagnetic field between them and in this final frame you see them flatten potentially from gravitational lensing happening from the very powerful effect that's happening here the plane's blurring because is beginning to accelerate already just like if you were trying to take a picture of a runner and it actually gets a little bit smaller here as well which may be an indication that mass reduction is already taking place from the event that's about to occur um and then we can see the full

(56:40) effect of our zap is our endothermic event that's why it's cold and this is important endothermic event means an absorption of energy so it could actually be argued that this event is absorbing the energy out of the lithium ion batteries so that the runaway lithium ion battery fire stops as well as potentially teleporting This Plane pretty much anywhere we can't say for sure a lot of people may ask me where did this plane go we have speculated that it goes near the nicobar or near the Maldives because there's a fire

(57:08) suppression device that washes up in the Maldives consistent with a b777 there's also a sighting in the Maldives that was ignored but it was only ignored because the direction of travel

of the plane was not from the East but there's a bunch of Islanders that clearly see the stripe the blue and red stripe of a Malaysian Airlines plane so what's happening with some of the science here so room temperature superconductivity can be induced uh from either meta materials or uh repeated pulse vibrations from the

(57:40) transducers um these orbs as I mentioned are field what we're seeing there is What's called the non-radiating barrier that's what the bubble is there combined orbital Moments can actually cohere these electrons the orbs are actually becoming part of the relationship with the plane acting as either electrons around the plane or extending the unshielded electrons around the plane at the point of transition so what this is is a transitional phase change event of the plane where it's obtaining the

(58:08) properties of quantum and therefore allowed to act like a Quantum object from being a macroscale object and then from a Quantum object perspective it can travel at the speed of light just like we have with quantum entanglement when electrons are driven from their equilibrium they begin to self-organize into a matter wave this means that solid state objects may be able to achieve macroscopic Quantum coherence um low temperatures are what allow electrons to couple and move as one and then when you have Cooper pairs

(58:42) which are pairs of electrons they actually begin to act as bosons and what that means is they can occupy the same location in space in time this is how you can have something uh act as an electron act as a matter wave um essentially act as a wave function instead of a particle so it can have a probabilistic point in space and time rather than a deterministic one uh the physicist would say that properties denote the behavior that there's no difference between a large object and a small object only the properties determine it now since time

(59:12) itself is a fluid symmetry time dilation is a real event this means that the less Mass you have the faster your time moves and the faster something can uh travel um and also when there is less Mass it actually takes very little energy to move something as well after the phase transition the object can actually be placed pretty much anywhere and does not necessarily um in the traditional sense have to adhere to the laws of conservation momentum so it's even theoretically possible that this object could just be set down now from

(59:43) the engineering perspective this has been argued that there may be a fourth orb so if I take this rubber band we could pretend like this is the plane with the three orbs there's a fourth orb that's entangled to the other three orbs and then when the singularity occurs this transition then all of a sudden the plane and the orbs go to the location of the fourth orb at the speed of light or beyond the speed of light now if you're into Salvador Pineda who is uh become one of my own friends after investigating

(1:00:12) into this case and reaching out to him he has some patents that are out there one of them is high frequency gravitational wave generator and in this patent he says you can generate high power frequency gravitational Waves by High frequency accelerated axial rotation spin or through accelerated high frequency vibration gravitational wave production Can Happen by

propagating electromagnetic radiation through strong magnetic fields this allows the enabling of macroscopic quantum coherence namely possible quantum mechanical behavior of

(1:00:45) macroscale objects multiple high power frequency gravitational waves if they were be focused on a particular point in SpaceTime locality they can induce produce A Spacetime curvature Singularity consistent with what we see in the videos generating gravitational well can happen along the flight path consistent what we see with the orb movement controlled motion of charged matter under rapid acceleration transits may lead to room temperature super conductivity nuclear fusion may also be engineered and then engineer Energy may

(1:01:18) be Amplified to such a high degree as to generate a space-time curvature Singularity which could lead to the total Destruction of an asteroid or planetoid or if you were to scale that up a planet itself one of the other patents that I want to go ahead and address as well is called high energy electromagnetic field generator H MFG the utilization of such high powered sources for space Power and propulsion generation the artificial generation of gravity waves in a locality of a spacecraft can result in energy Mass removal it is possible to

(1:01:54) reduce the a spacecraft's inertia this allows again for smooth sailing through the negative pressure or repulsive gravity of the Void so this is the science that can explain what we see in our videos now the next thing I want to describe is what it would take to hoax these videos a lot of people might say this is too much to believe right even I think it's too much to believe at some points but the requirements to hoax these videos are extremely long and elaborate so first of all we had a \$150,000 Bounty \$100,000 from kim.com

(1:02:30) \$20,000 from Chad and Sherry the investigate Earth podcast uh \$25,000 for my wealthy follower who's run for higher office as well as \$5,000 for myself no hoaxer came forward this has been going on for at least a month perhaps longer at this point if somebody had hoaxed these videos they took no credit for them there's not a single discrepancy on a single frame of either video the time to produce the video is between 4 and 72 days depending on if you believe Regis cenon's description date of received March 12th 2014 Just 4

(1:03:02) days after or the publish date May 19th 2014 there's no reference copy to copy from these videos do not exist anywhere else on the internet um you'd have to be aware of the fire scenario because we see this this heat event in the middle we see the smoke coming out of the back of the plane everything that we see is consistent with all the evidence that has been put forth um you'd have to know how to create the volumetric clouds that we see how to accurately animate the cameras how the clouds form at low altitudes how to

(1:03:33) accurately light the volumetric clouds when the zap goes off how to recreate exactly what MH370 looks like if you actually take the silhouette from the thermal it's a perfect overlay to MH370 if you look at in the satellite video you can see it's lighter on the top darker on the bottom Malaysian Airlines is white on the top and gray on the bottom you'd have to know the turn radius of a boeing 777 at a certain altitude wall and descent which is maxing out the capabilities you'd have to know where the plane was at the exact

(1:04:01) time it's on the agreed upon flight path in the nicobar islands how to accurately create the coordinate shifts as we mentioned as we see in the bottom left of the satellite video you have to know what the weather was like we looked at the weather satellites in nicobar islands and you can see that there's low altitude cumulus clouds in the area at 1840 UTC within an hour potentially of when uh 1840 UTC happening apologize it's not necessarily exact same time but it's within 15 minutes and an hour of

(1:04:24) the time you'd have to act know how to accurately create the smoke trails and the particles coming out of the back of both the planes in both videos you'd have to know what the thermal looks like to a level to fool the experts you'd have to know how to animate the heat signature in the belly of the plane where the air conditioning units are that changes very realistically you're going to have to know how to animate the shake that we see as well that is very accurate to zooming in on the with the

(1:04:50) camera you'd have to know you'd have to have knowledge of military class systems that were previously unknown to the public in 2014 you'd have to know that the military is using a Citrix environment you'd have to know the frame rate difference between capturing the satellite footage in the background and and the citric session over the top you'd actually have to know what mouse they use because there's a certain specific acceleration that's consistent with either like a a ball mouse or like

(1:05:12) a ball in the middle of a mouse or potentially if it's a laptop it might be one of those little buttons that's in the middle of the laptop but has a very specific acceleration that's different from the normal Mouse um you would have to know what satellites the US has in operation and what their payload is to know that USA 229 is there available you'd have to know what the false color IR looks like you'd have to know how to animate the orbs how that particle system in front of the orbs their forward- facing engine

(1:05:37) looks like which we've never seen anywhere in ufology you'd have to know how to animate those final frames where the orbs flatten and the plane blurs you'd have to know what the mq1 C drone looks like you'd have to know what the payload on the Drone is because we can see these cameras on the wings and there's actually pictures of those drones with cameras on the wings you'd have to have better VFX uh skills than the VFX lead artist of top gun Maverick who posted on social media claiming to be the expert saying that

(1:06:04) they the person who would have done this would had front ran their work by four years that movie was out in 2022 they said that the hardest part for them was to accurately scale the planes and the videos to have to match the C actual capabilities they had to cheat that in those movies and yet in our videos both of them are accurately consistent with a 77700 we had a Mar VFX expert Jeffrey Ford said that in order just to look up all the the information and put together these videos he's the lead VFX expert

(1:06:31) for Marvel Studios so it would take at least four to six months using today's technology you'd have to have a better understanding the most PhD physicists who actually they

themselves don't necessarily even have a good comprehension of any type of unification theory of quantum and macro you'd have to understand advanced mathematics as well as engineering better than experts as in those fields as well due to the pattern that we see from these orbs is perfect sydal pattern um as well as engineering capabilities of the

(1:07:02) plane you'd also perhaps most importantly have to know that we would never find the plane not even 9 and a half years later because the moment we would find a plane the whole hoax would break down so that is a huge list so in my mind the only way these videos are fake is if the US government themselves created them that's just the resources and knowledge that would be required the problem with this is doesn't make any sense if the US government made these they never made them available I am not doing this on behalf of the US

(1:07:30) government in fact I'm doing pretty much the opposite of what I think the US government want if you were to take these videos and put them on CNN MSNBC NBC any of these locations even Fox News um nobody's going to think that aliens zap the plane now maybe people in this chat might people that are my followers might but the uh people that are out there the Normal public is just going to think that the government created these to cover up for the fact that they did something to the plane what this means

(1:07:55) is these videos would just implicate the US government in the cover up so it doesn't make any sense for them to have faked it now we were able to find potentially the person that **leaked** these videos believe it or not I was sitting there thinking well we've have a lot of information about what the mindset the psychological profile would be for somebody who have **leaked** these videos and it took several weeks to find them I looked up pretty much everybody who had been charged with uh espionage will for retention of classified

(1:08:25) information will for retention of national security information um couldn't find much for over a week I almost gave up then I started doing date range searches and then I found Lieutenant Commander Edward C Lyn I thought okay the leaker must be a US military personnel probably an operator probably had an emotional reaction to seeing the videos since rer sideon says they received them four days later um they removed the HUD data they cropped the Drone out of the satellite video they likely cropped other assets

(1:08:53) out of the satellite video as as well they probably had to convince reeside andan that what they were looking at was authentic this could explain why it took reeside andan almost 2 months to upload the videos they may have thought they were looking at UFOs only later on to be revealed that this was actually third-party defense contractor technology now I'll say in my opinion this would have to be reverse engineered technology I don't think we could be the secretly Advanced but again I leave that to you

(1:09:19) all Edward C Lynn was part of the special project squadron 2 the vpu2 Wizards he flew in spy planes one of those spy planes was the locked Martin ep3 Aries 2 that has realtime tactical signant remember signals intelligence and full motion video intelligence the crew fuses collected intelligence along with offboard data for Battlefield situational awareness his actual

job was to relay the information from those planes to leadership his uh charges against him the case against him was given a code name Rogue Archer he had experience in

(1:09:53) signals intelligence based basically every article about this guy talks about signals intelligence his last deployment the dates are damning he was assigned to the vpu Squadron February 2014 he gets reassigned March 25th 2014 just two weeks after the plan goes missing investigation into him began April 2nd 2014 in May of 2014 he accidentally left two flight manifests in his flight suit from a deployment that included search and rescue code names this can only be MH370 the defense argued that the classified information in question is

(1:10:32) available on the internet this essentially has to be the videos I don't know what other classified information that could be available on the internet that would have led to a situation where he was arrested in 2015 we believe that the reason why they waited to arrest him is so that people would not put together the pieces that his charges were related to MH370 like we already have um the charges would have resulted in life in prison they tried to put him away for Espionage first major incident of Espionage by an active duty member of

(1:11:02) the Navy since the end of the Cold War almost 50 years his charge sheet heavily redacted they redacted everything on the charge sheet privy to the Navy's black program portfolio he had Above Top Secret clearance and compartmentalized access to information on Facebook he's friends with General Flynn he was very connected he had knowledge that would be extremely useful to potentially us adversaries but then the government had to come out and admit it wasn't really a spy case there was actually no evidence

(1:11:30) that Lynn ever exchanged sensitive information with anyone from China he was abused while in pre-trial detainment by someone called the Goon Squad agents didn't properly advise him of the crimes that he was suspect uh suspected of or his rights to attorney while he was being interrogated the emails listed as compelling evidence to deny him from his pre-trial confinement appear to be just completely mundane things the judge said he showed a dangerous pattern of disclosure of classified information but didn't point to any disclosures of

(1:11:58) classified information uh all the information was OB fiscated related to his case he was Char he get get a prostitution charge that made no sense as well he actually appealed his case later on and said that the charges against his classified uh um dissemination of information were completely inconsistent with other people as well so they forced him into a plea deal he took a plea deal we got a 9-year sentence for just two charges of mishandling classified information grossly inconsistent with other people he got three years taken off as well as

(1:12:32) two years time served for his pre-trial detainment they did not even let him out he accepted responsibility for the offenses he was actually guilty of and for the people in the chat you're going to love this I did Foya the FBI and NCIS the FBI rejected my Foya and so they couldn't give any information at all to me because it could be used as personal information against him the NCIS rejection they rejected my Foya in total to be kept secret in the interest of National Defense or foreign policy I would ask you if this wasn't a spy case

(1:13:06) what is being kept in the interest of National Defense and foreign policy if it's not these videos it has to be related to m370 has to be these videos so I've been saying this guy's name uh on pretty much every single podcast I've been doing over 60 podcasts he's never reached out to me to tell me to stop talking about him either I think this is quite a bit telling um I've even mentioned that we were able to find him uh and I was just like anyone who's listening please do not harass this guy

(1:13:31) just imagine the psychological State you would have gone through to have released these videos we would have ignored them for N9 years and not done anything about that and now he's out of prison and um you know we would need him to come out as himself as a whistleblower and you know really that would be the only way we could really authenticate these videos is he would have to come out but he's going going to go back to prison if he does his plea deal most likely makes it so that he cannot talk about them

(1:13:58) ever I found a cell phone that I believe was related to him we called it somebody picked up and hung up right away I sent him a message and said sir you are my hero you've made a sacrifice that I would do anything for you to protect you I mean not that I could but I would try um so you know this is essentially the case of MH370 now my opinion here is that we are looking at Lockheed Martin technology this is reverse engineered technology this being kept secret from us the motive here why would you do this why

(1:14:28) take this risk why orb this plane right this is a huge risk if somebody leaks these videos which they did in my opinion then you've just revealed your capabilities you've revealed your trump card this is the kind of Technology that's such Breakaway level civilization that this is the perfect defense against any missile that were to be attacked on us you might be able to use this to teleport a bomb back or a nuke back onto the place it went to you might be able to just completely render the nuke uh

(1:14:55) inert you know some Bob Greener argues that you can basically just disassemble it essentially into other elements using this type of Technology um so you don't want to deploy this unless you absolutely have to here so the the strongest evidence for the motive is the 20 freescale semiconductors and engineers and scientists on board This Plane 20 people from the same company on on a plane is way too many people my company even has a rule it's like two to three people uh this company on the same plane and these

(1:15:24) aren't like that's just anybody not even high level people these were very important Engineers that were going to China supposedly to help upgrade the manufacturing plants there again this plane was likely doomed because it didn't land in panang land in the ocean it was going to be destroyed so the motive here would be to save the plane then right um we found a 2005 National Security Agency report on the commercial superconductivity development of microchips that references freescale semiconductors nine different times it's

(1:15:54) pretty much just all about them we also found press releases to mention free scale semiconductors launching a major initiative dedicated to serving the RF power needs for the US

Aerospace and defense sector so these people on board This Plane were very likely connected to the US defense and they may have been actually connected to the actual technology we see get deployed You could argue that if this is an Espionage event perhaps this fire was started intentionally You could argue that the US government is trying to

(1:16:22) prevent these people from defecting to China because even if you set back China like 10 years from this technology it's probably worth it from a military perspective again whoever controls this technology is going to control the world um you could you could argue that they are preventing the loss of intellectual property that they need related technology and advancing it um you could argue as well that uh and I don't think this is a fringe scenario Fringe case but if this plane is doomed maybe you're testing it out

(1:16:48) it's kind of dark to assume but maybe you're testing it out because the plane is doomed um and that you you know want to see what the effects are on the people now another scenario that's been brought forth as well is what if there's just one person on this plane that's a VIP that's super connected and they just call in their rescue me button and they say hey guys you got to deploy the advanced orbs to save me right um so I think we don't know again I'm not a psychic I don't like to tell

(1:17:15) people what to think I don't like to tell people that I know it all I just have dug a lot into the evidence around this case um now one another thing I want to mention too is why do I think this is our technology versus non-human intelligence and I'm fine in my opinion I was going to go ahead I've done a lot of podcasts some people think no I think this is definitely non human intelligence um other people say yep makes sense this reverse engineer it's locked Martin and yes just real quick I I am

(1:17:40) not suicidal I think it's very important that we say that a lot um now the first thing is that I don't care which it is and the reason is I think one leads to the other no matter which way you go with it if this is non-human intelligence that leads to reverse engineer techn technology if this is reverse engineered technology then that's going to be coming from some non-human intelligence most likely right either something that came before us that we've dug up or something that's visi in US my personal opinion is I

(1:18:04) don't really care either way being as visi in US is not going to impact my day-to-day life I think that this is very important to stay as well is that what really matters is the time we have on this planet irrespective of um you know any any advanced technology or beings that are out are visiting us um there is no reason to do such an extensive cover up for just an anomalous event like this is a UFO event I I don't think they go to this level of degree of cover up I mean this would be multiple countries have to

(1:18:33) be in on this line about it definitely Malaysia definitely United States probably countries like India are also involved in the cover up and China may even know what happened to this and this might be part of the reason why us China relations broke down is that China may even found out one side thing that I want to bring up as well is that China hacked the Malaysians

government on March 9th 20 2014 the day after the plane went missing you know what they stole they stole the crisis meeting minute notes of MH370 as well as classified information

(1:19:01) related to MH370 I would ask you guys what could be classified about this plane the next day like the only thing I can think of would be the communications that they didn't mention now the assets filming this are US military so this implicates the US government directly they either got extremely lucky when filming this if this was actually non-human intelligence or this is an operation and the reason for that is that they're filming before the orbs even show up you know they're actually already filming the

(1:19:31) plane and then the orbs show up the orbs are moving at Mach 3 speeds so there's no chance that this plane is outrunning these orbs you know I thought initially well maybe this orb event caused the plane to go dark but it didn't make any sense because these orbs have no problem catching up to the plane so most likely they were deployed right there right before we see them in the videos the pattern we see is explained by computer program running around the plane so we don't need non-human intelligence to

(1:19:56) explain any aspect of these videos doesn't mean it's ruled out just we don't necessarily need it to explain them the fire event as I mentioned is indicating a rescue motive in my opinion we cannot attribute human motivations to a non-human intelligence I think that there is non-human intelligence out there visiting us they're probably going to treat us the same way we treat an ant on the ground right they're just They Don't Care About Us I don't I don't personally think that there's a lot of reason for

(1:20:21) them to be benevolent but they might be I think just think they'd be most likely indifferent and then I think lastly the most important part is science can actually explain everything we see in these videos now yes it's very Advanced science and the parts that are not available to the public especially are the mass reduction what I've been told by people that have reached out to me is that that is being withheld for National defense purposes because again the idea that you can reduce the mass of an

(1:20:46) object is now going to allow us to ignore gravity and it really enables everything about what we see here enables the macroscopic quantum coherence the macroscopic phase conjugation which is essentially teleportation the super luminal speeds this is all uh related to mass reduction and if those papers are being withheld from us that's what's keeping us in the dark that's what's keeping us back now just lastly to go on to my own little Soap Box I think this technology the reason why it needs to be disclosed is

(1:21:11) that this can change the world for probably billions of people on the planet people that have nothing you know we should have essentially free energy that's out there we don't need to be relying on fossil fuels whatsoever there shouldn't even be people that are homeless on the streets if we have a situation free energy you can get rid of uh we can have abundance right we have no we don't need scarcity anymore and just my own personal investment is that I care a lot about homeless people in general and I think that being on the

(1:21:39) streets impacts people's mental well-being so I think that it's a crime to be able to hide this technology the other side of it is this is that if this is can lead to Doomsday weapons which I absolutely think it can then this technology can only be disclosed in a safe manner in fact I'm so confident and scared that this can lead to Doomsday weapons that I would not even be disclosing this or doing this presentation if that wasn't MH370 on those videos because that's MH370 on those videos those those families

(1:22:09) deserve the **truth** they were the pilots families deserve the **truth** they were vilified when potentially they were actually Heroes trying to save the plane the witnesses 19 Witnesses and those are just the ones that are not on the Maldives they're all vilified they're all ignored they're all told that they were seeing things right and lastly Lieutenant Commander Edward C Lyn this guy if he **leaked** this footage he's a hero he's exactly what UAP disclosure has been asking for they've been begging

(1:22:40) for somebody to risk their security clearance risk their NDA to come out and show us actual highquality military footage that couldn't be denied not just lights moving around in the sky where people say oh it's Chinese lanterns right but actual footage that is of the highest quality cameras of the time that's out there and we did this guy huge Injustice we ignored the videos for n years made him go to prison for six years and come out all these people deserve indication as does the whole entire world so at this point I think I'm ready

(1:23:13) to go ahead and open it up um people may say last thing I guess I'll just get into real quick is where did the plane go right Ashton everybody asked me this where did the plane go what happened to the passengers um based on our flight path we think that the most likely scenario looking at the rubber band scenario right and it actually looks like in the video that maybe the plane is getting sucked backwards that if this plane is going east in the video and it's getting sucked backwards then perhaps it's

(1:23:38) showing up somewhere in the malds and the reason again for this is the b777 fire suppression device that washes up in the Maldives and the sighting in the Maldives that is again more witnesses that were ignored and discredited where these are just Islanders who rarely see passenger planes and they're seeing a passenger plane flying low headed to Diego Garcia military base which is just south of the Maldives Deo Garcia military base is where all the conspiracy theories said this plane went there's even a picture

(1:24:09) posted by supposedly posted by Philip wood the American IBM passenger who posted a picture on 4chan website just a black picture but along with it was texts that said I'm being held prisoner against my will I feel like I've been drugged and I can't think clearly people looked at the exif data on that picture and the coordinates uh indicate that that it was ni uh Diego Garcia military this is about a week after the plane went missing as well Diego Garcia military base in my opinion from what I've been told is the next

(1:24:41) Area 51 in fact it's supposedly Area 51 on steroids it's in perfect spot middle of nowhere in the Indian Ocean um and so you know if there's testing of this type of stuff going on

probably happening there there's a bunch of contracts for dredging that's go on at this place and yet if you look at Google Earth Pro there's nothing to changes on the surface of this this base for like 20 years so potentially they're building stuff underground there if you also look at the pictures before 2014 and then

(1:25:10) after 2014 the pictures before 2014 the runways are filled with giant planes after 2014 nothing maybe one plane this would indicate there's probably some kind of elev underground hanger of some sort where they can hide planes as well perfect place to hide the planes now what do you do with the passengers first of all I want to say that the families of the victims never believed the official story you have a lot of these passengers like the girlfriend Sarah of Philip wood who was going on CNN like over a month later

(1:25:41) going the official narrative is a lie like it's actually unbelievable when you go back and watch it in hindsight knowing all that information about the case the families were most likely forced into settlements where where they were forced into silence no family member not a single one has reached out to me to tell me to stop looking into this not one not one has reached out to me at all in fact this should have been tried in the US uh United States if these videos are real it implicates the US government in

(1:26:08) the disp appearance of the plane however the case uh brought forth by the passengers against Malaysian airlines in the United States was dismissed because it was argued that the correct jurisdiction would have been in Malaysia due to it being Malaysian Airlines despite the fact that both is an American company despite the fact that Philip wood is an American passenger the uh federal judge that ruled and dismissed this case her name is Kenji Brown Jackson she became Supreme Court justice under Biden a couple years later

(1:26:36) after 2018 if the passengers were alive they could have been exchanged uh returned to their countries in exchange for their silence so China most likely this would explain why China would be really pissed off is they would have had to get their pass their their people back the ones that lived what I do want to say is I want to express sympathy to those families of the victims cuz the reality is I think there's a very low likelihood of of them surviving even to this event and the reason for that is the lithium

(1:27:02) ion battery smoke is extremely toxic could have easily filled up the whole plane as well as if the plane was depressurized when the the batteries exploded um this meant that that 30 minutes of oxygen and those masks was going to be vital because we have this plane that needs to last for 80 minutes so you have 50 minutes where there's no oxygen from the masks so there is evidence that this plane survived because we didn't find a debris field anywhere if this plane crashed anywhere we should have found it even if it was

(1:27:30) somewhere in the Atlantic Ocean right so unless this plane got teleported to the zenu dimension or whatever you guys want wherever it could be right um then it had to have theoretically landed somewhere if it if it was on Earth um if the American passenger had survived Philip wood then he probably would have gone into W witness protection he would

have probably had to sign a deal where he's never going to speak ever again and he's going to have a new identity and what have you I mean no matter how you look at it it's pretty

(1:27:55) dark some of them may have been forced to live their days out on Diego Garcia military base and never leave the workers that work on Diego Garcia military base the non-military ones they actually go there for multiple years at a time and they're not allowed to communicate with anybody outside the base um the nephew of the pilot was told and this is from Florence to Changi one of the investigators who I respect a lot I actually am communicate in communication with her um the nephew was told that his uncle was collat damage

(1:28:23) that's just dark the French father I'm going to butcher his name Gan Westeros uh he uh was told that two awx which are these military radar planes US military radar planes were in the area and the Americans know what happened to the plane the former head of Indonesian police says that he was told quote unquote what really happened to MH370 from his Malaysian counterpart so this is just in my opinion the largest verifiable conspiracy of all time it might be the largest verifiable conspiracy of all time even if we didn't have the orbs and

(1:28:58) this zap this um macroscopic phase conjugation event happening in this plane uh but because we have that happen that's why I'm talking to you guys that's why I'm talking to muon this is why I talk to all kinds of podcasts this is why I do spaces on Twitter where we talk about disclosure because I think that people need to wake up to what really disclosure means it's not just as simple as flying saucers it's not just as simple as non-human intelligence and saying hi to you know beu from the

(1:29:24) Andromeda galaxy which sure I'd love to do that too uh if that's true but no it's it's more about what is this technology really mean this type of technology I I have so many people who are viscerally angry at me over just doing what I'm doing revealing this and it's not because they're upset about the families it's because people can't understand this technology to be real because what comes with this technology being real is that we've been getting lied to probably our whole lives it

(1:29:51) means that these Wars that are happening are all meaningless that they are just money production events for you know the military-industrial complex this technology means that any War could be ended in a day if we were to deploy it and then also potentially most importantly it means that this is a a national security risk you know and I don't want to I'm not a Trader I'm not a spy or anything like that so I I wouldn't even want to disclose this information and that's kind of how I'll

(1:30:20) finish my investigation here um and anyone who wants to ask questions we can go ahead and answer them and I'll you know do my best I'm honest and open person and I try to answer everything as uh honestly and openly as I can thank you guys for listening all right we have a few questions uh there's one that's been around for a while from a I may be mispronouncing the name is it luri or lorri Baraga so go ahead and unmute yourself if you want to ask your question uh hello can you hear me yes just

(1:31:01) checking sorry I'm I'm not sure I had a question um you didn't really pronounce my name well but that that's okay don't worry about it uh I I didn't really have a question honestly you can just pass it along so thank you all right there was somebody named Jimmy who uh may have had a question I'm not sure the hand was raised but maybe it was more to make a comment I'm not sure let's put it this way if anybody has a question go ahead and ask it uh this is Gary spake hey Gary how's it going I boy my

(1:31:44) brains are just about to blow up listen into this uh a lot of stuff kind of rings true though um I had a question I just seem to remember that in the early part of this where they were thinking the pilot might have caused the crash or something that he was doing uh like flight simulations at home testing in the area running these scenarios to go these places that were actually where the plane ended up going what was what do you think about that yeah so I'm trying to pull my evidence I just close it I think I closed it okay I'll just do

(1:32:15) this based on memory then instead so the actual the simulator data actually matches mh150 which went from qual lur to Jetta he was actually scheduled to fly that route February 4th 2014 the data points and times from the uh data points they claim were this route was February 3rd 2014 so what really happened here was they manipulated the public into thinking that the route from Jetta uh which isn't even a direct match to this this route that we see from our flight path was some sight of suicide route attempt um they also then try to connect

(1:32:51) the spirit individual ual flight points which is our um South Indian Ocean uh point that they claim they found um they said there was actually two points that they found there um and that's how they came up with this Narrative of oh he practiced this flight path the reality is that this guy was a 30-year flight veteran with 18,000 flight hours every single person stuck up for him including the wife all the officials have stuck up for him and all his co-workers as well so there was a big vind or vilification

(1:33:18) campaign in the media to present false information about him they also claimed that he was part of a political party that was you know they claimed that he was a terrorist because he was part of this political party I mean that's just racism frankly um so the reality is there actually is no evidence whatsoever of this being a kind of suicidal intent um he had a very large custom simulator uh in it on at home as well because he just loved flying and a lot of people who are pilots actually have that as well um in order to turn off uh all the

(1:33:50) electronic devices that were turned off um you would actually have it would take more than one person as well um Captain bellany actually argued that in order to turn them off in 64 seconds you know there's like four apus or um power sources I think they would have had them been uh disabled all at the same time so it's not consistent at all with one person being able to turn all this stuff off but it is a lot more consistent with a fire a lithium ion battery fire exploding and taking out the uh main

(1:34:19) electrical uh computers or Main engineering uh computers all right that makes a lot of sense um have you ever talked with Nim Harman uh no I have not who's that physicist uh he's

kind of worked on the stuff that you're kind of talking about there so I just wonder that'd be a guy for you to meet Haron I'm gonna write that down yeah I'm always down to talk to more people what I will say is that I have been I started my own podcast up um and this is because uh about almost say a little over a month ago someone said

(1:34:53) hey you should reach out to Salvador Pas he's got these uh patents that are out there they call them the UFO patents I I think that does them very a lot of justice and I had reached out to various physicists and what have you a couple of physicists came into my replies and then my DMs guy named Roy de Herbert who he's been kind of tutoring me on the science I I have not a PhD on engineering or phys physics or any of this stuff but so I ended up emailing Salvatore Pas and the very next day replied back and said

(1:35:23) send me a zoom link I want to do an interview and I was like okay well I guess I'm a podcaster now and um that's when I started my own podcast called hard truths so the first one was was with Salvador Pas um and then you know he uh he talks a lot about uh not giving this information away to our enemies and he goes into a lot of detail he's very very uh well educated when it comes to physics and knows all of the science um and can name drop pretty much anyone in anyone's scientific theories the second

(1:35:55) one I did was with Bob Greener who I've mentioned as well who in my mind has kind of figured out how this science Works he doesn't have an NDA he's been doing he's an experimental engineer and and uh I guess you could call him a physicist as well um and then he's been looking at these low Power Nuclear reactions that's where we able to figure out toroids it seems like the shape of a toroid which is a donut or fractal toroids which is a dut inside of a doughnut essentially can uh kind of

(1:36:23) harness and focus the electromagnetic fields into a single point where then they can continue to build up and build up and build up and this is how you can create what we think is how the orbs are actually able to create this energy level that's so strong that it can essentially rip the fabric of SpaceTime under the right conditions he was even able to point me in the direction of a locking Martin P patent for coherent matter wave beam which if you look at it basically what it's talking about is creating a coherent matter wave which

(1:36:52) can induce superc conductivity potentially room temperature superc conductivity which is what we need because room temperature superc conductivity superc conductivity in general is when the electrons can flow freely with no resistance whatsoever and when you have this this is where these electrons can break free from the equilibrium States they begin to self-organize and this is what allows these macroscale objects solid state objects to achieve the properties of quantum the third hard truths podcast I did was with a guy named Dave Rossi he

(1:37:21) is a 20 25y old it's actually most of the the replies in the comments could not believe that this guy's 25 years old self-taught uh engineering DOD contractor and he basically explained pretty much everything that he could um he has like the least restrictive NDA that you can potentially have he's the one who told me about the idea that there might be a fourth orb which

salvator Pas ended up agreeing with as well because I'm now good friends with both of them um and the idea that there would be this uh quantum entanglement

(1:37:51) effect so it's interesting that the physicists see it a little bit differently than the engineers do and I'm sitting here in the middle just trying to wrap my brain around both of them and then the fourth and the final one that I've done hardre podcast I've done so far although I'm planning to do more it was with actually Dave Rossy and salvator Pi at the same time um if you guys want to check those out if you're interested in the science like I am and trying to explain the science

(1:38:13) we see you guys can check out my YouTube channel just X Aston I have all those videos I think a couple of them you have to look at the live vers of and then a couple of them I've uploaded I've just been really busy but those are really interesting if you want to learn about the science of what you know UFOs how they might work how these orbs might work the idea of how teleportation would work and I'll let other people jump in here in a second but one last thing I want to say too is that if you're the

(1:38:39) type of person that believes that there might be non-human intelligence visiting us that I think it's very important to keep in mind that how are they getting here uh I was on a space actually where I was a speaker on X with actually Dr Steven Greer and in that space I clipped part of it because in it he says the speed of light is too slow you know if beu ambassador beu from the Andromeda galaxy is going to get here it's I think thousands of light years away maybe even millions of light years away that is

(1:39:07) going to take way too long to get here you need a way to travel faster than the speed of light and if so what we're talking about faster than speed of light I'm going to call it super luminal speeds because I think that it's very important in this area to use scientific terminology but it's really just teleportation essentially and it's taking quantum teleportation and scaling it up to the macro scale level um so that's just something that I would urge people who who believe in you know the

(1:39:33) non-human intelligence visitation theories that really have to explain how are they getting here because I think that disclosure is a lot more more than just about being nonhuman intelligence is about what is what is the technology how does technology work and what does it mean let's take some more questions YouTube link again yeah just X Aston I'll put it in the chat I'll even try to pull it up for you guys thanks that's all I got yeah no problem that was at just X the the letter X Ashton yes exactly at just X

(1:40:05) Ashton yeah I'm G see if this works I want to take a look at that myself let me see if this yeah okay this works I'll throw it in the chat as well for you guys okay and any other questions probably noce are our minds are almost fried and and don't know exactly when to where to start with questions yeah let me take a look at my list and see if I so I also have this evidence list so if you guys want to follow the case you can follow it on Twitter it's also justex Ashton on Twitter as well I've synchronized up my

(1:40:40) my usernames uh I'm probably going to be posting a new version of the all evidence I'm currently on version two um probably going to be posting version three of the all evidence link which is kind of a summary of what we've been talking about here uh as well and the reason for that is that I always want all the evidence to be out there I want people to be armed with the evidence themselves because the reality is that this uh this case has in my mind broken a lot of people's brains um not probably

(1:41:06) people that are in this chat but people that are out there that have believed all the official narratives like this is too much for a lot of people to take in and um in order to fight that I'm just one person right if we want to get this information out we want to spread this if we want to achieve true disclosure we've got to reach as many open minds as possible my personal opinion is that disclosure will only happen when a vast majority of people just all agree that you know there are other there is other

(1:41:36) life out there that there is technology that we don't understand that's out there and then when we achieve that point now all the mainstream media will just go oh yeah of course it's out there and then what will happen is the people that don't believe will just go oh yeah I always believed it all along right um and I think that's really how it works in real world it's kind of sad State of Affairs but I think that's what it'll take and then this may be a controversial statement as well but I

(1:41:59) think that when it comes to UAP disclosure we need to move away from doing Congressional hearings that are about you know alien bodies and stuff like that it's just too much for a lot of people like my parents for example if I bring it up with them they go what do I care if there's aliens how does that impact my day-to-day life right but if you approach it from the techn technology perspective from the cons iracy perspective that there are third party companies and I'm just going to name them Lockheed Martin Northrup

(1:42:26) Grumman Boeing Bigalow airspace there's several others as well if these people are hiding technology from us that to me is a crime against humanity and that's the type of thing we can investigate it's verifiable information um and if we find out they have that and they're holding that back that's the type of thing that can lead to the rest of that disclosure that we want right that yes there's also now Beaton visiting us because once you have teleportation technology now people are gonna go oh

(1:42:52) yeah okay of course there's probably beans visiting us you can literally just teleport here from Alpha centari and it doesn't take four years to travel right hey Eric uh Tim's got his hand up yep I know I was gonna call on him Gary but then you broke in okay sorry I don't know which screen you're seeing uh good evening um regarding your comment of um how are the ETS getting here um I think that they're couple or three ways probably teleportation certainly is one uh you know their own

(1:43:27) craft uh whatever they may be is number two uh you may be surprised but number three is they are born here in other words they uh get get born to some couple uh here on the

planet yeah arguably from well I won't say my experience but just from what I have seen um that Third Way being born here uh they have to give up a certain number of their innate abilities uh you know that are obviously Superior to ours but some of them they must suppress or give up in order to be born here because otherwise they would you know rise to power and

(1:44:12) rule the planet or destroy it so uh but yeah I see three basic ways where they're coming to our civilization yeah and I think one as well is that like what if you know we are just hybrids or maybe they're our cousins and here's another thought too is that what if they were here before us right and we dug up some craft right I mean that's also possible what if they're living beside us um I'm actually a proponent myself of the ultraterrestrial hypothesis like we don't really know much about the ocean

(1:44:41) at all and in fact when this case happened this was one of the first times we started to map the bottom of the ocean you Ocean's really deep as well so you know it's almost a lot these sightings in ufology seem to happen over the water they seem to be related to the Navy so you could almost argue that you know what if there is another civilization just living right beside us this whole time and that we either evolved from them or were their cousins or what have you um the the rabbit hole goes really deep and I've been trying my

(1:45:07) best not to fall into it but thank you Tim I appreciate your insights it's interesting how things tie together um I haven't had a lot of time to spend on the science of it but when you mentioned the name Salvatore p reminded me I learned about his patents I haven't read them yet but I I learned about them years ago and it was in connection with another scientist who is now deceased but who was working uh in locki and uh actually demonstrated some of this so-called anti-gravity technology so it's pretty fascinating uh

(1:45:44) how things kind of click together sometimes when you you hear them coming from different directions same people uh and it's it's definitely worth spending some time looking into into their science yeah a couple comments on that too is that you know I think the reason why we can't pass an audit right is this type of Technology black budget programs I see people in the chat mentioning as well you know like I think they say something like 40 to 60% of the money can't be accounted for the same reason

(1:46:11) why we spend \$110,000 on a toilet seat to quote the movie Independence Day is that you know it's being pushed into these types of uh you know science that's out there I've also been personally told that um you know the department of energy potentially has more power than the president has and the president's a you know temporary employee and that even if we were to try to investigate them they have ways to hide the technology by putting in someone's name and having them flee the country I'm sure there's other ways as

(1:46:39) well um and I but I still plan to Foya everybody around this because I want to collect these foyer's like you would collect Pokemon cards right because they're all just rejections based on National Defense reasons um and also when you talked about locking Martin Skunk Works specifically you know I remember Ben rich I believe it is who said that you know anything that

you might have imagined we've already been able to figure out as well as um having the ability to already take ET home I remember thinking when I heard that

(1:47:06) quote that he was you know exaggerating but now that I've been looking at this case the last four months and it's somehow only been four months I look at it with a fresh new set of eyes and I go wow maybe we really have the capability to go to another planet it um and you know that maybe this really is locked Martin's technology but again I would say I don't care what people want to believe about it um I think everybody should be entitled for their own beliefs related to the videos and what it means

(1:47:34) um I just want the **truth** from the government and people ask me well what's the next step I think the reality is the government's never going to admit this is real at least not until the plurality of the people um believe that it is so for me is twofold one is to make it self-evident make itself apparent so that a vast majority of people understand that what happened in the plane was not a suicide route it was not a crash in the South Indian Ocean you can't have a 777 crash into the ocean without leaving a debris field and then

(1:48:01) the second part is force the government to make a statement the last thing they want to do related these videos to be forced into a statement I think that they actually are not legally allowed to lie I think there's legal liability around that so what they have to do is either have to make a non- statement they have to ignore it entirely or they have to tell the **truth** now we know they're never going to tell the **truth** so right now I think they're stuck into trying to ignore it pretend like it doesn't happen even though I've had over

(1:48:24) a 100 million impressions on my Twitter account I mean if you were tack up my Impressions I'm getting higher ratings than CNN's getting on a weekly basis and yet they just refuse to talk about it um and then so the reality is if we can get them to force into a statement then we can force them into sale we can't confirm or deny that right which is pretty much as good as admitting it's real um and then that's a way where I think we can push the conversation forward any other questions from you

(1:48:52) guys I appreciate you guys been a great Audience by the way just want to let you know that and I thank muon while I have the opportunity as well for you know inviting me on to talk about the case um as you can tell I'm I am passionate about it and passionate about getting the **truth** out there to as many people as possible and as many people that are open-minded that will listen to it well you've done an impressive amount of research and it was a a very well organized and researched presentation so want to congratulate you on that are

(1:49:20) there any other questions before we end the session okay hearing none I guess we will end the recording and we will wind this up thank you guys very much all right thank you recording stopped okay chat so I'm going to be deleting this stream because I don't want to infringe on their uh copyrights on this but wow 360 people were watching this this is a good amount of people so yeah I think we've uh you can tell huh what what questions you guys have I can answer any questions that were left behind I wasn't

(1:50:12) really following the chat very much there guys but I thank you guys very much for the Mind blows uh emotes and what have you um as you can tell I it's a very compelling case right I mean it's it's a ton of evidence that's out there um and so everything I said there applies to you guys as well yeah that that was a lot of people in the Stream there and there was even a lot of people on their thing he said there was only going to be like less than 15 people but there was like 25 people or something like

(1:50:38) that yeah I'm getting better at the presentations for sure for sure um let me just see exist in a higher Dimension there could be a dimensional aspect that's at play with the you know non-human intelligence it could even be an extra-dimensional aspect related to technology that we see I think that that's really interesting as well um and what I would say too is anybody who wants to get the information out wants me to speak on other events feel free to let people know about me obviously you you can tell that I'm I'm

(1:51:13) pretty well versed in this topic at this point Tesla yeah I think that Tesla is somebody who for sure I'm very interested in looking into as well yeah selftaught DOD contractor Dave rosi is probably one of my best friends at this point I think he's one of the smartest people on the entire planet um I think that most likely he will be somebody who's extremely connected in the future I mean I can't believe the dude's 25 years old I actually ask him all the time like are you sure you didn't use some kind of

(1:51:38) reverse aging serum or something like this just can't believe somebody knows that much um I don't know jeep I'm not sure about the octopus situation let's see what other questions anything okay I think they were a really good audience though as well that that was great guys are giving him crap over his profile pick yeah so um I'm glad I was able to stream this for you guys glad you guys were able to hang out tonight um you know I think it was it was a good one we have a lot of work to do chat we have a lot of work to do

(1:52:13) still we've got to update our version two document to version three you can tell that I was kind of including some stuff in there uh removing some stuff uh that I think that needs to be updated um we need to do a new version of all works I probably have another like 50 posts that we have to update into our all Works document we also need to finally finish off yeah I think that was Jimmy uh I don't know who that was actually there we also need to finish off our podcast list a lot of people have ask me about

(1:52:44) the podcast list as you can tell here it's we've got a lot to go I there's been at least another 10 podcasts on top of this year maybe more so evidence is really strong and we're going to keep going uh you know if people don't want to believe if people want to believe that the videos have been debunked from some cloud pictures I mean go nuts as you guys can tell there's way too many questions still to let this go if people want to hate on us or whatever we're just going to let that happen too I'm

(1:53:13) I'm not going to be pushing back on people hating us anymore I'm not going to let those kind of people get to us anymore um we just have too much going for us right and we've

just got too good of a community here and we're going to learn the science together and it's going to be great that's why we call it catastrophic disclosure so I think I'm going to log off for tonight uh I got to go uh Drive uh um Drive uh Melo demon back home he's been hanging out with me for the past couple days we've been working on stuff

(1:53:44) we've got some big stuff coming in the next day as well we've got uh this we're going to probably look at that case of that 1970s plane and then uh we might be having another scientific paper coming out in the next couple days terms of the rebunk info on the cloud picture the reality there is there's just not a lot of credibility to it to begin with right it's a really weird thing that somebody claims to have found these clouds that are like all perfectly match because the reality is that in order to create these

(1:54:13) videos you need to make a 3D rendered environment right and if you make a 3D rendered environment so you can get both angles why would you have a 2d background we've already proved that the the clouds are moving we already proved that um that the Dr when the orb goes through the the uh the cloud that it distorts the cloud right so the whole uh Cloud thing in general doesn't make any sense it doesn't make any sense why somebody who's a Six-Day old **Reddit** account is emailing some other guy to come out and

(1:54:47) make a **debunk** and why that guy is making a **debunk** within one hour of being emailed from an anonymous email it also doesn't make any sense that these Source where these cloud images come from we can't find them we looked at the torrent they don't exist we look in the way back machine before 2016 they don't the cloud pictures don't exist we look at the database update and the database update says December 4th 2023 I'll tell you guys this I work with databases and when a database is updated

(1:55:18) you don't update all all the rows in your database if I go look at the in my my work and go look at my work's database I'm not going to see the database rows getting updated that doesn't happen the only way the database the individual element database rows get updated if somebody goes and changes something on that element and when the the the uh website owner was asked about it the website owner didn't respond and instead they started trolling us started making UFO videos and trolling us so the whole

(1:55:50) whole Cloud situation is extremely sketchy and the thing about it as well is that right after that then I was uh the the victim of a criminal felony fraud where the **debunkers** from **Reddit** committed an actual felony against me falsifying evidence to get us to not look into the case anymore so we really can't trust anything that the **debunkers** are putting out there especially when it's just from sketchy backgrounds um it it just you know it would be too easy to use AI to manipulate an image to add clouds to it

(1:56:23) uh so the reality is unless our evidence right look at all the evidence unless our evidence is refuted unless a hoaxer even comes forward and can prove it and even then I'm going to be skeptical now just because of the levels of the **scam** I've seen them willing to go to until that happens we got to keep pushing forward really the thing that will give us closure on

the case is when the US government comes out and they tell us directly what happened to the plane right that's what we need to have happen

(1:56:49) just like I was saying on that that um interview I did with them we need the US government to tell us what happened to the plane right um and then you know if they come back and they give us a story that makes sense maybe they say they faked the videos right and they can explain why then maybe we can take that but otherwise you know they've just got to tell us the **truth** that they were filming they were filming the plane so okay guys I hope you guys had a great night uh we will be back tomorrow uh we have the diamond podcast we're we're

(1:57:16) going to meet with Oppenheimer Ranch again tomorrow I'm really excited about that Oppenheimer Ranch was a really great guy so that's going to be at 800 p.m. Eastern tomorrow we're at 13 pages of evidence for Paul and I'm probably going to stream either before or after the Oppenheimer Ranch I don't know which so if you're one of the early risers probably it could be streaming from 6:00 p.m. Eastern to maybe like 8:00 p.m.

(1:57:38) Eastern or it's going to be uh afterwards after Oppenheimer Ranch after we talk with him a little bit I think that'll be a fun one he's uh he knows a lot of stuff so it should be exciting yeah we haven't posted this evidence sheet anywhere yet so that's why guys what I want to do in the next couple days is I really want to get the evidence sheet posted to the public so that you guys can share it with stuff I have seen people trying to share the evidence link I want to make sure you guys have all the evidence so let's try

(1:58:04) to do that in the next couple days maybe on tomorrow's stream we'll prioritize the evidence link and we can do that um we're not going to be able to find this stream after I delete it what I will do though is I have a recording of it so if they give me permission I will upload the recording but otherwise it's going to only be available for muon so this was just one that you guys had to watch live so thanks guys have a great night appreciate yall peace

Transcript:

(01:33) hey what's up chat uh full screen face okay there we go let's get this my camera might not be lined up correctly I was moving it around how's everybody doing tonight hey Dorian hey Bernie hey Misty hey pugman Ash catch him hey Chris Chris was the first chatter tonight uh I've also got uh Mello demons in town hanging out so if you guys hear background noise that's what's going on um let's see camera actually looks really good today for some reason interesting okay sweet yeah I think uh

(02:13) Bernie what time are we work doing it Friday I hate to like just have chats in the middle of our stream here but um what time are you guys thinking for Friday I put it down for 8:00 Eastern but we can do whatever you want my my Friday's open um after Friday I'm taking a few days off for holidays I'm not going to be streaming or I mean I'm not going to be doing podcasts at least uh and then I'll take more podcasts after the holidays but I just I need my own little break from podcast I've been

(02:40) doing one every single day hey James how's it going man yeah I saw the article about thisy this fisherman from nine years ago I'm going to spoil it for you guys there's not going to find a playing there but yes I saw it isn't it weird how um okay cool time is perfect uh isn't it weird how this stuff is like getting spammed across mainstream media and it's just like some guy like making a random claim some guy makes a random Claim about he pulled up a a jet engine and a and a wing in his

(03:19) net it's like doesn't like let's go look at let's go find it guys it'll be easy to find hold on I'm going to pull up I'm going to switch views here in a second in fact I wonder if I if I just search MH370 news I guarantee it shows up yeah here it is like eight articles about MH370 where where are the articles about the fact that we've got videos that seem to show what really happened to the plane the fire fisherman finds fisherman claims he found Wing months after disappeared he just didn't take any

(03:59) pictures doesn't have any proof could be just literally anything but yes we're going to go ahead and write a bunch of news articles about it completely unverifiable the only Survivor who is on as well on the boat the only Survivor of anyone who's on the boat everybody else who's on this boat is is dead now it was it was also too big to get onto the deck but he's sure that it was part of the plane okay it's also what thousands of miles further away than where the plane supposedly crashed yikes

(04:50) man this is like uh the equivalent of finding a cloud pictures on a random website uh yeah this is this is wild hey James how's it going man there's more than one James in the chat now um what was I going to say I do want to apologize to the chat for and the followers for how I acted yesterday I feel like it was acted a little bit inappropriately I think that the the high road would have been a better way to take that right uh I think I let these YouTubers and whatever get to me which I shouldn't do so I just want to

(05:28) apologize to you guys for anybody I let down we won't be doing that ever again we are not going to do that ever again typical MSM yeah hey Gap how's it going hopefully you can hopefully that uh you know helps give your daughter uh something for uh Christmas that she enjoys um I always down to help people out okay what should we so just real quick I've got a muon um presentation in about an hour at the top of the Hour 1 hour from the top of the hour here and I think I have a link that I can post uh let me look

(06:17) through my email and make sure that I have it Zoom link okay there's my zoom link if your followers want to hear your talk direct them to this link wait please direct them to the

following link which describes your talk and what to do to connect Eric Hartman okay Eric is the one who got in touch with me muon thing will be interesting let's see what how we do it here oh look catastrophic disclosure oh nice that's even better name for it I love this what is so this this is probably how you guys will get I'll I'll post this in the

(07:04) chat or um I'll pin it to the top of the chat so you guys can if you want to watch I probably won't stream it because I I think they won't want me to do that in full disclosure I guess just so people know like they are uh they're giving me uh like a payment for this uh \$200 oh you actually have to pay to watch H so yeah I probably won't be able to stream this unfortunately well that's disappointing that's probably why they're paying me though huh okay well in that case I apologize but yeah I'm

(07:51) going to prepare for this so I will go ahead and you guys can at least get the inside on this uh hey thanks V Commerce appreciate it man appreciate it uh one sec guys so I'll let you guys can see the inside case of this but um yeah don't spend it all one place don't spend it all in one place oh uh Gata or Gata awesome been following it from the beginning awesome I think that a lot of Pilots um are very compelled by the evidence because it's very compelling and I think a lot of Pilots know that this is not a suicide

(08:35) situation right yeah see def lith batteries people know how dangerous these batteries are oh I should move the chat over here for you guys feels like my like when I look at the side here it feels weird yeah people know there's something wrong with these batteries man I like the idea of catastrophic disclosure we should like not like trademark it but we should just make the term catastrophic disclosure just go viral you know we should make the term go viral oh you got that light working pretty well actually it's doesn't it's not

(09:10) glaring um cuz really the catastrophic disclosure stuff is like really the way for to go it's a little too dark with that I think are you going to set up other lights okay got it um yeah we're working on filming some stuff to I don't know who knows maybe we can get the word out there with this case at some point pretty much all the pilots I've talked to though so far other than the ones who are these like Netflix people or whatever right are realize that there's something something going on that

(09:41) doesn't make sense with regards to this thing so you know what I'll do I'm going to play the flight path explainer in fact cuz I I need to rename it as well just to give people a little bit of background on what we're dealing with here cuz you look at the flight path it's like there's no way this was a suicide route it just doesn't make any sense and I've got a lot of stuff holy crap one sec guys is it this one hello everybody this is Ash yeah this is it okay here we go I'm going to

(10:13) rename this as well real quick MH 370x flight path explainer okay let me let me pull it back up again okay folks here we go this is me oh this me my hair was a lot shorter a month ago hello everybody this is Ashton Forbes here to bring you the MH 370x flight path explainer the plane takes off at 1642 UTC from qual lur headed to Beijing at 1719 UTC the pilot says good night Malaysian Airlines flight 370 around 1721 UTC a lithium ion battery fire explosion occurs

and is scene by Mike McKay on an oil rate 300 mil away he sees fire for 5 to 10

(10:55) seconds nine Witnesses along the coast hear loud noises at the same time the plane goes dark in the case of a fire the first response is to pull the main buses and restore the circuits one by one until you've isolated the bad one if they pulled the buses the plane would go silent the plane heads towards panang lwi International Airport the pilot knew the train was friendlier towards Lanka which was also closer than qu andur at 1730 UTC there's a communication with another pilot who hears the voice of one

(11:23) of the pilots of MH370 at the same time eight fishermen on a boat 10 mil off the coast see the pl flying unusually low consistent with a depressurization emergency event attempting to provide oxygen for the passengers the Malaysian Minister defense claims the plane was not identified but admits they knew it was a non-hostile civilian airliner the plane flies over Lanka at 1752 UTC when the co-pilot cell phone pings a cell tower the plane doesn't land either due to the fire or because they have communicated a

(11:52) rendezu point the plane continues to the nicobar islands until around 1840 UTC when a witness came at sees a glowing orange plane with dark smoke coming out of it this is consistent with the crew battling the lithium battery fire with Hon fire suppression devices releasing bromine a hallogen gas soon after the videos begin they show smoke coming out of the back of the plane consistent with the fire the plane is descending in the videos consistent with an intercepted Chinese only reported communication that claims the plane was attempting an

(12:24) emergency landing and disintegrating the plane's altitude is low in the video as proven by the cumulus clouds that only form between 1,000 and 5,000 ft also consistent with the witness of sighting this is where I just let it kind of play out here because just good to just watch poof so I probably will show this uh in the muon thing so let's figure out what we should do here um just alien cheeks that were clapping yeah I was already mentioned about the fisherman story thing I think there's no chance I mean it's just the last

(13:05) surviving guy of some boat thing says nine years later he's going to bring it up doesn't make any sense right doesn't make any sense I also went ahead and I if you just joined I apologize to the people who I might have offended by being by being rude yesterday to some of the the YouTubers and what have you I think that's not the person that I want to be I don't want to be somebody who's lashing out at people I don't want to be um type of person who is uh you know acting like the people who are hating us

(13:33) are I think that we don't want to lower oursel to that level um yeah um yeah as a pilot I can see the horizon or if I'm at 41,000 ft I can see a large fires from the sky yeah the clouds that that was really weird that was very weird uh the Danny Jones podcast in general was a huge setup did if you watch the Danny Jones one do you guys notice how like he has us go on break but then he's still recording like he was like trying to get me to say something weird and there was several phone calls I had with him as

(14:13) well where it was just bizarre when I was talking to him the thing that's weird about those podcasters that set me up was like they have lots of more esoteric people on um yeah I mean I still felt is important I'm not and I'm not apologizing to the person because the person who um made the the YouTube video about us and stuff you know like that that that's just disgusting to do stuff like that somebody gets **scam**med has a criminal activity happening against them and you're going to try to cut them down

(14:43) it's just disgusting I'm apologizing to you guys because we should be better than that cloud experts and yeah so um I probably won't be streaming later tonight after the uh muon thing which is in an hour just because it's going to be super late it's going to be like 2s hours so it'll be like midnight by the time that ends um but uh I did want to let you guys know about that oh yeah the contrails thing too jeez ridiculous okay so um let's see what we got going on here I want to I want to just set up some some

(15:22) notes oh I already have I already created one is whatever for the muon how can i s the link in the chat to the video you link to what oh the the video of the the contrails ending in midair is probably not related to MH370 I've seen that long time ago long time ago anyway welcome everybody um let's see here so for the muon presentation I wonder if I I should do the flight path explainer first but yeah in terms of the guy with the boat and the story like they're not going to find any debris they're not

(16:07) going to find the plane there guys just spoiler every few months a new article comes out that gets spammed if it's being spammed by all the mainstream news article news websites like it's most likely nonsense if you do want to follow the muon thing it looks like you have to pay \$15 yeah looks like you have to pay \$15 which is disappointing uh but that's muon for you um and no disrespect to muon I you know they invited me on to to do a thing for them uh and yeah I want to do a good presentation for them yeah yeah I think that the goal

(16:53) here is to get as much much exposure as possible for the case right um because the evidence is so strong and even even these experts out there so-called experts I'm going to say which really by so-called experts I just mean people that have been following it for nine years have have solved nothing they've solved nothing right and they can't refute any of the evidence against interview I get I don't know what that is Misty um muon Orange County uh asked me to do a presentation yeah I'm not going to oh

(17:30) yeah you guys could do that uh that might be acceptable I don't know I just don't want to run a file with what they're doing but if somebody buys it and streams on the Discord I I did set up uh yeah you guys can maybe do a live watch thing the voice channel is set up in the Discord if you're a part of the Discord so you guys could probably do it that way if you want yeah um I'm not sure if I'm going to do flight path explainer first but then I'm going to do why didn't crash [Music]

(18:03) um debris that was found then we move into understanding the videos video details probably science Edward sein that's probably going to take an hour an hour and a half for that

and then probably questions so I can kind of do this pretty quick these days the fire scenario actually probably probably go here actually should probably do fire scenario after why I didn't crash and then forward cargo bay I might need my other thing up for that though might need my recent piece up for that that Diane Feinstein piece is taken off

(19:03) over 100,000 views in eight hours I mean this this fining thing if you guys didn't see this earlier of the bin look at the bin Laden pictures look how detailed this is we're supposed to believe they didn't see the debris they've got detailed satellite imagery like this it's probably even better from this is a geostationary video o um what if it looks like I'm in the club guys work in progress setting up for the MU thing in Pakistan that you can see trucks mean you can see everything here

(19:40) so it's like now I'm told a lot of this has to do with the angle of the satellite that doesn't really have to do with the angle satellite how it works lot of people I think that she means like if a geostationary satellite's not straight down the US and others with sated and Diane Feinstein's passed away so this was this was back like 9 years ago technology can't actually see better than the pictures we're seeing well I think it depends on the satellite and the resolution that's provided by the

(20:09) satellite and I mean what does that really mean I guess she's talking about like how low to the ground the satellite is I mean if so I mean USA 229 is right there the satellite how sophisticated our satellite 2011 only three years beforehand uh I'm not going to go into what we have or what we don't have does she know when she says this seems like she knows what I just said suffices doesn't really suffice at all right we want to know like did we see the debris from the satellite right can we assume

(20:43) that the US does know more or can see more I love her questions who is this lady how have I never heard of her not necessarily not what do you mean not necessarily guys do we have to play this s's video I I would answer that that way I would answer that that way this is like the Minister of Defense right now I can't answer any questions directly it's like she's like not sure like how she should lie know whether more sophisticated satellites could be turned onto this area I just don't know I just don't know I mean wow I think the

(21:21) answer is yes we do know here here it is guys there they are these are the sophisticated satellites staring right down at and this is definitely wider than this bubble now we're we're sure it's probably much much wider two to three times bigger than this maybe even bigger than that I mean that's uh it's going to be a big big scan that these things can do so for sure they can see it I mean this is this is what it looked like this is a a satellite that was also set up in 2011 look at the detail I mean

(21:49) these are like cars that they can see here this is Extreme high amounts of detail you can see a car right here damage support vehicle like you could probably see people walking around here that's how this is like insane level of detail the low earth orbit satellites provide so yeah definitely definitely knows um oh yeah that so that reminds me sorry chat what are we say in

chat yeah they were searching in the wrong spot for a while and we also need to show cbers where are we going to talk about cers [Music]

(22:36) cers flight path explainer I don't know if I'm going to go into the searching in the wrong spot so much in in this one that's the thing that a lot of people don't understand about the video as well there was nobody that really understood how no one really understood how well um or how little we understood about the flight path certainly not for months it was not a clear understanding of where the flight path was for a long time uh I'm probably not going to go too much into the **debunk** stuff it's just

(23:20) boring just boring I don't I don't want to waste time on **debunk** stuff right I just want to present the evidence if people don't want to believe it's real they're not going to believe it's real for whatever they want uh I'm approximately 40 years old yeah it's definitely a cover up I think the the cover up part is pretty indisputable the official story makes no sense yeah the debris would have dispersed everywhere man it would have been a huge debris field right if you want an invite to the

(23:56) Discord you're going to have to email me at MH 370x proton and you'll have to give me some personal information uh if you want to invite to the Discord I'm going to skip the ads here whenever I notice it I usually just skip the ads um yeah I mean age doesn't really matter guys but I'm old enough to at least be somewhat mature I think okay let's see let's look at our evidence and see what else we need the video the dates on the videos video details video speculation oh the fake video

(24:35) requirements I could probably go over that instead like you know instead of going over the the **debunks** I mean I have them laid out here in fact we could probably add to the **debunks** now if we want Chinese hack motive probably need to go into motive right yeah thanks G I hope it's Gat G common sense is what most people need today in this day and age and just for people who are wondering I'm not very political either I mean I guess I care about stuff that impacts people so that's what politics really is

(25:31) um but uh you know when we look at stuff of this magnitude of like what we're seeing in these videos it's really hard to care about politics because you just it's how can you see I just see Politics as a game after you look at these videos right hey Amanda welcome 12 feet welcome welcome everybody we're streaming a little bit earlier because we've got a muon presentation yeah I just want the **truth** the official narrative is definitely not the **truth** and it's not even an official narrative

(26:04) official narrative is they don't know what happened to this plane I should probably say that right crap videos come back videos see what other videos I can show there is another 777 that um was scrapped too early purchased by G8 tesis I'm not sure Ken has been talking about this **Reddit** thing that came up that they're claiming that you can see like the plane after it disappears there's no plane here guys there's there's no plane here this little dark Trail seems to be the trail from the

(27:06) orbs that you can still see barely you can see the dark Trail in front of the orb here see the dark Trail in front of the orb here as well as the one here you can still slightly see them there's there's no plane in this maybe he's talking about this it's just a cloud in the background I don't I don't know what people are saying about seeing the plane still I think sometimes people are looking little too hard this is why like I don't I don't a lot of the stuff Punjabi Batman post to is is a little

(27:33) little too much it's trying too hard for Stuff got to have strong evidence for stuff look at this non-radiating barrier here incredible there's new orb footage over La no I think we're going to be seeing a lot more orbs guys a lot more orbs wouldn't be surprised if some of the orbs we're going to be seeing are from other countries as well like China and Russia yeah the disinformation and the VFX debunk stuff I don't really like to go into too much on that although there was a good Artic a

(28:22) good Reddit post I I don't know how long ago it was CU sometimes the stuff just shows up was actually on the UFO subreddit where they were actually talking about all the disinformation that was being pushed on the UFO subreddit let me see if I can find it God this is just this these kinds of post shouldn't be allowed on a UFO subreddit it's always just moral in moral righteousness this was pushed to make people look bad guys there is no credibility in the UFO Community to normal people like you're not a 4K

(29:09) balloon no one even knows about if I were ask my parents to have no idea what I'm even talking about right this 4K balloon stuff like it's always that you're making us look bad it's like dude if you're talking about aliens visiting earth like nobody's taking you seriously already right just just the reality of it um so you know I I will believe you probably because I think that there's life everywhere and if this technology exists then they can get here but normal people won't won't believe it so this kind of

(29:38) post are just ridiculous and like this too like stuff about you know even the extra dimensional aspect it's too far into the woo for a lot of people guys where's the one about disinformation that's pretty weird weird I really don't even check this website out anymore just because of how bad the subreddit is and how completely controlled it is by the government Cat by us helicopter where is it it might have been like more than a day ago here it is it was a day ago um this is the one it's definitely

(30:32) the UFO discussion is being manipulated heavily by the government if you don't think they've got people on subreddits and social media then you need to read the Twitter files they control Reddit most likely it doesn't mean that everybody on Reddit is some kind of disinformation agent just means that they um you know they know how to manipulate the conversation yeah I feel like there's really good people in the UFO community that we've met but overall it's a lost cause like I was talking to this UAP mik

(31:03) guy today who you know we've had we've gone back and forth in general I I just I don't think about him generally but you know in his mind it's about aliens and I'm like if you can't

figure out the technology then you can't really start talking about aliens you know you need to figure out what the technology is first how do these aliens get here if they're getting here right or if they have a super advanced technology it's about understanding that that's the real implications

(31:28) um now where is the the thing that I wanted to find maybe it's in the top comment here it is no that's not it is it the reply to this one here it is 25 rules for disinformation you guys are going to recognize a lot of this stuff I actually kind of want to add it is the problem is it's too long it's too long look how long it is 25 rules um maybe I'll just post a link to it uh where's the disinformation stuff I'm going to go through it with you guys though okay oh hey wow thanks lamp I haven't

(32:24) seen you around welcome Sig to signals intelligence not a pronoun titular yeah I know about signals intelligence OS I did not know open source Intel I didn't know that I did not know that's what OS int stood for hum mint human humint is human Mass int measurement and signals Geo INT geospatial in tell and all other feed analysis interesting thanks L appreciate the donation appreciate that information I didn't actually didn't know a lot of that stuff that's how that's how uh disconnected I am from a lot of this

(33:11) um well let's read through these I think these are good to know guys this is very important if you want to recognize it hear no evil see no evil regardless of what you know don't discuss it especially if you are a public figure if it's not reported it didn't happen and you never have to deal with the issues well think we know that one guys we know that one right become incredulous and indignant avoid discussing key issues and instead focus on the sides which can be used to show the topic is show topic

(33:37) as being critical of some otherwise sacent group or theme also known as the how dare you Gambit I think we know that one right guys this is the how dare you your this is the your hurting ufology argument so the first one is mainstream media won't look at it right as long as the mainstream media doesn't talk about it it doesn't exist second one is how Dare You offend the UFO Community right create rumormongers avoid discussion issues by describing all charges regardless of venue or evidence as mere

(34:06) rumors or wild accusations I mean you've heard this one you have no evidence you have no evidence right you've heard this literally every single thing on here is going to have been played against us every single piece of disinformation that's possible other derogatory terms of mutually exclusive **truth** may also work the method uh which works especially well is with a silent press because the only way the public learn the facts are through arguable rumors right they say that there's you know there's you have no evidence even though

(34:34) we've got literally 13 pages right um use Straw Men find or create a seemingly uh a seeming element of your opponent's argument with which you can easily knock down to make yourself look good and make the opponent look bad either make up an issue that you may safely imply exists based on your interpretation of the opponent or the opponent's argument or

select the weakest aspect of the weakest CH uh charges so this is like what Victor of the independent group did right he says oh well the cloud should be moving right

(35:07) he tries to find some way to argue against it using some kind of straw man and then will we say okay we figure out the cber system how it works right hey Ellie how's it going oh wow thank you very much again lamp appreciate that that's five donations I haven't recognized you yet oh Amanda you got your MH370 didn't disappear itself awesome um Sidetrack opponents with name calling in ridicule I don't even think we have to read into this one right we know sidetracking people with a name calling ridicule you think aliens zap

(35:41) the plane to another dimension right that's what they always say hit and run make brief attack on your opponent's position then **Scamper** off before any answer can be fielded this is why people get blocked right it's fake blah blah blah so Corridor crew said it was fake blah blah blah right hit and run this is what they hate the most this is why they hate being blocked question motives Ashton must be a grifter right twist or amplify any fact which can be taken to imply the opponent operates out of a hidden Personal Agenda or other

(36:12) bias they'll say oh Ashton's too emotionally connected to the case he he doesn't answer questions right they try to question the motives invoke Authority just look at the AA 2014 Discord officially **debunked** right like they uh use disinformation in their headlines intentionally to invoke fake Authority that doesn't exist heck they have people with fake subject matter expert tags right because they're trying to invoke authority over other people literally every single thing on this list you

(36:43) could find examples on that Discord probably within just right away he's seething yeah play dumb no matter what evidence or logical argument is offered avoid discussing the issues except with denials that uh that they have any credibility so again we just say that the US government is seeing everywhere we say that you can't crash 777 into the ocean without leaving a debris field and what do they do they just play dumb they don't address it right they never never address the evidence associate the opponent's

(37:12) charges with old news a derivative of straw man um so this one I this may be one where they actually don't hit us with a lot although Victor did say today when I replied to him that all our evidence is old it's like wait well yeah of course it's all old it's from 26 from 2014 establish and rely on fallback positions using a minor matter or element of the facts take the high road and confess with candor that some innocent mistake in hindsight was made that the opponents have seized the opportunity to blow it all out of

(37:46) proportion imply greater criminalities which just isn't so others can then reinforce you later um I can't think of any great examples of this one right now I'm sure there's some out there though enigmas this is one enigmas have no solution drawn upon overall umbrella of events surrounding the crime and the multitude of events and prayers paint the entire Affair is too complex to solve this is one of those situations where they will commonly say that there's no answer right or that we we just can't know right this is also a

(38:15) derivative of the one where if you ask people what their opinion is that they will not be able to give you an answer right they'll just say that we don't know I don't know right it's almost like they they say it's not something that can be solved but of course everything can be solved everything has an explanation um Alison Wonderland logic avoid discussion of the issues by reasoning backwards or with apparent deductive logic which forebears any actual material fact this is stuff like it would be easy to fake right it would

(38:46) be easy to fake stuff like that Alison Wonderland logic they don't actually talk about any of the facts they just use deductive reasoning reductive reasoning um to avoid talking about it demand complete Solutions if you haven't described literally every single thing down to a detail then you then your argument fails some people literally argue that if they find one thing that's inconsistent that that means everything must be fake right avoid the issues by requiring the opponent to solve the crime at hand completely aoy which works

(39:16) the best with issue issues qualifying with number 10 which is the old news thing here fit the facts to Alternative conclusions um so this one doesn't really work too well cuz usually it's trying to people trying to **debunk** us right so you know they they really have to ignore the facts in general um what are you guys saying YouTube probably would not have more info but I don't know maybe yeah they always they they found debris all the way back yeah that that could could probably be a version of one of these arguments Ellie yeah the VFX

(40:01) **debunk** thing was just straight up disinformation from the top I mean that never matched that was just a way for people to give confirmation bias hey Chad I gotta do something crinkly for a second keep talking you're fine um vanish evidence and Witnesses if it doesn't exist it's not a fact they literally had to dis uh credit 19 Witnesses in order to present a fake narrative on this uh conspiracy change the subject usually in connection with uh blah blah blah this works extremely well with companions who

(40:39) can argue over you so this is where like they control the narrative right especially on sites like **Reddit** especially on the **debunker** sub**reddit** they are trying to make it about what they want to talk about like oh Pro somehow like today I think there was one about somebody's trying to pay somebody to try to find cloud pictures and stuff like that it's like they don't want us solving the case they want to be focused on not solving it emotionalize antagonize and go opponents I mean you know they do this all the time

(41:07) right um they try to they try to emotionally attack you to make you look foolish and overly motivated right they're trying to they do this to me a lot right this is where they and then you you got these Freudian people who are uh these want to be uh people psychoanalyzing every little thing right uh ignore proof demand presented and demand impossible proofs I mean they do this all the time and we literally show them the cers video and then you know they just play this is a modification of the play dumb rule right

(41:39) just completely ignore it never address the evidence um pretend like you never saw it you know demand proof of demand proof that the VFX **debunk** doesn't match all the stuff like

that right even though we do provide proof of that and then they pretend like they never saw it false evidence introduced new facts or Clues designed to manufacture to conflict with opponent's presentations I mean they literally committed felony fraud to present false evidence heck probably the cloud **debunk** is false evidence too right there's no

(42:12) way somebody randomly found those pictures like that just makes no sense not to mention they just don't exist in any Torrance right false evidence call a grand jury special prosecutor or other empowered investigative body um actually this one's a weird one this one doesn't really apply I would love for a grand jury to look at it manufacture a new **truth** right this is where they call we must talk to VFX experts about how this could be faked right so they're trying to create their own **truth** create

(42:43) bigger distractions I mean this is what you see from the news articles that are out there right uh you know let's let's talk about how some guy nine years ago found uh found some uh you know claim to find a wing or something like like that silence critics just remove your critics from circulation this is why they ban everybody on **Reddit** right this is actually the number one tool on **Reddit** for disinformation just Banning people from every subreddit if they don't agree with you ban them and then vanish hopefully I don't I

(43:15) hopefully I don't get vanished so there you guys go 25 uh types of disinformation now you guys hopefully are empowered that you can recognize them hey PJ Mike welcome welcome to the party you're not too late but yeah actually we have quite a lot of people on right now even though I didn't post this on Twitter or anything like that we're only going to be live for another 25 minutes or so because I got to get got to get ready for this presentation although I think I'm pretty ready I've done enough of these already

(43:45) um let me see here so what are we going to be working on uh hold on a sec guys sorry I'm trying to close the door Lulu doesn't want to come in there we go cool um so what are we going to be working on here in the near future um we're going to do we' got a lot of stuff still to work on guys like a lot and a lot of science we I want to do the Rolls-Royce so if anyone out there wants to help and email me any addition I want to find some quotes on Rolls-Royce and them not giving the evidence cuz we know they didn't provide

(44:31) the evidence we know they didn't provide the evidence Twitter is what x is or X is now Twitter yeah orbs are going to be everywhere Punjabi Batman got suspended on **Reddit** are you sure about that although he probably did let me double check if he doesn't respond to me he probably he's probably banned let me see okay I see some emails about um Discord invites I'll get you guys those Discord invites please make sure if you join the Discord do not be confrontational with people if you are confrontational with people you will get

(45:15) banned out of the Discord it's not personal we just we're not trying to create a confrontational Discord we're not going to have a toxic Discord um yeah let me see if he's still here he posted yesterday tweeted me I don't think he's correct about the mountains thing I think he's looking too hard into it yeah I mean there's literally somebody who's just pretending

to have made the videos as well it's just we can't really trust anyone it's pretty wild yeah Rolls-Royce with held the Ping

(46:18) data that's exactly what we're saying we we know they did um I Just Want To Have Some solid evidence for it but yes we know they did we've had some some quotes the problem is it's really hard to find wait are you guys sure he was suspended yeah rhubarb I think that that's a good point how would they know the videos probably this is this is plenty enough for an hour and a half this is going to take the whole time it's going to take the whole time and then what was the one clip I needed drone video here it is lithium

(47:02) battery fires I need this up I need this I pretty much just need these three things I think and the evidence these are going to be the things I need for the presentation yeah we've already talked about the Australian thing guys but yeah if the if the videos are fake how do they know we would never find the plane right how is it that the the videos corroborate what really happened in the plane better than anything why would they end up spending this time Faking It the Rolls-Royce thing we don't have a lot the Deep dive podcast claiming TV

(47:45) producers were showing their export The Disappearance footage and asking if it's real n guys even VFX experts don't know even the experts don't know you can't uh Foya for uh third party contractor information or Foya is only work for governments yeah private companies are exempt from foyers requests exactly you guys figured it out so we would have to figure it out ourselves the lighting is looking pretty good here yeah actually challenging setup you have here but we're doing our best yeah yeah we got Melo demon here he's

(48:27) we're working on getting some nice quality uh footage here metal sphere that washed up in Japan I'm not sure not sure we may actually start talking about some other interesting cases I've got one on the docket that I want to talk about um I'll give you guys a sneak peek we're probably going to be talking about this on Thursday or Friday where is it um here it is quantum electrodynamics the science behind Bruce gan's flight we may look into this this is pretty interesting because it has to do with the Bea

(49:21) triangle and the idea that this guy's flight like like went through something that distorted time where like he got there faster than he should have been able to get there so we may look at this because there's actually like strong there's like hard evidence in here in terms of where he was and how fast he was traveling so it would be interesting as you see here from this image right if you're the planet's in the right spot can the right conditions apply to a specific point where like there can be a

(49:52) warping of SpaceTime I find that very interesting and it kind of applies to our case right cuz what we're talking about here in the MH370 video is a situation where time is working at a different rate for the plane itself right that's the Layman's understanding is that they're able to warp SpaceTime and when you warp it now your playe can either kind of shoot slingshot like the rubber band scenario right the rubber band or if you believe more the physics side then you think that you know the plane is its time is speeding up because

(50:27) there's less mass and then Mass reduction is the answer so you can see here's the compression of SpaceTime happening under the exact right conditions it could really be possible that a plane flies into this and it just appears on the other side quicker than it should now this effect might be very localized it could be very small but if there is uh a distortion perhaps like where the bror triangle is then perhaps that does explain some of the weird stuff that happens there so so this is an interesting

(50:58) case and you can see here's an idea of that like the electron cloud may also get localized around the plane pretty cool actually this is the kind of stuff that I like so we may talk a little bit about this we may talk a little bit about this in the next couple days um so this is one thing that's up there uh I'm probably going to leave this up Quantum electrodynamics this is pretty cool the science behind Bruce gan's flight I might try to find independent sources for this as well H there's a new thing coming

(51:51) out huh through the electric fog this is wow this was 1970 H this is pretty interesting and then the other thing we going to dig into is the Rolls-Royce data so if anyone can find any data on Rolls-Royce we already have a Rolls-Royce connection to uh locki Martin which is already pretty daming and look at this right here 2014 right before one month before the plane went missing we've been saying that it's locking Martin's orbs and now we have a connection of Rolls-Royce where they're paying they're getting

(52:36) paid a billion dollars with locked Martin to deliver engines to them it's like all these companies are in bed with one another so then the Rolls-Royce things MH370 data well we might have just found a chat I think that no matter how this investigation goes down matt Kim's interviewing Tucker Carlson what right now somebody find me a clip to that later if you don't mind I want to watch that it's funny I mean we Matt Kim interviewed us yeah why would you not take pictures of a of a wing you found months after

(53:22) the plane went missing makes no sense man um yeah you guys got me sidetracked now Tucker Carlson stuff gets a lot of views on Twitter and he's been talking a lot about UFOs and UAP phenomenon yeah the higher up you go The More Voltage that's what it is so it is voltage I've been saying it correctly yeah JK Philly fan you are on it man so the Earth is a ball of electrons so the higher up you go The More Voltage there is so there could be the right conditions for or A Spacetime anomaly it's pretty interesting uh I'm doing a

(53:59) muon presentation in 20 minutes Amanda but unfortunately you have to pay to watch it it's unfortunate oh yeah so no matter how this investigation goes I think the story of this investigation is extremely compelling right we found so much evidence so much evidence James Fox is let's just say we don't talk about James Fox let's just say that guys you would think somebody like James Fox would be interested in something like this but it turns out that these types of people who investigate uaps either

(54:34) are not as open-minded as you might imagine or they don't really understand what disclosure means right whoa is that true skinny pop Rolls-Royce delivers cold fire is that

trademark or TM thermal and Power Systems to locking Martin for directed energy field tests  
whoa hey Sean how's it going buddy oh yeah we're we're popping there's a lot of people here  
now it's like \$15 Amanda if you want to pay Amanda and you want to stream it on the Discord  
that's probably okay since we wouldn't be

(55:12) recording uh we did set up the voice channels in Discord where I think you can video  
stream there yeah \$15 is kind of a lot hey messy tube welcome if you are new I would  
recommend uh going to the Twitter here and going through the highlights there's a lot to go  
through this not the kind of stuff you can just get through right away um if you're on my  
YouTube then you probably want to listen to the explainer videos first check out the explainer  
videos they're only a couple minutes long they'll get

(55:50) you up to speed and then you're going to be dropping down into one of the deepest  
rabbit holes you've ever fallen into I have hundreds of posts uh about evidence and about twists  
and turns in the case um so yeah that's okay uh skinny Bob I'll find it I'm going to post it in my  
evidence Channel we'll put it on my our uh our list where's the Rolls-Royce stuff we'll find it okay  
my dog is needing attention she's needing attention she's a good girl yeah I'm pretty much  
solely focused

(56:28) on MH370 but I probably will start to look if something really Peaks my interest I  
probably will do little like onesie TWY tweets on it and look at it just cuz I don't know I need a  
little bit to shake it shake things up a little bit the case isn't going away either Lulu's over here  
she's uh she's demanding attention from Ross at the moment it's pretty cute yeah we're buddies  
yeah she's a pierc beast to find mut Fierce Beast nipping my heels video the field today  
everybody says she looks like a

(57:03) wolf and she acts like a wolf Lulu be good girl be good girl no no nobody nobody okay uh  
let's let's look at this before I have to drop off I'm going have to drop in like 10 minutes here  
guys um and if the if the lighting looks really good it's cuz uh I've got professionals now helping  
out with the lighting we're just getting started yeah it's looking it's looking pretty good here so  
we're yeah but it's you know two inches from the wall so it's a little challenging we're trying to  
do what we

(57:30) can do talk about maybe okay no pressure but Spider-Man maybe for muon could be oh  
we'll talk later yeah May might have he can come down if he has to come down okay um if you  
need the link to the Discord you need to uh email me at MH370 xpron and you just have to give  
me some information about yourself in terms of why you want to join so that I know you're not  
a troll and then then I will give you an invite I will do that probably after the muon thing  
although it's going to be late so you might not

(58:01) might not be till tomorrow Sandy uh just again you can email me as well I Sandy I  
definitely get you an invite if you just tell me you're Sandy on the on the email MH370 X at.me  
send me an email uh let's see yep yeah CERN is pretty interesting uh Eve what did the scammer  
have to say the scammer went on a full meltdown so [Music] we we hacked that password much

faster than they expected which honestly saved the investigation if I had been talking about that for weeks it would have definitely the death investigation it

(58:43) hurt the investigation even that I that I believed it at all um and then they basically admitted more or less that they were a **redditor** that they were a **debunker** um which kind of helped the investigation cuz now now the **debunkers** don't have any credibility anymore cuz it shows the lengths the just sociopathic lengths they're willing to go to to fabricate fake evidence to throw us off um so they they hurt themselves a lot in that respect so that's what happened with the **scammer** it was disappointing I did get

(59:13) **scam**med out of several thousand dollars for that um but yeah yeah the **Rebecca** hate video I deleted my um what do we call it uh uh I I deleted my kind of uh mean-spirited attack on her um even though she is a terrible person like that's true right she is a terrible person but it's not worth stooping to their level right that's what they want I think that it's better if we just ignore it and move on right let let the haters hate let the the people that are just disgusting trusting people to do whatever they want to do if they want to

(59:56) attack us it really doesn't doesn't bother us so I slept on it I woke up I thought I didn't feel right about it um that's not what I want my community to be like that's not how I want how I want to represent the community and if you look at the replies from her community like they're just disgust they're all like just like her right like that's you guys are much better than that you deserve somebody who's who rises above that so I'm going to try to be better at myself and I think that's

(1:00:21) you know something we can all kind of uh get behind and we can all try to better people as well so yeah thank you wow people are Don hold on I'll try to get down to some of these yeah you can DM me as well on on Twitter for a Discord invite if I'm following you and you'll definitely get one awesome let's see Sandy of course I'll give you an invite you just um either I think I'm following you Sandy so if you just DM me on Twitter I'll I'll take care of that lamp thanks thanks man I can't like like this but

(1:00:54) thank you appreciate appreciate it for sure who's who's next oh lamp again sandwich money lamp's going all out man you're awesome tonight appreciate you buddy thank you man or woman I I don't know I guess I shouldn't shouldn't prejudge I also like that we have people of both genders we have people of different political backgrounds who are in this community um yeah getting **scam**med ended up actually being a net positive like the case was like really hurting from that because of that was right after the

(1:01:24) cloud **debunk** and they almost did us a favor cuz they brought a lot of attention to the case um if I if we hadn't had those files unlocked it would have been it would have been bad also was really big that I I streamed all of it as well if I hadn't streamed all of it then people would have been making stuff up about how I was involved in and I did it myself right so it really made it so they couldn't do much lamp thank you very much again wow appreciate you man yeah we're gonna we're going to Mu

(1:01:52) on to move on or move on to muon um they didn't even really say about the PDF they just they just trolled me with like a dozen emails they actually have deleted their email those email accounts as well because they they are actually probably afraid of um the criminal being uh criminally charged CU that was that's actually a felony what they did um you know anything where you **scam** somebody for more than \$500 is a felony in the United States felony fraud so they I I and the reason why I know is cuz I reported them to proton mail and proton

(1:02:24) mail replied saying the accounts have already been deleted by the user so anyway I don't want to really talk too much about the **scam** stuff it's just just obviously it's embarrassing to fall for like crazy **scam** stuff like that which is why I two reasons why I deleted the videos uh all the streams one is cuz I don't want to mislead anybody else who's jumping into the case and then the other one is obviously because it's embarrassing to be **scammed** you know um one of my aunts actually was **scammed** uh

(1:02:52) you know like older people have are very uh you know fall for those **scams** a lot one of my aunts got **scammed** the only reason why I'm talking about is cuz she's already passed away uh she was a great woman and you know she felt really embarrassed by it and I never told anybody about it after she told me because she didn't want anybody to know and I understand you know it's it sucks to be **scammed** for sure but you know in terms of this case you you've got to rise above it oh okay let me go ahead and get you

(1:03:25) guys if you guys are trying to get into the Discord so that you can watch the thing it hasn't started yet Sandy am I not following you on Twitter I don't see any direct let me see let me check my emails real quick because I'm going to have to jump over in like two minutes here okay I'm going to send uh invites to the people who emailed me real quick um 10 users do not not share these invites with anybody I'm if you do I I can tell there's ways to tell so do not share these invites okay Dorian you got your invite

(1:04:09) should be in your mail make sure you when you join the Discord you need to verify right away I'm sorry to hear about people who are mention how they've been **scammed** uh Neil whoever you are in the chat you've also got an inv [Music] um **Mick** you've got an invite Sandy if you email me at MH370 xpron domme you can get an invite as well James I'm not going to say your last name James the one who emailed me you've got a invite as well okay Stuart I'm going to have to get ready for this presentation here guys so I

(1:05:13) think I hit up everybody except for the emails MH370 xpron I'm probably not going to simoc cast it because I don't know if that's if they want me to do that but I will ask them if they tell me that I can simoc cast it then I will go ahead and I'll stream it for you guys yeah it's definitely a roller coaster okay hey Paige how's it going um I think that people are going to probably someone's going to probably try to stream the presentation that I'm going to do I mean it'll be pretty much repeat

(1:05:51) stuff if you've been following the case but if you're new then it'll probably be pretty good um okay P I see you in the P you should have an invite again if you join the Discord you

have to verify right away otherwise it boots you out uh p is Page P if you are then you uh you have an invite think no no people wanted donations turned on people want people actually want uh they want me to turn on subscriptions but I don't know I'm not worried about people thinking I'm a con man I mean I think it's pretty apparent that I'm

(1:06:36) not the money that people have put forth will go to a good cause it's going to trying to get the evidence out there for the families as much as we can I mean that's the **truth** of where it's going um trying to get better production so that our people follow and and follow along um I hope hope we don't let you guys down that's the biggest thing okay a few other people emailed I'm sending those emails out right now as well okay again make sure you verify right away when you guys join I hope I might have to do a

(1:07:14) new let see okay so we're gonna have some newcomers in Discord guys please keep it the Discord uh uh friendly okay there's Shera okay I think that just capped out the invites for this one yeah and again the thing I always say is don't donate if you need your money you have better causes for it keep your money you don't need to donate to me it's not what we're doing this for if I were ever become wealthy all I would want to do is try to give back to people I'm obviously not very wealthy I mean

(1:07:52) I'm I'm well off but I'm not like extremely rich or anything like that okay guys I have to jump over to the um other one I'm going to ask them if I can live stream it if I don't record it um and I'll try to get a few more invites out before the top of the hour for people to join the Discord okay I'm going to probably have to create a new invite for the Discord uh because I think I only made it like 10 invites and I think we just used them all up okay so thank you guys I appreciate

(1:08:23) it um when you when you join make sure you verify right away and then introduce yourself in the introduction Channel and then you should be good to go if you do not verify right away the server will boot you out of Discord and then you'll have to wait for like I think like a day or something so yeah yeah Sean you are awesome appreciate it man yeah bill um I think you were the one who emailed me if you're in the Discord you can probably watch for free otherwise I'm going to see if they'll let me stream they probably won't but

(1:08:49) we'll see thanks guys I'll talk to you guys later um and otherwise well see you on the on um the uh muon thing guys if not then we will uh yeah Amanda you can invite people you have you have a mod capability Amanda so if you want to invite people go for it if you want to DM them you guys are cracking me up uh we will be streaming tomorrow again as well and we're also going to be on alien uh no we're going to be with diamond tomorrow on the Oppenheimer Ranch so we'll probably be streaming probably

(1:09:24) before that it's probably going to be an early stream tomorrow could be a late stream though

MH370x - Drone Video 12/18/23 - YouTube

Transcript:

(00:29) for yo what up let's not waste any time today full screen face oh need a haircut what up everybody hey Dorian hey vinc D Joe King you just saw UFO sweet dude sweet I've I haven't seen one I'd like to um let's close this there's a bunch of stuff to do I think I want to make a clip about why the plane didn't crash into the ocean I also have to fill out some report for uh muon presentation I'm doing that scammer apparently deleted

(01:39) their email address I filed a report with proton mail and they replied back saying that the user had already deleted their entire account guess they didn't want to get uh thrown in prison where's the muon thing I'll switch over my you in a second guys what was the muon thing a bunch of people want to do follow-up interviews but I I'm I'm booked man I'm getting tired of doing interviews man getting real tired of it actually not against them just it's just a lot where is the release where is

(02:59) it speaker release form I already already downloaded it uh what up what up I'm actually fill up wood yeah no oh yikes H I don't have I don't have Word I actually can't even fill this out if I just copy and paste it into Google dude sorry guys hold on and I have to probably go print this out

(04:02) tomorrow it's annoying there we go just do like this Ashton Forbes what's the date 12 18 I think we're going to post the video the Drone video just got to think of what kind of content we put around it what do we call our presentation MH370 conspiracy and what hey man how's it going yeah I like the alien addict guys

(05:07) that's why I go on them pretty frequently the Drone video the Drone video banner by the way guys I can't keep up with all the emails and messages and stuff that people are sending me it's way too much like not even like not even close we're going to post this video okay back just uh sending back this release

(06:15) for later we're going to trust muon OC to not screw us over we looking at the non-Radiant Barrier right there so let's see what do we do here uh nah maybe man hey gaps hey J hopefully you got what you

(07:21) needed yesterday for your daughter if not let me know okay let's look at a little bit of science I want to get some of these windows that I have here those balls flying around the plane are not balls there it's a radiating barrier it's a bubble so I think that's what we're going to make a video about because we haven't had a lot of people I think a lot of people aren't up to speed uh vinc man um this isn't personal but you asked me a lot to do a lot of Investigation for you

which you should

(08:17) just do yourself please don't ask me to provide you details of the investigation you guys can find them yourselves you can find them in my profile you can Google it yourself you have two hands right it's like I I don't have time to go do your homework that's just the reality of it I'm not trying to be mean but that's just the reality of the situation so if you want to know something you can just Google MH370 simulator and you can find it yourself um also yeah the fire evidence is good I don't know some people like just don't

(09:11) even read the article though like they don't even read the article they're like oh the fire couldn't last I'm like do you read the part where it says it can last for 1980 minutes like it's weird we're also not going to be streaming too late tonight I took a nap I'm if you tell I'm a little grouchy it's because I'm really tired or I was tired now I'm just like just woke up how how does this work oh there it is new project blah blah blah I don't care about features I think the moment I show this video

(10:13) it's going to copyright strike me but whatever yeah that's part of what I think we need to do is we need to if you guys want to instead of trying to look for drones that have the cameras we should look for drones that match the video did I already close it I think I did like you can see the nose of the Drone so we should just be able to match it to the nose of the Drone we should just be able to match this right you can tell it's got this little elongated piece here yeah cargo bays are fire rated that's why people are saying like oh the

(11:06) plane will the plane will burn up or whatever it's like the cargo Bayes literally have automated fire suppression and they're fire rated to protect from that and they have a special filter like people just have to read the article I posted that that's all they have to do uh mq1 C drone NOS it's really hard to tell which one it's definitely got the right shape is there a thing sticking out of the front of this oh there's a thing in the front of this one so maybe that one's maybe it's not

(11:56) this one CU it doesn't have the thing not going to spend too much time on this oh uh no I haven't what do I need memberships for thanks my channel what are the memberships for this one just looks just like like the other one so they have the same chassis oh boy they have the exact same chassis chases ches we can't actually tell the difference they actually look identical

(13:05) no one helped you out okay well I'll help you out um give me a second nobody helped you out huh how does this work boy okay Jim uh I just sent you

(14:21) \$50 hopefully that'll help out with your daughter Merry Christmas oh I don't I don't need regular monthly contributions thanks though um if you want to here I I'll give you guys if you guys want to help gem app I just I just donated to her so that she could get her daughter present it is uh if you care I don't want anyone to feel enti or like they have to but that's what her uh I think it's like cash app is I confirmed I looked at her name that she had sent in the email match that one

(15:19) right there careful because there's two there's one that's in all caps the one that's the correct ones not all caps I'm surprised they let people have ones that are that similar um okay let's do our drone video here yeah I don't need monthly donations I mean I don't even really need any donations but I appreciate it I also have to hook up somebody else who I owe as well

(16:47) I appreciate my channel I hear what you're saying man hear what you're saying if you're good at something never do it for free it's true uh okay let's read a little bit about Quantum batteries while I try to figure out what we're going to do here for uh this Twitter post we haven't posted the videos in a long time guys we haven't really posted videos in a long long time uh not going to look more into the the Facebook photo that looks like the pilot we got a lot of flak even for

(17:35) bringing that up I just don't really care where the plane went that much I mean I think it went to Diego Garcia all the evidence says it went there but it's just not that important so what we need to do chat is we need to discover room excuse me room temperature super conductivity that's what we need to do we need to figure it out it's definitely possible uh we don't need uh meta materials for it we just have to figure it out ourselves hard as that is weird as that is to say um Quantum batteries break

(18:21) causality what do you mean is a Quantum battery sounds like made up yeah they don't exist okay I don't like this paper this is trash hey Orbeez let me see what I was going to say about

(19:27) this I almost didn't stream tonight because I was pretty tired but then I woke up and got some food now I'm a little bit better I'm somewhat of a lithium ion battery expert uh I'm not going to try to make it bigger or smaller with to the story Austin I'll pull the chat over here I think that the reality is we just need to keep going out a standard Pace there's so much disinformation and so much personal attacks that I I don't I just going to keep going while people attack us but we just we can't try to

(20:08) force the situation there think there's a lot of podcasters well I mean the stock photo guy is like some kind of weirdo man some kind of super weirdo it like has no credibility whatsoever it's whole story makes no sense at all makes no sense why he'd be doing this uh it's obvious that he is invested in the **debunking** the situation which rules him out the website you know whatever textures.

(20:45) com like the owner is some kind of like Nut Job who uh you know is making like making prank videos and CGI videos instead of releasing their database uh instead of releasing their database logs you don't update uh specific rows in your database when you are doing like General updates that's not how that works so none of the story makes any sense related to clouds whatsoever clouds could not be found pre-dating the cloud pictures cannot be found predating the videos so that's the end of discussion the cloud **debunk** is technically

(21:23) dead I don't care who or why I was involved in the hoax but the reality is the people that are trying to **debunk** are willing to go so far as to commit criminal fraud criminal felony fraud so

uh unfortunately we can't take anything the **debunk**ers say uh at face value okay um how I spell turbulence

(22:27) wrong oh it's e so how is the A and the E's jeez my spelling is struggling it's hard when you have a microphone right in front of you uh there's rumors that the videos were

(23:36) uploaded earlier I think I saw it on the community chat but there's nothing conclusive nothing conclusive on that yeah I think we should do a video maybe I can just even do it right now and do a clip of it I could always just clip it right I think I want to do it a little more professionally though um I think we're going to do we need to do some explainer videos right so let's let's look up here I think we can delete the lithium battery stuff now we did that that's done we need a drone video explainer and we

(24:36) need the wi didn't crash into the into the ocean explainer including debris but like the amount of people have commented someone commented in all caps that I told you there was debris found I'm like what the hell uh yeah I mean that's why I **debunk**ed the debris like I I never said that there wasn't debris found I said the official search didn't find any debris which is it didn't which is impossible spent \$155 million didn't find one piece of debris let's see what we got going on sorry I'm

(25:41) going through my notes Here deleting old notes don't matter anymore oh yeah shutter what is shutter can someone explain this to me take photos like these May in three things aperture the a camera typically and stop shown as again we for the the camera dark the image would be if I was to take the shot now I'm going and keep your eye on the light meter once it stops flashing then you know you're

(26:45) getting close to The Perfect Exposure we're now looking at a shutter speed of 1 second two seconds doesn't make sense to me shutter speed it doesn't I don't get it um I could also mention the interference pattern but I don't think we need to mention that just got back from a Christmas concert with first to Fourth Graders awesome welcome back Jimmy welcome welcome welcome uh I think we want to dig into the scient scientific aspects let's let's pull a video up here on the side where can we

(27:26) put it where you guys can see it manually tracking shaking okay we see the orbs nonradiant barrier why did they do to a plane probably

(28:29) there's probably limitations to this technology guys most likely they do it to a plane because it's in the air right one thing I learned from watching a lot of anime is that no matter how powerful someone or something is there's always limitations always limitations yeah I can't tell if this is the Gorgon stair Wing mounted cameras on an mq1 C or if this is a mq9 they both look really similar so if you guys can help with that I think the best way I mean the problem is that both of them are look

(29:09) exactly the same both the drones look exactly the same my guess is you can't do this to

an object on the ground three orbs is the minimum number of orbs you need create a uh two-dimensional space and two-dimensional object and threedimensional space I mean if you only had two orbs then you can only make a line right but with three orbs you can make a triangle that's the answer how many orbs do you think there should be seven four five right uh we need to find the high frequency gravitational wave generator where did I put that

(30:26) one oh yeah yeah look at that it's just levitating it's funny oh I think I actually have it in here I think I already posted in here where's the salvator P science where is it oh there it is for

(31:59) yeah I mean I think what we're seeing here is the real deal it's not Annihilation because  $E=mc^2$  maybe more energy release but it's theoretically possible the phones are ringing afterwards so if the phones can't ring if the planes another dimension I don't think yeah the math says there's a fourth orb but the fourth orb would be somewhere else controlled motion of charged matter under rapid acceleration transits may lead to room temperature super conductivity huh that's the locki Martin

(33:26) thing for I don't think that's right oh wow thanks for Robert Russell yeah a lot of people can't fathom us

(34:33) making this and then once you figure out that we can that science can explain this then people come to realize that this is our technology even myself for for

(36:22) I don't want this to be too long okay let's see what else we can do here with this oops you got displacement of the orbs when it travels through the front and the back excuse me wow look at that orb being displaced there orb displaced in the front here h

(37:31) let's go back here and take a look at what I'll read the science with you guys yeah I think the speed of light is a constant to some degree I just don't think that the speed of light is the speed limit lithium ion batteries could be a catalyst we just don't have any evidence I don't know if quantum computers are real I think we just have to wait and find out I think if they weren't real people wouldn't be building so many of them though yeah if we have uh technology from non-human intelligence then could

(38:35) definitely explain what we see here I've dug into Lynn probably the most out of everything we found so much about Edward Lynn we even found his appeals man found everything there is defined I think the fact that Edward Lynn hasn't told me to stop talking about him is pretty damning also the time of his charges are extremely damning he had to be related to MH370 repeated pulse vibrations from transducers for

(40:55) for for for should we call it gravitational lens you

(42:25) I don't know if that's actually accurate as we there's no we can't find reeside and on guys we need to back away from this idea that alien zaap the plane I mean even if you believe aliens zaap the plane like you shouldn't say that out loud even if you believe that that's just my advice no one's going to take you seriously you have to ground your stuff in real in reality man and you

can believe whatever you want I'm just letting you know people are going to give you weird looks the science that we're talking

(43:18) about here isn't Magic we can actually figure it out yeah lensing is specifically with that for

(44:30) gravitational lens is not quite accurate maybe though so yeah like when you say like oh aliens did you're basically just saying like you think magic happened right like you got to you got to follow the evidence and Science and that's the reason why people make fun of us just say you think aliens zap the plane cuz like in their minds they're so simple-minded that they can't comprehend how science really works and they they're trying to belittle us as well of course maybe aliens did zap the plane

(45:15) right but we got to understand the science we have to be able to explain it this is already probably too long I'm not going to even add potential Mass reduction here

(47:08) think that's good guys I really hope aliens are real just for all of you guys I really do I think that life is everywhere in the universe and I think it would be weird if there aren't aliens out there somewhere if this technolog is real and there's no reason why they couldn't get to us should we uh bold a lot of stuff probably never

(48:55) for that seems good how's that how's that go why ads on the live stream I don't know I just have it turned on for uh monetization I think you can just hit like skip right doesn't make you actually watch them does it one Theory I don't like is uh future humans Theory it doesn't make any sense you can't break causality if you believe in string theory I guess maybe it can make sense but I'm actually not a big proponent of string theory I don't I don't like the idea that uh the past can

(49:59) be altered it just doesn't make a lot of sense to me maybe it's possible yeah you can just skip the ads it's just five seconds guys okay let's read through this together this is the original drone video pulled from the regon channel on the internet archive the operator of this of this drone is manually tracking the plane there's realistic camera shake from the turbulence in addition to it increasing naturally when the camera Zooms in as previously mentioned there's dynamic 3D Parallax in the clouds we can

(50:28) see the orbs in their non- radian barrier this is a field that acts like a bubble displacing the object inside of it from space time allowing for Mass reduction therefore they can ignore gravity gravitational waves can be produced by propagating electromagnetic radiation through strong magnetic fields generate gravity well in its path I think we get rid of this part we see these geodesics uh there's an extra comma thing there has dark cold lines in front of the orbs I think that's good the electrons of the plane are

(51:21) being driven from equum State and self organized into a matter wave which can allow solid state objects to achieve macroscopic Quantum coherence the orbs converge in the plane

triggering phase State change of the plane the orbs create an aouth and flatten due to the powerful electromagnetic field being generated that induces The Singularity the plane blurs indicating acceleration which leads to Super luminal speeds I think this is good what do you guys think seems good this is good so one thing two is the terminology

(52:20) is very important guys V fors terminology is very important you're probably not going to hear me refer to things as a wormhole or anymore but it's just a matter of terminology right we name things based on how we can explain them I also don't like the word teleportation because when we talk about teleportation then people are thinking Star Trek like every single time people are thinking Star Trek reality is we probably need to be calling it super luminal speeds faster than speed of light like people like I have literally

(52:56) people going How can there be debris if it's teleportation and I'm just looking at them thinking like what do you think the word teleportation means just like what what do people think the word teleportation means super luminal speeds superluminal means faster than the speed of light or the speed of light when an object moves from one place to the other there's nothing wrong with finding debris I I don't know how that's people are confused by that think this should be good achieving battle save paay

(53:40) Supremacy against all foes uh real person Jedi you're cracking me up I'm G to give you some laughs in the chat I like that like obviously Consciousness is something again I I don't care where the plane went like we can't we can't confirm where the plane went it's a good question but yeah don't pretend to have the qu answers although the answer here is that we know how the science Works we're starting to learn it okay I think they're good here okay guys here we go you guys go make it popular do your

(54:28) thing chat okay Dr this is kind of a late post so I don't think this one will take off like many others have but it's whatever it's worth for yeah we're really really really far

(55:57) ahead of the science game hey Dom uh most people can't understand this stuff to be real is the reality it's just it's too far Advanced for a lot of people it's too far Advanced for me early on Einstein's variable speed of light theory has to do with zero Mass I mean it's all relative as Einstein would say it's all relative yeah speed of entanglement should be instantaneous yeah we've already seen this but we we can't no one can pull the video up okay oh yeah no problem shy I think on

(57:19) one of the podcasts the podcast I did today uh I mentioned how I just I don't care about what people think of me or whatever like everybody so cares so much about what people think of them it's like all I care about is getting the answers thank you me going to give you a follow for that appreciate it yeah yeah I don't know what Jack Sara's deal is what he's got me blocked so I can't read what he says but dude is straight up grifter for sure or just a spook I don't really know he's literally

(58:05) just stealing people's work he's posting stuff about teleportation when he was trying to

hate on me what the hell how does that make any sense don't trust a single thing Jack Sur fatti says who has that mq9 footage someone can post for this guy I'm just I can't answer every single person in the world like gez man like it did wasn't it just like mq9 China drone video wasn't there some mq9 footage like just the other day there it is oh it's a Russian

(59:20) jet these guys are just so stupid I hate to be mean but it's getting to the point where like I just I don't know people are just there you guys Happy God internet's just terrible man okay I want to look at room temperature super connectivity a little bit and then I'm going to go to sleep early tonight in the next 30 minutes hopefully okay what's this somebody added Ashton well that's not

(1:00:24) me this isn't how it works guys let me guess this guy think yeah this is I think it was months ago I want to do room temperature super connectivity that's what I care about that's what we need to discover sure so I was watching parts of the Ross Kart Gary Nolan thing but Rosell Kart's either an idiot or just controlled by

(1:01:29) the government I don't know which one doesn't really matter which one Ross kohart I'm pretty sure has never once in his entire life revealed anything verifiable that's a pretty big red flag man like you don't go hey guys go look around chasing buried UFOs and Trump knows kind of stuff like that's not it's not what journalists do man journalists actually reveal stuff Ross kohart is more concerned about being a TV personality and making his making a career and making money selling books yeah Ross is probably on the

(1:02:22) federal payroll most likely on the federal pay payroll pretty much any big person who's on TV probably is on the federal payroll or they're being they're being controlled either directly or indirectly that's the sad reality of what we've started to discover with relation to this case is that you only keep this stuff quiet by controlling a lot of people you want people to not be able to uncover something yeah skinny Bob I think what we needed oh God all the the noses on all the drones look the same I'm not really sure

(1:03:04) how we're going to be able to prove which drone it is it's too difficult yeah the spinning heat signatures of the orbs so if you're interested in that check out Bob Greener interview I think I actually asked him problems is like three hours long I I really need to watch that again yep fundamental in in uh intive principle the enablement of microscopic Quantum coherence induced by controlled motion of charged matter under rapid acceleration transients uh yeah I think Ras colart I'm sure says stuff that

(1:03:43) is uh you know appealing to the masses for sure uh I mean I've been saying the disclosure bill is not going to be anything for months they're never going to give us disclosure guys just quote me on that they're not going to wheel out the alien spaceships they're not going to wheel out the alien bodies it's just not going to happen people want to believe that it will that's fine I doesn't bother me but just telling you this the implications of this are just too great The the rich people have too much

(1:04:18) to lose 4K drone video oh yeah I don't I don't know maybe it's a balloon maybe it's not a balloon seems pretty damn weird to me you should be very if I were you guys I would be very hesitant to the stuff that Think Tank puts out there I think you've seen how much he waffles on stuff right like posting videos going wow this is amazing and then five minutes later saying oh it's a balloon like is does not lend one's one to uh levels of credibility you should should stick to an opinion and form your opinion before

(1:04:57) you start trying to get people to give you clicks it's okay to be wrong and change your mind but dude changes his mind on literally everything think tank is flip floppy McGee like oh change my mind again change my mind again it's like dude why don't you you know investigate before you push everything out there superconducting materials they claim that it exhibits super conductivity at room temperature now did not turn out to be a super conduct this is it bugs me how they say it does turn out to be a room temperature conductor

(1:05:42) like this is just disinformation just disinformation we're literally staring at it floating yes I've thought about the temporal implications that's why you can't travel back in time guys there's no temporal implications I also don't think there's such a thing as future humans either because it does doesn't work you can't break causality man if I could break causality I'd be a billionaire and I'd control the planet actually probably not because that's not what I want from life but you

(1:06:19) get the point breaking causality just doesn't actually make sense moving forward in time is fine but moving forward in time is not the same as moving backwards in time okay where's the part that I want okay here we go this is the part we need to learn the electrons are free to move normally we think of electrons as being bound into their atomic orbitals sometimes the outer shell electrons are shared between atoms in molecular Bonds in conductors there there are either extra out of shell electrons or electron

(1:06:57) holes that can jump pretty freely between adjacent atoms and I think we're going to clip this when does he say this 230 I can't tell where the thing is oh there it is it's over the top their resistan flow of electr what the what is going on with this how do I make this like their resistan less flow of electricity has been exploited in some powerful ways like the super strong magnets used in MRIs particle

(1:08:00) accelerators and fusion plants and then there's the bizarre ability to levitate in magnetic fields but the broad use of superconductors is limited because they need to be called to extremely low temperatures to work 23 seconds but what if we could produce super conductivity at room temperature it would that's what's going on oh okay yeah this is what's going on here I see this is seconds how do I how I make this the heck guys how do I go to the right there we go two here it is is just a material in which some of

(1:09:08) the electrons are free to move normally we think of electrons as being bound into their atomic orbitals some sometimes in atoms in molecular Bonds in conductors there are either extra out of shell electrons or electron holes that can jump pretty freely between

adjacent atoms add a charge or voltage differential across the conductor and a stream of electric charge a current will flow in a regular conductor current doesn't flow completely freely the conduction electrons can interact with each other or with non-conducting layers

(1:09:47) of electrons all that bumping around manifests as heat atoms begin jiggling electrons move talking about here is that yeah so there's like when there's resistance it's because electrons can't flow through them but when you have a superconductor then there's no resistance the electrons are just flowing freely they're coupling this saps energy from the current and results in resistance in fact the hotter the material the higher the resistance because the random motion inhibits a nice ah so the the higher it is the more

(1:10:19) the flow of electrons neutrons moving around and cooling a conductor decreases resistance so it might seem reasonable to wonder how low resistance can get for example if you get to I'm learning VFX [Music] skills mq1 C with a gorgon stair wide area Airborne surveillance system yeah that could be that could be why you see this here I guess you're seeing the housing of the thing above it although this seems like one would be groundbased

(1:11:24) think we have to be less uh certain about our ideas this to me looks like something that's going to be staring downward oh this was 2011 though maybe maybe says it's too heavy to be flown on an mq1 C can't be an mq1 C with gorgon here it is too heavy there's your answer has to be either mq9 with the Gorgon stair or an mq1 C without the Gorgon stair jok King got this that's too long zero jiggling do get zero

(1:12:37) resistance the universe really satisfies our most simplistic extrapolations except in this case near zero resistance is possible although it's not for simple reasons we move this over here right here how do I export this it's not Spider-Man 2 uh super conductivity resistance export sweet exported open folder yeah damn we're editing stuff chat we're editing stuff okay how do I go back to this now super conducting materials

(1:13:43) SE can I start this over okay pull that over there superconductors can make things fly well can make them hover fast forward to 1933 see else we got mezer effects I guess this is how you make it go over to the right really happening here we can predict what'll happen to a superconductor inside a magnetic field if we know just where's the other part oh this part's pretty interesting no resistance the induced electric

(1:14:49) current can get strong enough to completely cancel out the initial magnetic field in fact all three electrons in the superconductor will quickly spiral along the magnetic field lines and sit upes of current at the surface persistent currents those little current Loops don't take any energy to maintain so where's the part where he shows how they make the field go around it yeah here you go conductor as being layered with electromagnets another way to think about this is the the magnetic field lines expelled from the superconductor

(1:15:26) pile up on the outside causing an intense magnetic pressure this effect is nicely described by the London equations figured out by the German Brothers this is the one I like right

here it these guys were able to explain the Meisner effect based on the Assumption of perfect conductivity without having any idea why superconductors have no resistance one other subtle assumption in the London Brothers theory is that the system should be in an equilibrium State they figured out how things should look after the electrons finish rearranging

(1:16:05) themselves into whatever final configuration of currents and magnetic fields were induced they took time out of more drone stuff tonight guys so the next Advance was made by putting time back in in particular by thinking about the transition into and out of the super conducting state that change is what we call a phase transition phase transition the equation so the next Advance was made by putting time back in in particular by thinking about the transition into and out of thinking about in particular by putting time

(1:17:00) back made by putting time back in in particular by thinking about the transition into and out of the superconducting state that change is what we call a phase transition closely related to the more familiar State transitions between solids liquids and gases this is **Russian** physicists valital Ginsburg and Lev landow realized that there are certain rules that all systems undergoing a phase transition have to obey even if we still don't know the actual nature of the post transition state so in 1950 still not knowing what

(1:17:35) caused superconductivity we got the Ginsburg landal Theory this new mathematical description of superconductivity predicted everything that the London Theory predicted but also some new weird stuff and this new way of looking at superconductors yielded another Nobel Prize shared between a few contributors to start with they predicted that there are two types of superconductors that behave very differently around the phase transition for regular states of matter the phase transition Point depends on both temperature and pressure water boils at

(1:18:08) a lower temperature on a Mountaintop but the phase transition Point into Super conductivity depends on temperature pressure and magnetic field these materials have to be below a certain critical temperature above a critical pressure and below a critical magnetic field the old London Theory allowed any amount of that it filled to be expelled by the superconductor but the new Ginsburg landal Theory said that if the field gets too strong then Super conductivity will break down and fair enough any material only has

(1:18:47) so I think we want to cut it right here conductor but the new Ginsburg land AI Theory said that if the field right here Theory allowed any the old London right there basically magnetic field to cut it delete clip so this is our clip of phase transition we'll we'll post these clips tomorrow so we got a phase transition

(1:19:53) clip it's pretty spicy see what else let's delete this pull this back down come on types of superc [Music] conductors this is flux pinning here another Nobel Prize impossible as the material is cooled down traveling electron set up these patterns of oscillations in the nuclei of the material's crystal

(1:20:58) lattice the electrons sort of ride these waves in pairs what we call Cooper pairs yeah

Cooper pairs electrons are of the fermion particle type which means no two electrons could occupy the same Quantum state that type is determined by the electron spin any half integer spin particle is a fermion so that covers spin half electrons but Cooper pairs typically have spins of 0 or 1 half plus half or half minus half which makes them bosons and bosons behave very differently to fermions any number of but this is where we want to cut it

(1:21:44) right here Quantum state so our material gets cold enough and these coherent oscillations allow Cooper pairs to form all of the Cooper pairs drop down to the lowest energy level now from there it should be possible to excite a Cooper pair back up to a higher energy State through some Collision but in a cold material collisions aren't energetic enough to allow that transition in quantum mechanics you can't excite a particle only halfway to a new energy state it is All or Nothing in the case of the superconductors it's

(1:22:32) nothing no excitations are possible so no collisions happen there is no resistance so finally we how superconduct Okay think that's no resistance cut it there Cooper pairs but Cooper pairs typically have spins of zero this is good I like this as well guys I'm learning how I'm a VFX expert guys when you think the corridor crew will sign me up now I think I have achieved Nico levels of uh VFX editing just call me Captain Peard we'll just we'll all name ourselves after uh Star Trek next Generation

(1:23:27) characters I'll be actually I'll be William Riker Dana L. Troy or what was her name I think that was her name I don't even remember Ian the loudness of the video is a little inconsequential it's just the balance is as high see is there anything after Cooper pairs Cooper pairs all this is where he starts talking about uh high temperature super conductivity and others soon managed to get the critical temperature up to 93 Kelvin this is probably that was a game changer because it meant that superconductivity could be produced using

(1:24:21) liquid nitrogen rather than liquid helium a much cheaper option that opened up the technology to industrial use bed no and Mueller got the Nobel for their demonstration of the newly emerging field of high temperature super conductivity and we've actually stopped counting the superconductor Nobel prizes and this wasn't even the last we've now managed to induce superconductivity in exotic Ceramics with temperatures as high as 133 Kelvin and and higher still for materials under extreme pressure I think this I don't

(1:24:57) know if there's anything else look here way colder than the room temperature super conductivity claimed by the recent result and so it still requires expensive and cumbersome cooling apparatus so is room temperature super conductivity okay that's it that's pretty good though don't save Wesley Crusher rude rude guys it contracts and squeezes applies pressure to itself you think the pressure is causing it the quantum coherence maybe okay I think that's going to be it for tonight though I'm going to go go to

(1:25:53) sleep uh but thanks for going out there can you see the plane again you want to watch again after we've I think sure we can watch it again after now that we've learned a little bit more about superconductivity right start to get a little bit more of uh understanding of what we're

looking at right so let's watch that again full screen oops well that's not good okay seven of nine over here Dax I'm data okay sure yeah we got everybody here so many inuendos so we can see our uh room temperature superconductors orbs here

(1:26:38) that are producing their field we can see them creating their geodesic using their high frequency gravitational wave generators um we see this drone manually scanning for the plane here and then we see it zoom in squeezing into that form entices electron movement into a pinned State huh now we see this happen now we watch it in super slowmo here we can see that this is what's causing the singularity to happen is when the orbs converge here this is where they're forc in the electrons to break free when the

(1:27:19) electrons are breaking free here they're Achi they're causing a phase trans which is causing super conductivity in the electrons around the plane think of the electrons around the plane as a field or as a uh yeah like a a gas of electrons or a field of electrons right and then they're Breaking Free that's what's causing the phase Singularity to occur uh they organize into a matter wave like instantly self cohere into a matter wave they get the CER pairs begin and this is why we see that low temperature as well that low

(1:27:50) temperature and pressure are what's causing potentially the electrons to break free here in the final moment I wonder if like right here in this final moment the flattening I think that we're seeing a very powerful gravitational field beginning form to form right here this is just wild I could watch this all day the flattening pretty wild yeah the red is heat I mean we're looking at a thermal see it gets cold though as well right excuse me in the final frame final frame it actually just gets cold you can

(1:28:37) see it turn all green right look how it's all green here except for a tiny bit of yellow right there where the engine is I wish we had like more frames imagine if we had any more frames I I think that the reason why it's cold as well is consistent with that super conductivity we were talking about causes it to cool down causes the electrons to break free causes the electrons to form that coherent matter wave like locked Martin's technology and then that's how the plane is now beginning to act like an elect like a

(1:29:12) atom itself with the matter wave of electrons flowing around it coherently H does kind of seem like a does kind of seem like a like Wormhole or portal though really does yeah the plane was never found yeah the plane shrinks as well slight amount of shrinkage at least from what we see visually right I don't think the plane is actually shrinking but right here the plane gets a little bit smaller in this Frame than the previous frame I have a picture of that as well I think it's better better when you see it side by side in the

(1:30:01) picture I probably should have posted this with the video here it is wait no this is the one where it turns backwards but sure this also works it's a little bit smaller in this one than it is in this one this is actually the one where you can see it kind of getting sucked backwards here's a couple more if you want to watch it getting sucked backwards like you can actually tell in this one that they overlaid the frames you can see that the tail of the plane right here seems like it's

getting sucked backwards everything's falling getting

(1:30:51) pulled backwards towards a common location here pretty wild yeah it's breaking the swinger limit we're going to probably have to look into breaking the swinger limit in the near in the upcoming days what it really means snapping shrimp attacks what the heck is this oh this is going to be cool the pistol shrimp what was that what is this whoa you see that can we slow that down oh look at that that it's able to move its hands so fast

(1:31:58) that it creates bubbles whoa whoa I don't want to get hit by that guys I wonder if this is similar to like when you crack a whip what did he just do is that a mantis thing is gross looking what is this this wait is he going to shoot at it that's neat Oh

(1:33:03) weird Super Punch Super Punch Yeah I watched the star and the jar stuff which is actually similar as well the star and the jar is really weird I mean we might as well watch it cuz I think we've already probably demonetized our our stream from watching all the other stuff I think this is it right that's not what I'm looking for that's not the star in the jar so luminence here it is this is pretty weird is it just sound like look at that

(1:34:10) create a miniature star and this is why this is important is because if size doesn't matter if size is irrelevant then this could be a star right it's just a small star yeah it'll burn you because it's hotter than the Sun and they're trying to measure how hot this gets in the middle this is how you test it on a smaller scale right here people have already done it this is just water and they put sound wave through it to the point where it creates this Soul luminescence take it easy PJ Mike I'm

(1:34:43) going to sleep in a minute as well and they're trying to measure the temperature on the inside where just you're literally looking at a little tiny miniature star look at that just I think through resonant frequency or something like that he mentions how he wants to measure the temperature on the inside he thinks it might be hot as a star on the inside it is just from sound waves right pretty wild man yeah SC see buddy like God man **debunkers** are just the worst people man you haven't answered all my

(1:35:27) questions that are nonsensical therefore I mean I'm not trying to make you believe man it's not my goal if somebody doesn't want to think it's real they're going to find a way to not believe it to be real it's called Uh confirmation bias all I can do is give you 13 pages of evidence that covers the science the papers the videos the flight path what it requires to be fake fact that dim crash into the ocean and then you'll still go I don't understand why the temperatures are the way it's like d

(1:36:02) okay man just handle something else then Size Doesn't Matter or does it or does it folks or does it I think we need to get this uh evidence out there to everybody as well guys I think we need to make this evidence available so this might have to be one of our priorities ities this might have to be one of our priorities let's get the evidence out there so that you guys can use it a little more uh correctly yep confirmation bias goes both ways that's why the **debunkers**

should make sure they apply it to

(1:36:44) themselves I think that we've got plenty of evidence here imagine if de bunkers had this much evidence for the videos being fake instead of just going oh but some six- day old account says they found cloud pictures that don't exist before 2016 or a one day old account says a VFX that doesn't match matches which is the one experiencing cognitive uh confirmation bias guys the same **debunkers** if we had a one- day old account that claimed the videos are real would would never believe them to be real right I agree make sure you're

(1:37:20) applying make sure you're not being a hypocrite make sure you're applying your same level scrutiny to your own beliefs like when a person says they don't want to be involved in the videos and then they're doing ask me anything about them does that uh does that sync up where how people who are photo manipulation experts are the ones claiming to have found cloud pictures that they remember from over 11 years ago when they've taken hundreds of thousands of pictures just apply your own level scrutiny to yourself

(1:37:49) man I think that's my biggest problem problem with the **debunkers** also the fact that they **scam**med me no we're not going to block anybody tonight let's not be vindictive but anyway uh I appreciate you guys tonight it was a good night I think we did uh yeah if I didn't think this was real I'd just move on right that's what that's the whole shebang right they want everybody else to move on so that nobody's talking about it uh anyway that's I think that's enough for evening guys I appreciate you guys being

(1:38:23) here check out the stream if you want to oh I just confirmed crypto I just confirm something with Thursday with uh Diamond of the Oppenheimer Ranch we could do it after that if you want so Bernie my thing with Oppenheimer yeah I don't know if it's going to work Thursday I'm booked uh at 8 o'clock Eastern on Thursday so we'll probably have to try to do it Friday if we can Bernie but anyway you can send me an email man I'm going to go to sleep and I'll check my emails in the morning

(1:38:54) thanks everybody have a good night

(01:08) what's up with chat what up full screen face rocking the shirt today um well it's going to be a weird one I've got I've got to do Pokemon Go stuff while I do this it's going to be kind of nerdy going to be kind of nerdy folks going to be kind of nerdy um what up hey everybody hey

darar hey Aaron Hey Joe how do you have that it's weird my boss at the agency said I have to watch this okay full screen um I want to steal the I think we're going to pull the Punjabi Batman clip that he posted because I want to go over

(02:02) um how we know it's oh jeez how we know it's 3D already um okay let's do this red is limit our access wait can I just right click on it I can that's easy okay uh drone video 3D uh parallax guess we don't need to worry about that then okay guys you want to watch it

(03:14) together that was my birth control alarm guys um let's see here where's the clip pretty tired tonight A this one's a little slower than the last one we played I think maybe it isn't slower huh May it's not slower what do you guys think what's up fam yeah well no well bye buddy uh just in case people don't know if you troll the chat that's your only chance you're gone there's no I don't put people on **timeout** I just St to block them you're free to move on and go do

(04:14) something else n Noel you're free to move on and live your life unencumbered by our quote unquote fake video or whatever you want to think hey thanks Danny appreciate you bud appreciate you yeah I was watching the AEL stuff I need to watch the uh Alien scientist thing a little bit more clearly though um I had a post prepared for this video that we were watching here imagine looking at this and thinking this is fake we're looking at 3D Parallax I mean we're looking at a drone actually flying underneath the the thing

(05:17) here and have to C manually track onto this plane I mean okay man if you think it's fake you think it's fake no one's going to stop you so don't be surprised when we haven't given up recap what do we oh um yeah give me a sec so the oh and there's a new new sub**reddit** now the other sub**reddit** already got banned only took two days they banned the the only moderator so somebody made another sub**reddit** and they added me as a moderator probably because they now know that it's going to get banned oh it's a private

(06:23) Community wait aren't I I'm part of the private Community though aren't I confused like aren't I the aren't I a moderator of this community oh it's three uncore orbs okay hold onore orbs there's no post yet on it new community let's see how long this one gets banned guys um hey Richard thanks for being here man appreciate it Richard so there's a new **Reddit** Community if you want to post here we'll see how long it gets banned till it gets banned um so I'm not going to Hash on this too

(07:18) much but I think I don't think I've posted it yet so we do now have proof that the person who **scam**med us or the group that **scam**med us is the **redditors** we do have proof now we do have proof and it's right here well that's not what I want to happen there's your proof right there Punjabi Batman made me do it I blocked the sender PB made me do it this is a reference to **Reddit** this was not a random **scam** uh unlike what the **redditors** claimed this was one of them this is one of the **debunk**ers here um Dam Danny you lost your chance

(08:02) Bud uh well the **redditors** **scam**med us for starters this is absolute proof right here so the reason why we um the reason why we won't be able to accept any more **debunks** no matter

what that originate on **Reddit** is because of the **redditors** that **scammed** us here using an elaborate uh social engineering **scam** so again **redditors** um you can feel free to apologize anytime you want since this was one you I I mean I know you're not I'm joking I know you're not going to apologize but you guys have radicalized

(08:37) people you've actually now committed a felony fraud so this is the reason why we can't listen to anything you say **redditors** committed felony fraud to social engineering a fake uh fake set of files for me for the sole purpose of trying to uh ridicule no this person they're not trying to throw this this is a joke this is a joke what this does is this proves that that the person that did this is some of the **debunkers** and **redditors** is what this proves not it proves that it's not a random Nigerian **scammer** or a random Indian **scammer** this

(09:15) is literally someone from **Reddit** probably a group of people from **Reddit** in fact if I had to guess so we're not going to harp on this I just want to make sure there's absolute proof that you guys see this yeah Punjabi Batman did not do this guys are you really this slow guys are you really this slow come on guys you can figure it out this this is a troll man he's talking about Punjabi Batman because he's a **debunker** who hates Punjabi Batman it's not that hard yes it's the **redditors** this is the

(09:46) **redditor** **debunker** nut jobs this this is absolute proof this was a group of people that pulled this this was this required planning and coordination so you again you can't anything you see on **Reddit** especially from the **debunker** sub**reddit** you need to be very careful yes they're extremely disgusting people and they've now committed felony fraud felony fraud now so they've they've escalated it to actual crimes felony crimes um so I don't want to hear any moral High Ground uh no the suicide note was

(10:29) actually real the suicide note was actually real guys the person who lied somebody lied about making the suicide note but they did not I I know they did not I'm looking at the username right now of the person that sent the suicide note this was let me make sure I mean honestly I don't know actually wait let me look here all their posts are gone I don't know it either way I have no idea I mean I can't confirm it one way or another I mean if somebody faked a suicide note that's like just up that's just

(11:30) that's like Beyond effed up man their profile said they were a veteran and they had a picture of their kid in their p in their thing huh yeah anyway we're going to move on with that you even if it's fake I even if the suicide thing was fake it's not something you joke about I mean that's messed up man it's like really messed up okay so real quick let's go back to this but that's the level of like just straight up demented people we're dealing with right like straight up demented where man where did I put

(12:28) it hell it is um okay carrying on I want to post this because it proves that this is a 3D video and you couldn't use 2D assets for it and that it matches our other one we're going to move on from all the garbage but uh you know I just need to make sure it's recorded for all time so that they can't claim later on the people we're dealing with are extremely disgusting really

just the worst subhumans on the planet Tony I'm not going to ban you I'm just

(13:34) going to put you in **timeout** for an hour uh 30 minutes apparently don't uh don't play like you're a mom in my chat no trolling no acting like you're a mom or a Karen just be a normal person I don't even like the term Karen it's pretty disrespectful also okay here we go yeah we're moving on relax guys we got work we got to do so I'm going to

(14:46) try to focus here guys I don't want to get too sidetracked actually I need coffee as well yeah I mean there's just like don't even just not even just the date look at what we're looking at here you think someone faked this Parallax 3D accurate Distortion accurate tracking accurate camera shake like okay who faked this I'm I'm I'm filling out the details of the video chill cordor crew could even recreate 5

(16:01) Seconds of it sorry guys I'm trying to do like two things I wants here h for

(17:32) dude I just did the verbally F I just filled people in with verbally guys I'm involved in Pokemons over here yeah if it's faked it's faked by the government guys that's really what it comes down to there's no random people fake this I'm I'm doing a drone clip here of Punjabi Batman and then I'll probably post the full drone video right after and we're going to do we're going to go over the matter wave as well there's also a new sub**reddit** a new new sub**reddit** the one from yesterday has

(18:33) already already been the moderator got banned and they were the only moderator so now there's no way no way to keep the other sub**reddit** alive anymore so they made a new new sub**reddit** I know this because they emailed me I'd show the email but I'm just gonna you guys are just going to believe me on this one they made me moderator of this one which I don't know if that's going to be a good thing or a bad thing uh a little con concerned maybe I'll get my **Reddit** account banned I mean if they ban my

(19:02) **Reddit** account it just furthers the case that **reddit**'s completely controlled so maybe they won't maybe they will who cares either way one sec guys sorry sh

(20:57) okay oops it's SP Parx WR two I's this is pretty

(22:00) good merry Christmas everybody there oh yeah I already said it's mird I already said it was

(23:20) mired sorry guys I'm involing my Pokemon happy FES of us for the rest of us okay that's good oh wait one more one more Pokemon to evolve time is running out I'm not even going to link to their sub**reddit** James shut the hell

(24:27) up imagine if you put one tenth of the scrutiny you put into things you refuse to believe into your into the idea that somebody found some Cloud VI cloud pictures randomly on an obscure website it's ridiculous man I can't the **debunkers** are just off the deep end man off the depend is not even good like I'm going have to buy like a weapon for personal protection that's

how nuts the **debunkers** have gotten it's gotten to the point where I actually have to freaking defend myself from potential Psychopaths these are the people that

(25:17) want to take the moral High Ground my God man I think this is good so many experts all of a sudden everywhere on **Reddit** and not just **Reddit** but everywhere yeah sure you're not man James you're from Chris Leo's Community which is the most toxic Community I've ever run into so come on man literally told Chris today that I like him I love him I think he's a good guy I think he's got the best in heart but I will not go back on his show because his community I mean not like he would ask me but his community is just the most

(26:11) toxic people I've ever run across he needs to like Wipe Out the moderators start over fresh and start Banning people that uh are just completely unhinged I mean I think he just doesn't care because he doesn't use his Discord but yeah yeah I don't really want to dig too much into the **Reddit** stuff but uh yeah it's the worst place ever um Punjabi Batman's the only one out there even trying to solve the mystery he's the only one out there I'd say like I like about one out of every five of his

(26:56) posts so some of them are just too there's not enough connection there for me oh wait someone mentioned the Chinese hackers thing can't believe this AMA dude okay I think I'm just going to post this okay here's the Drone clip you guys can have it go nuts folks what do we call this uh FX Twitter oh wait oops jeez uh drone clip okay I screwed up that yikes uh

(28:02) post all the updates in my discords okay next one we are going to do paid actor AMA guys can you imagine if I did an AMA can you imagine if I did an AMA how toxic it would be okay James I gained a little bit of respect for you gained a little bit of respect for you for leaving that server gained a little respect little bit of respect gained okay now what do we do about this PL coherent matter wave beam I'm trying to figure it out what do we do about this

(29:56) yeah any thoughts on how we should play off this why would you think step Greer would know Edward Lynn what what guys no they found the black boxes last night guys um Gemma do you want me to promote that thing you emailed me about hey Gem Gem apps do you want me to promote the thing you emailed me about can't tell I don't think Leto's Too Faced I just think that he cares a lot what people think generally it's a big problem in our

(31:03) society is people care more about being popular than being correct sorry I'm distracted at the moment okay it has some of your your private information in it though that's what I wanted to ask ahead of time find where the hell are my emails so Gema uh in lie of donating to me I would prefer if people would help out people in need man where my emails I close it you go to be kidding me apparently I closed it literally over here like looking up what kind of uh Firearms to produce to protect myself can't believe it's come

(31:56) to this um so I definitely prefer if people don't donate to me where is her thing oh here it is okay I'm going to uh blur out your name Gema since you put it in there uh wait let me make sure it's going to work correctly oh I mean I think you actually posted this publicly but I'm going

to go ahead and post it here anyway without your name since this is my stream okay guys uh Gap is uh looking for donations to help her daughter get a Christmas present so so yeah I didn't put your real name in

(33:00) there I blocked it out so if you guys in lie of donating to the investigation for the near future like today or whenever you were going to donate I would prefer if you guys would donate to gem apps cash app looks like here that she has on the screen um so don't donate to me today or in the near future instead go ahead and donate to gem app so she can get her daughter uh a present would appreciate that maybe I don't think she wants to buy her a Glock 19 but you know that would be nice the only reason why I've promoted

(33:40) uh this is because J apps has been here following us for a long time following the case and I care more about other people getting stuff I don't I don't really need it I want to help the needy so if you also want to help the needy you don't have to go overboard but you know this would I'm sure help her out yeah I I would not I would not promote it unless I knew that gem app was legit so there you go guys can do something nice for somebody you can help change their Christmas you know appreciate it um I may leave this over to the side

(34:24) for now just in case people don't see it or haven't written it down or something um let me see here make sure I'm not showing my DMs we're get on that just to be clear I I'm a Chris letto fan myself I like Chris just not really a fan of his community

(35:29) yeah I I think that trying to call me a grifter is one of the weirdest things considering how many real grifters there are in the UFO Community it's like people are out here like buy my book buy my other stuff and I'm like yeah I don't I don't I don't know man I just don't know okay so there you go Gap appreciate you I'm also donating to uh JK Philly fans doing a homeless thing we may promote that a little bit later yeah I think Chris just doesn't care about his community uh I actually don't think

(36:12) Greer is a grifter anymore I actually don't think Greer is a grifter anymore the reason why I don't think that anymore and I was buying into it before which I probably shouldn't have you know so respect to Dr Greer um i' I'm now thinking that he's a normal guy that has been uh attacked I mean we get called a grifter too right and I don't even collect money um but Dr GRE specifically said that yeah we're going to look at we're going to look at this I'll leave this up here for you guys to

(36:44) read um he said that he was they were doing crowdsourcing for their projects because that way they have control over it compared to it being shut down which is doesn't surprise me like yeah the government's going to shut down anything that they don't want out there now I don't know I don't really buy into a lot of the I don't buy into a lot of the the beu alien stuff it's a little too much for me man it's a little too much I shouldn't laugh I shouldn't laugh honestly I really

(37:13) shouldn't it's just a little much for me like I can only do I can only do so much I can

only absorb so much at the moment guys yeah it feels like uh Brave traveler they've run out of insults it's like everything's Griff Griff this Griff that it's like what about can I just like try to get the **truth** like man I just want the **truth** for the families is that is that okay apparently not Galactic Federation uh it was like he's like oh time travel or uh the speed of light's not fast enough yeah my dog was just

(38:02) she's actually man I almost want to take a picture she's on the blanket underneath the table over here looking so cute are you looking super cute Lulu yes she's just staring at me with her blue eyes um I lost my train of thought I lost my trade of thought oh yeah the beu thing beu thing was funny Ellie yeah the like oh speed of light's not fast enough but and we were in contact with Buu from Andromeda galaxy I'm like oh man why' you have to include that in there yeah some of the claims are just

(38:42) too much for me where it's like it's kind of the same scenario of like the videos where it's like I just wish there wasn't orbs in these videos right you got to like realize you're talking to people that aren't they're not ready for all this man you got to take it a little bit out of time man it's like the Grays and the reptilians it's like that's where you you start to lose me when you start talking about like the Elohim and the palladians like guys let's just start with advanced technology then

(39:07) let's work our way up to the various Spiritual Beings and different species of aliens and whatever right and again I say that as somebody who's like I'm I'm down to believe I just one step at a time man I actually would do a C5 event but I don't think I'm GNA pay \$ thousand dollar for it I just not really feeling like thousand for C5 or whatever they're charging although it's funny it didn't uh yeah Dave rosi is like my favorite person on the planet it's funny when uh Dr Greer

(39:58) called out Aaron Rogers I don't know was that public was that even public information he called out I gotta look it up yeah I don't think he even I don't even think that's public information dude he didn't that Aaron Rogers thing was not public information I just Googled uh you want another update what's been going on um let's see oh he did talk about it Selena Gomez as well geez man I know lizo lizo definitely and oh wait Demi levado I think Demi levado was the one uh let's see well I got a a suicide

(40:57) note that was pretty messed up now I actually don't know if it's real or not the person that was sent me the suicide note left the Discord they're not in the Discord anymore so if it was a **scam** that was like the most messed up thing ever their Discord profile had like veteran and all this stuff on it wait no wait they didn't leave the Discord it says Mutual server hold on what why are all their messages gone oh no they didn't leave the server what what how come I didn't find their messages did they change their

(41:55) name that's weird man huh oh maybe it's because I have streamer mode engaged oh I bet you that's what's wrong I bet you it's because I have streamer mode engaged why would they have deleted their message they haven't been online that's the weirdest part but yeah I got

a suicide message um I don't feel super comfortable showing it but I'm going to show it anyway just cuz people might think I'm fine or something I'm not going to show their name oh did everyone get the Gemma thing

(42:32) who wants to donate I'll show it one more time if you want to donate to gemma's daughter for Christmas instead of donating to me that would be awesome here you go here's your cash app thing if you have it I appreciate you guys can I have their spot dude that's dark dude that's dark you you you don't need to uh take somebody's spot was the don don burge's one from like a few weeks ago yeah it was garbage there's been a lot of low low rent um low rent low uh YouTubers who've

(43:22) been trying to leech off of our our situation I think Don Burgess was one of them somebody's mentioned his name before okay just in case if this is a **scam** then wow I mean I don't know I've been getting **scam**med a lot but this is this is pretty dark man if you want to invite to the Discord send me an email I'll get through them so if you do get an invite I want to be

(44:52) clear no trolling BS stuff we hold our community a pretty high standard um you need to introduce yourself when you join so this was the message I got last night while I was streaming I didn't see it until later on and then there's a followup as well a couple more messages pretty damn dark man pretty dark doesn't seem I mean I don't know anything could be a **scam** I suppose at this point I don't know why someone would **scam** a suicide note I mean this was somebody in my Discord this is not a random person this was

(45:30) someone in my Discord yeah the D burges guy is just some random clown guys he's just some loser not wasting my energy on losers okay yes this was extremely sad this note is extremely sad I was actually crying about this so I hope that this was not a joke this morning I mean it's heartfelt it's extremely sad this was somebody who I checked they had posted messages on my Discord I looked to see if I thought they might be a **scam**mer from the messages on their Discord uh no that was that was not somebody getting me to

(46:27) quit if anything they increased my resolve and told me I should never ever stop I looked at their messages on my Discord and they didn't have they didn't seem like a troll at all yeah they trolls would do something like that for sure but their messages on my Discord made me think that they're not a not a **scam**mer no I mean maybe but I can't be sure what's real anymore honestly I really can't it sucks people will go to the the lengths that they've gone to to try to discredit the case really does

(47:25) suck uh the time between those two messages was less than 10 minutes less than 10 minutes between those two messages yeah I I've heard I've I've never had gotten a suicide note but that one looks messed up next move is the matter wave now we're going to ignore all the it's matter wave of time okay okay

(49:02) oh there's Jeremy what's up Jeremy yeah check out this uh I'm gonna pin this actually

podcast I did with uh Dave Rossi is really good Dave Rossy is like my favorite person on the planet he's just like a super good guy probably one of the smartest people on the planet uh highly respect him for sure n Dolan hasn't said anything sorry guys only a few more Pokemons to do only a few more to

(50:19) do it's like the once in a year thing you do on in Pokemon where you have to like evolve your guys or something and I've waited until like the last 30 minutes to do it I haven't played this game in months but I don't want to lose miss out it's fear missing out guys fomo fomo Momos uh oh how do I do the candies for this guy give them candies guys how do you do this hold on Jesus the candies there we go guys I used to be really big in a Pokemon go I mean I know that's extremely embarrassing

(51:15) but sometimes you just got to tell it how it is man I think I'm pretty much done here okay so I yeah I mean if Dolan wants to reach out I'll probably hit him up jump on what do you mean jump on oh you wantan to you want to fill in on the stream uh I don't even know how to do it man I'm too tired to set up a zoom link or something something I need to get like um what uh Jeremy what do you use for streaming do you use uh which platform streamlabs or which one do you use I need to get something better than zoom zoom is awful

(52:11) man zoom's like the worst one I don't even know how what do I what do I do just go on zoom and let him talk how does that work I want to do this matter wave thing streamyard I got I probably got to switch over to streamyard uh we can probably do that in the future I'll try to get streamyard set up for the future it's just like I'm so bad at technology man just learning one thing at a time here one thing at a time okay I want to do another post about this I'm trying to figure out I I used to be disgusting at Pokemon

(53:06) like I was like one of the the community leaders but then it got to be too much like there people got too serious man it got to one of those points where like people are getting like angry at each other in real life like **redditors** like kind of scary kind of scary stuff yeah we'll do I'm going to get figure out how streamlab works and then we'll do something for sure in the future that way I can let people just jump in and take over my stream if necessary definitely wouldn't mind having you helped

(54:05) out okay the question here is what should I just post the matter beam uh should I post this or should I post this with the video I'm not sure yeah Gema actually I think that worked I think that fig fixed the camera I changed it to oh changed it to high temperature yeah my guys if you guys saw my Pokemon go list you'd you'd crap yourself I have like all the best Pokemon like all the best I used to raid like a lot a lot I've got a 100% Shadow Mewtwo yeah I I I hung out with like the most hardcore Pokemon go players there

(55:05) were like ones that would run like six different accounts yeah it was pretty wild you didn't miss anything or not much Haley welcome welcome to the stream uh and I've got a 100% shiny gudon as well I don't mess around I don't mess around when I do things I go hard at it I go hard um okay I think I'm almost done with this guys what do you think we should do here with

the matter beam wave should I just post the matter beam wave patent or should I post it in conjunction with the video show account I don't even know how

(55:50) to show my account let me let me look and see if I can figure it out oh wait what's this guy um people want to see my Pokemons dude should I show my Pokemons in the in the Stream I'll show my Pokemons in the Stream in a second since the people want to see I'm might get I might get myself banned though I have three different counts okay this first one of my janky oh you can't even see it wait can you yeah no it doesn't really work quality is too low on the screen like that

(56:56) seems good 100% Shadow Mewtwo seems good it's like literally the best Pokemon in the whole game uh okay that's enough nerd stuff let's do more nerd stuff got to catch them orbs I think we're just going to post this I think we're going to post it like this get him on the hunt for MH370 early on I was in a Discord and I I said something about MH370 and people had no idea what I was talking about and I was like yeah this this is the wrong crowd wrong crowd for that okay I I think I've upgraded all

(57:54) the guys hold on yeah okay I what about this yeah okay that's it that was good that was good folks I think I got everything I needed okay we evolved everybody we need good done with Pokemon for next year okay I think yeah I think we're definitely nerds in this in this uh stream right now we're science nerds we're gamer nerds we're all the above all of the

(59:15) above okay oh oh I remember what I was going to do start over start over Mulligan [Music] where's there it is let's listen to Bob Greener for some reason when I clip these the first little bit doesn't come across Einstein condensate a coherent matter at near absolute zero I learned from The loed Martin 2013 paper systems and methods for creating a coherent

(1:00:22) matter wave that using an electric discharge of electrons going into some 10 Micron cavities they could produce coherent matter weight using the Aron Hof bomb effect which allows for phase synchronization and energy exchange okay challenge is people think you can only make a Bose Einstein condensate a coherent matter at near absolute zero I learned from the locked Martin 2013 paper systems and methods for creating a coherent matter wave that using an electric discharge of electrons going into some 10 Micron cavities they could produce coherent

(1:01:02) matter weight using the rhof bomb effect just going to quote this I think I think the best way to go about this is just to quote it dude yeah he's legit which allows for phase synchronization and energy exchange okay challenge is people think you can only make a Bose Einstein condensate a coherent matter and near absolute zero I coherent matter at near absolute zero I learned kabose Einstein condensate a coherent matter at near absolute zero I learned from the locked

(1:02:06) Martin locked Martin 2013 paper systems and methods for creating coherent matter wave that using an electric discharge of electrons going into some 10 Micron cavities they could

produce coherent matter weight charge of electrons going into well we're going to use all this charge of electrons going into some 10 Micron cavity come

(1:03:17) on Micron yeah exactly this was published not even 10 years ago like 12 years ago they could produce coherent Micron cavities they could produce coherent matter weight using the Hof bomb effect which allows it's good enough I could say the air and half bomb in fact but I don't know how to spell it for phase synchronization actually we better put it in using the Aaron Hof I'll I'll fix the spelling an energy exchange bomb effect

(1:04:24) which allows for phase synchronization and energy exchange okay challenge is people think you can only make a Bose Einstein condensate or coherent matter at near absolute zero W using the iron Hof bomb effect which allows for phase synchronization and energy exchange okay challenge is people think you can only make a Bose Einstein condensate Ching that's the money quote right there uh how do you spell Aronoff bomb effects it's probably is it with the E Aaron Hof I was close I was really close man this is wild man what do you think

(1:05:40) about this uh Jeremy what do you think about this man this is this paper is like The Missing Link man coherent matter wave we're talking about phase synchronization the capability of creating Bose Einstein condensate at not absolute zero seems wild to me did I spell it wrong no I got it a h a r yeah Bose Z and content state is definitely involved this is where we were talking about turning fans into bans and back again I don't even know if we have to turn them into bans I think we can just act like bant this to me explains the

(1:06:22) videos this to me explains the videos so oh this is the publication damn it was a application was 2011 publication was 2013 yeah the Bob Greener stuff just went over my head is the only downside granted in

(1:07:33) 2016 oh the citations that's a good call where are the citations are they down at the bottom yeah this this is the this is what we need to get down to I think you my my community just wants to clap alien cheeks I know you guys I know you guys trying to clap those alien cheeks matter wave Quantum tunneling what the what if one of the legal events was MH370 I want to know what Jeremy thinks

(1:08:37) about this I asked Dave about this paper should I see what Dave said assuming it's appropriate he said he was very familiar with it he said he was very familiar with this paper don't let the aliens know don't let the aliens know we're trying to clap those cheeks for

(1:10:20) I think we reply right and then the replies we can put the paper what do you guys think I think we scroll to patent section citations 33 uh what if I just download PDF wait I don't see the citations here they are uh um who is that Amor Amore uh

(1:11:28) which one were you thinking which citation yeah this is this feels like catastrophic disclosure from locked Martin here you go Jeremy this patent is sketchy man this patent is sketchy as hell it's lockie freaking Martin how's this lockie Martin it's like man this is the missing

link man yeah dude I want to but now they have

(1:12:39) the patent Jeremy how they got a freaking patent on teleportation how are we supposed to do it while they own the patent these mfers dude I'm gonna upgrade this to 1080 yeah we're literally connecting the dots live guys this is just nuts I want to oh is this claims where is there not a better link for citations down here somewhere what's wrong with this crappy you know what might be a better way to do this maybe there's a better one what's this so I'll just

(1:13:50) Google definitely feels like a yatsi moment I'm expecting like Amar Oz o or Amar oav Amar oad or aads uh like name to show up or something like that what the oh there they are patent citations there they are there they are let's look at these real quick before we post this MIT 1988 matter wave Optical systems hello 1987 how long has this been out here cor semi-conductor drive device coherent particle beam 1994 how how old do we think this technology is electron wave coupling or decoupling to devices on Quantum

(1:14:54) interference devices what does this one on the right mean publication date 2002 device and Method from generating and manipulating coherent matter waves Max plank what the f matter wave resonant resonator system sorry I just want to read all of them dude this I think we found the missing link guys I think we found the missing link this

(1:15:58) is uh it doesn't find that one where how come I don't find that one oh is it a different one wow that one's interesting too using Tangled Quantum particles dude what the f man we literally have they liter have another one for Quantum entangled particles I mean you just add this up together and you create cre our orbs electric field guided particle accelerator Ain hom bomb

(1:17:09) sensor damn dude damn dude this is wild this is definitely this is definitely locky Martin I'm ready to call it if I just add up like a few of these things here we've got our orbs okay we're just posting this Aaron off bomb effect in the double slit experiment where do you see that James here you guys go yeah well now we have the scientific papers to back up our stuff

(1:18:34) coherent matter ways how's that taste the answer to figuring this out is definitely the science I think we might need to do a post just about locking Martin is the US patent office used to spread disinformation I certainly don't think so go ahead and try to patent something that's nonsense and see how far you get I'm going to close this tachon thing is this our paper oh it says this our paper what did someone say aof bosm effect on the double slit experiment does look just like the double slit

(1:19:51) experiment doesn't it I just don't understand the significance I'm not smart enough yet how's it going people o YouTube video o yeah James you're you're on fire right now James is it this one this one James yeah okay oh yes we're watching this I'm going to get some coffee before we watch this oh I'm excited guys I love science YouTube videos I love them love them okay good we're going to watch that uh I'm GNA let you guys read Maxwell while I go grab

coffee I'll be back in like I don't know

(1:20:49) less than 5 minutes oh actually you know what the coffee machine probably to warm up okay guys I'll be right back don't get too excited hey yeah I'm ready to solve the puzzle I

(1:25:04) think folks how do what's the I'm Peter Parker yeah this is my 3D uh Spider-Man thing goes from like spider venomized Spider-Man back to normal Spider-Man um okay yeah I'll take a look at I'll take a look at my things later and try to get you an invite yo so how does the game Clue work again how do you solve the puzzle and clue uh clue I want to solve the puzzle it was locked Martin with the orbs in the nicobar islands against MH370 folks let's watch this video and then let's solve the puzzle in this episode we will talk

(1:25:59) about pure quanton effects of electromagnetism the aranov Bon effect let's enjoy it unification is an important issue in physics basically the whole mod physics is always looking for unification unification in the past electricity and magnetism were considered as two separated forces ah thanks to the works of Maxwell genius Max later understood that both forces were just manifestation of a single interaction we call to the electromagnetic interaction inside electromagnetism or electrodynamics Chargers are able to

(1:26:43) generate magnetic Fs in this way it is also true that an electric current can generate magnetic fields which basically move forming circles around the electric current the mathematical formulation of this phenomena is represented through the Ampere law right hand rule additionally a charge moving along a region where there is a magnetic fi we also experience some Force perpendicular to its direction of motion and perpendicular to the lines of the magnetic fa this phenomena there is a magnetic fa a charge moving along a reg

(1:27:22) where there is a magnetic fi a charge moving along a radium where there is an electric electromagnetic field or magnetic field we also experience some Force perpendicular to its direction of motion and perpendicular to the lines of so it's perpendicular so this is the field motion of the magnet north to south so it's experiencing this Force like this Super Mario yeah Super Mario chat oh I want to show my mug off that's my room 2008 mug you guys see that room 2008 they sent me this I like when the people send me stuff

(1:28:25) says conspiracies paranormal unknown when's the alien adct guys going to send me something of the magnetic F this phenomena is represented mathematically through the Lawrence Force law know that if the charges in the middle of the magnetic fi region don't move then and they will not experience any magnetic force indeed magnetic forces are fa only when the charges are moving when there is a group of charges moving we then have a current in this way the currents also experience a magnetic force if there is a magnetic

(1:29:12) field crossing the cables transporting the current the electric motors for example and other engines use the lence force for transforming energy in kinetic energy which will be used for practical purposes this doesn't make sense to me it is also well known that there are positive and negative electric charges and that they attract each other when they have opposite sign

understand and they repel each other when they have the same sign I'm back guys I'm back I'm following again the representing this

(1:29:45) phenomenon is the colume law another inter where's mayosi phenomena from classical electrodynamics is the fact that a change in time of a magnetic flow generates an electric current or motion of charges this phenomena is known as the law of farad Faraday's law man this guy's accent's killing me though how many streams you guys do where they're just literally going through electric engineering uh don't think there's a lot par is fundamental for the operation of generators of alternate current

(1:30:26) basically the electricity arriving to our homes is a natural consequence of the fact that the generators transform the kinetic energy in electric energy finally for completing the scenario about classical electrodynamics we have to mention that accelity charges generate electromagnetic waves which move okay I can see this electromagnetic wave is going to use the right hand rule so that means it's going to be going this way I got you I'm with there move over the vacuum at the speed of light subsequently Einstein's theory of

(1:31:05) relativity confirmed that maxw theory was correct Einstein basically realized that the symmetries of maxw theory have to be translated to the laws of ordinary Dynamics besides this Einstein realized that one of the consequences of Relativity is that a magnetic fail in one frame of reference can perceive as an electric fail in another frame of reference and vice versa man this is the case I need somebody with a less harsh accent because both fails are just components of the same tensor felt from the perspective of a special

(1:31:45) relativity if we go now from classical electrodynamics to Quantum electrodynamics at the quantum level it has been demonstrated that the fundamental objects describing the dynamic of the particles inside the electromagnetic interaction are the potential Fields namely the vector potential which is related to the magnetic fi and the scalar potential which is connected to the electric fi both fields are just components of the same quadri Vector from the perspective electrodynamics and from the perspective of special

(1:32:24) relativity among all the effects perceived at the quantum level the don't know bone effect is one of the most important ones ever this guy's this guy's video like what is what year is this from like the 90s my guy he needs to upgrade it it is an effect that demonstrates that the potent I want I want more witches and and warlocks to teach us electrodynamics have a testable physical effect at the quantum regimes for understanding this aspect better imagine for a moment a standard double experiment with electrons if we

(1:33:06) send electrons one by one then the pattern of impacts over the screen behind the slits will generate the standard interference pattern observed in waves this means that each electron crosses both leaks simultaneously in principle now imagine that we put a solenoid between both leits as it appears on the figure okay if a current crosses it then a magnetic F will move through the center of the solenoid however all the regions surrounding the solenoid will be free of any magnetic felt yet still the magnetic potential

(1:33:51) generated in the magnetic  $F$  doesn't vanish over the same regions surrounding the solenoid then it comes out that there is an additional shift between the paths taken by the electrons when they cross the double slit this extra shift is a physical effect generated by the vector potential surrounding the solenoid in this way the Vector potential has some observable so I think he's saying if you put a solenoid there you can modify the way that the wave function operates physical effect in summary while at the classical

(1:34:38) level the potentials are just considered to be mathematical artifacts without any physical observable effect at the quantum level they are physical fields which generate testable and physical effects if you like this video please give share the link you could no way we need something that's a little bit more easy to understand nothing wrong with this one but we need like the simple yeah we need the simple version um may this one we want to make sure that your money

(1:35:42) this is the kind of one one we need here first 100,000 people use this link will get the free oh yeah no I don't want that during this video check out a free Tri of SK field represented by these field lines the compass this guy seems like he knows what he's talking about when you have the man bun that adds like a lot of credibility the man bun adds a lot point in this direction at this point in space and if we moved it to this point the compass would point in this direction and so on and so forth there is of course a lot more to

(1:36:12) magnetic field lines but this is a really nice basic visual description that we'll stick with now a magnetic field is often represented by the capital letter  $B$  and on top of this  $B$  we draw an arrow in order to tell us that we're working with what's known as a vector field we can assign a vector to every point in this space and each Vector represents something about the magnetic field itself the size of the vector tells us something about the strength of the magnetic field at that point in space and the direction tells

(1:36:39) us the direction of the magnetic field for a long time when physicist studied magnetism they treat magnetic field thick glasses these are some thick old glasses this guy might be able to see into outer space with these as very fundamental quantities of high importance the concept of magnetic fields very clearly and concisely described how magnets interact with each other after all every magnetic field must be generated by some sort of magnet as well and so the magnetic field  $B$  was included in a lot of mathematical

(1:37:07) equations that described magnetism however the magnetic field was not always the most mathematically convenient quantity to deal with for more complicated scenarios for example where the magnetic field is not quite as simple as the one we're dealing with here the magnetic field gets very complicated and very hairy very quickly instead it made a lot more sense to work with another closely related quantity that we look at in a second that made the mathematics a lot easier but essentially this quantity was defined just for convenience no

(1:37:36) other reason it's just to make the magnetic field simpler now the quantity that we're talking about is known as the magnetic Vector potential as I mentioned earlier it's meant to be defined

for mathematical convenience and the reason we is actually purely due to a mathematical trick take any Vector  $\mathbf{a}$  and we find what's known as the curl of this Vector  $\mathbf{a}$  doesn't really matter what curl actually means followed by finding the Divergence of the curl of this Vector  $\mathbf{a}$  then a mathematical identity tells us that this quantity must always be equal

(1:38:06) to zero again just to reiterate we don't really need to know the meaning of curl and Divergence all we need to know is that maths tells us that this quantity must always be zero for any Vector  $\mathbf{a}$  for more information on what this means and why this identity is true I've made a couple of videos discussing  $\mathbf{C}$  and I'll also leave some useful resources in the description below now interestingly one of Maxwell's equations which are the equations that with electromagnetism tells us that the Divergence of any magnetic field must

(1:38:35) always be zero I've also made a full video about this particular equation so check that out if you haven't seen it already but basically the point is that if our understanding of classical electromagnetism is correct then the Divergence of the magnetic field is always zero for any kind of magnetic field and the mathematical identity that we saw earlier the Divergence of the curl of any Vector must be equal to zero also can be used in this scenario and so at this point it might make sense for us to just Define  $\mathbf{B}$  the magnetic field as

(1:39:04) the stud  $\nabla$  for and specifically this quantity  $\mathbf{a}$  now we will call the magnetic Vector potential what we've done is Define any magnetic field  $\mathbf{b}$  as the curl off this other vector quantity the magnetic Vector potential because sometimes working with a magnetic vector potential is easier than working with a magnetic field now before we go any further I'd like to thank this video's sponsor skillshare skillshare we want to find out what the magnetic Vector potential is for a particular scenario that we happen to be studying where we

(1:39:36) only know the magnetic field  $\mathbf{B}$  then there is a family of different solutions all related to one another but there's no one right answer as to what  $\mathbf{a}$  is if we know what  $\mathbf{B}$  is the best analogy I can give here is that it's like differentiation versus integration if we have a function and we differentiate it then we get an exact answer because there's only one thing that this could differentiate too however let's say we didn't know what we're calling the original function and we want to find

(1:40:02) out what it is knowing this quantity when we integrate it it could be one of a set of solutions represented by this plus  $\mathbf{C}$  an even simpler but slightly further away analogy is that if we want to find the square of a particular numbers then we you know I have to do it there he is dude there he is dude just  $\nabla$  for dude dude he needs to clean up his beard a little bit he'd be ready to go dude I think this might be him he needs to wear some more eyes Shadow as well eyeliner if you get some eyeliner my dude's ready to

(1:40:50) go we know that there's only one possible solution but if we want to go the other way what it could be one of two different answers and similarly if we just know  $\mathbf{B}$  then we can find  $\mathbf{a}$  but  $\mathbf{a}$  can be one of a few different solutions whereas if we know  $\mathbf{a}$  then we know exactly what  $\mathbf{b}$  is all of this will become important later so let's keep that in mind basically like I've said using  $\mathbf{a}$  is

just for the mathematical convenience it's a mathematical trick it doesn't represent anything physical or correspond to anything real in our

(1:41:19) universe it is the magnetic field  $B$  that actually represents how magnets interact with each other that's the fundamental quantity and that is what scientists thought until the study of quantum mechanics revealed something rather interesting to understand what quantum mechanics has revealed to us let's first recall that when studying a Quantum system we most commonly deal with what's known as its wave function this can be thought of as a mathematical function that contains all of the information that we know about our system in this

(1:41:46) video we will be thinking about what happens when an electron passes close by to a coil of wire known as a solenoid specifically we'll be thinking about how the wave function of the electron is affected by the solenoid to understand why a coil of wire would affect an electron passing close by to it in the first place we should understand that when we pass a current through this coil of wire it generates its own magnetic field in practice this is the main purpose of a solenoid is to generate a magnetic field and importantly the

(1:42:14) magnetic field inside the coil of wire is very strong but the magnetic field outside is really quite weak now it's important to note that because the magnetic Vector potential relates to a magnetic field but is not the same thing as a magnetic field it is possible to have a region of space where the magnetic field has a value of zero there is no magnetic field in a region of space but the magnetic Vector potential isn't necessarily zero I mean why not right as long as the curl of  $A$  gives us the magnetic field which is essentially

(1:42:44) the thing we're most interested in doesn't really matter what  $A$  could be but the point is that there are different versions of  $A$  that satisfy  $\nabla \times A = B$  where  $B$  is equal to zero but  $A$  isn't necessarily zero and so here's the thing if we pass an electron through a region of space where the magnetic field  $B$  is zero then we'd expect nothing to happen to the electron and on the surface that's pretty much what we observe I mean the motion of the electron is not affected or anything like that but if we consider

(1:43:12) the electron's wave function then we see that when passing through this region of space when the magnetic field is essentially zero but the vector potential  $A$  is not zero the phase of the wave function actually changes not necessarily  $180^\circ$  phase that's it folks that's the answer they're able to change the wave function by manipulating the space that it goes through I wonder if this is a toroid is needed for this or not shift like we've shown here but the phase definitely changes and how much it

(1:43:40) changes depends exactly on what the value of  $A$  is in this region of space even though we thought  $A$  was just a theoretical construction the phase of a wave function has physical consequences as well as well we can actually measure how much the phase changes by looking at interference patterns of these electrons as they move close to our solenoid now it's worth me stressing that the specifics of phase change or interference patterns aren't really important again I'll leave some resources in the description below but

(1:44:06) the point I'm trying to make is that we see a real physical measurable change caused by the magnetic Vector potential and it has nothing to do with the original magnetic field  $B$  cuz so we can actually modify the phase yeah we can modify the the wave function so what you do then is you get all we then we're trying to do is get them in sync right once we get the waves I wonder if this is what the orbs are doing magnetic field strength in this region wonder what this is what the orbs are doing is this what the orbs are

(1:44:37) doing are they manipulating the wave functions of the electrons around the plane causing a phase shift huh or I imagine that's I don't I don't know they're doing something right this part maybe this is the part where they're doing it we don't see any visual change here though could it really just happen instantaneously like here could really happen that fast you can see the lines still in front of the orbs the lines are still in front of the orbs right here you see them this line is still in front of the

(1:45:36) orbs I think what do you guys think causing resonance yeah you think when they're spinning around it they're causing the plane to get into resonant frequency SC scalar inferiority yeah huh yeah the moment the planes converge is really interesting definitely feels like electro electric engineering on a play here and I wonder how like looking at this in real time it's crazy how fast it happens in real time just straight up

(1:46:40) gone in like under a second under a second just W man huh is it wait is it even possible to change Twitter into chronological order what do you mean they are they my Twitter is in chronological order and I don't think it's something I can control is that even something that's even possible guys you can you change your Twitter to chronological order is that even a thing pretty sure Twitter only works one way of space is zero what we've just discussed is known as the aharonov bom effect and what this effect is

(1:47:30) suggesting to us is that magnetic fields and similarly electric fields are not the fundamental quantity that we should be talking about really we should be thinking about their potentials whether that's the magnetic Vector potential or electric Scala potential because it looks like those are the things that relate to something physical in our universe something that causes a measurable change and also because knowing the vector potential in this case allows us to find exactly what the magnetic field is anyway so if we know a

(1:47:57) then we definitely know what  $B$  is it's a rather crazy idea something that we discovered as a bit of a trick ends up being an actually important quantity when we study it quantum mechanically and just to clarify in this video we could have been talking about the electric field and its potential rather than the magnetic field and the Magnetic Vector potential because the aov Bome effect deals with both kinds of field but the reason we talked about magnetic fields is because one form of the Haron of bone effect deals with an electron

(1:48:22) passing close by to a loop of wire and that particular experimental setup is the one that has shown actual evidence of the aronov B effect being real and with all of that being said I'm going to finish up here oh so this is why the electrons passing close to the electrical wire

that's what the um solenoid is huh yeah there's no well cone or signature what's uh Patrick Stewart got hello I'm Patrick Stewart Bo Patrick Stewart is did you know that right now over big thanks to skillshare for spons

(1:48:58) he was already old please do hit the thumbs up lines then there is of course a lot more to magnetic field lines but a vector to every point in this space and each Vector represents something about the magnetic field itself the size of the vector tells us something about the entity tells us that this quantity must always be equal to zero again just to reiterate we don't really need to know the meaning of we need to know is that maths tells us that this quantity must always be zero for any lifestyle all related and we

(1:49:28) want to then we know that there's only one possible solution but can't do everything tonight Sir Patrick Stewart how about vacuum per per Vivid zides oh this one's a little too long this one looks like somebody looks like a witch though might be riding backwards look at this one this one's only four minutes our ancestors [Music] out of three layers two layers of Reynolds Wrap which are good conductors and then one layer of plastic wrap in

(1:50:31) the middle which has a higher permittivity and so in order to make this work uh and make it a little bit more portable I rolled the whole thing up and so it looks like that if you look at a real uh capacitor it's going to be rolled up but it's essentially the same thing you have conductors on either side and then something insulated uh in the middle and so let's look at this video for just a second right now I'm hooking up my capacitor to a multimeter and you can see that there's no electric charge

(1:50:56) on the inside now I'm connecting it to a couple of batteries so I'm adding charge now to the capacitor and now I'm going to hook it up to the multimeter and you can see that the charge increased really quickly and so I had stored charge in just this little amount of rental drape and plastic wrap you can see it's kind of discharging now and so what is permittivity well if you have an electric field like this matter has an ability to resist that electric field and that resistance to an electric field is

(1:51:24) called its permittivity and so the permittivity of free space would be the resistance offered by just a vacuum between those two conducting plates and so that's a constant value that we can compare uh I haven't seen project unity's video what is it what do project un's recent video compare other materials to and so if we have other materials their permittivity is based on their structure so their atomic or molecular structure it's going to be variable and as we vary the permittivity we can make a capacitor that is more or

(1:51:56) less efficient and so um let's look at a real basic capacitor and that'll show you the elements of capacitance this is what they look like today so if we zoom in like this what you have are two conducting plates on either side so those are connected with wires and then in the middle we have a dielectric and so that's going to be an insulator it's something that we can resist that electric field forming in that capacitor and so if we look at basic free space permittivity so what we would have in the

(1:52:23) middle now is going to be just a vacuum and so what we do is uh as we hook it up to voltage you're going to see that there's an electric field across that Gap and that's the free space permittivity or sometimes we refer to it as the dielectric constant and so for a vacuum it's going to be one uh air is going to be slightly higher than one but it's going to be pretty close to one and so what happens when we add a dielectric in the middle when we add an insulator in the middle well that's going to be

(1:52:50) made of atoms and atoms are made up of protons and electrons and what happens is as that field moves through the dielectric what it does is it shifts the electrons so the electrons are actually being shifted in this case to the left and that creates an opposite field which cancels out that electric field and so if you add a dielectric between these two conducting plates what you're doing is resisting CA that electric field and what that does is build up a charge on either side that's how we're storing

(1:53:20) that energy and so we now see that we have a dielectric constant that's going to be higher than our constant which was one and so if we look at this pH simulation we have a capacitor here in the middle and so we're going to add a little bit of voltage to it and you can see that charge is starting to build up on both sides of that plate now if we take a dielectric and slide it in the middle well this dielectric is just free space and so you can see that it didn't change the capacitance but if I start to

(1:53:47) increase the permittivity watch what happens to the charge on the plates so now we're at two need to make these CC's go away and now we're at three and now we're at four you can see charges building up on the plate and each material Teflon 2.1 paper 3.5 glass 4.7 is going to have a different constant and if I pull that dielectric out then our capacitor drops down to zero and so did you learn that electric permittivity increases resistance in the electric field we can use it to make a Capac which could be made simply out of

(1:54:22) Reynolds Wrap and plastic wrap I hope so and I hope that was helpful guess that was helpful why was the video mirrored yeah project un paper reads like K Harris's speech okay well now you guys got me interested uh what's his is it YouTube is this him there's something Beyond it is this

(1:55:28) him yeah him ladies and gentlemen coders and debuggers Today We Gather in the sa Church of wow okay so for the past few days as some of you know because I put out a video recently I have been meticulously drilling down into a large language oh it's on X whatever here we go model which I'm now happy to say uh is cloud or Claude C I a u d e Claude 2.

(1:56:08) 1 the only reason I didn't want to say it at the beginning was because I was worried that I was potentially uh exploiting a window that I didn't want them to close up so that's why I was keeping it quiet but I've now finished my entire PDF document and one thing I'll just say off of the bat is that I sent this document off to Dr Salvatore pus and he responded to me this morning so I'm gonna salvator pus doesn't like to be referred to his doctor but okay oh alien scientists are podcast reviewing it okay I'd rather watch alien

(1:56:44) scientists version of this although get that up for you now just give me one second wow this thesis is the most profound cohesive Collective thought I have ever read dude you should try to publish this in the philosophy of Mind journal or even in the annals of the asentia foundation brackets Dr Bernardo castrop now real quick a fair amount of people have been tagging Bernardo castrop of the whole thing well he said he said a word that I can't in the process and I was sounding a bit frantic and I was very excited and I'm sure some of you

(1:57:24) were like H Jay slow down you know I'm not Jay's making AI papers but teleportation's too hard for him huh not 100% sure if this is this is viable on not and that's fair but I was losing myself in it intuitively I I felt that this was right and I was just getting it to you know go deeper and deeper and deeper anyway it's been at least for now validated in a pretty significant way with like major thumbs up and 10 out of 10 stars from salvatoris so we're getting somewhere with fact and

(1:57:59) formula explain philosophy and physics you know intuition and logic Project Unity this is what I've been kind of building towards I mean I didn't do this in any way on purpose this was completely sporadic random thought experiment into something that's now and uh this was also a a new iteration of the cloud language but um in the descript was going stop going to rip this shreds oh he was streaming an hour ago a man I want to do catastrophic disclosure with Jeremy where where is it the first 10

(1:59:07) minutes yeah I'm telling you he needs to do more of this stuff where is it the hell oh he didn't upload it is why he just he just was going live is this one what's up we are here catastrophic disclosure live Jeremy number five Jeremy needs to get a better camera though and I wanted to talk a little bit about um is this maximum quality it's me it's my fault um Eugene see to it within the hour oh here we go here so stay tuned for that and uh yeah good um nice nice job Jay on that and uh a nice job

(1:59:59) on some of the other you know other people that have put out some uh funny um comedy responses to this P pancake recipe that's a good one John Warner and um yeah we'll get into the what was royy Herbert saying I want to know what royy Herbert said uh royt why come he doesn't show up damn royy Herbert's getting more followers folks he's getting more followers I mean this guy probably should be getting followed by more people is this really what he looks like this looks like an AI generated picture uh Mr Herbert sir can we get

(2:00:59) your picture updated yeah and we need more than this this like a 10minute YouTube video we need to do a little bit more my man we got to work on a social media presence where was he post yeah you should probably follow him somehow this explains everything I haven't quite figured it out I just I just like everything he says where is the AI thing he was busy today why do I hear

(2:02:11) noises where's this thing about I don't know whatever let's go back to this physics of that hit the like button and um we're going to get uh Jay I'm going to get Jay on again sometime we were on a stream one of those Twitter spaces sometimes I see these guys on and I'll jump on

with them there it is it doesn't Lang large language models don't have an intuition or un a true understanding of what what they're doing they're just mashing words together based on the probability so if we look at the title

(2:02:48) though that's interesting think it's saying that there's um uh mystical traditions and science are related in some way but also uh it's it's really just a word salad so if we go down here oh word salad like just scroll through quickly um whatever it's this is just this like the disclaimer on uh on the uh what's the a open AI or whatever it's a disclaimer um but it looks like they've taken off a lot of the guard rails that open Ai and other AI models use so they didn't bother to do any of

(2:03:24) that so it's clear he prompted to take seeds and idea seed ideas and introduce and push them into extremes of abstraction and conceptual development yeah well I mean it's it's using a lot of like words but whatever I mean at the end of the day let's go down further so the thing is right there's not a lot of content here we can just what we really need is something that from AI is to AI to solve quantum gravity for us but you're not going to solve quantum gravity with AI by prompting it quite in this manner

(2:04:00) it's it's sort of a different yeah I mean we got we got a project here at WPI where we have a professor um dude uh Michael Peron can you put a turn a light on dude turn a light on if you're G to stream's my man's streaming in the dark over here he's streaming in the dark even even I have to turn the light on bro ring light's like only like \$15 just buy a ring light they're what they're doing is they're making human readable AI where they effectively they have a neural net and each layer of the

(2:04:34) neural net okay for the uh equation of motion for a pendulum but that uh that model was able to discover the equation of motion for a pendulum in about three minutes so that will do the job but neither this nor uh large language models are um artificial general intelligence neither of these does all of the things that a human mind does um they're they're very optimized for their various things that they're doing um but yeah they're they're not uh they're not capable of as many things as a person is

(2:05:15) or anyway let's go through this so yeah we're definitely on the ver Tech Superfluous wording could be Ang could also be lock Mar technology brain turn off when they hear like buzzword let's go down no because another post he programmed it to talk about quantum gravity implications which we already commented on the problems with you know this this type of AI solving quantum gravity um then only garbage in garbage out it'll just do whatever is on Wikipedia basically it'll take in whatever human girl it and'll just

(2:05:51) killing this paper right now just going to do whatever wikip maybe you'll get a few useful connections out of it so it is useful for uh rubber duct debugging as they say so sometimes a person will uh you just like type in a thing in a chat bot or whatever and it spits out some recombination of the words and that unlocks uh realization in your brain which that you can then use and that's where that's where uh large language models are helpful to science right

now is it just like uh jumbles up your uh it

(2:06:23) it puts noise into your own neural net which can help you figure out problems but like it's not going to find it on its own yet it's not there so let's keep going down well he has geopolymerization Dynamics which is kind of like a a funny funny colorful buzzword again for for the idea of that pies this is the idea that the pyramids right that whole French group that thinks that the pyramids are um ancient concrete well see here it's it's it's it's presupposing that if this is the case

(2:06:59) and then speculating uh accordingly so let's this is this is just the intro this is uh let's keep going yeah um I mean it's 60 something Pages it'll take forever otherwise uh so wait wait up I mean go go down each page yeah no I've already been through I want to talk about EV one you're right that's very so okay so go down one more page um so basically so this is a this is talking about a specific uh UFO encounter supposedly but it looks like it might also be jumbled with some other

(2:07:35) a bunch of different things in you different U UFO encounters don't go too fast now don't go too fast you're missing okay so cracking me up uh what's it uh yeah like is mixing Focus attention somebody with the microtube Quantum channels it's kind of like presupposing that this is the case right um although I mean Focus attention is useful as a skill um let's see mathematically yeah okay so look is is using a forier integral um that's not correct I think that might be a uh that might be a ll

(2:08:11) transform I would have to double check that that looks like a l transform and it also has an error there's two sets of parentheses around the T minus to which is unnecessary yeah and then Dynamic kernel that's just some function of T minus to so um I mean first off it's not a fora integral kernel second um it's it's assuming that like a 4A integral so a 4A series these already lost me not um 48 integrals are we talking about you want to use a WAV transform or a llas transform that's got

(2:08:52) it contains more information than a forier transform so for series is not going to be like that that's like that's like college level math that's not grad school level math like it's it's not going to be whatever the final theory of anything is it's not going to be related you you got you got wavelet transforms and you got llas transforms which contain more information than the 4A transform so it's just wrong on that point okay I think I've seen enough I don't know what's going with this

(2:09:24) Isotopes has right no but uh but what is this Quantum oscillated momentum is this like the potassium in your brain States in your microtubules you can't explain it may harmonic that's tubul 10 to the seven tubulin confirmation spinning not we got some tubulin confirmations going on here guys there's spanning lots of CNS neurons this is like Star Trek where they like would do write papers and then they would just like put in put in uh fancy sounding word cerent it's not coherent it's just not yeah well

(2:10:06) it's so Jay was reading this and he thought he had like the most profound thing here here out based off of some some papers not not based off of thinking about a paper just based off the words in the papers so let's see objective reduction equation I'm not familiar with their imedia work uh and then microtubule automa is assigning too much uh what would you call it yeah it's too much techno Babel here uh capability to so like the microtubules I think the underly principles probably fine they're

(2:10:44) not going to be the full aom combining it like this doesn't work and that's also just technobabble words so it's again it's overly flowery language it's yeah this comes from uh Kurt go just read there's there's an MH370 Wiki should we read the MH370 Wiki guys let's see what this thing has to say huh blah blah blah flight blah blah blah left radar search for the missing plane became the most expension in history we could probably like rewrite this whole Wikipedia lack of information in the

(2:11:27) days after disappearance prompted High criticism from the Chinese public yep it's true several pieces washed ashore in 2015 2016 many pieces you mean three pieces that's not even really confirmed this is this is wrong Wikipedia is awful second search again found nothing it's hard to find a plane it isn't at the bottom of the ocean relying mostly on iMat data well there's your problem where do they even mention a fire scenario they don't even mention a fire scenario here 221 kgs of lithium

(2:12:22) ion batteries just ignore that Jesus man God Wikipedia is bad that's it pilot suicide scenario is not even mentioned there you go they didn't disclose any [Music] information that's it what is it can't tell if it's raining outside or what's going on no there was no passwords found um any sufficiently advanced

(2:13:30) social engineering **scam** will will catch you especially if it's targeted how Malaysian government fell for a much less sophisticated social engineering **scam** I don't do Wikipedia guys it's candy Pettit one of my Bigg biggest haters on **Reddit** welcome this guy is completely obsessed with me it's funny how they don't mention pilot suicide in the scenarios is there's some pilot suicide stuff did they mention here did they mention the missing the phone calls from the ground to the plane I keep hearing tapping

(2:14:29) nois what is that oh wow yeah that's the wind hold on whoa oh wow stuff's getting blown over that's wild I was wondering what that was let's see what else they say here MH370 hit Tower number seven okay the radar junk is pretty much garbage although I do think that the

(2:15:32) plane went to panang I just the radar stuff doesn't even line up detected panang yep they really make it confusing here they just can't draw a graph or Draw on a map there it is here's the F they do have the telephone calls here they only called twice you got a plane that's I got a rogue 777 you only call twice walk me through that guys you got a pilot suicide scenario or hijacking scenario you only call it twice doesn't make any sense when you call again does the it probably doesn't mention the fake

(2:16:37) passengers there is literally zero evidence of pilot suicide literally none there's actually zero evidence of pilot suicide literally everyone stuck up for the pilot nobody official has said it's pilot suicide it's actually just a completely fabricated narrative you don't fly to the nearest airport when you're on a pilot suicide route you crash the plane the pilot suicide narrative is easily the dumbest one ever I even was on an interview with a uh with an actual pilot and she agreed that it just made

(2:17:17) no sense whatsoever ever changed the status of the flight to accident huh there it is there's the kotabaru all these people saw the plane man how burning object in the sky like what they think all these people just made up these all these sightings like come on man every single one of them saw the plane it's ridiculous man they didn't

(2:18:25) the phone calls didn't connects see it's spent three years no evidence literally no evidence from the official search after three years of searching wow \$155 million just for the underwater search 155 million God it's so

(2:19:38) embarrassing yeah the fire has got to be one of the most key discoveries yeah I've never read this page before I don't really read Wikipedia because it's garbage there's a reason why you're not allowed to recite Wikipedia in uh in even in school when I grew up you couldn't cite Wikipedia you had to actually do research which usually meant just clicking on these links and then going to the link because Wikipedia is editorialized hopefully people understand why Wikipedia is not good cuz you're taking editorialization these are

(2:20:17) not direct quotes right they're editorializing based on these references what your teachers want you to do is want you to figure it out yourself you click on the links and figure it out does it say 1840 was the loss of the signal anywhere no black boxes were covered no yeah wikipedias it's not that like of course if you Source stuff correctly it can be fine but the problem is that Wikipedia is just completely editorialized that's the main issue but you can dig into the sources sure sure that's what I used to

(2:21:07) do in school is I would just click the links and try to find the sources from there find other sources then quote those that's that's the difference between you doing your own search and taking someone else's word secondhand you know look at these search areas guys and I guarantee you they saw more than this this is probably just the underwater search areas cuz searching over out with the airplane you're going to see much bigger wide wider field than this yeah these look like these are maybe the water search

(2:21:52) areas like where do you think guys think the plane went you think it's in one of these little dots that they didn't search over here or something like come onit that wait was that only only three big planes have never had the black boxes recovered the last one was MH370 wow that's interesting what were the ones before that depleted uranium Cowboy what years were the ones before that I don't know how nobody thought that this could be how could nobody have thought that this was a lithium ion battery

(2:22:30) fire I'm pretty sure I'm the first person to bring that forward right is it did anyone else before us even speculate the lithium ion battery fire are we literally the first ones I I love how people try to claim that I stole work who came up with lithium ion battery fire who who uh found all the witnesses that match up who found Edward C Lyn right did **Reddit** find any of that no did anyone else in social media find that no yo kradon yeah I think we're ready to uh solve the puzzle it was locki Martin

(2:23:03) with their Quantum uh coherent matter wave orbs uh taking out MH370 in the nicobar islands Wikipedia makes a reference to it okay let's see underwater search I they searched everywhere man 2018 search ocean Infinity blah blah blah I met I emailed ocean Infinity months ago said you guys are never going to find a plane down there I wonder if they appreciated that yeah they want a credible leak here's one oh 2023 unless they're looking at Diego Garcia I don't think they're ever going to find the plane in the bottom of the

(2:24:07) ocean I think they they got the black boxes from uh af447 though yeah they got the black boxes from af447 where's battery fire the leading theory next to Pilot suicide is that true James welcome to the investigation James welcome this idea that like that the they were able to tell if the flapper on was up or down or whatever is total nonsense I don't believe that for a second parts from stabilizer other debris I mean Rolls-Royce literally had engine data Rolls-Royce literally had engine data wait how do Rolls-Royce not engine

(2:25:08) data not made public oh yeah we're we're going watch I'm going to probably go to sleep here in a minute I'm pretty tired tonight I keep staying up too late yeah this page oh we're not even close to the bottom oh we're going to have to skip down through some of this stuff oh JK Philly fan this is for you here BTO bfo oh here we go power Interruption unresponsive crew hypoxia what's the evidence of that so basically they say because this

(2:26:13) is all just being uh extrapolated based on the IMAF pings that's it there's no actual evidence of hypoxia they're just extrapolating that okay oh yeah here's this flap run analysis okay this is definitely oops yeah this is definitely what analysis you cannot an you can't figure this out from looking at a piece of debris here's here's the piece of debris this somehow they're able to figure out whe the fla Ron was extended or not come on no way what what is the actual evidence of

(2:27:10) it though they don't explain the evidence they just make claims here there's like no actual evidence they just say that they that that's what it means without actually explaining how it means that okay oh here's the passenger involvement there it is there's your passenger involvement stolen passports oneway tickets this doesn't add up at all either you don't fly to **China** to try to get to Amsterdam that's not how it works

(2:28:13) at all especially on St passwords you're just risking getting caught every country you go through you're risking and getting caught so they don't give any evidence for why they ruled them out they just say they ruled them out great this isn't sketchy at all what's chat GPT say honestly that's a good idea okay I thought I was just going to keep going

(2:29:18) there it is double slit experiment POS Einstein condensate interesting hey everybody crew

(2:30:27) involvement us officials believe this why would us officials say that so the United States government the [Music] one the ones who are implicated so this is a big cover up this is a big big cover up Chad gbt is going to say it's **debunked** by the corter crew wow this is a big cover up why is the US government is the one that said that I want to see a

(2:31:33) Quote us intelligence officials man this is bull snap dude this is BS I mean these are the people who have satellites that would have known exactly where it goes this is total total nonsense man why is my government so sketchy man I'm much if this was **China** I'd feel a lot better about exploit exposing this this just all leads the United States locked Martin I know where you're at yeah nobody from locked Martin's going to talk about this because they don't want to get killed lock Martin doesn't want to get

(2:32:14) killed we're probably going to have to Foy some people it was locked Martin I'm calling it locki Martin sensor systems and methods using entangled Quantum particles 2010 here's some more Aronoff bomb sensor 2013 systems of methods for generating coherent matter wave beams 2013 man lockie Martin man I want one that's called orbs building superconductive harmonic orbs okay sure sure sure crew involvement the home simulator thing has already been **debunked** it's just mh150 why were people saying does do

(2:33:02) people not know where jedha is I it would surprise me that Americans have no idea about geography they're like oh jetta's not even in the right direction what are you guys talking about dude mh150 to jeda oops images guys mh15 Z to Jetta it's literally the same route this is how they were trying to claim that this was a suicide route because it's the same general direction here but they forget can I zoom this in here this one look at this this is why they're trying to claim it's the same because it just goes in the same

(2:33:46) general direction right here this tiny part this is this is the literally the suicide route they were claiming matches even though it doesn't include anything from South **China** C over here they're like oh well this is the same one dude he's practicing route to Jetta man God this stuff is so dumb man hey fbw T E yo Bernie what's up sorry I saw your email I still haven't responded yet should literally have it open in the background right now what about oh I was busy today yeah there I had a bunch of stuff going on

(2:34:29) today I'm so tired I've got a bunch of requests too but maybe Thursday or Friday we could do this week wait what is that comment oh dude one of the funniest parts was when uh um I'm not even sure I want to say the word the r word on stream but Greer said that all the aliens want to R Us I guess I just have to say it he said he said everybody just wants uh aliens to come and rape us I was like jeez I was like boy that's dark clapping those alien cheeks oh here's the cargo so I saw something about the

(2:35:15) microchips there's a lithium ion batteries the B There It Is batteries were assembled

they don't mention that they didn't get scanned twice or they they missed two screenings there it is do not go through the screening there did not go through any additional inspections of qualum poor so yeah I mean dude come on what the hell man how is this not the thing they don't even mention how much there was 221 kog Thursday Bernie Thursday or Friday works whichever one you want to do I'll do Thursday or Friday with you guys this

(2:36:02) weekend if you or this week if you want I'm replying right now I just replied for you Bernie the bit right above the cargo this is total nonsense stuff it's like oh if we take a couple manually programed coordinates we just combine them together no unusual activities other than game game related flight simulations exactly there it is the waypoints he was literally scheduled to fly mh150 February 4th one day after this yeah we're talking about clapping alien cheeks over here I mean this how do they not come to the lithium ion

(2:37:06) battery conclusion here they even talk about this here what how do they have a whole section about it but nothing tying it to the plane yeah we just had a bunch of lithium ion batteries but no one's investigated it we're just going to conclude it out and they even have a whole part about how many other planes have burnt up from it there's another plane that crashed wait wait which one's this this is a different plane too another plane that burnt up UPS plane to

(2:38:10) Dubai it's like dude dude how are they not coming to the conclusion Friday evening yeah it should work that should work yeah let me know thanks man any single alien green chicks hit me up might might be getting honey potted guys might be getting honey potted but you know what it's all good it's all good decoy plane I don't think there's going to be a decoy plane mentioned I don't think there's a decoy plane it's too complicated it's like going to have another it's like going to have another

(2:39:04) 777 come flying in from where in the middle of the night where's it going to put flying in from not get detected it's just too complicated so that's it huh just nothing about the lithium battery there's like yeah we got a whole bunch of lithium ion batteries that weren't scanned but you know not going to consider that anything aftermath financial troubles blah blah blah compensation so I already know it's 50,000 each this they did definitely not get this nothing thing I found says they got

(2:40:01) 175,000 maybe they did get paid so maybe there was a separate a different payment though here an American Court could be expected upwards of 8 to 10 million look at this 8 to 10 million is what was expected from an American Court they got 30,000 does he even mention this does he even mention Kenji Brown Jackson there it is that's \$5,000 in Comfort money that's nothing dude wow passengers got screwed dude or the familes got

(2:41:12) screwed what is going on outside so there was four elt transponders that just didn't go off how does that happen none of this story makes any official sense purple skin Ellie purple skin yeah I want a telepathic green alien as well clapping cheeks something about clapping cheeks just cracks me up every time they're like hey guys we're going to give you a a comfort payment

of a few thousand. Jesus is bad, it's nothing. Flight recorders, yeah, we wouldn't find any, no black boxes found, that's it, huh, that's

(2:42:11) it just yikes, guys, okay, this is Wikipedia, page, someone needs to update the fire scenario part of this Wikipedia page, anyone out there wants to update the Fire part of the Wikipedia page, you guys should update it to say Ashton 408 says that the most likely scenario is 221 kilograms of lithium ion battery fires supported by 19 witnesses, here we go, here we go, there it is, dude, I think there's like a tornado going on

(2:43:14) outside, I don't, I don't update Wikipedia pages, I spend \$5,000 on raw files every week, true, true, very true, guys, I think people's like next door, like, stuff is blowing around there, it is high density packages of lithium ion batteries and cells not to be transported at cargo passengers on airplanes until such time as methods of transfer are established and followed, wow, we might, we got a new article, right here, guys, we got a new piece, not for tonight, probably, I'm, I'm tired for tomorrow, though, maybe, did we ever do the calls from NC

(2:44:23) boy, yeah, we did, we did, we did the calls, we did the phone calls, go on, hacker, man, get your hacker, man's, going, tornadoes in December, seems kind of weird, hey, uh, Candy, Pet, could you get the **Reddit** people to stop signing me up for random stuff on, um, using my email account, that'd be cool, that'd be cool, they signed me up for like 50 fake things, I just deleted them, but it's kind

(2:45:28) of annoying, it's like, like, when, like, a mosquito, B, too, it's pretty annoying, there we go, that's what we need, wait, what, why would the duration of the flight and whether or not it's flying over water matter, guys, well, it was worth, it was worth

(2:46:34) asking anyway, candy, P, it, yeah, I like the investigating part as well, I keep, we keep finding more stuff as well, um, if you think, just, find any evidence on how it could be suicide, just find any evidence, there's literally no evidence of suicide, none at all, just start with this, go, look up the German Wings incident in 2015 and find out how long it took for the guy to lock out the cockpit before he crashed the plane, it was 9 minutes, suicide narratives, you usually crash into something you don't go on Joy rides

(2:47:20) for eight hours, that's not how suicide narratives work, even in, uh, even on 911, which I don't know if you guys are too young or not, but those planes, like, crashed into the buildings within, like, uh, 15 minutes or something like that, like, they don't, you don't go on Long Joy rides and UA93, when they fought back, they caused the plane to crash really quickly, as well, the Ping data is basically, you guys want to look at the Ping data, I was showing somebody the Ping data earlier today, people should actually go look at

(2:47:54) the Ping data, cuz it doesn't add up, here, I'll show it to you, guys, here's the Ping data, guys, so let's just start here, this plan hasn't taken off yet, it's 1606, look at the Ping data, I'm just going to let it all play out, I'm just, this is a video of me scrolling through the Ping data, showing the time 1606, it's, uh, still loading, it's on the runway somewhere, okay, let's just, let's just look at

the Ping data together because I think like here we go so now it's on the

(2:48:31) runway getting ready to take off at 16:30 it's backed away from the gate I think the number of people that have actually looked at the Ping data is like a handful in the whole world okay look at I mean just look at the data look at how many rows we're scrolling through here hundreds of rows if not dozens if not hundreds okay so the plane's taking off at 1642 it's taking off right now planes taking off 1642 here's another ping 1655 here's another ping 1656 1706 1707 there's a couple weird rows there but

(2:49:03) you know nothing big 1707 plane goes okay so plane goes dark at 179 so now we're already at 1803 here so the plane's already past panang at this point so plane's gone dark it's past panang it's 1805 1825 1828 now look at this what the f what the heck's going on here 1839 boom zeros blank rows look at this what 1839 hey guess what guess what time this is oh it's the time where our videos happen look at this does this look normal to you guys does this look normal all of a sudden just blank rows

(2:49:50) and just zeros for P for at least a page multiple Pages look at this one ping here everything else is just zeros nobody can tell me this is normal I don't care how many times Victor yells this is normal at me without explaining it this I do databases I work with relational databases which are basically just Excel spreadsheets no chance this is normal all of a sudden then guess what well we look down here now what now the day the time comes back 1941 2041 2141 here's five hours of data right here folks five

(2:50:31) hours of data right here where I'm circling 10 total rows we just went through what two hours and it was like about 200 300 rows then it just goes to zeros and then now it's just and you can see this pattern 104 4 10 4 10 4 10 4 I could have just copy and pasted this into here the Ping data is sketchy as hell man I can't believe nobody looked into this before I looked into this look at this this is either manipulated or I don't know what's going on here something is not right here though 184 1839 1840 something's

(2:51:09) wrong something's definitely wrong it's 10 total rows so just and the video makes it I think is better but when you look at here's the individual screenshots as well so I just I mean it goes as you guys saw it goes on for a while on this one and then this is where the 10 hours this is five hours of pings right here five hours of pings 10 total rows this is supposedly when it's in the South Indian Ocean does that look normal to you doesn't look normal to me that's the problem is everything's

(2:51:45) based on these pings and the pings are sketchy as heck so hopefully that answers the question this is why we can't and in order to make for those pings to make any sense they had to rule out 19 Witnesses so would you rather look at that data or you rather look at 19 witnesses to me 19 W humans is more credible than 10 sketchy rows of data and about two dozen rows of zeros and blanks it's funny because when people they when they talk about the ping data they delete all of that other stuff they don't look at all that the zeros and the

(2:52:24) uh and the empty rows they just ignore it entirely this is the difference between listening to what you get told on TV and doing the investigation yourself yeah you can't ping what's not there Governor you got it ghost you figured it out pretty weird man some people argue that they manipulate the Satellite computer yes and the reason for that as well is that the the satellites never ping to p p satellite so the I satellite that we were looking at there sorry about that is over the Indian Ocean but the P satellites over Japan in the

(2:53:01) Pacific even though the plane was going towards the P satellite it never pings the P satellite for the duration of the flight the reason why this is important is because it makes it impossible to track the plane it's very weird the biggest problem is the iMat data when it was released like it wasn't released for months they had plenty of time to manipulate the data plenty of time one guy even was killed we were going to look into that or he died under mysterious circumstances I don't know that he was

(2:53:31) killed nobody can really explain the difference between the P Channel c channel and R Channel stuff to me candy pedit Victor uses a lot of like just technical mumbo jumbo jargon that doesn't make any sense no matter how you look at it though the zeros and the blank rows make no sense there's something that happened at 1839 1840 and coincidentally enough and it's not like I looked at that ahead of time like I looked at that after we were after we were like 1840 we had the satellite at 1840 like I'll show the

(2:54:07) satellite just to get people up to speed on some of the stuff cuz not everybody's been like following along the investigation early on we thought this is the South Indian Ocean over here and you can see it's like 18:30 here this this satellite was here for about 15 minutes on the south Indian Ocean and we're like how does the plane get here like does it teleport twice and then we figure out it has to be the northern coordinates which was nicobar Island and then we're like oh well just fast forward the time it's like oh actually

(2:54:34) it's staring down right over here pulling the data that it needs for the cber system at well look 1839 it's like this is the exact time like how can this is why I'm like I'm not afraid of a courtroom man I show jurors this and go 1839 and match it up with the sketchy data it's like I I'm pretty sure I can convince a juror I'm pretty sure I can convince an entire jury like well look guys 1839 52 1839 zeros staring at the plane here we are this this is what I'll show the jury I'm just going to pull this up I'm going

(2:55:10) to show the zeros and then I'm just going to pull up video of the plane I'm just going to be like well what do we think happened I'm like how about this is what happened this is what happened 1839 feels like we're staring down this is this is what happened it's like yeah it's hard to believe but I mean there's the there's the ersat data I don't know man all everything just lines up accidentally it's like every everything just lines up and people want to say that I have like confirmation bias no

(2:55:56) it's just called way too much evidence that lines up and a witness who's there it's like damn man just has to be a battery fire the reason why I to they have to cover up the battery

fires everybody knows that in a battery fire there's no chance that the plane goes to the South Indian Ocean it's not going to last for eight hours it's actually like almost unbelievable it even lasts for 1 hour and 20 minutes like even lasting for 1 hour and 20 minutes is a pretty big miracle but it's it's possible It's just

(2:56:37) tough like has to the fire would have to be contained and they would have to be actively battling it like persistently persist consistently actively battling it it was not designated as the dangerous goods shipment not designated as dangerous goods 221 kgr did not go undergo safety checks dude how is this not the leading theory where did that just go how did this how is this not the leading Theory yeah we're going to do another follow up on the lithium ion batteries tomorrow it's just it's wild man yeah I'm going to play the other

(2:57:36) clip my other favorite clip real quick for you guys also here here you go guys you hey having a nice day in the beach very bad for these beach goers what happens when you try to land a plane in the ocean are you ready for it here you go this is what happens look at this plane look at the wings go ripping off the moment this plane hits lot the engine just ripped off and went to shreds there's going to be bodies everywhere that's a controlled descent controlled descent these people are all dead I have not looked into the neutrino

(2:58:33) detector in Antarctica but it is the Antarctica situation is very sketchy the Antarctica situation is very weird how no one's allowed to go there JK Philly fan did a crazy amount of work on the B the ion batteries and the atsp report watching The V the pictures of it it's these things look so sketchy look at this the Assembly of the batteries were packaged into individual boxes two of the boxes were then put side by side into brown box carrying standard international warning this is they just stacked all

(2:59:15) the batteries on top of each other and then they just put the brown boxes into a larger box and then and then they just put them on wooden pallets dude this is this is super super dangerous so dangerous man how do we not find this article earlier 47 487 lbs total weight of the batteries yeah there he goes look at this guys Bingo yatsi folks yatsi this article is amazing how do we not find this article before thermal runaway there it is okay yeah this is this is what we needed guys this is the article we needed we're going to need to pull those

(3:00:11) pictures back up yeah we might have to be looking into neutrino detectors I also want to know more about some people need to spill the beans on Diego Garcia this Diego Garcia base stinks man yeah that's safe there like this is the sketchiest I cannot believe 487 pounds of batteries that were just stacked up together in wooden pallets this is just the worst possible this is not safe this is not safe at all no insulation from protecting what there's no insulation to prevent protect prevent this from happening yeah

(3:00:58) this is definitely it guys I'm 100% sure I am 100% sure this is a lithium ion battery fire it's actually ridiculous that this was ignored yeah I mean the whole batteries would have just lit up man this is what uh Mike McKay saw you saw the batteries start on fire a whole stack of batteries dude look at this while being accepted from the majority of D danger they literally

didn't have them ex um they had them Exempted from dangerous good Provisions this is like if you just put bombs on the plane and we're like nah

(3:01:57) those aren't dangerous we're all good they'll be fine honestly I'd feel more comfortable with bombs on my plane than I would with these batteries at least bombs aren't probably just going to blow up these batteries are just ticking like literally ticking time bombs ready to blow up yeah don't please don't put any batteries in the cargo please don't put any batteries in the cargo don't put them in your check bags do not put lithium ion batteries in your checked bags there's nobody down there

(3:02:29) watching how did this get dismissed wait it was divided into three pallets two were in the forward cargo bay how come I it's not highlighting damn guys we might have to make another post I'm going to save this next post for tomorrow morning I'm going to save this post for tomorrow morning and then tomorrow we'll do more science but I'm going to this is this is too wild oh there it is there it is the for it was in the forward car Bay man took out the electronics Bay that's the problem there it

(3:03:19) is the forward one's directly behind what's the cerebral cortex of the 777 the main elect equipment center of the electronics Bay booya that's what we needed uh Motorola made these batteries and guess where freescale semiconductors broke off of in 2004 Motorola Motorola pallets there they are two side by side pallets oh my goodness oh my goodness man this is how do we not find this JK Philly fan how do we not find this article before dude how do we not find this article before Oh there's even a

(3:04:12) picture oh my God look at this look at this so this just ex ignites right here huh and then it takes out the electronics Bay and then the smoke is going through the air conditioning system and then it's coming out through the air conditioning ex exhaust ports here feels very very likely yeah we might have to make a **Reddit** post yeah this I think this line right here that doesn't have a thing is the this is like the electronics Bay right here so this would have exploded somehow damaged this I mean this is like two

(3:04:59) pallets of them dude there is something going on outside the wind is like scary outside right now H let's look at the the videos again again guys we're in fullon investigation right now yeah we got a new **Reddit** we're going to post to we're going to see it we're gonna see if it gets banned in under 24 hours we're I mean I'm going to post it on on Twitter first don't get me wrong we're we're checking to see how long it takes us to get permanently banned on **Reddit** somebody who made another

(3:05:42) sub**reddit** already got their main account band or whatever account they made for it I mean this right here is the lithium battery smoke the reason why this shows up is because it's not smoking your barbecue ribs this is smoke from a toxic lithium ion battery fire that's why we can see it let's look at it in the full thermal so you see it here I mean look at how clear this shows up this smoke here and it's hard it looks like on this from this perspective it's coming from the engines but when you get closer you

(3:06:15) can tell it's clearly not coming from the engines it's coming from the belly of the plane the shaking is natural as well the shake here ISC and you see how much more it shakes when they zoom in as well you can tell from this view here that this smoke right here is not coming from this engine it's it's up a little bit higher the smoke here what's happening is coming out of these AC exhaust ports here and then it's wrapping around the plane to the side of the plane it's like coming up here and

(3:06:49) wrapping the plane and then pushing out the back creating two lines one on each side the shake is natural too like what did they build in a shake into their fake video you can see the orb here is being naturally distorted as it goes through this uh smoke here as well how can this not be smoke look at this you can see it it's coming right here you can see it you can literally see the the hot of the smoke as it cools when it enters the atmosphere here it's hot right here it's getting cooler Etc this is not coming from the engine

(3:07:32) look at this look at this right here it would not be the same temperature if this was like all of a sudden coming from the engine this would make no sense no I mean Chris I respect Chris Leto but I think I vehemently disagree that that's not engine exhaust hot spot is right behind the nose what no the the heat signature is coming from the Hot Smoke it's not coming from the where the battery fire is the battery fire is contained in a cargo bay that is actually made to contain these fires the question is when it exploded

(3:08:30) how much damage did it do that's the real question how much damage did it do when it exploded yeah the front cargo compartment is not hot because it's uh literally a heat heat containment cargo bay the cargo Bays can maintain uh temperatures up to 1700 degrees 900 Degrees fhe yeah my guess is they're venting the smoke through the air conditioner system or if it if the plane was damage there could be holes in the plane as well but the theory that was put forth by uh glory and NC boy was that it's

(3:09:16) it's ramping through the air conditioning system from the forward cargo base and then it's going through the air conditioning system here and then it comes out through the exhaust ports at the bottom here I have images of the exhaust ports I'll show you guys as well I have everything my I have SE several discords but so here's one example I think this is a 777 you can see you've got these exhaust ports here and you've got the ones down here as well I think I have another picture as well my number one priority is trying to

(3:10:09) understand the science though that's the way we'll prove it we need to understand the science here we go hello I clicked it there you go boom vent one vent two I think that matches up so those would be those two vents there most likely yeah CU there's the landing gear door there's your vents landing gear vents Vents and it could be damaged and the plane could be damaged yeah the pilots could have been in big trouble too honestly yeah I don't know about the holes I mean I'm just speculating with

(3:10:58) the holes but I would say that because the plane was seen flying low that most likely the plane had been depressurized the question is how much damage I I don't really know maybe

there's very little damage maybe there was very little I'm not sure maybe taking out the electronics Bay did damage to the uh air pressurization I'm not sure that's actually interesting thought maybe that's what it is maybe there wasn't holes in it maybe the electronics Bay getting damaged caused issues with

(3:11:26) keeping the plane pressurized yeah that's actually very interesting maybe yeah here it goes boom cargo is a special liner intended to contain a fire until it's extinguished oh boy there it is as right next sentence this is the this article is the money article here Daily Beast could degrade the airplane's ability to suppress a fire by crucially uh changing the flow of air and oxygen there you go there it is there it is this article is the money article we needed this article before how do we not find this till today we just hit the

(3:12:19) jackpot there it is could have breached the liner and there so allow the air flow to weaken in concentration the fire Howen fire sign suppression wouldn't have kept it out anyway oh this is what guys this is why he saw the fire go out the fire explodes and starts starts the plane on fire Mike McCay sees it go out because the automatic fire suppression devices get deployed the fire suppression devices get deployed and it take it puts the fire out immediately then the crew goes down and has to battle it then the crew is battling it manually

(3:13:00) after that wow this is also probably why they had to fly lower maybe it didn't take out maybe didn't damage the plane enough but it did damage the electronics yep the air flow patterns see how long concentration the how and fire suppression device retain their effectiveness it's not going to work on lithium ion batteries though yeah and they would have to they'd have to get the G the smoke out of the plane so they would have put the gas masks on for sure like immediately there it is overwhelm the

(3:13:43) fire suppression devices there it is compromise the wall separating the cargo Howen fire sings there it is Boom look at that there it is some of it is automatically released on the onset of the fire boom I just called it you guys see that I just freaking called it just called it there it is right there it's it's like having a delayed reaction right now can last as long as 180 minutes booya booya there it is 180 minutes that's what we needed that's what we needed who said it couldn't last for hour and

(3:14:47) 20 minutes who said that booya 180 minutes there it is metered flow can last as long as 180 minutes they don't even need they don't even need to go actively battle it they can actually just have a metered flow shooting the hon and there trying to keep it at Bay can last for 180 minutes there it is wow how did we not find this article how do we not find this my God how did we not find this before Oh I know what pictures we're going to use we're going to use the pictures of the burnt debris we're going

(3:15:35) to use the pictures of the burnt debris we have pictures of the burnt debris as well that clearly has burn marks on it where are my images I got to move them over before I forget look at this look at this look at the burnt debris look at the burnt debris with the burn marks all over it oh my God we're solving MH370 folks that that first one even literally says burnt marks it

literally even says burn marks on it it's got the honeycomb pattern consistent with MH370 look at this heat damage I mean this is obviously a burnt up piece right

(3:16:31) here right this is what this all is this is burn marks from burning off this stuff oh my God man yeah this is YSI the only problem with it being intentionally started fire is it's too complicated it's just too complicated but maybe I mean I can't rule it out I've never ruled out that the fire was intentionally started God I can't believe we saw read found something that says 180 minutes too yep yep toxic fumes there it is O flooring and arsonic okay you know guys know what I'm looking up next right

(3:17:34) can this be seen in IR damn it we need a video I almost guarantee they can be seen in IR let's ask let's ask chat gbt oh here's the new here's the new uh subreddit by the way this is where we're going to post three orbs whatever I don't even care what it's called well that's disappointing it

(3:18:40) doesn't look like they're does not look like what I wanted to get but that's okay we have to follow the evidence wherever it goes wait oh wait Organo fluoride compounds wait what did this say organic electrolyte I think it is Organo floride compounds organic electrolyte in lithium oh man we need to figure out if we can see this in infrared wow

(3:19:43) their compounds often can be seen using infrared spectrometry it's spicy says it right there yep yep oh guys I think it's smoke I think that's got to be smoke coming out of the back of the plane that's it that's it how do they write this whole article and they don't get a response or anything how could it have continued this is the thing it didn't it didn't continue for six hours it's pretty simple it didn't continue this is why they ruled it out because they went with this stupid iMat data that we just

(3:20:46) showed that it's got a huge anomaly they had to come up with a fake story guys you hear you heard her here first folks we solved the mystery granted maybe The Daily Beast solved it before us but they didn't they didn't run with it like they should have maybe they didn't run with it like they should have this was definitely a lithium ion battery fire no doubt no no doubt 19 Witnesses support this including one that sees the plane glowing orange because of the hon fire extinguishing gas releasing bromine a

(3:21:22) hogen gas what what is wrong with this Daily Beast website man who's Dr edel yep there it is there it is right there boom Dr edel we need to get a hold of Dr edel we need to find this person chat you know what we got to do we got to find Dr edel if they had the Drone footage that was it that would have been it they would have been able to figure it out I guarantee it even if the transponders were located in different parts of the airplane they could have been disabled by fire in electronics Bay holy crap man holy

(3:22:28) crap this I can't I can't copy anything that's like this website's garbage is there like a reader view or something what these buttons do anything up here the Rolls-Royce engines the Rolls-Royce engines would have been like how do we not get the data from the Rolls-Royce

engines they would have continued working flawlessly Rolls-Royce know what happened to this plane Rolls-Royce know what happened to this plane no the pilots probably did send out a Mayday they probably did send out a Mayday it's been classified we're

(3:23:05) talking about a major cover up here we have multiple reasons to believe that the communication was not lost with the plane I'll run through the communications 1730 UTC 10 minutes after the plane goes dark there's a communication with another 777 pilot that's uh that doesn't want to lose their job so doesn't say anything the Malaysian Minister of Defense says that the plane was unidentified but that the uh it was a civilian airliner and not hostile the only way you can know it's not hostile is if you have communication

(3:23:36) 2:43 a.m. **China** intercepts a communication from the Taiwanese Embassy that the plane is attempting emergency landing and disintegrating that's three different potential vectors of communication yeah we're doing better than a multinational multi-million dollar investigation they should just pay us \$150 million I'll just divy it up amongst the MH370 crew so MH370 X crew is Rolls-Royce a sub of locky Martin no is it is it actually it can't be right rollsroyce successfully Powers directed energy field tests what the

(3:24:27) f what this is this is one month before the plane goes missing what the what the where where is that what you see that someone find me someone find me the web Archive of this someone find me the web Archive of this article right here Rolls-Royce has completed a long-term agreement with loocking Martin worth up to \$1 billion to deliver over 600 engines February 12th 2014 holy crap holy smokes Rolls-Royce is in bed with locked Martin I'm screenshotting this guys we're going to get freaking killed we're going to get freaking

(3:25:18) killed man I don't even care we're calling out locky Martin I'm I'm sick of this someone needs to find me those articles in my Discord I didn't want to mess with locky Martin I just it's too late it's time to just call these people out dude everything just lines up huh it's getting spicy huh I bet Rolls-Royce stock I'm I'm invested in nxpi what were you saying why would Mayday have been classified yeah I mean this candy petted I think we know why it's classified my man this is the only

(3:26:03) reason why they classify it right here you have to classify because if they tell us the **truth** then same reason why they changed the time of the plane disappearing D had to develop a cover up we think this is like within a minute of the plane of the intercepting that communication you mean of course you have to okay that scared the hell did did that just go dark for you guys too that was scary yeah this is getting spicy out here post link to that article here I'll give you guys the article my screen just went black did I

(3:26:43) go black for you guys too man it's not looking good for us guys I'm not going to die of old age chat I'm not going to die of old age I don't know if the pilot knew they were going to get orb'd I to me looking at these videos it doesn't look like the pilot knows they're going to get orb'd to me just looking at this like they're Landing they're getting ready to land in the ocean someone just deploys the locki Martin orbs and is like we're saving this plane I don't think the

(3:27:13) pilot had any idea what was about to happen but I don't know how we would know one way or another initially I thought maybe they were slowing the plane down because they were getting prepared for the teleportation but now I'm looking at it again and I'm just thinking they probably didn't even know what was going on with these orbs man and there's not enough time to react this is only 30 seconds 30 seconds before here and they get teleported away I honestly don't even know if anyone survived

(3:27:46) this we're talking about a coherent matter wave I what do you guys think they would do to cover this up I would think they would do basically anything to cover this up basically anything including killing people the MayDay is not suspicious the MayDay is just classified like everything about this freaking case is classified every single time we Foy anybody they say it's can't be given out because of National Defense I need a version of this website that isn't garbage that doesn't like lock up on me it could also have been

(3:28:35) remote controlled too there actually could be a remote control aspect to this like if the pilots were wiped out maybe the plan getting remote controlled by the awax that were in the area there's definitely an aspect where that could be a possibility as well I mean I just I don't know I just I'm not going to pretend like I know all the answers oh my goodness it would in some way be contained and then died out before it could finally degrade the airplane structure oh my God man we need to find Dr edel

(3:29:16) dude we need Dr edel to come to congress with us huh I don't think the pilot would have been able to know advanced the chemistry here how do we not find this article man yeah there's a lot of scientists die of mysterious uh conditions you I mean Candy Pet it man why do you think they classify it dude like they have to classify all the stuff that would leave to the **truth** that's the answer that's why it's all classified cuz we're talking about National Defense purposes here this is why they only release the communication

(3:30:14) from before the plane goes dark no one really believe no one could explain why they would not have communications there's no scenario where they wouldn't have communications the Malaysian Minister defense knows the plane's not hostile how can they know it's not hostile without there being communication they had to have had communication with the plane and it makes sense that's why you don't set up Jets because you know what's wrong with the plane it's a fire maybe the Americans say it we'll take

(3:30:44) over not sure the only reason why this all makes sense is that I don't think the passengers all died you return the passengers back to the whoever wait what there's the aim system right here this thing could definitely be remote controlled huh all the critical electronic systems are concentrated in one place wow dude wow wow man I think we got it chat I think we got all the proof we need for

(3:31:49) the fire scenario what more could we ask for we can we the plane can last for hour and 20 minutes it's going to be taken out the electronics Bay two pallets were in the front yeah I mean that's why it didn't just crash right didn't crash this is the reason why you need to cover up

candy pedet you're starting to get it the only thing that explains why the cover up of a fire is these videos it all fits together if it was just a fire and the plane was crashing we would have found the plane crashed in

(3:32:28) the in in a fire and there' be no need for a cover up there' be no need to fake the immat stuff you would just tell the **truth** they had to fake The Narrative of the iMat they had to change the time of the plane going missing the reason why they had to change the time of the plane going missing is because of this what we're seeing right here locki Martin orbs coherent matter wave teleportation's real or maybe it's cloaking I don't know it seems like teleportation to me though I think the only way you could say it's

(3:32:59) cloaking is if somehow this event is taking out or pulling the energy from the batteries this is the only explanation I mean I just can't come up with a better one wow W what an investigation tonight chat what an investigation tonight we got more and more people are actually coming on the later it gets because of how much stuff we've just uncovered this is wild this was this was a really good investigative night tonight I'm not going to write this up tonight so you guys have the inside info we'll write write it up tomorrow I'm too

(3:33:50) tired yeah I mean I wish the orbs and teleportation stuff wasn't real to be honest with you man I really wish it wasn't real life would be a whole lot easier for me right now if that stuff wasn't real there wouldn't be as many people hating on me and I could have just solved the mystery of MH370 and been famous without having any uh orbs in there but the orbs and stuff are real so it's it's a it's a rough battle it's a rough battle and for the record I don't really care about being famous I'd rather just

(3:34:19) go back to me my normal job but I'm going to get the answers for these families oh more pictures oh yeah oh yeah there's the ases cabinets right there baggage look right behind this wall huh so how does the the fire take out these these computer systems there it is right there there look at that hostile

(3:35:24) takeover by the crew is a very low probability oo deliberate Act of planting something in the cargo ooh guys is the Espionage scenario back on the table oh thank you very much yeah we need a subpoena Rolls-Royce locky Martin rathon General Electric my cousin Vinnie yeah all we got to do is all we got to do is subpoena some people yeah this community is the best community no doubt we're just solving the mystery right here tonight folks let everyone know we're solving the mystery tonight I'll post it tomorrow damn this article just goes on

(3:36:26) and on and on wait do we need to cop clip any more of this I think this is what we need to clip do we even need this part we might not need this paragraph but I'll put it here anyway save this wow yeah we have a whole long piece right there okay this is just this just goes to explain like how people are just completely unaware of the dangers just completely unaware of the dangers I've been streaming for an hour longer than I was going to yeah I'm going to be going to sleep here in a minute as well people

(3:37:18) saying can do who's can do guys it doesn't matter what website this is it's literally an expert talking about the scenarios is I don't is Daily Beast a bad Art website I don't know and I don't care is the answer shout out to my cousin Vinnie yeah heat melts wires insulation causing shorts yeah that's why he says there's many scenarios that could take it out I mean we just looked at the pictures of the fire so we're going to put on our our piece we're going to take this picture right here we're going to

(3:38:00) take this picture up higher here as well wait what's this one what's this oh hello oh yes is this thing going to explode oh guys this is going to be spicy oh yeah oh yeah how I bet this is only like a couple batteries in here too compared to five 487 lb is it going to blow up oh yeah it's going to blow up oh my God oh my God we have to clip this holy crap did you guys see that how much was that how many batteries was that imagine 487 lb imagine 487 lb of

(3:39:04) that you see how big that explosion was oh my God that's like a bomb oh my God how do we never have this video oh yeah well this was a good night this was a good night folks this was a good night we are going to go ahead and take this video Steal This video and that's our video now damn dude oh and look at it so look so it gets it gets suppressed right now watch this it doesn't now it just comes back up again and it was just put in like cardboard boxes look at this look at the runaway lithium ion

(3:40:09) battery fire here oh my God God so they would have the fire suppression devices would have put it out but it's going to come back up again my God look at this this is less than 5 minutes now they're trying to put it out and how much how many batteries was even in this that was just like what a couple batteries 487 lb 487 lb divided into three shipments so we're talking about probably 300 lb of lithium ion batteries exploding 300 lb two pallets man yeah this is how do we not how did no one figure this

(3:41:02) out this article even mentions that no one brings this article up I almost want to put that video and up upload that video I'm going to we're going to post that video right now uh maybe I'll clip it maybe I'll clip the video actually we probably just post the whole thing let's take a let's take a quick look at this yeah that plane's not going to be pressurized for long how long is this it's kind of a long video 5,000 lithium ion batteries oh my God I guess it's fine it's like a couple

(3:41:54) minutes long we're going to give uh a little treat for people till tomorrow it's all off one sketchy article this isn't one sketchy article man if you want to argue with the facts let's argue with the facts let's not try to discredit the Articles uh where the article comes from just want to see if there's anything else we need here so many interest stakes in the outcome uh I think there's reason to doubt the investigators yes they ignored a lithium ion battery fire supported by 19 Witnesses I'd say that's that's a

(3:42:45) pretty strong reason to doubt them Hey look it's Jake Chanley damn he's got some hotties with him I don't care what people think I like Jake I really do not care man spends four years in jail or something like that or however long he spent when was when was J six I don't

know couple years in jail over like walking through the capital and then he's got such a good attitude about it that's impressive to me anybody who goes to jail and has that

(3:44:01) good of an attitude coming out you've uh you're a good guy in my book I think we just push like this we just go like this with it get people hyped up clip with a link we could do clip with a link but I think I'm just going to post the whole video I'm just going to post the whole video I think whole video is pretty spicy dude although I like the part where it blows up

(3:45:13) should I do breaking update 41 months in prison dude spent almost four years in prison Ian he spent his time man he does not deserve to be vilified anymore man even if you even oh insurrectionists yeah do you really think they were going to take over the government man just be honest with you guys man do you really think that the j6 people are going to take over the government it's not how you take over a government man and even so even if you think he did man even if you think he did he spent three and a half years in prison for

(3:45:51) walking through the capital being escorted by police come on man that's not equal justice man I think I'm not going to break it I'm not going to make it breaking update we're just going to have it be like this I think we'll just go like that sweet okay here's the fire guys come on man if you guys have been following this in investigation this long and you're upset about which sources are being used and how credible the sources are you haven't learned anything if I if you can learn

(3:46:53) anything from this investigation **I want you** to learn that how many credentials somebody has how many letters they have next to their name how many times whether or not it comes from CNN or whatever has no bearing on factual uh content no bearing uh what should we call this okay I think it's sleepy time I think it's sleepy time

(3:47:59) folks I don't know about directed energy weapons all I know is that this plane had a fire we had already figured out the fire because we talked to Witnesses now finding an article that corroborates it has a literal expert named what was his name doctor something or other I mean that's that is what it is what was his name could to find that guy's name I'll find it tomorrow it's in that article somewhere there's a literal expert uh quoted in there anyway pretty sweet this was a good job tonight chat uh that was fun that was

(3:48:50) fun that was like that was like taking us back to the old school days of the early investigation right there that was a lot of fun Ben chill out man Jesus Ben you've got full on CNN brain Ben Ashton didn't even look him up because I don't need to look him up man I can read what they're saying I can come to my own conclusions without being determined there he is Dr edel I can come to my own conclusions without determining whether or not I think somebody's expert enough or whether or not they've uh got the right

(3:49:27) uh the right people like them I don't care how how many letters people have next to their name all I care about is what's the evidence show me the evidence the evidence lines up everything that's written here is logical and rational anyway let's go ahead God Ben you are Ben

go watch CNN man go watch CNN um okay let's play us out guys you know what you know how this goes we're playing it out catastrophic disclosure no breaks wait there's no sound either Malayan 370 contact 120m Nan 37 breaking news tonight A Malaysia

(3:50:22) Airlines flight with 239 people on board including four Americans has gone [Music] missing [Music] [Applause] [Music] I remembered the line from the Hindu scripture the babad Gita Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed form and says now I am become deatha the destroyer of worlds

Transcript:

(01:34) what up chat let's not waste any time tonight how's it going uh I might have to actually hold on uh I need to wait probably a couple minutes I think I got to get some caffeine if we're going to do this tonight you guys get me excited in a good way hey Bernie what up what up what up um yeah guys give me a couple minutes I'm going to grab some caffeine real quick oh y y yo okay uh full screen face full

(05:09) screen face uh my coffee machine is heating up I screwed up uh what up everybody what up Tito and soda yeah I'm not drinking tonight I kind of wish I had some beers though but probably better if I don't you guys seen what happens if I drink too much it's been a while since I drank that much honestly it was kind of a nightmare combination of everything but I do want to appreciate real quick uh the people who hacked that password somebody else two people hacked it independently actually I'll say you

(05:39) guys saved me you might have saved the whole case if I had been talking about that for weeks on podcast it would have been a complete destruction the fact that we were able to break into that within just a couple days was huge really huge okay see okay the Greer thing was really good that was a really good podcast definitely recommend or whatever space definitely recommend checking that out um think we've got some science to look into [Music] today we've got some investigative stuff to do I want to this is the reason why

(06:29) wanted to come on tonight see what I got think Punjabi Batman had something that was interesting as well also we have a new there's a new **Reddit** out there we're going to see how long it takes to get banned going to see how long it takes to get banned where's Punjabi Batman stuff okay apparently Boeing is tracking their planes all the time what the I'm definitely never paying Wikipedia scent Wikipedia is garbage um that it seems like the person who did

(07:36) the scam was a redditor they were like a debunker the evidence for them being the debunker is that they sent me the following email which again I'm going to tell you do not open this website do not open this website here if you open this website you will see an anus staring at you so do not open this website that I have linked here but the fact that they they sent this link with the anus this is like the it shows like the whole thing is they're trying to make fun of me for the my butthole doesn't look like your like it

(08:12) looks like your butthole but doesn't mean my butthole is your butthole scenario and this means that they're like a corridor crew redditor debunker nut job now could I mean the thing is this was sophisticated man this this was really sophisticated they did not expect us to crack in to this that quickly and then they freaked out when we cracked it that fast because they were thinking this they were going to play this out for a while they thought they were going to play this out for a while yeah yeah this is they sent me

(08:48) this this was not a random person from India or scammer this was not a Nigerian scammer this was the complete psychopath nut jobs who've been stalking me so you guys can see I'm not sending you guys this link no you guys can see it don't type it in there thanks Adrian appreciate you man yeah I've got a coffee machine yeah you don't want to click on that link trust me that this was like and then they sent me one more this is like last night where we were streaming guys Chris chill out man we're

(09:28) going to move on when I say we're going to move move on I don't need peut Gallery comments about it okay we've got I've got the stuff on here obviously we're going to do real work tonight just recapping it because not everybody's up to speed okay but yes today we had the uh the space with Dr Greer if anybody felt misled I want to apologize that it wasn't just about me and Dr Greer I didn't think it was going to be about just me and Dr Greer I figured it would be a thing where he talks and

(10:02) there ended up oh Jesus there ended up being a lot of people who were um on the space talking so you know I didn't really ask a lot of questions mostly because he actually answered a lot of the ones that I had already he already answered a lot of the questions so the only question I asked was about the the technology and the implications of it why hasn't anyone else picked the story up I think that that Trump won I think that's a pretty self-explanatory thing the reason why no one's picked up the

(10:32) story is because this is the biggest conspiracy of all time this conspiracy in general breaks the minds of many people this is why so many people hate me is just the implication of this being true cracks and completely breaks the minds of people and turns them psychotic because it means that everything they've ever been told in their lives is a lie and it means they're not as smart as they think they are it means that everything they've heard on Reddit is a lie like the implications of this being true are that their whole

(11:07) lives are lies that's far too much for most people even did you even hear it on kim.com today we're going to replay that part I think in the space like kim.com is sitting here going why

don't the aliens just tell us how to cure cancer like the dude is just not connecting with reality man why don't the aliens come down and tell us how to cure cancer guys is it really that simple is that what we got going on here alen's just going to come down and teach us how to cure cancer my man's just not really

(11:39) understanding the totality of the situation here you don't uh you don't put Pandora's put everything back into Pandora's Box here man the moment you open Pandora's Box and this technology is out there everything's out there right this is the problem the whole emule thing was a weird detailed ad cuz I had never even heard of emu so the scammer came up with an like this old peer-to-peer location that existed like this was really really thought out very weird uh James I heard there was a couple Chinese

(12:15) families angry about this narrative no that's not true no families have ever reached out to me nobody's even no families have reached out to me negatively what the what the families are angry about is that they've gotten no answer they're suing the Chinese government they should be suing the United States because the United States is directly implicated in The Disappearance of the plane how did nobody leak the anything the whole time you think like you think Trump controls this information the president does not

(12:51) control this information presidents are temporary employees the people that control this information are the military-industrial complex if you listen to Dr Greer today I agreed with a lot of the stuff he said way more than I would have thought the United States government's never going to admit this stuff to be true never never going to admit to be true people are they're going to be playing you guys people that are out there thinking UFO disclosures coming they're going to be playing you every single year never

(13:19) going to tell this stuff to be true the only way this becomes true is that everybody agrees that it's true we get to like 75% of people out there say that yes there's aliens visiting us which good luck with that whenever we get to that point then CNN will go ahead and admit it because the way that it works a lot like how Reddit works is that it's based on popularity people believe whatever is popular whatever makes them feel good whatever all their peers are saying right unfortunately that's not

(13:45) how the truth works but that's how popular consensus works right okay I'm going to grab coffee I'll be right back you guys can feel free to go uh you know talk smack about one another whatever I'll be right back actually I'm going to play part of this for you guys how far was I 36 minutes I don't remember where the good we notic I don't remember where the good part is what is this why is there no way to skip this this is part of Bob greener's thing I hope I don't get copyright hit for

(14:34) this let you guys listen to this while back in just a minute okay yeah uh the the overall structure changes the um epsilon0 the dielectric constant of the physical vacuum and so the ability of charges to represent ordinarily changes the speed of light changes and time changes so so it does it gets around many many problems so I think everyone can work out what's going on

on here right I'm the figure skater spinning around right and as I pull my mass in my angular velocity has to speed up right now and here you have the gyroscopic

(15:28) effect okay very simple now does anyone know what I'm going to see here now what you've got to what what ah what you've got to imagine is that these are not washers that they are electrons and electrons have the powerful Exclusion Principle so as they are coming into the center of this well they will force each other  $180^\circ$  out of phase if one goes if one's behind it will be pushed more around that way and when it reaches the equilibrium position okay and as it goes down in its gaining gaining

(16:31) velocity it to become coherent there it's actually going to have to shed energy and this is what happens as it's going into that phase Singularity it's shedding the energy so what you end up producing is a topological monopole okay and this is exactly the structure and in fact they have done predictions and using Bose Einstein condensate gases at Alto University they have got actual images of what is produced and the 3D model that I showed you earlier is better at showing the structures that they see

(17:12) from physical experiment than their own mathematical calculations and it's much simpler okay but you have this Central spin horizontal the spin down and you have this this is the overall bubble of the structure and this is the point of the phase Singularity this is the topological monopole and everything is coming into here okay now in a 1976 paper where they fired a laser pulse into a nonlinear plasma they produced a magnetic field of over a th Teslas okay this was replicated funded by the US Department

(17:51) of energy the European Union the UK [China](#) South Korea and Japan and published in 2021 here the laser is going into the nonlinear plasma you can see the flow pattern here is the Magneto hydrodynamic flow pattern okay uh uh okay um and what you are seeing here in red is 136,000 Tesla now the biggest magnet that's been produced on earth is for supposedly for magnetically confined Fusion by MIT and it's 50 Tesla this is self-organizing with one ftoc laser PSE into nonlinear plasma 136,000 Tesla now imagine you had

(18:46) a resonant phenomena where it doesn't matter if you're only building a little bit at a time you're building and building and building it's like Tesla said a snowball rolling down a mountain is getting bigger and bigger sooner or later it'll Vanquish anything now look at something also very interesting in the center we also have 136,000 Teslas okay and it stops dead it doesn't carry on through it's exactly at the phase Singularity now we've already discussed boben gravity going through this is a

(19:20) gon from 1954 from this chap John Archer bald wheeler the guy that worked on the Manhattan Project sorry it was too loud he says this electromagnetic wave a standing wave which is basically what matter is it's trapped light right is held together by a gravitational azoth that is a gravitational azoth so we have gravity coming through here we have intense magnetic sweet um yeah there's a new [Reddit](#) as well I'm going to post for you guys check out what's it called airliner duct 2014 uh I'm not going to be a moderator

(20:04) on this and I don't want to be a Moder I don't want to be a subred a moderate I never wanted to be one I did upload a couple oh I'm going show [Music] DMS they removed my cross post I put on here but I don't really care 23 people online 110 moderate members already uh we can maybe post some work on here as well but we'll let we'll probably just let other people do it I want to see how long before this place gets banned without me even being involved the trolls are already on here as well

(20:42) the trolls are already on here following this Eve I have not served in the military but I have a I have a clearance so I work with people who are in the military and or were in the military both of them I guess Bob Greener is awesome Bob Greener feels like he figured it out and he doesn't have he doesn't have uh any kind of clearance or um NDA so he can just say whatever he wants which I like there was parts of this I wanted to clip and we have a toal moment toal moment problem is the microphone didn't

(21:25) work here we have a to so we're going to have to deal with this another time though let me see move the science stuff over here for now what's this so this was I think I want to First what do we want to do uh what what sequence do we want to do stuff today me find my notes going to do a little science tonight we're going to do a little bit of work oh nice wakeful Panda yeah I haven't I haven't recognize you awesome glad you're here man glad you're here um you can see we have a lot of

(22:09) scientific stuff to cover I feel like just in a few days I feel like my understanding of electrical engineering Advance like two years like school years worth it it helps when we already know like you know the answer what you're trying to get to makes it a lot easier um I still got a lot of pieces that I didn't push out either like a lot record of trial I don't know what this oh oh Edward C Lyn like that oh we want to Foya everybody as well we're going to foer everybody tonight we're going to foer

(22:49) them all I'm not doing the bookham Nakamoto stuff sorry qarana I just I can't do any more weird crap anymore after the last sophisticated attack on me it's I can't risk anymore weird stuff Bob Greener was threatened because of the US Navy because of his research wouldn't surprise me no it wouldn't surprise me at all okay if you guys want to help out I know there's a lot of people out there that want to help out the stuff that I could use the most help with is if you can if you can find any clips of anybody

(23:34) who's talking about portals or wormholes or you know from the scientific perspective or teleportation or like the Tucker Carlson clip any of stuff like that honestly anything Tucker Carlson where he's talking about UFO stuff is also just big in general especially when it comes to like the implications of UFOs uh cuz his stuff just a lot of people respect him and look up to him last say it's funny because I used to hate Tucker Carlson just to like full disclosure I used to be CNN brain myself like 10 years ago or more and I used to

(24:08) believe all the myself and so I used to hate Tucker Carlson after the John Stewart thing where he was on CrossFire with Tucker Carlson and it's amazing how I've even gone just a full

180 one of the reasons that we' had all these disclosures I like this at this point and it hasn't really become Front Page News part of it supression you know parts of the government don't want you to know about it but part of it is the public can't deal with it it's too far out the implications are too

(24:36) profound and like what do people think he's talking about here what can people possibly think he's talking about here to me he has to be talking about like we are like engineered like we might be like on a prison planet we might be on like a farm Planet like we're cattle might be that the world gets reset like that's like the only stuff I can even thinking about or the teleportation right technology is just too hard to understand I'm just like man don't even want to know that honestly deeply

(25:07) disturbing stuff forget like saers and Technology it's deeply deeply disturbing Tucker's been on uh on fire with this also anything you could find from like Brett like I know Brett has been on a lot of stuff as well he's been on I'm not doing Michael Herrera story don't not that Michael herrer is fine it just it's too too woo I need stuff that's not woo I need stuff that's solid but yeah um so yeah if you can find me stuff like that that would be great I just need I need video clips short ones 1 to three

(25:47) minutes if you guys want to help with that so what should we do here I think the phone call is the best the first thing we want to address right I'm going leave the subreddit up here if you guys want to join that subreddit this is a good one we're g we're going to use this okay this is what we need right here they only called the plane twice someone walked me through that guys if you don't think Tucker is a

(26:56) legit journalist then you might need watch Les CNN it's probably the most credible investigative journalist on the planet right now which is not saying much let's just be honest not saying much investigative journalism is essentially dead he got a kiss from Rosanne what the dude he's ripped Jake Chanley is ripped does he just go out like dress like this all the time trumping trumping Point USA huh okay that's not doing what I wanted to do D he's ripped though

(28:07) what was I doing again oh yeah I was going to make a post the reptilians are among us I can't tell if they're being Koy with this reptilian thing or not yeah America Shaman dude career space every single space I do is blows me away yeah uh Dan Winter did it see on my list damn wearing a WF pin you're never going to see me wearing a WF pen I'll guarantee you that I'm not even into all that but I'm still never gonna I still know enough not to wear it I think Roseanne Bar I okay we got a Sidetrack

(28:45) guys sorry I don't like to Sidetrack but we got a Sidetrack um this is this is a super weird clip hopefully this is the right one schools teach kids hate their country uh demon Trump Trump trump I don't know who this is hello sound I can't hear it Rob sound yeah I can't hear any we can't hear it sound please your the beginning Rob thanks no wonder I don't remember this no you blocked it out MK Ultra who's that that's the mind control program you're under Bill MK

Ultra yeah so who's but who's CLA Schwab the head

(29:49) of the WF Bill Mah is pretending like he doesn't know who Carl Schwab is I I'm not even into conspiracies and even I know Carl Schwab is the head of the world uh economic Forum what's that what's that what's the wef who's that Bill Maher what why are you pretending like you don't know this dude runs a political political talk show every Friday where he has people from all over the world and announced people like he's probably had people like Carl Schwab and WF members on his show like

(30:26) regularly he takes a drink like who's that Rosanne just can't believe what she's even hearing Google it Google Google it Rosanne I love you I want to talk to you Rosanne he he really Pat that was that's not an act he acts like he doesn't know even these guys are like I don't even know who this podcast is even these guys can't believe it look this think acting like he doesn't you think he knows but he knows 100% he knows he he why is he playing dumb why is he playing dumb that is the weirdest clip man that

(31:05) is the weirdest clip man I can't decide if just I just can't I don't understand if the world's just controlled by the elites or I I don't I really can't figure it out guys I'm trying not to fall let me turn this light on what's the WF man man what's the we you think if I Google WF like we're going to get some other hit on the top I'm pretty sure we Google WF it's going to be the top hit man pretty sure WF it's right there at the top uh I don't know man even I'm not like

(31:45) conspiracy-minded as many people but even I like if you just follow any of what's happening and what people are saying you you should know what they're they're talking about wef man that is just man that clip is up there with uh Don Lemon you think he's playing dumb because it's Roseanne maybe man uh no I'm not saying Tucker is not part of the Elite Class Tucker definitely is but he's also telling he's also getting information out there you know that's why I said I mean it's

(32:24) investigative journalism as much as investigative journalism exists which it's not much it's not much guys we're doing more investigative journalism than all mainstream media combined that's not really me being egotistical that's just the reality of what we're doing it's like I hope when they they talk about this and they make future documentaries about this that they realize that we're doing more work than all mainstream media combined like I when was the last time you guys even saw an investigative

(32:56) journalist piece on any mainstream media channel at all like an original one like I I don't know I don't have I haven't had TV for like eight years so I don't know I could show you guys my TV sitting right over there but it doesn't have cable I'm going to do investigation updates we might we might change this now so it's more specific okay this one has been a piece that NC boy has been digging into but uh Punjabi Batman also figured it out so who should I credit NC boy or Punjabi

(33:35) Batman yeah Taylor Swift never heard of it what what's a Taylor Swift Carl Schwab's

Greatest Hits I don't know if that's going to be uh is if I look up Carl Schwab's Greatest Hits I feel like YouTube's GNA cancel me feel like YouTube's Gonna Cancel me I got to do it now though Carl CLA Schwab CLA Schwab's Greatest Hits oh man this is not going to be good this is you heard clausy M Schwab's first two records all I don't even I don't even care I don't even care if I get

(34:21) canel volume I'm going to get cancelled guys two three four five all the unvaccinated are still alive a little bit of fer in my arms a little bit I'm going to get can I'm going to get okay I'm GNA get canceled I'm going to stop I'm going to stop please YouTube don't cancel me we got to keep the investigation going guys we got to keep the investigation going we can't watch that we can't watch that uh it's CLA I know I was calling him Carl CLA Schwab see I'm not even the

(35:03) good like obviously I'm not even into it yikes yikes I'm surprised that's allowed on YouTube I'm actually literally surprised I'm surprised that's allowed on YouTube yeah that's how you get demonetized on YouTube that's how you get uh your your YouTube channel shut down oh by the way we're going to I think I decided to we're going to do an explainer video on the on the Drone video and we're just going to call out locked Martin at this point I'm just 100% sure it's locked Martin I'm ready

(35:41) to just go all in on these orbs being lockie Martin I was like pretty damn sure before and then I listen to Dr Greer and listen to everybody else I'm just like this is locked Martin man locked Martin skunk quirks staring at it staring at I'm calling it show the cards I want to see all in all in these orbs are locki Martin I wonder if we can tie anybody on this plane to locked Martin you think we can tie somebody on this plane to locked Martin I'm really feeling like the save my plane card is the move here this just

(36:19) this is not aliens we're looking at I'm sorry guys we're not looking at aliens here the these little orbs are not aliens man this there's no aliens inside this orb this is you can see the heat signature on the side of it this is locked Martin just I'm I'm sure this is locky Martin skunk orbs I can't believe this is real the crazy part is like I wouldn't have been able to believe this at first but everything adds up to it being real I've even got scientists engineers all the previous UFO people like Dr GRE I

(36:57) didn't even know about all this stuff I'm sitting there listening to it and then once he starts talking about pointing vectors and teleportation on the thing I'm like holy crap I didn't believe I didn't know he was talking about teleportation I mean what you guys we got hold on Sidetrack Sidetrack Sidetrack MH370 locked Martin can we find a direct link can we find a direct link passengers can we find any direct link to locking Martin from the passengers why when I look this up or is this all stuff about the plane

(37:42) wreckage okay duck duck we got to use Duck Duck Go Guys Google is not not Google's not doing it Duck Duck Go I wonder if there's a way to connect the free skill semiconductor scientist to locki Martin oh there's also a microchip I think I think we're ready to go all in on this microchip you in the cargo not sure yet I need to pull that back up I need NC boy to help us out

with the microchip there might be a microchip in there see see this is look at how different the search is look how different the

(38:37) search is fact check jeez jeez is there anything less reliable than a fact check Greer said like three of his people were killed in the 90s that's pretty dark doesn't bode well for me guys doesn't bode well I I guess this is probably a good time to say I'm not suicidal as well just to be safe since we're talking about locked Martin on stream uh not suicidal I'm very happy uh I don't plan to die suddenly ey wink um so I don't see anything directly tying them why is everything

(39:44) about what the heck we need to find something that connects the other three Americans on board were children hey UFO chick you missed out on all the drama turns out this was some kind of elaborate **scam** by like the **debunkers** they created a elaborate social engineering prank if you want to call it a prank not really it's a fraudulent **scam** it's a criminal act and um we end up catching it because somebody broke into to they we decrypted the password within like two days they definitely didn't expect us to break in

(40:20) that fast they thought it would take weeks if not months they intentionally sent us a fake password uh that was like Miss numbers and one of the letters was different and because we broke in we were able to get ahead of it and actually now they've discredited all future **debunks** too because now anytime anyone comes up with some random **debunk** then we just can we can go and point to the extreme lengths they were willing to go to falsify um evidence against the case I mean they had to developed an elaborate plan for trying to fool me

(40:55) with this weird uh R file thing that was that was weird nuto psych that's like saw like the movie Saw level psychopath stuff like really Nut Job stuff it was probably a group of people too not just one person like literal insane nah locky Martin's on this level they're definitely on this level man you have you never heard Ben Rich you I mean if you haven't heard Ben Rich he literally just says it this was like 10 years ago oh no this was when did he say this let's start with locki Skunk Works Ben Rich was the

(41:44) head of the locked Skunk Works and acknowledged towards the end period there that they had technologies that could quote take ET home he also stated there were no private conversations anywhere on the earth true M no matter what you're no private conversations anywhere on the earth no matter what your encryption is there you go encryption is and also he said that anything you imagine we've already done at the Skunk Works this I mean how much more do you need man you really still don't think lockie Martin

(42:12) has this you still don't think locky Martin has this locki Martin f good call shows up what what they compete by the way how is my I got let's figure out how my investment's doing guys just so the SEC doesn't come after me uh I have invested in oh my God 232 oh wow don't worry about the **scam** folks wow wow oh this is this is nice this is nice guys who didn't listen to me when I said to invest in oh wait I I didn't

(43:17) this is not investment advice just to be 100% clear if the SEC is watching um I invested in

this company I don't know over a month ago couple couple months ago probably after I realized that uh free scale semiconductors is probably free scale superconductors I invested in nxp just so that I'm clear this is not investment advice but usually when lines go up when lines go up like this usually that's a good thing I got in somewhere around here I got in somewhere around here in this range right here and now it's up

(43:55) here just saying semiconductors seem like a good investment that's all I'm saying seems like a good investment to put your money in the in the companies where all the rich Elite people put their money just saying just saying I kind of want to send this to some of the people that were talking crap about me when I mentioned that this company might be a superconductor company but I won't but I won't free scale semiconductor receives ethics award war war never changes I would definitely play some Fallout Clips right now but they would

(44:37) get us for um copyright this is weird why where's locky in this locked Martin won an ethical Behavior award that's ridiculous hello hello holy there's a board of director who used to work for lockie and Martin became board of directors at free

(45:42) scale guys maybe I'm in the wrong maybe I'm in the wrong contractor maybe I should be a contractor through locky Martin and not through my company huh interesting turns out no that's this isn't just because of War this is let's look this let's look this one up their revenue is way bigger than 10 billion how do you guys think locki Martin's uh Wonder they're they they're privately killed or no they got to be a public right God what's their stock what's their market cap 100

(46:41) billion huh nxp is worth half of uh half of locki Martin wow what north of grman 65 billion hey Twitchy ql nah Twitchy I hate to B thank you very for the \$10 but I have to say I guarantee you they can crack encryption yes they can crack it they don't they don't need a back door man it's called quantum computers they'll crack right through any of your yeah quantum computers will crack through any of your encryption doesn't matter at all yeah see everybody see everybody in the chat saying the same thing that I

(47:42) was saying quantum computers will crack it quantum computers are in the way it's been kind of sold to me is it's probability based computing it's like taking the wave function and now you can just probabilistically figure out what the password might be I mean it's like cheating I don't really know howse to describe it if you can teleport a plane you there is no nothing that can be encrypted that's that's the wild part that's the crazy part about it okay um I don't know who to credit here guess we

(48:24) don't need to credit anyone is it inner set logs I don't know how has this not been made public knowledge 23113 looks like does that say 23 13 oh we watched the AEL thing the other

(49:30) day AEL is amazing 233 for for

(51:24) for for for unen

(53:34) let's do like this let's move this up for okay hey is it Ellie or L hey Dorian hey UFO chick Paige what up yeah Salvador

(54:41) Pas saw the a orbs and said that's AI like right away people tried to talk me down from it being AI as well excuse me I'm speaking Greer is so arrogant I I loved when Greer said that I loved when Greer said that I gained even more respect for him and then when Kim's like well you were talking over me and got super salty about it I was just cracking up it felt like the the UFO spaces the Middle School ones where people are getting angry at one another and then Greer goes is this is this space about me or not it's Ellie oh

(55:17) Ellie okay we got you Ellie yeah how know what Shaw 256 even is but Quantum will break everything Quantum I like how we just randomly casually talk about quantum computers without the implication of quantum entanglement quantum teleportation macroscopic teleportation the fact that we just casually have quantum computers and we're like oh yeah nothing else is possible like dude we have quantum computers yeah now when Kim when Greer was talking smack to kim.

(55:54) com it definitely felt like like a UFO space I was actually I I kind of miss the UFO spaces we haven't had one in a while like one where it's just Middle School people just yelling at each other viscerally angry this the closest has come is the uh this is going to be pretty cringy but uh it was UFO mic what's his is it just UFO mic Twitter I like I Google UFO mic and instead comes up mick West what what is his name isn't it UFO mic I don't follow him but I don't have him blocked either guys what's his name UFO Mike

(56:39) help me out help me out folks UAP mic okay this is as close as it gets I I got my my taste is that UAP mic no I don't know who this is where's this clip did he take it down he took where is it dude this dude posts a lot of stuff man these people like man they make the the whole like this UFO stuff is their whole lives look at this guy it's a cult this guy is such a nut job dude this UAP mic guy like these people they've made their whole personalities around the UFO phenomenon like they're just completely

(57:20) obsessed with me you know this guy's a redditor you know this guy's a redditor I mean look look at this guy's thing UFO nerd UAP tool NASA fugitive no good cancel Queen Lou crew asset lless culprit dented drooling sycophant Necromancer you couldn't come up with a more cringe bio if you tried you literally couldn't has like 20 Tweets in the last 19 hours the fact that this person's trying to put anybody else down imagine being this much of a loser imagine being this much of a loser Jesus man and and just to add to it

(58:03) where's his where's his thing he delete it here it is I mean this is just redditor I didn't even approach listen to these losers dude like listen to these losers they approach Project Unity who's also a loser but whatever like this is just redditors meeting in real life what would you expect me to do like not even filming his face cuz they're so cring why would I dude are you I would love to you out I would love I'm sure you would I really would sure you would except you won't cuz

(58:37) you're a coward you're AOW why would you ever get a confrontation like this theet to get here who gets in a confirmation like this anous buddy who asked for my last name why do I owe you you don't I you don't you can go back inside I don't need your permission to go I didn't approach I'm telling you right now you can walk away yeah that's fine and I won't bother you again because I think you're a and I think that honestly if you think I'm a come at me right now absolutely I got I got no

(59:04) problem man God these people are such losers my God these people are losers yeah those are the people that try to talk smack about us huh okay people have never produced anything to society in their whole lives that's that's the level of sycophant we're dealing with folks I mean just that's when like two redditors meet in real life that was literally the comment I put on there I was I was looking at Twitter and that showed up on my my home space thing and I'm just like my God no there's no testost testosterone there

(59:41) it's more like estrogen that's like a little cat fight little cat fight they they would that's like the kind of fight that would happen where they would fight and nobody would end up hurting anybody no one would end up getting hurt oh man cringe that's that's a bunch of people that uh probably didn't even I don't even know just wow just wow oh UFO Community man UFO community no they're not even Jim Bros I've got actual stuff to do like I would just walk I would be like the person

(1:00:32) that's like walking between them be like hey can you guys um take your fake fight over to the corner where I can just get past real quick oh man okay I think we're good with this I think it's the iMat logs right can anyone confirm this oh yeah Jay is a weirdo man Jay's a real weirdo like I had a good interview with him and then for some reason he just like came at me in the investigation for no reason whatsoever none at all and he just got destroyed in his own comments and he just had a had a total meltdown

(1:01:24) he started retweeting all his own replies to people that were that raging at people and then had one of those super cringe things where he's like and I'm not even going to bother replying to people anymore just a quick note to Jay of the unity never tweet or reply to somebody saying that you're not going to reply to people just don't reply the moment you try to say how like you're above it even though you're clearly not like that's just like you've just shown that you're a

(1:01:53) loser right imagine if I was like replying to people who are angry at me and then like made a reply about how I'm not going to reply to people who are angry at me it's just it's super cringe the same thing happens to everybody um everybody who tries to attack us like they just get a dose of reality they just get a huge dose of reality they live in their own little Bubbles and then they get the dose of reality it's bizarre man bizarre I think that a lot of people have their whole personalities is tied to

(1:02:33) the UFO Community right their whole it's their whole personality it's like when I used to play uh World of Warcraft like people get too into it right where like their whole world is the

game and they tie their whole personality to the game and it gets very personal for people it's the same thing here it's the same thing here I don't know who David Feldman is but I just whatever it helps that I was never part of any of these communities because I just don't I don't get any of it and I just

(1:03:11) don't care for any of it he blocked a lot of his own followers it's like it's the same thing happens to all the people that come after us like they just get exposed it's part of the reason why I stream everything so that you can't um so that people can't make up false narratives um I played on hooorde all the time I always hoarde I never play on Alliance never hoarde for life hooorde for life I'm definitely not in my own bubble that's for sure definitely definitely not I'd say the **debunkers** are the ones

(1:03:55) who are living in a in a fake reality of their own creation when was the last time I **debunker** talk to a real scientist probably never in their whole life it's amazing how many people are VFX experts too my God you think all of **Reddit** a VFX expert turns out you can lie on the internet pretty easily you knew I was hoard Ellie how do you know I was hoard lar Ogar yeah I played uh what was it classic oh tomorrow I got speaking of nerd stuff I got to play some Pokemon go tomorrow I haven't played Pokemon go in

(1:04:40) a long time but like there's some kind of thing going on where you can get special moves on your guys I used to be mad really hardcore in a Pokemon go I was like one of the like super super legit players in my area Shane Buddy get some help Shane like you're getting yourself blocked for no reason Shane like I don't know why like you think you can talk like that in my streams it's just wild man these are the people that get mad when they get blocked Shane get a life grow up man go somewhere else go do

(1:05:23) something else go be prod Ive for once in your life Shane anything else just stop obsessing over me do whatever the hell else you want to do I'm never going to date you I'm never going to go out with you whatever you want like you guys are just completely mental cases I've never once felt the need to go tell like imagine if I went going around to every **debunker** telling them how they're wrong with their **debunks** like I just it's Nut Job stuff it's literally psychotic if it didn't bother you you

(1:05:56) wouldn't be here so just go do something else man my God these people this is why like yeah I don't think it was worthwhile to even unblock everybody I knew I'd end up just reblocking most of the people anyway I've never seen a community more obsessed with somebody in my whole life never seen a community so obsessed with me my whole life and not is obsessed but like scary man scary obsessed to the point of like legit stalking behavior and **scamming** I'm sure they've been putting out the fake **debunks** too like it's these

(1:06:37) people are mentally unhinged they just project all their insecurities as well that's the craziest part yeah I mean that goes to tell you so Robert I'll move the chat over here as well Robert exactly right why haven't the **debunkers** gone to try to find the ho the hoaxer right of course they're not because they know there's no hoaxer in the back of their minds they know

that there's no hoaxer right they know there's no hoaxer otherwise they'd be trying to find him they've got people pre like there's

(1:07:21) literally people pretending to be the hoaxer as well that's how often rock or some of these people are and of course like they'll see stuff like that and they don't even question it they won't even question it like they don't even question how somebody found some random clouds that are like resized and mirrored they they just immediately take it at face value right these are the same people who think that like oh it was such an obvious **scam** when you had some super elaborate social engineering

(1:07:47) **scam** that was run on me but then they get somebody who's like I found some clouds and like oh yep this person must be it oh it's totally **debunked** Wild Man the **debunkers** do not put themselves to even the fraction of the level of scrutiny that they do for other people okay let's I think does this look good could the hoaxer be dead I mean what it hasn't been a 100 years man you think the hoaxer was like 80 years old when they made the hoax like come on man The hoax are dead why would the hoaxer be dead

(1:08:34) man did the the guy LARPing as the hoax are actually ask for \$2,000 to recreate the [Music] videos that's hilarious man that would actually be funny if somebody **scam**med the the **debunkers** yeah it was just a it was a **scam** it was a social engineering **scam** they had a fake PDF I mean they had everything it was pretty wild man the Caleb files I'm glad that we hacked that early because if not I it would have really hurt the case but we were able to move on right away and we're actually able to use it now to dismiss any future **debunks** as

(1:09:18) well because they've shown how insane these people are so oh I'm not um Intrepid Soul I'm not uh saying that everybody in the UFO Community screw balls I I go to spaces with a lot of people there's a lot of people who I think are and I don't care what people believe either man I mean there I sit there and listen to people talking about angels and uh beings that are talking to them whatever doesn't matter to me I don't ever feel the need to to **buunk** them I never feel the need to **debunk** them you

(1:09:57) can tell there's a difference between people who are respectful and people who are not respectful people there's a lot of people in the UFO Community who are clearly dishonest and have dishonest intent right a lot a lot and a lot who have tied their own emotions to their opinions and then you have people who are honest like um God what what was his name guys in the chat earlier is he still in there let's um God how come I can't remember his name right now uh it's in the tip of my tongue I think he went to sleep already too yeah

(1:10:36) he's not in there anymore um God like I don't know in the space that we were in earlier um you guys probably heard it I wasn't streaming it what was the guy's name oh Bruce Bruce like people like Bruce who've looked into the stuff and he's like yeah these different species are coming or whatever it's like he's obviously like a legit guy who's just a nice person right there's a lot of people in the UFO Community are nice but there's half of I would argue it's like 5050 half the UFO

(1:11:05) Community is just off their rocker and I don't mean off their rocker like they're the stuff they believe in that's not what I'm talking about I'm talking about like off The Rocker like they need to be on meds because like they're just vicious and terrible people some of them I think are dishonest as well okay I want to get this pushed out real quick that's

(1:13:23) it's seems good guys see anything wrong in here I need to be nicer otherwise I'll scared off the aliens with disclosure **debunked** Let It Go how many messages like this have we gotten guys so many here I'll let it go for you there it's gone it's gone now I've never seen so many nut jobs attacking somebody because they're investigating something that they think is fake I've never seen it in my whole life what we've put together has literally broken people's brains it's

(1:14:03) actually broken people's brains they look at the the evidence right and they can't comprehend that they've been lied to and then this is where cognitive dissonance takes over right cognitive dissonance takes over and says this can't be true this can't be true it's got to be CNN's got to be right CNN told me it's like wow man I I've have never seen anything like this like psychology classes should do like case studies about this and how this has just broken people's minds

(1:14:36) thank you Indo Wars it's just wild if I like saw something and real and it was and I was like oh it's been **debunked** now I would never talk about the topic ever again I would just move on to other stuff in my life but that just never happens with the **debunkers** because it's not about that right anyway oh here's the link there you guys go this is a pretty good post won't get a lot of attention because the the video posts get the most attention for sure the video post get the most attention Okay never stab CL and

(1:15:30) recycles I probably shouldn't drink any more coffee but I want to stay up for a little bit longer I'm going to probably have to go get one more coffee do a little intermission we go see where was the monopo section supposed to be a monopo section of this monopolies we might have to read Maxwell's equations next uh I don't know what the deal with

(1:16:35) the bcoin stuff is I stayed out of it I stayed out of the bcoin stuff the last thing I want to do is have the SEC come at me that's the last thing I want they're basically studies on how this is breaking people's was mine Diana palosa would not surprise me this might be part of the reason why they literally don't tell people because it would I think it would actually break people's minds I think a lot of people would have their minds broken by this I'm not sure about the pilot receiving a call ahead of

(1:17:22) time yeah um confirmation bias is wild honestly the **debunkers** are the ones suffering from confirmation bias right you want to see exhibit a on confirmation bias like when we put stuff out there our stuff never says 100% proven blah blah blah right like our stuff is like here's some evidence for what might have happened to the plane right that's not confirmation bias this is confirmation bias first satellite video fully **debunked** source for cloud found like this is confirmation bias if this was unbiased you would just

(1:17:59) say hey I found some Cloud some images that seem to have clouds that are similar to the videos that's what it would say like if I made a post like videos 100% real blah blah blah people would rail on me right because that would be confirmation bias in fact they did when I was falling for the **scam** right this is confirmation bias a sixday old account making a post called satellite video fully **debunked** and they no one asks a single question about it right no one asked a single question oh yeah you you randomly

(1:18:35) found some clouds that have been changed oh yeah makes total sense makes total sense I mean we they' already proved the clouds are moving that's okay we'll just ignore that just ignore the fact that we already proved two days ago that the clouds are moving and it literally can't be a two-dimensional background I mean we ignore the fact that it would take a 3D rendered environment to make what we're looking at just completely ignore that we found some clouds that look the same don't ask how don't ask

(1:19:03) how they don't exist in any Torrance we have torrent of the entire website every single picture in the entire website somehow those pictures are missing what a coincidence it just goes to show that the people on the **debunker** side like **scam**ming them is a lot easier than **scam**ming me takes almost nothing they're willing to believe anything they think might be fake okay guys I'll be right back in a few minutes I'm going to see if I can grab one more coffee yeah the the word officially too I mean that really adds to it right six

(1:19:40) day old **Reddit** account officially **debunked** total total nonsense it goes to show how easy some people are misled by disinformation confirmation bias that's the definition let's look up the definition of it the tendency of people to favor information that confirms or strengthens their beliefs and or values that is difficult to dislodge once affirmed there you go theun that explains the **debunker** is to a te they're sure it's **debunked** right but they continue to look into if they were sure it was **debunked**

(1:20:21) they wouldn't be here anymore right they'd be gone but nope they keep coming back cuz they got to try to convince everybody else cuz yeah anyway I'll be right back intermission is

(1:25:04) over did I get a knock on the door n should we show dog though let's show dog show dog uh come here dog dog yeah I'm going to trick her I'm going to trick her by giving her a treat maybe she won't she won't freak out did my camera go off no treos she likes treats okay's see if we can do this yes good girl okay we got her in the first try we got her Dodge

(1:26:11) C I don't know if this chair is built for this much weight such Dodge wow such Dodge such Dodge she looks huge but she's not that big oh such a dog okay let let's show them how big you are oh such dodo good girl Dodge cam okay good girl come here yeah that's a wolf that's a wolf we call her a little wolf cuz she's got she looks like a wolf why does Ashen talk to himself and stare at the wall Lulu come here come here yeah she looks like a baby wolf uh she's like 9 years old eight

(1:27:17) years old every time people see her they're always like oh my God she's so pretty I'm

like yeah I mean I don't control that I rescued it from some people now that Dodge cam just gained like another 10 viewers people love the Dodge cam maybe I should just have an extra camera that's I always looking at her okay um I want to clip part of the career space I also want to clip something from this Bob Greener interview but I don't know what part to clip from this if somebody wants to dig in and try to get

(1:27:49) a clip from this that that sounds pretty good the problem with Bob stuff is it starts to make sense for me now like the science is too deep for normies it was too deep for me too it's still too deep for me we need something that normies can absorb you know that normies can absorb can't be it can't be too deep dude the amount of people that like message me and ask me for information and evidence like just read my stuff look through it you know like I'm not at everyone's becking call yes this is pretty

(1:28:37) interesting let's let's reply man are they all just blonde can you can you change the type of shrug guy do I have to be a blonde white person I want to diversify okay like this this is one of the biggest pieces of evidence we found to date this is wild man I can't believe more people weren't like this only got 71,000 views this should have like a million views this is nuts is rejected or **foyer** for National

(1:29:43) defense purposes asking about MH370 what the hell could it be why would this there be a National Defense protection against uh m H 370 what the hell space is pretty epic uh concept no uh for complex and Clarity one one of the sort of a theorem that I've come up with and that is we need to listen a few minutes to this terrestrial Interstellar civilizations are transdimensional okay I don't not the CI director but his wife asked me who was the chief operating officer of the National Academy of Sciences in Washington I'm about to say

(1:30:44) by conventional science people but I said look you know if you've asked this question it's too slow because if Galaxy which is supernal would say paranormal sort of meetings I let the person I'm briefing drive it by what they ask so in this case I I think this is it right here said well you know the speed of light is okay 2630 let's make notes there it is speed of light is too slow I love that quote I love that 2630 let's see how long too slow because if you're from the Andromeda galaxy

(1:31:24) which is two and a half million light years from here and our team has had a contact with a very senior ambassador from that Galaxy whom we well that clip is a little weird but if you are communicating I's say you're here near Earth and you send a signal back at the speed of what you and I are using right now that would take 2.

(1:31:45) 5 million years to get there at the speed of light that's 186,000 miles per second now for them the reply and say good how are you doing the day bud that's another two and a half million years so that just took five just real quick I wish he hadn't said the thing about his ambassadors from the Andromeda galaxy I wish he hadn't said that part that part kind of makes it a little too much in the woo like if he had just said the stuff about the speed of light that would be a lot better million Earth years we know that therefore the

(1:32:15) electromagnetic field of speed and the speed of matter let's say electrons you know subatomic particles all of that has to be transcended to go from point A to point B Interstellar and that's why all Interstellar civilizations that are extraterrestrial that are near us or have discovered us have to have mastered transdimensional physics and transdimensional Sciences now we'll get into that in a moment because it's critically important I think one of the issues I was brought to my attention of why I'm

(1:32:54) speaking today various Technologies from and if you're and let's say you have a Interstellar spacecraft that's 300 football field in diameter size and you're going from one star system to another in this with a group you're not going to go at the speed of light and you're not going to go in a straight line you're going to basically the technology bends space time like you would bend a piece of paper so if you put two points on a piece of paper I'm also pretty sure it doesn't Bend

(1:33:25) SpaceTime that way but maybe it could right and then bend the fold the piece of paper so those two points are right there that's basically your you're bending SpaceTime through the physics they're using and you are then traversing not linearly in a line through space but transdimensional what does that actually mean it means you're traversing through other dimensions one thing I thought when I was listening to him as well is that syntax the words we use is very important when you start talking about

(1:33:59) transdimensional travel this throws people off and when you are doing so your physical space can't the very high systems around them cause it to drop out of linear SpaceTime but when it's not in a solid quote unquote materialized form it is actually traversing something very very close TOS would call the asteroid Dimension or the worlds of light and it can stay in that state even when and when you start talking about the astral Dimension like just heads up guys if you want people to take you seriously don't

(1:34:31) don't mention astral Dimensions so it wouldn't be visible or detected by any radar or even but and I say this is somebody who respects Dr or Advanced sensors so we'll get into all this later a little bit later I hope if we have time but the key thing is to understand is that when they're in that form they would to the untrained eye let's say they would now what's happened is that there are many many phenomena plural the same thing alien when did he talk about now their communication systems are let's call it internodal

(1:35:08) let's say did thought and we call you know a thousand Lighty years away so instead of it taking a thousand years at the speed of light it's instant so that is being done but it's if Dr GRE ends up being about all this stuff boy a lot of people will a lot of people owe him a lot of apologies the way he talks about it he talks so matter of factly right like he just knows for sure there's a scientific interface and it goes both ways there are technologies that assist Consciousness so you can be in that

(1:35:38) state um and those Quant of thought specific not just every random thought you have to actually connect to it with intentionality and put your attention off just real quick guys like

how I was a speaker in this with keemstar kim.com uh John mappen here it's got 200,000 followers like I'm just like a speaker this whole time with these guys like this was it's pretty wild man some of them also require for the record I could have asked more questions if I wanted to it could have been rude or something

(1:36:08) right that but like he actually answered most of my questions to touch the console or to touch a part of the craft so that there's a sort of a bio Consciousness field that assists with it somewhere on the order of ability ion years ahead of where we are so I think uh it runs what's this Indo Wars thank you agent died faaa flight 1979 it's a gamut and if you look at the sky SED man every stable star system out there has planets around it and there's some types of creatures around each one so the universe is teaming with life

(1:36:49) actually it's not empty I'm trying to find the poting vector but that doesn't mean they're all operating the same technology that you and I are and one of the problems that we run into with the human experience with this is the tragic anthropocentric projection in other words we project onto other species you see people do this with their pets uh as if they're human and as if they're human using early 21st century human technology but I remind the scientists I work with there's no

(1:37:20) reason why a civilization that Advance would be using the speed of light like we are or using energy and propulsion systems that we are they're obviously not going to be because look at the technological advancement just in the last 100 to 150 years from an agrarian society to what we have today uh so it's very important to understand that but that has implications for what I call the cosmology because what you don't want to do is conflate and mix together together all these different manifestations of conscious entities

(1:37:56) into one Gish and then be confused about it it's very easy to do it because in in in in defense of those who have done so um if you don't know the specifics of the science behind transdimensional physics and how these extraterrestrial civilizations operate you would be absolutely easily confused by it being uh looking very similar in some circumstances to Something From Another Dimension not another star system but this is why I always say if you're an Interstellar extraterrestrial civilization you are a priori

(1:38:34) transdimensional however there are beings that are no idea he talking about right interdimensional extradimensional that aren't extraterrestrial but they're beings and their intelligences and they're non-human and those all get blump together erroneously and that is the beginning of the end of any clarity so that's the very first point I wanted to make about this yeah now that's really interesting I mean it's it's a question of um Gods Spirits archons Elohim and then actual interdimensional species so that is a

(1:39:05) fascinating topic uh Dre uh you have your hand up uh go ahead my friend awesome thanks for uh having me on and and Dr Greer thank you so much for all your work I remember watching unacknowledged for the first time in uh 2018 was really eye opening um just to just to fully understand you know all those and then actually the Pentagon audits uh for the first time

happened right afterwards so it was uh it was interesting having seen your work and then seeing you know these Pentagon audits you know finally try to go

(1:39:37) through of course they've all failed but I have um and they always will until they get this under control exactly exactly yep um so we covered so far I'm glad you covered earlier the Extraterrestrial versus you know interdimensional um aspect but I want to um I want to bring up a few as craft originally of that because that's this ask five questions this straight by the way we have five documentaries thing we want got to go back to the mid to late 1800s right Sciences we have or a radio telescope at a certain very high voltage

(1:40:19) and certain specific frequency think about civilizations that are hundreds of thousands to millions of years more advanced than we are how they might appear uh using the state-of-the-art of their science and technology and why we may confuse that with beings from whether they be I'm not sure about Bazar I've actually don't think we need Element 115 anymore that's one of the biggest changes in my thought process since I've started this case GIC demonic from another di your great grandmother

(1:40:51) rattling through the cupboards at night after she died Poltergeist are transdimensional not the CI director but his wife asked me who was the chief operating officer of the National Academy of Sciences think we're washington and she said well how are they communicating across these fast distances and you know I was sort of reticent to tell her the **truth** because you are very much at risk for being considered you know nuts person I'm briefing drive it by what they ask so in this case I said well you know

(1:41:39) the speed of light is too slow because if you're from the Andromeda galaxy which is two and a half million Lighty years from here and our team has had a contact with a very senior ambassador from that gxy Galaxy whom we call beu but if you are communicating let's say you're here near Earth and you send a signal back at the speed of what you and I are using right now that would take 2.

(1:42:06) 5 million years to get there at the speed of light that's 186,000 miles per second now for them to reply and say good how are you doing the day bud that's another two and a half million years so that just took 5 million Earth years we know that therefore the Electro magnetic field of speed and the speed of matter let's say electrons you know subatomic particles all of that has to be transcended to go from point A to point B Interstellar and that's why all Interstellar civilizations that are extraterrestrial that are near us or

(1:42:42) have discovered us have to have mastered transdimensional physics and transdimensional Sciences now we'll get into that in a moment because it's critically important I think say drive it by what they ask so in this case I said well you know the speed of light is too slow let's just really wish he didn't say the beu thing there s of meetings I I let the person I'm briefing drive it by what they ask here we go let's try that again I think we're going to clip it right when he talks about the how many years it is

(1:43:27) five million years or whatever that is so in this case I said well you know the speed of light is too slow because if you're from the Andromeda galaxy which is two and a half million light years from here and our team has had a contact with a very senior ambassador from that Galaxy whom we call beu but if you are communicating let's say you're here near Earth and you send a signal back at the speed of what you and I are using right now that would take 2.

(1:44:00) 5 million years to get there at the speed of light that's 186,000 miles per second now for them to reply and say good how are you doing today bud that's another two and a half million years so that just took five million Earth years we know that therefore the electrom I really really wish he didn't say the beu thing it really kills my clip here with the beu thing so in this case I said well you know the speed of light is too slow because if you're from the Galaxy which is two and a half million light years

(1:44:33) from here and our team has had a contact cards name like whom we call or is it B if you are communicating let's say you're here near Earth and you send a signal back at the speed of what you and I are using right now now that would take 2.5 million years to get there at the speed of light that's 186,000 miles per second now for them to reply and say good how are you doing today bud that's another two and a half million years so that just took five million Earth years okay that's a that's a pretty good

(1:45:08) clip if we could somehow get rid of the beu part I think it would be spicy anyone know how to spell beu can we look that up is that even a thing we can look up uh Greer and [Music] Andromeda galaxy beu yep there he is it is b j o u remember when uh he calls out Aaron rodgers does did anyone know that Aaron Rogers did the C5 stuff was that even public knowledge before Dr Greer just straight up outed him that was funny I might have to clip that just to hate on Aaron Rogers although yeah uh Greer light speed beu we're going to call

(1:46:02) this spoken to beu he's got cred okay this is a good post for winding down and then we'll dig in a little bit of science maybe we can do some memes somebody make me a beu meme I need a beu meme Buu is apparently an ambassador from the the Galaxy yikes uh what kind of update is this for

(1:47:49) that's for even though I'm talking to the uip community should I should I even tag the UFO community in

(1:48:53) this guys should we tag the UFO community in this let's do a poll you guys tell me I I'm going to I like to go with democracy what the okay guys vote should we tag UFO Twitter and UFO X in this post should we tag them or not up to you guys it's going to be we're doing democracy here guys if you care vote if you care vote whichever whichever vote is higher votes whichever has more higher votes is what we're going to go with I personally do not care either way we're going to go with democracy on this

(1:49:43) one should we tag UFO Twitter and ufox yes or no H it's a tough one huh it's a tough choice tough choice let's see how we're doing how do I oh it's oh only 30 votes 31 votes guys

there's a lot of people in here nobody's voting it's almost 300 people in here too many people sometimes it's nice to stir the pot sometimes it's nice to stir the pot this might get us copyrighted I'm going to show listen I'm going to pull up a joke for you guys it's the only Dane Cook joke I

(1:50:31) like this is probably going to get us copyrighted okay it looks like the yeses have it okay God it makes me feel sick to use their their hashtags for let them come let them

(1:51:49) come no I'm definitely not forgetting about relativity relativity is no issue with speed of light it's time dilation it's time dilation all you have to do is check out the once you watch double slit experiment froggy check out double slit experiment I'll link it for you then you'll realize that faster and light travel is capable so is fast and light communication this is actually how quantum entanglement was found there you go check it out take a take a good look at that you know what's funny is before all these

(1:52:35) videos happened I would um actually that's not true I it must have been right after the videos I would post about quantum entanglement and redditors would argue with me that the double slit experiment is solved and how simple it is it's like that's typical peak redditor time doesn't stop at the speed of light that's not how it works it's not how it works at all time does not stop at the speed of light that's not how it works time dilation is based on how much mass there is so uh The more mass the slower your time

(1:53:15) goes the less Mass the faster your time goes that's how science works guys half the audience isn't liking my stream what does even liking my stream even do I don't even know does it do something does it make people see it I don't get it that's okay I'm don't really care about how many people like the stream I'm just doing it for you guys it's for my special people out there my special peeps I think desert cat is uh a little bit behind I think she's watching Lulu think she's seeing

(1:53:59) Lulu yeah my dog is really beautiful she's super cute my parents were telling me that I got to use my dog to meet chicks they're like man you got to really use your dog to meet some girls I'm like okay yeah and is feels pretty easy when you do that people definitely always want a pet her yep yep we're familiar with time dilation don't don't Google things you're not going to get the right answer don't Google things I'm very familiar with time dilation Quantum tele portation has

(1:54:50) already been proven to be real BTW okay UFO Community is going to love this one UFO Community is going to love this one is this an hour old this is even an hour old 6,000 views that's not bad for

(1:56:23) going to grab the screenshots as well for this part is this giving too much information about my job is this giving away too much information about my job I think it's fine I think it's fine I call myself database architect that's not my official job title it's just what I call myself based on my skill set oh you guys don't need to delete that but yeah I don't I'm not going to even

repeat that message Alex but yeah yeah Cliff Cliff uh Cliff was

(1:57:29) retweeting my stuff and I started watching what Cliff was saying Uncle cliff apparently and I realized he might be a little little too into the woo for me a little too into the woo let's just That's How we'll put it politically and then he went out hard against us when like I called Jack sarfati a clown which he is and that's when I blocked him I don't care how many followers you have don't come in and try to condescend me in my replies especially not when you're talking about the Elohim and

(1:58:03) angels and stuff like that there's no moral High Ground yeah and if you start talking about the space Jews or whatever like just when you start to get anti-semitic at all just stay away from me I'm not trying to get involved in any of that stuff Violet says I'll say it he's off his rocker yeah I mean it's cool I think there's a lot of people who are into the woo Who are into that camera's out I got I got to fix my camera I have a feeling it's my um cam card I think it's overheating I probably have to get

(1:58:39) a better one I am not into the anti-semitic stuff I have a lot of Jewish friends I I went to school with a lot of Jewish friends I went to a Jewish preschool um I could actually know some Hebrew uh and I I understand the situation in the Middle East is uh I I don't want to even touch it with a 40 foot pole I just just leave me out of it I think that all wars are pointless why would I be offended at this I would never be offended at

(1:59:48) that for sorry guys I I guess you don't need to watch me replying to people oh beu is a that's a Jewish thing oh

(2:00:58) okay yeah the overheating thing is weird like the camera the camera is definitely not overheating the camera is doesn't feel hot I think it's the there's like a cam card you have to use I have a feeling that's probably what's overheating and then when I reset the camera it switches it or something it's pretty bizarre though for might be beneficial to talk more

(2:02:07) discretely we're just sitting here just spilling the beans on this freaking **scam** of the is MH370 such a **scam** man even if these videos Were Somehow actually fake like I would still be 100% sure something sketchy happened with this plane no matter what why are you guys guys please like you're being a whoever is deleting this you're being a little too rough unless someone's trolling you don't need to delete it yeah the cable is fine I think it's the card I have like a cheap \$15 cam card I think that's probably what's over

(2:02:49) overheating all what I'm going to do tonight is I'll unplug it and then I'll see if that's I'll see if that's what's causing the issue and then tomorrow when we stream we'll see what do you guys think science time maybe science time it's a little late in the game to worry about people's feelings one 1.

(2:03:19) 1 million views on this I did not expect this to get this many views 1.1 million views Tucker Carlson brings the views folks this guy is in straight up CNN brain independent aircraft

investigators you mean random people who call themselves experts two obviously fake videos this guy has lost his mind L dude there's yeah Wall Street advisor am I following Wall Street advisor good Wall Street advisor just murdering people out here this guy okay that's enough of you oh wait is this my post oh I guys stop let's stop talking

(2:04:18) to Gerald McGuire he obviously he got mental issues quite the specific section he wants me to quote it for him didn't somebody post the the picture of this the other day did I take a snapshot of it I don't know why I'm interacting with this troll I like to correct people though on their false views I guess that's kind of the way of the internet right yeah 1.

(2:04:58) 1 million on that post I'm over 40 years old over 40 we'll call it despite the fact that this fresh young face over 40 is this not going to post it's not going to go oh okay hello he wants me to quote it for him even though he's the one who linked it thinking that it was going to prove him right cute people are in serious Next Level denial about this stuff it's definitely science time though folks science time science might get really a little bit rough though I want some any have any good science videos we can watch oh

(2:05:45) oh we're going to listen to some Dane Cook am I the only person here who loves to watch a couple together that hates each other's guts that has to be the most entertaining thing when you see two people that just hate each other together and look we've all been there everybody's been in the situation where you will stay with somebody you don't even like two weeks in you're already like I F no way can't stand this person I'll hang around for five or six years and then we can end this thing

(2:06:24) violently I got time girls you make the craziest excuses to stay right that couple is the best they fight until I can leave with my CDs that couple is the best they fight over everything every little thing huge explosion and it's not even about the thing it's about the fact they want to stab each other on the neck with a steak Knife because they hate each other's existence they get in what I call nothing fights fights about absolutely nothing right you see him waiting in line for the movie theater they hold

(2:07:09) hands but it's not loving at all it's like this Rigamortis rheumatoid arthritis Red Rover grip that they got going on and everything's an argument I should probably bring my jacket it might get cold you bring your jacket you think do you think yes but if they're pumping AC in there and then you're cold I got to go out and I miss the previews cuz I got to get your jacket bring your jacket I love nothing fight the best nothing fight I've ever seen in my life I was at the supermarket a few months

(2:07:53) ago and I'm going down the aisle and I'm at the stoer french bread pizzas and I'm deciding do I want four cheese or one cheese cuz sometimes I like a lot of cheese sometimes I like a dancing plethora of cheese in my mouth and then other times I'm into a more solo cheese Adventure just a single one-on-one me and one cheese yet sometimes I want an or give cheese on my pallet so as I'm standing there and I'm contemplating my cheese future I hear the nothing fight going on in the next aisle I don't know exactly what they're

(2:08:29) saying but I hear mumbles and I hear grumbles okay I hear the guy going yeah yeah yeah uhhuh yeah and then I hear the girl and she's like I don't even care I didn't even care I didn't even care yeah yeahuh uh-huh uh-huh yeah I don't even care I don't even care care I don't even care care huh I hear the nothing fight I start getting so excited I'm like I got to go watch this I got to go see this I'm so excited I leave my cart you never leave your card God forbid somebody comes into the store and

(2:09:15) wants exactly that and they're like what jackpot this is everything I wanted I'm peeking around the timent cookies and I'm watching the best nothing fight that I've ever been a part of they're in each other's face okay and the guy is saying to the girl he's going like this I asked you do we have any jelly in the house do we or do we not have jelly you said we did last time I'm looking in the cabinets I don't see any godamn jelly I just want to know if we have jelly in the house and she's egging

(2:09:55) them on she's like I don't even like jelly I don't even like jelly I get hives if I even look at jelly I don't even know about jelly I've never I don't even what is jelly I didn't even care and he's like I don't even give a about the hives I want jelly in the house stat Pronto tonight I don't give it I will break your neck and pour jelly all over your body and pray to the gods of jelly to burn your soul in a jelly like hell now get that jelly I'm so excited I'm eating the

(2:10:32) entiments out of the box I've opened a box and I'm eating I'll pay for it relax I know you're concerned but I paid this is the point during the nothing fight that I like to get involved yeah I have to get involved and I have to say something just a little jab a little poke that will fuel the fire and help take it to the next level as they're going back and forth I walk by them I lean in and I go like this hey dude dude dude I know what you're saying about the jelly bro yeah tell this to get Jelly

(2:11:16) now see see get the Jelly uh what's that word what good word thanks bro I didn't even I forgot about that word get the Jelly great word dude great word [Applause] yes hope you guys appreciated that joke get the Jelly get the Jelly hey Gemma what's up so I think about that Dane Cook joke a lot get the Jelly like the nothing fight that reminds me yeah you and ufox yeah that's about right I'd like to get I like to get involved myself hey bro I totally get what you're talking about with the

(2:12:10) Jelly that's when I like to involve myself between the UFO fight okay this is I don't care enough about this guy guy I'm wasting too much time with this person that's a CNN brain they're not going to believe no matter what so really doesn't matter just going on to like Antonio's stuff because she's donated money no military uses rainbow gradient thermal why do people just make fake stuff up it's literally built in to the rad the Ron camera obviously it's added over the the

(2:12:48) top I don't know what that person is thinking yeah if the pilot did this why would there be any national security risks if this was a pilot suicide why would there be National Security risks guys doesn't make any sense yes yes BL WM not just that the corridor crew gets something

else wrong so you it's shaking naturally here because it's in the turbulence you can even just see it shaking naturally here when it goes under you can see it shake again and then they zoom in when they zoom in because like if you were to

(2:13:26) zoom in on something it would start to shake more and more and more based on how much you're shaking in that actually is natural here as well it zooms in more and it shakes even more when it zooms in like how how does someone look at this and think this is fake if you took the orbs out every nobody would think this is fake nobody would think this is fake if you took the orbs out it's also obvious obviously nighttime because look at all this interference here if it was daytime you're not going to see all this black

(2:13:53) pattern interference this is because this is being shot at night fairly confident about that as somebody who's just a random guy and then when it zooms in now you can look how much it's shaking this is because you're this is what it really looks like when you're zoomed in on something I just don't how do people think this is fake it's just because it's too hard to believe right just because it's too hard to believe just that's the reason why everyone thinks it's fake this is the reason

(2:14:25) right here this is why everyone thinks it's fake I don't want it to be true either man but it just is what it is the serial numbers that you mean the non-unique serial numbers on the wing first of all I want to talk to no is it not threat no threat no threat what part of this is ruled out by finding a flapper Ron what makes this Impossible by finding a flapper on what part of teleportation in a burn event is rules out finding a piece of the plane I just don't get how does finding one tiny piece of the plane prove that

(2:15:06) there was a crash walk me through that I want somebody who thinks you realize there was no matching serial numbers right those serial numbers are part numbers those are not unique serial numbers like I'm going to help you out right now no threat I've literally been talking to you bud I'm going to I'm going to help you out no threat right now I'm going to break down your CNN brain right now are you ready for it watch this watch how easy it is to find MH370 serial plate this is all you had to do if you had just Googled this

(2:15:42) before talking you'd have found that the unique serial plate was missing that's all you would had to do instead of just believing what you've been told you could have just literally just Googled it missing ID plate delays confirmation of MH370 a critical identification plate of a Boeing 77 flapper on that washed up the UR Island they would tie it to MH370 is missing because of the effect of seawater on the adhesive that bonds it to the structure this is bolted on you can see the screws you can see where the

(2:16:16) screws would go on this how's is this missing how does this wash off they did not match it to Unique serial number they matched it to a part number this also even if this is from MH370 what we see in these videos is consistent with that it could have fallen off during this event it could have fallen off afterwards wherever this plane goes it's not going to the zenu dimension just going somewhere else on Earth okay now we know this Clon can easily be from

the plane someone walk me through why you think the debris all of a sudden he went

(2:16:56) quiet all of a sudden he went quiet so we proved that there was no unique serial number for the part no threat any comment visual effects guys visual effects I dude I just Googled it from you man are you just in total denial like this is the this is your brain on CNN folks this is your brain on CNN MH370 flapper on serial plate literally missing there was no unique serial number are you seeing it no threat 33 Google it yourself man there they did not match unique you've been lied to no there was not a lot of

(2:17:53) debris you want to watch to see how much debris was found this is how easily you're lied to look at this picture does these three tiny pieces look like a lot of debris to you man this is less than 1% of the plane there's 238 people on board This Plane all with luggage on it three tiny pieces of the plane are there even if you this there was nothing this big found even if you take all these highly likely pieces still less than 1% of the plane walk me through this why did we find pieces that clearly have burn marks on them this is a burnt

(2:18:34) piece of a a plane it's undeniable that this is a burnt piece of the plane both of these are look at this heat heat damage this is a burnt piece of the plane how can anyone look at this and not think this is a burnt piece of the plane clearly this was on fire clearly and it also happens to have the honeycomb pattern here is consistent with a Boeing plane we literally have pieces of the plane that were on fire that's just been ignored this is from the atsb report this is literally from the atsb report so the scenario I've put forth is

(2:19:15) Fire Plus teleportation how is is a couple pieces of debris cons how is this prove that a plane crashed do you know how much debris there should have been for a plane crashing yeah and just in case just like what quiz total just said just in case there was a exact replica of the plane purchased in October of 2013 by GA tesus if you don't believe me I'll give you a link to that too just in case you think that this might be fake debris which I guess it could be you need more doubt we've got plenty of

(2:19:49) it this is just cold hard evidence not even just there's no speculation just hard evidence the cast doubt as to whether or not this is look at this amazing amazing an exact replica of the plane purchased by G Tes say October of 2013 This Plane this is it was 25 years old this year when I took this screenshot planes last for 20 30 40 years they scrapped This Plane a decade too soon look at this delivered in 1998 it was only 15 years old and they scrap This Plane why why did g tell us to scrap This Plane only 15 years old exact copy

(2:20:34) the parts would have matched from this plane to the ones that were found there have been floating seats the planes are made out of plastic and Light Metals there should have been thousands of pieces found thousands we should have found the debris field the very next day my birth control alarm it's a good one it's a good one we should have found look guys just for I'm doing this just for no threat just cuz we're going to we're going to convert somebody today make them realize how the official narratives are

(2:21:17) Global persistent infrared surveillance did you hear that Global persistent infrared surveillance Global persistent infrared surveillance continues to be a critical National Security space mission how do they not find a plane guys hey no threat if we're scanning the entire Earth all the time like this how do they not find the debris field literally scanning the whole planet and this isn't even with operationalizing the Drone the the this this isn't even with operationalizing the satellites War focus on strategic

(2:21:51) ICBM systems has expanded your sensors act simultaneously look how huge these scans are man do you really think they don't know where the plane was man look at the cers system look at it look at this man will be an unprecedented resource these are geostationary satellites they're just sitting out here scanning the whole world all the time blows me away man debris doesn't fall off okay just stop pretending like you know man just stop pretending there you go anyway okay yeah persistent is the word constant AKA

(2:22:29) always scanning so anyway I hope we got a convert we converted someone there sure I like this guy but when I start looking at his tweets they get a little bit uh they get a little racist they get a little bit racist no I'm not down with racism folks not down with racism think that everybody's the same what is n NC boy is just on fire right now what did they hide the debris thing is like the most common thing people say too they're like how about the debris it's like that debris stuff like that's how

(2:23:22) easy it is to lie to people man only jet airliner never found one thing I'm 100% confident of this plane did not crash into the ocean yeah Lulu is a small Husky she's compared to other Huskies she's not very big yeah she's a Siberian Husky desert cat although desert cat I think you're like 30 minutes behind but yes where was that link that hermes's put in the chat for us where was it want oh yeah I've got to do some work stuff crap I don't want to get in trouble I'm gonna have to drop here in a minute

(2:24:33) to take care of some work stuff actually we'll just watch this video while I'm taking care of that what's this it's going to be black and white yeah it's too bad Chris Leto's Community is so toxic I'm not going to do any more stuff with Chris Letto I think he's a good guy but his his community needs a lot of help man he needs to regulate his community a little bit more easily the most toxic Community I've ever seen point of view that is from a particular frame of reference and things look different to

(2:25:22) us under different circumstances at the moment things look this is the same one again you look peculiar you're upside down no you're the one that's upside down no you're upside down no I'm not he's the one that's upside down isn't he well let's toss for it all right okay you lose he's the one that's really upside down you better come into my friend um why do you put down Skinwalker Ranch because TJ Allard is a douchebag TJ Allard actually tried to cast shade on our case like he's he was completely

(2:26:18) off his rocker TJ Allard guy's a complete clown he he was so weird man like he is your stereotypical like Bizarro producer guy and so we just clown on him because he was trying to say

that we don't have any evidence while I'm showing him 13 pages of evidence and then like for someone who works on a show like like Skinwalker Ranch to say that we don't have any evidence is one of the most laughable hypocritical statements you could literally you could make honestly it's just TJ Allard complete

(2:26:57) clown and if you were in the first space I was in with TJ Allard halfway through yeah he's a self-righteous douchebag halfway through the space he just starts making it completely about himself for like 45 minutes I was wondering who the hell this guy was I was trying to be nice to him in the first space I was ever in with him which was like months ago and he's like well if you want to make this about a TV show you got to have a pitch and you got to have this and I'm like I never asked you about how to make this

(2:27:25) into a TV show like I never I never asked and he was like kept trying to like get me to explain every little detail to him even though I had just done an hour long presentation about it and it was just bizarre man and then we did this follow-up one and he was just being like a total douche and he's like he's sitting there and be like uh I'm just trying to help you I'm just trying to help you like literally just go listen to my uh and the space wasn't even about him it's a space about Danny

(2:27:55) Jones and Julian Dory and me and somehow TJ turns it into all about himself like it was wild the best part was he found out we were streaming and he's like Ashton's here streaming laughing at us he's like a little he's got the mentality of a little child mentality of a little child so that's the reason why we make fun of skin Ranch it's nothing personal against the people who enjoy Skinwalker Ranch it's just like if somebody who made Ghost Hunters is hating on people who are like

(2:28:26) investigating ghosts it's like dude you make a show called Ghost Hunters right like why are you hating on anyone else right I've literally never seen Skinwalker Ranch not one episode not one episode yeah TJ's like I've got got 20 years of experience in producing TV so you should be kissing my ring that's like his attitude like Jesus man th those are the people that don't deserve any respect in this world those are the people that don't deserve any respect anyone who tries to tell you

(2:29:01) that they like you owe them something because of how they how much work they put in or something like usually that means that they are self-conscious about how little work they actually do like I've done my job for 20 years you'll never hear me telling one of my co-workers you should talk to me a certain way because of my work right that's what like people who are just like narcissistic do right I've never held that over anyone my whole life just bizarre okay sorry reference [Music] now my frame of reference was inverted

(2:29:45) from what it usually is that view of things would be normal for me if I normally walked on my hands this represents a frame of reference just three rods stuck together so that each is at right angles to the other two now I'm going to move in this direction you see the frame at the same spot on your screen but you know I'm moving this way because you see the wall moving

this way behind me but how you know that I'm not standing still and the wall moving it was the wall that was moving now the wall has disappeared and

(2:30:32) you have no way of telling whether I am moving or not but now you know that I'm moving the point of this is that all motion is relative in both cases I was moving relative to the wall and the wall was moving moving relative to me all motion is relative but we tend to think of one thing as being fixed and the other thing as being moving we usually think of the earth as fixed and walls are usually fixed to the Earth so perhaps you were surprised the first time when it was the wall that was moving and not Dr Hume a frame of

(2:31:11) reference fixed to the Earth is the most common frame of reference in which to observe the motion of other things this so we're experiencing the Earth like movement of the Earth moving right the frame is fastened to the table the table is bolted to the floor the floor is anchored in the building and the building is firmly attached to the Earth of course the reason for having three rods is the position of any insect using these three reference lines this reference line points in the direction which we call up to which is a

(2:31:47) different direction here than it is in the other side of the earth and these two reference lines specify a plane I want another video from that that one horizontal or level in this film we're going to look at the motion of objects in this earth frame of reference and in other frames of reference I want to get another oh camera's dead again man camera's killed again um I need another one I want another one of those cool ones about electricity I want some I want some Rel to the Earth frame maybe something about pointing

(2:32:21) vectors let look at a motion this steel ball can be held up by the electromagnet now I'm going to open the switch and you watch the motion of the ball the ball is accelerated straight down by gravity along a line parallel to this vertical reference line as you can see the electromagnet is mounted on a cart that can move and I'm going to do exactly the same experiment that Dr Hume did but this time while the cart is moving at a constant velocity the cart is pulled Along by a string which is W around this phonograph

(2:33:02) turntable and that pulls it with a constant velocity I get plenty Vector next when the cart passes this line the ball is released as you can see I'm going to start the cart down at the end of the table so that by the time it gets to this point I can be sure it's moving with a constant velocity now I want you to watch right here so that you will see the ball falling okay well the ball is going to move at the same speed that the cart's moving I think you can see that the ball landed in exactly the same position

(2:33:48) that it did before when Dr hum did the experiment with the Cart fixed but this time the ball could not have fallen straight down let me show you why and the ball was moving forward the ball was released at that point if it had fallen straight down because the cart moves on in the time that it takes to fall it would have landed back here somewhere but it didn't this is good for people guys to understand I'm going to do the experiment again this time I'm going to let you watch the motion through a slow motion

(2:34:20) camera which is fixed whatever it's connected to it's going to be moving the same speed right yeah moves by the ball will fall and you can watch in the slow motion camera they had a slow motion camera back when the 60s that's cool you can see it's moving I'll show you this again this time there will be a line on the film so that you can see the path I think that you can see that the path of the ball is a parabola but all of this has been in a frame of reference fixed to the Earth how would this motion look in a frame of

(2:34:59) reference which was moving along with the I don't know what EC mode is frame of reference like that well so that you can see what it looks like I'm going to fix this slow motion camera so that it moves with the c like this I'm going to do the experiment again and incidentally I'll start it and then I'm going to stand here so that when the ball Falls you will have something which is fixed as a reference point oh yeah in the moving frame of reference the E mode thing after that the path of the

(2:35:55) ball is a vertical straight line it looks exactly before when Dr Hume did the experiment with the Cart fixed if we were moving along in this frame of reference and we couldn't see the surroundings then we wouldn't be able to tell by this experiment that we were moving at a constant velocity as a matter of fact we wouldn't be able to tell by any experiment that we were moving at a constant velocity I'm going to do the experiment once more and this time I'm not going to stand here behind the ball as it falls so that you won't

(2:36:24) have any science frame it looks like it's not even moving right you can't tell as far as you're concerned that time the cart wasn't necessarily moving at all that time when you couldn't see the background then I think perhaps it was harder for you to realize that you were in a moving frame of reference the important thing to read pretty cool pretty cool the batteries are shown in the uh manifest the batteries on the plane there's a cargo manifest that in Thursday's class this is pretty

(2:37:20) quiet be very short on time by the time we get to the idea of the pointing Vector I'm making this video so you have background um can't turn it up any louder so this right here is my attempt of drawing an electromagnetic wave traveling through space so of course C would be the direction that it's moving in and keeping in mind then the electric field and magnetic need to be simple perpendicular to each other so this um would be like the electric field which I drew in pink would be want stuff that go

(2:37:59) makes me go the xais would be on the YX plane so this is supposed to be one plane here that would correspond to the screen while the blue which represents the magnetic field would be in a plane that would be coming out of the screen which would represent the Z axis and so I tried to draw that three-dimensional situation here on the screen was marginally successful but hopefully you remember these pictures from the book keeping in mind or just reminding you that both these electric fields and the magnetic field are

(2:38:42) sinusoidal so they're varying with time these Expressions should look somewhat familiar because they are related to she just said they're sinusoidal huh the same as the path of

the orbs that cannot be a coincidence cannot be a coincidence the path of the orbs are sinusoidal right what are we missing about that feel like we're missing stuff traveling waves which we studied at the very beginning of the semester so in some respects we're circling back to the material that we saw at the beginning of the

(2:39:23) semester so pointing Vector why do I want to talk about the pointing Vector well um the pointing Vector is important in certain applications because when we talk about electromagnetic waves which are light so sometimes I'll say light because electromagnetic waves is a lot to say but anyway you think it's a windows power setting I doubt it man way as they travel through space they're carrying energy and that energy is contained in both the electric field and the magnetic field um we might talk about energy

(2:40:10) [Music] density iPhone 15 in a mouse case come on now uh which we have encountered in previous chapters um maybe in the chapter on capacitance we made have may have talked about the energy density because we were talking about how a fully charged capacitor stores energy and in that situation energy is stored in the magnetic in the electric field and so for our electromagnetic wave is sheing backward we have both energy stored in the electric field and in the magnetic field right now I'm going to present it in terms of energy

(2:41:02) density um the energy stored in the electric field can be written as one half Epsilon KN times  $E^2$  and then the energy stored in the magnetic field can be expressed as  $\frac{1}{2} \mu_0 B^2$  so as I mentioned we did talk about this I feel I have to focus density in a previous chapter I don't think we talked about the energy stored in a magnetic field if we use the relationship that is true for electromagnetic waves that the ratio

(2:41:53) of the electric field and the magnetic field are equal to the speed of light we could actually rearrange this and substitute into this expression in order to find out how we would Express the energy density in solely the magnetic field and we would get this term so in any case that sort of gives a little bit of background for what the pointing Vector is um but the she got a big ring on the relevant information is the idea that as these waves they're carrying energy with them and that energy is stored in those

(2:42:33) fields that actually the waves are the waves consist of those fields now we come up with this Vector called the pointing vector poting vector and the pointing Vector is i' like to describe it as a flux um and I but not like not as much like magnetic flocks but guys it's bugging me out that I can't tell if she just flipped the video or what is she she's also left-handed she she's got the devil's hand they used to call people who are left-handed like witches and stuff an electric flux but sort of like that

(2:43:19) um the she's a left-hander she's got the devil's hand guys the flux here we're talking about is sort of as this wave is traveling through space if I imagined a plane that the wave would pass through the pointing Factor guys I can't focus on anything else other than the fact that whether or not she's riding backwards it's it's really bothering me I still trying to figure out the

writing backwards part of this is she writing back I feel like she has to be writing backwards she just went from right to

(2:43:51) left she's left-handed this is her left hand we Sorry Moonlight did she I don't think she did look so she's left-handed we all agree right this is her left hand I mean this is her this is her left arm this is her left hand and she's writing right to left she's writing right to left she's writing backwards I think this is bugging me out that doesn't work man it doesn't work she can't be right-handed video can't be flipped that way she has to be even if you mirror the perspective

(2:44:29) does it wait does that work would describe the energy that goes through that area per unit time and so I'm pretty sure her arm can't flip to the other side that's why it's a flux and you know guys I don't think we're ever going to figure out the videos if we can't figure out we can't figure out if she's if she's right or left-handed no so then we could say well electric flux and magnetic flux are sort of like that because they are calculating Fields passing through an area but um this is a little bit of a

(2:45:08) Twist on that but we're sort of think let's just move on from the fact that we can't tell if this what anded she is thinking about what is the energy passing through a area in a certain amount of time and that is going to be Quantified by what we call the pointing Vector the amount of energy passing through a certain amount of time is the pointing Vector the way that it's defined is  $1/\mu_0 \mathbf{K} \cdot \mathbf{n}$  and then  $\mathbf{E} \times \mathbf{V}$  which if you think about it and you remember from the beginning of the chapter when we first start introducing

(2:45:44) the um electromagnetic waves which are light we did mention that the direct guys is this my left hand or is this my right hand let me look at my video no this is still my left hand so she's definitely left-handed there's no way to trick it I'm looking at my own video which should be flipped as well this is this is my left hand still over here so yeah notion of propagation is always given by  $\mathbf{E} \times \mathbf{B}$  so it sort of makes sense that if we're talking about the most of the energy or how the energy is

(2:46:18) moving that it would she's a witch Absol guys she's a witch this is must be bfx guys I think this is a portal effect from the 90s that're we're looking at gives that direction and also talking about the electric field and the mag magnetic field kind of back that's what bothering me too she's writing backward backwards better than I can write forwards that's the part that's really killing me right now idea of the energy density which of course we could change from energy density to just simply

(2:46:47) energy but obviously it would be related to the strength of those electri so energy over area times time so enough justification for this expression  $\mathbf{M} \cdot \mathbf{W}$  are you out there **debunkers** we need you to **debunk** this video for us we need you to **debunk** this video for us people we need some help here later knows are equations now if you think about it I actually bunkers this is this video AI did uh somebody hoax this video wrote here the expressions for electric field and magnetic field and if we substituted those in here we would see that the um

(2:47:23) pointing Vector would be something that would vary in time here's one thing you need to do before buying I was like I skipped the ads and I like we we got hit by ads yeah I'm going to sleep after this I think I can't tell if she's writing backwards it looks like she's writing backwards Mick West please we need your help Mick debunk this video you know it's not a constant value but instead it is a value that will wax and wane along with these cosine functions so because of that the you

(2:48:10) know an instantaneous value of the pointing Vector that is the value of waxes and wanes so it's waxing and waning because of these connections here how the huh because of the sinusoidal pattern so it's going to wax and wane which one's wane wane down here wax is up here yeah she has rings on both hands too just making it even more confusing I'm pretty sure she's a witch guys I'm I'm pretty sure she's a witch specific time might not be as useful because of the fact that if we just change the time

(2:48:49) we could get a totally different value for the same wave so what we like to do um is we like to think about what its average would be like what would be just sort of the average value of the amount of energy that's being delivered before we do that let's sort of write a scalar quantity or a scalar amount for the pointing Factor like just how big is it if I substituted these expressions in for  $\mathbf{E}$  and  $\mathbf{B}$  I could write it if I again use this relationship here between the electric field and the magnetic field  $\mathbf{I}$

(2:49:29) could express this just in terms of yeah these are Harry Potter glasses for sure she looks like Doris under brook or whatever her underbridge one of the fields for now we'll do electric field we could say that oh what up Jeremy value of yeah we're we're sciencing the crap out of this right now could be written as speed of light Jeremy you just got here we need to know Jeremy is she a witch is she writing backwards what's going on in this video we need help man we need help we need Jeremy to tell us if she's

(2:50:03) writing backwards or forwards and if she's right-handed or left-handed it's killing us right now absolom KN time  $\mathbf{e}$  not  $\mathbf{s}$  time the cosine  $\mathbf{s}$  KX she video called the right-hand rule oh no we might have to watch that minus  $\Omega T$  but what we would really like is what is its average value now this quantity I just want to understand pointing vectors guys I think she's writing backwards too I'm I'm going backwards writing intensity and the average value for the pointing Vector are exactly the same thing that just something sometimes

(2:50:45) you'll be told the intensity is this and you have to remember that that actually means the average value for the pointing Vector so if you think about want  $\sin^2$  function the cosine function in general oh damn it guys Jeremy just debunked it it's videos reversed damn it so she right-handed or left-handed though she's right-handed we're just making it look like it's left-handed right vares she's not a witch plus one and minus one if we Square it what happens is that it always is positive wait what did

(2:51:31) she just do here so it'll now it'll only vary between zero and one and that might make it more helpful to think about if we looked over one complete period of the wave what would be

this average value and hopefully it makes sense to you that it would be equal to one half and so if we think about okay that's sure taking all this just going to draw a line a value a age value into you know over one period we would say that it's going to just yeah I really wanted her to be a witch uh that would really made this video a lot better just

(2:52:13) be one half should I change the name of the stream possible which question mark f c Epsilon somebody confirmed right-handed damn it squ which could also be written in terms of it would have been a lot of skills for her to be writing backwards a magnetic field and in that case it would be  $C \text{ over } 2 \mu b k n^2$  can't get over the witch part when we talk about intensity getting too late still going to represent the energy passing through an area per unit time but the intensity is just more over sort of taking away the fact that these waves

(2:52:59) are constantly changing and sort of looking like well as an average over time this would be how much energy we would be seeing and um that's what we did here by letting the cosine squared that average value being  $1/2$  and so this just gives us a single value this gives us a nice idea given um a light source for instance we could think about if it has a particular intensity at its uh emission we could also then think about how that's going to decrease as the light travels outward because you would be having the same

(2:53:38) amount of energy but now you're spreading it over a larger area and thinking about what effect that would have and also this relation someone find me a better Point Vector video figure I need something that's like better than this I need like more something that's like for idiots it's got to be like real simple like maybe this one oh oh how about this one this guy looks like he knows what he's talking about we need somebody who's not a witch oh she's actually right-handed okay look

(2:54:21) Jeremy **debunked** it within like five minutes guys okay after talking to Dr Greer today I'm I'm very very confident now that teleportation is real we should stop calling it teleportation though I think that's what messes with people's minds when we call it teleportation people think of Star Trek we need to call it super luminal speeds that's what we need to be calling it from now on folks super luminal speeds already or what we're going to call hold on a sec guys one sec one sec guys I gotta I'm just

(2:55:08) finishing some work stuff real quick it'll take one minute and done okay so what I want to do in this video is to um yeah maybe this guy's a wizard this is already looking the same um point out a very neat and very important connection between the directions of  $e$  and  $B$  in the solution to Max's equations that we got Jeremy now looking for the software that we found several videos ago and the pointing Vector so I've shown you the solution ution here um remember we had um an electromagnetic wave that was

(2:55:50) propagating in the  $X$  direction we found um and it had an  $e_y$  and a  $b_z$  okay the  $b_z$  is pointing out at you okay the  $b_z$  pointing at us okay and the wave was moving in this direction but at this one moment in time when we took a snapshot of it the  $e_y$  which up here was pointing up some ways over half a wavelength over the  $e_y$  was pointing down and at the spot

where the  $\mathbf{e}_y$  was pointing down the  $\mathbf{b}_z$  had flipped sign also so the  $\mathbf{b}_z$  instead of pointing at you as was the case over there was pointing away from you towards me but

(2:56:27) it's still Point pointing Vector so um this was the solution that we found we this is this is what we found just by following our noses and solving the equations and now let's work out what the pointing Vector is and let's remind ourselves what the definition of the pointing vector so I've been is he wait is this guy also a witch this guy's using the same same thing huh um which we symbolize by  $\mathbf{S}$  the pointing Vector lot of wizards and witches out here tonight the definition of it which we learned previously

(2:57:06) is  $\mathbf{S} = \frac{1}{\mu_0} \mathbf{E} \times \mathbf{B}$  and then there's a constant here which is  $\mu_0$  not yeah we're learning stuff this is Hocus Pocus and pointing Vector is not real let's work this out it's all magic  $\mathbf{E} \times \mathbf{B}$  well so I take my right hand and I go  $\mathbf{E} \times \mathbf{B}$  oh he just gave it away he just gave it away he set his right hand he set his right hand folks he's a wizard he's a wizard unless he knows that this is his left hand and he knows it's reversed pointing this way so right here at this location from this  $\mathbf{E}$  and this  $\mathbf{B}$

(2:57:44) I have a pointing Vector which points in this direction so again let me use my right hand  $\mathbf{E} \times \mathbf{B}$  this time  $\mathbf{E}$  is pointing down  $\mathbf{B}$  is so I curl my fingers in the direction of  $\mathbf{B}$  that means from you towards me and again pointing Vector this way so here also double negatives man gets confusing pointing Vector points in this direction so this tells you that the story hangs together okay the electromag this stream has had 2,000 views already solution that we found described waves going this way and the pointing Vector points this

(2:58:26) way and what that means is that this electromagnetic wave is carrying energy this direction okay um it also means by the way that if I had started out constructing a solution in which I had let's say the  $\mathbf{e}_y$  exactly as it is but suppose I had had I had chosen at the beginning of my derivation bunch of videos previously suppose I had chosen that at the spot where  $\mathbf{e}_y$  points points in the positive  $y$  direction  $\mathbf{b}_z$  instead of pointing in the positive  $Z$   $\mathbf{b}_z$   $Z$  Direction suppose I made  $\mathbf{b}_z$  point the other way suppose here my  $\mathbf{b}_z$  was

(2:58:59) pointing not out at you but instead pointing towards me away from you the then I would have taken my right hand out and I would have gone I would have gone  $\mathbf{E} \times \mathbf{B}$  and the pointing Vector would have pointed that way and in such a solution this  $\mathbf{B}$  would have been in the opposite direction also and here too when I when I I I would have done this and the pointing Vector would have pointed this way so if I had chosen my  $\mathbf{b}_z$  to point the other way I would have Then followed through the math and I would have found that I had a

(2:59:28) solution to Maxwell equations as long as the whole pattern was going that way and you should go back and check the derivation and see that that's true okay so what we need to figure out for tomorrow is we need to figure out exactly how you can abuse this this seems abusable we need to be able to create Infinite Energy out of this must be a way like I think the toroids are the answer right or you can create a shape where we can cause the pointing vectors to just do something nuts because it's it's named after a guy

(3:00:03) pointing yeah the best stuff is the basic stuff so the reason why this is important guys is we know what we're trying to do we're trying to create a system that can Focus energy to a single point to such a high degree that it can break the fabric of space time similar to what we were watching with Bob Greener earlier today when I put you guys here this is what we need to figure out talk about oh come on we got to figure out the curl of the pointing Vector I need I need Jeremy to explain this for me this is what I need

(3:00:56) to understand I'm too I'm too Noob at gravity going through this is a gon from 1954 from this chap John Archer bald wheeler the guy that worked on the Manhattan Project the point he says this electromagnetic wave a standing wave which is basically what matter is it's trapped light right is held together by a gravitational azoth that is a gravitational azoth so we have gravity coming through here we have intense magnetic field and we have a toroidal moment we have a toyal moment and we have ions coming in here we have

(3:01:39) everything focused to an incredibly small point what are you saying right now basically and the fields calculated for these structures this is 20 microns across I've already showed you structures that we've observed much smaller and they are fractal all the way down so the substructure in here can have a much higher field strength and then Higher and Higher and Higher and Higher and if you keep piling on the energy and it's not being lost it can get very very this is one pulse one pulse a resonant phenomena builds and

(3:02:09) builds and builds and build so what he's talking about here is basically like you you build a system that constantly increases the amount of energy that it's without losing it to a point where you are get to a point where you just have as much as you need so what you can have is a scenario where trillions of atoms are forced into this little box and they all become coherent you can make so that the the challeng become coherent guys resonance coherence is people think you can only make a Bose Einstein condensate

(3:02:49) a coherent matter at near absolute zero I learned from the locked Martin to we're clipping this uh what did he just start saying that and condensate a coherent matter at near absolute zero I think it's about 55 they all become coherent you can make so that the the challenge is people think you can only make a b okay so I think we clip it at 2957 people think you can yeah 2957 we're going to clip this 29 57 only make a Bose Einstein condensate or coherent matter at near absolute zero I learned from the locked Martin 20 3

(3:03:45) paper systems and methods for creating a coherent matter wave that using an electric discharge of electrons going into some 10 Micron cavities they could produce coherent matter weight using the iron Hoff bomb effect which allows for phase synchronization and energy exchange okay that's what we want right there that's what we want that's what the the noobs need guys it's the iron Hof bomb effector is critical to this process and you know what it occurs in the center of a fractal toroidal structure and that

(3:04:21) was published in uh n the 1990s by the team including uh vich duik okay so that's what I want I'm either posting that tonight or tomorrow morning camera off again okay and here it is

apan and duic some okay I'm going to use that any some remarkable charge current configurations join Institute for nuclear research and here we go this is a fractal toroidal structure I'm going to clip this real quick guys sufficient energy D the achievements matter will reverse the flow of the Super Force causing the

(3:05:08) space containing the energy to revert back to a state of quantum coherence yeah that's this this one is really I'm going to put this in the chat for you guys I recommend everybody watch this actually Bob Greener sent this to me and I I replied back said I was already watching it I was like dude I'm I'm ahead of you Bob Greener is definitely ahead of the game on this front definitely better ahead of the game he's got some stuff figured out wouldn't surprise me if he's had some threats he needs to be careful man

(3:05:45) he needs to actually be careful okay 29579 29 through what was it 30 probably post this tomorrow because I'm tired and we already posted a bunch of stuff tonight man let me see ready okay effect that is critical to this Electric discharge and they all become coherent you can make so that the the challenge is people think you can only make a Bose Einstein condensate a coherent matter at near absolute zero I learned from the lck key Martin 2013 paper systems and methods for creating a

(3:06:49) coherent matter wave that using an electric discharge of electrons going into some 10 Micron cavities they could produce coherent matter wave using the iron Hoff bomb effect which allows for phase synchronization and energy exchange okay it's the iron Hoff bomb effect that is critical to this process and you know what it occurs in the center of a fractal toroidal structure and that was published in uh the 199 pause that okay pretty spicy guys pretty spicy I like this a lot so this is a pretty good night I think we did a lot

(3:07:31) of stuff any want to do any oh oh yeah we need to check out Jeremy's stuff too you guys should definitely check out his what is the arrow gels the arrow gels are really interesting man Arrow gels are really interesting I think I'm probably going to write something up about this locking Martin stuff generate a coherent matter we beam wave this is this might be the answer resonant cavities creates resonance one micron across one micron is very small do that

(3:08:36) download okay let's see if this works challenge is people think you can only make a Bose Einstein condensate a coherent matter at near absolute zero challenge is people think you can only make a Bose Einstein condensate a coherent matter at near absolute zero I learned from the locked Martin two which allows for phase synchronization and energy exchange okay I think that's fine that clip is probably fine phase synchronization and energy exchange that's what we're looking for here yeah I think aerogels are not the

(3:09:11) answer I think they're a a piece of the puzzle any type of advanced engineering and meta materials and um Material Science is definitely definitely solid if you can create a vacuum space like with arog gel then you can resonate at the right frequency interesting yo Jeremy do you get like do people knock on your door when you start buying like phosphorus and other sketchy ingredients like I feel like some of the stuff if you try to buy it you might get a knock on

your door this is pretty good I like this matter beam

(3:09:54) stuff definitely need to read this paper let's let's read this real quick before we go to sleep coherent massless particle beams such as lasers have been successful of spawning many disruptive Technologies a mass a massive counterpart to lasers namely coherent matter matter wave beams May hold the promise of similar and even more revolutionary Technologies generated massive coherent beams however has been elusive a major obstacle in producing coherence in matter waves is to change the phase of the beam

(3:10:27) particles without modifying the energy of the particles conventional phase modification effects may lead to a change in energy thus modifying the  $\lambda$  the wavelength of the particles and making it difficult to synchronize the particles for coherence dude this is explaining what's happening to the plane I can already just tell while coherence for Photon uh photons may be achieved through Photon emission enhancement via resonance a similar technique for massive particles EG particles with mass may not work because the velocity of the mass of

(3:11:02) particles is a function of the wavelength the speed of the photons is the speed of light regardless of the energy this dependence of the energy on the speed of the particles may make get difficult for masses massive particles to become coherent a less a way is found for changing the massive particle phase without changing the energy okay this is getting really spicy you did have the FBI visit holy FBI did visit that's wild man that's wild wow what hell what are Beetle wings like real Beetle wings luminescence according to various

(3:12:05) aspects of the subject technology a directed beam of low entropy coherent massive particles similar to laser beams may be produced but with concentrations millions of times higher than any intense laser beams currently available furthermore unlike laser beams or the Bose Einstein condensate the subject technology May produce coherent matter waves that allow both fermions and bosons to achieve coherence whoa it's it's yatsi time folks you guys remember the video we posted several weeks ago where you can convert bosons to

(3:12:42) fermions now they're basically saying we don't need to convert them we can allow bosons to achieve matter coherence wow according to various aspects of the subject technology a system for generating a coherent matter wave beam is provided the system comprises of plurality of beam generated units disposed each of the plurality of beam generated units is configured to generate stream of charged particles I don't that I need that to be converted to English to me the system also comprises a magnetic field generator

(3:13:24) probably a high gravitational field generator to expose the plurality of the streams to a magnetic field such that the charged particles of the plurality of the streams undergo phase synchronization with one another in response to a vector potential Associated a vector potential Associated to the magnetic field and the plurality of the streams is directed along one or more channels to combine with one another and produce a coherent matter wave beam I think that the orbs are making the matter wave beam happen

(3:13:57) across the plane Beetle wings I know chitlin from what I don't know various video games I used to play there's actually why are Beetle wings anti-gravity I need someone to just explain that to me know very simple you guys are confusing the heck out of me it's cool though yeah we need to man Jeremy and I need to make catastrophic disclosure happen Jeremy's got the science part and the science connections I've just got I don't know maybe social media skills metallic beetles ah okay The Meta material effect that makes

(3:14:39) it look like metal interesting um according to various aspects of the subject technology a method for generating a coherent matter wave beam is provided the method comprises generating of generating plurality of streams of charged particles the method also comprises exposing the plurality of the streams to a magnetic field such that the charged particles of the plurality of the streams undergo phase synchronization with one another in response to a vector potential associated with the magnetic field and the plurality of the Stream is

(3:15:13) directed along the same direction to combine with one another to produce a coherent matter wave beam this feels like what's what they did to the plane this just feels like it I'm not smart enough in the science to explain it but I'm more of a theoretical person this is when I read this I I just can Envision that that's what they're doing with the orbs according to various aspects of the subject terminology a system foren coherent matter wave beam is provided the system comprises of a housing having

(3:15:44) one or more channels the system also comprises of at least one beam generating unit disposed within the housing that at least one beam generating unit is configured to generate a stream of charged particles charged particles are generated with the same nonzero kinetic energy as one another people who are not watching this are missing out the charged particles comprise of fance the system also comprises a magnetic field generator configured to expose the stream to a magnetic field such as the charge particles of the stream in

(3:16:21) response to the vector potential associated with magneet field undergo phase synchronization with one another without exchanging energy with one another and the stream is directed along one or more CH channels to produce a coherent matter wave beam huh yeah I uh Bernie I'll take a look at that email I think I saw it I've just been busy man what you guys are all yelling Hutchinson Effect is that something we I need to be pulling up right now I'll take a look at the emails tomorrow Bernie and confirm with you

(3:17:08) guys I just I have a bunch of stuff I'm probably trying to take it easy over the holidays too I don't want to do so many podcast I've been doing more than one every single day we'll definitely have to look at the Hutchin and effects at some point we might have to do right now trying to get caught up uh Hermes we're trying whoa what the f was all about was extremely high voltages in but equally of course what reson we'll look at this later but let

(3:18:15) loing what the wow done thinking that does seem like it could be called anti-gravity anti-gravity doesn't really feel like the right term for this right no one's been able to replicate

the Hudson effect yet I bet they have I bet they have and it's just not uh I bet it's not just I bet it's classified the more I read about this the more I think that we we figured it out locky Martin at least figured it out what was this 12 years ago 2011 I think they figured out how to do this in the last 15 years with the plane we might have been

(3:19:09) looking at one of the first it might now that I'm looking at this wondering if the plane was not a test oh you think there was a string in that one could be could be we'll have to dig more into it if UFOs are real there's a way if UFOs are real there's definitely a way I'm starting to wonder now I'm thinking that if this teleportation technology is real I'm thinking we just uncovered this like 10 15 years ago that this has not like been proven out there for that long um did I already read this

(3:19:49) part the charged particles are generated with the same nonzero kinetic energy as one another the charged particles comprise of firmance the system also comprised the magnetic field generator compos configured to expose the stream to magnetic fields such that the vector potential associated with the magnetic field undergo phase synchronization with one another without exchanging energy I think we already read that so they're able locki Martin definitely thinks they can do it locki Martin definitely thinks they can cause the

(3:20:19) phase synchronization the plane we don't know exactly where the plane would have gone my guess is it got to Diego Garcia but who knows additional features and advantages of the subject technology will be set forth in the description below and in part will be apparent from the description or may be learned by practice of the subject ter technology illustration one an example of a system for generating a coherent matter wave beam in accordance with the various aspects of the subject ter technology is this figure one yeah

(3:21:19) wow I wish I understood this figure one that's it what's figure two example of a beam generating unit scientific drawing of the coupling between neighboring part articles in in accordance with various aspects of the technology I'm going to write this up tomorrow we're going to put locking Martin on blast because I'm all in on this being locking Martin technology yeah Jeremy here's my view on when it comes to stuff where it's like might be fake is that we just figure it out ourselves right let's just figure it

(3:22:06) out if it's real ourselves that's the that's the beauty of science right reproducible wait he used your old video as his explanation he used your video it's funny man it's really funny interesting I'm pretty sure when locky Martin puts out a uh patent that it's not a joke I don't want to do all the whole detailed description right now this is definitely interesting though I'm going to put this in the chat for you guys I'm going to probably tie it I'm going to put it in the description of

(3:23:03) the stream as well anything else I need to throw in the Stream we'll keep Maxwell's equations for later I think that's probably good for tonight that is that good guys supposedly these Boeing aircrafts are being monitored independently all the time as well according to this somehow I'm going to keep this up for later too okay guys I'm tired it's sleep time for me Loy we

never forget who we're working for Hail Hydra we're also going to **foyer** everybody we're going to foer

(3:24:07) everyone tomorrow probably I'm going to foer all these freaking organizations I want to get responses back from all of them about MH370 that all say that it's classified for the interest of National Defense why would MH370 stuff be classified in the United States in the interest of National Defense makes no sense unless they we did something bizarre man for the glory of the emperor okay with that said I'm going to play you guys out catastrophic disclosure you know what it is you know what's coming

(3:24:39) here we go let me play it my favorite where is it where is it there it is hold on start it over full full screen 3 [Music] night breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone [Music] missing

(3:25:43) I remembered the line from the Hindu scripture the Bhagavad Gita [Music] Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed form and says now I am become death the destroyer of worlds God do I love that I'd love this alien

MH370x - Dr. Greer Space 12/16/23 - YouTube

Transcript:

(02:32) oh I'm muted okay hey chat what's up what's up what up um what was the new sub**reddit** called someone help me out wow 470 comments of this yeah people are extreme like the videos have already broken the minds of thousands of people they've just broken their minds completely it's scary where where's the new sub**reddit** it is it called again yo yo yo oh airliner abduct 2014 CIA so we're moving over to the new sub**reddit** yeah oh they're already look at how mad they are already they're already down

(03:31) voting everything like they have to have narrative control right like the nut jobs on **Reddit** it's not good enough that they have a sub**reddit** that they ban me and ban all my content from and ban my name from they need to make sure there isn't any other locations out there so guys let's go ahead and support this sub**reddit** let's go ahead and support this sub**reddit** guys we're going to move away from the **debunker** sub**reddit** the **debunker** sub**reddit** is the one for all the nut jobs and Psychopaths that are out

(04:03) there day is good so far I'm going to go see my family later as well so let's see if we get to talk to Dr Greer here guys I was told I would be able to be a speaker but I don't know exactly

what that means I didn't get a lot of details I was told initially that this would be uh you know they would be setting this up to facilitate this between me and Dr Greer but I have a feeling it won't be we'll see though we'll see I'm being cautiously optimistic cautious optimistic so I don't I first of all I

(04:33) have no relation to this remote viewing the CIA person no connection to this person I am not going to be a moderator of this subreddit either even if they ask me I will not be a moderator of this subreddit I don't want anything to be do like I don't want to I just don't want that position man I would be happy if some other people want to be moderators I do not want to be a moderator or involved with anything related Reddit yeah we're going to move away from the debunker one let the people who

(04:58) are like literal Psychopaths and jobs uh have their own thing and let's just have our own and let's just be respectful as well um because the nut jobs the psychopaths are like completely lost their minds if they want to believe the videos are fake then they don't they can go and circle jerk themselves about it yeah somebody actually messaged me about this subreddit like every other post on the debunker sub is about me now people say the scammer could be in scunthorpe UK okay oh uh something else I want to show

(06:23) you guys before I show this do first of all before I show you this do not click on this YouTube link okay I'm going I'm going to make sure you guys can see the time so you know it was yesterday this was while I was streaming one of the one of the the emails I didn't open up on stream yesterday okay I blocked the sender after this this video here goes to somebody showing their buttocks which proves that the person who did this was a redditor somebody who's been following the quarter crew stuff who's a debunker redditor person

(07:03) these people are mentally unwell extremely mentally unwell okay like these people are sick in the head this is anyone who's like laughing about being scammed like this is disgusting human being disgusting human being please let's be better than them because of the stuff like this and the scam that was perpetuated we will never be able to accept any debunk at face value no matter what never again never again no matter what so for the debunkers you lost your only chance of debunk the videos when you guys stooped to this sick disgusting

(07:41) level that you did um it's honestly it's just disturbing really really disturbing how disgusting and mentally unwell these people are now let's get in that space folks I had to delete part of my video yesterday CU I showed my private email address I didn't want to say that because then people are going go digging around looking for it but I'm already being signed up for like tons of fake crap at the moment so hello John thank you for your help well hello Stephen and um I have to say that out of all of the people that

(08:20) uh my wife Arena and I have gotten to know um during the journey that we've had over the last few years at Camelot Castle in terms of trying to get the truth out there to all the various different parts of the Freedom Movement um you are really I I I I would go so far as to say you are certainly um one of our favorite if not one of the the the favorite people that we

have met uh if not the favorite person that we've met as a result of this journey um we have found your information to be so in alignment with

(08:57) everything that we know to be true and and it really is a great honor for us to be able to introduce you to the uh the BART team and it's a very very interesting phenomena we uh heard about it and uh we're very very pleased to uh be part of it and um what can I say you really are a spectacular human being and I'm I'm I've been looking forward to this now uh ever since we spoke and arranged it great well thank you I'm glad to be here with you guys so yeah so I don't know if you want me to just sort

(09:31) of for those who are new to our work if you would like for me to do an introduction I'm a please yes I'm a actually now a retired emergency trauma medical doctor I founded the global disclosure project and disclosure movement back in the 1990s um when it was then called project Starlight which was a code word uh name for it when I was shuttling from North Carolina up to Washington to brief folks like the CIA director and others uh on the problem of UFOs uaps whatever the fake name of the hour is that the

(10:10) intelligence Community grinds out and the gulo UFO subculture believes but nevertheless uh by the way no one in the business calls them either either thing uh but we'll talk about that so you know that sort of diverted me um from the original project which I found in 1990 is the C5 contact uh program which there's an app that you can get called C5 uh contact that goes through the whole protocol for making contact with the non-human extraterrestrial civilizations um it is not geared towards contact with all the other

(10:52) non-human intelligences and we'll get into that in a moment the distinction uh amongst them which has been confused by the general UFO public so the initial program which I started which began after I had a ironically a near-death experience and then a subsequent direct ET encounter when I was 17 and then 18 um was a result of me learning that Interstellar civilizations utilize uh a really advanced form of technology for communication and travel that is transdimensional which means they Traverse from one point in space time to

(11:34) another through dimensions and I learned that when I was 17 and uh and I had the near-death experience and had an encounter with a very high level of Consciousness and subsequently u a few months later directly with ET uh being up in the mountains of North Carolina and exactly 50 years ago this October uh it turned turns out so that was in 1973 but that evolved uh you know I just sort of put that on the Shelf as I went through my medical career um after I had these encounters I became a meditation teacher dating myself now back in the 19734 five

(12:16) era and went all over the world setting up meditation centers and teaching people higher States Of Consciousness and that information and then I went into medical school after my first daughter was born since I figured I better do something more practical if I'm going to actually support a family like I have now which I have four daughters so that uh whole journey led me after we had a huge mass witness C5 contact event C5 is when you initiate or invite these

uh ebans extraterrestrial biological entities to interact with you

(12:51) and it was filmed uh not very good quality it was an old hi8 video camera uh just retail grade but also photograph and it end up on the front page of the Pensacola paper in March of 1992 31 years ago and that led to the intelligence Community unfortunately and some maybe fortunately I don't know uh reaching out to me and well initially threatening me because they said what the heck do you think you're doing and I said well this is what we're doing and you have no authority over what we're going to do

(13:26) with this and we had a bit of a battle with the head of Army intelligence General Albert Stubblebine III uh but at any rate um that got us on the radar of both what I call the friendlies in the National Security establishment here and then later elsewhere but also some of the people who want to keep all this secret and more importantly not so secret as confused and that's what we want to do today we want to talk about the deliberate aisc and confusion that's been overlaid on the subject for its psychological warfare value value and

(13:59) scop value but um so that's really sort of it in a nutshell I mean beginning about 1992 I started meeting with senior officials in Military and then in 93 some of you probably know actually it was exactly 30 years ago on December 13th this month that um I briefed the the director of the CIA for President Clinton and then subsequently many other high officials and whatnot who were uh curious about the issue but had been denied access in other words the president CI director senior members of the Congress I had began briefing all had made

(14:37) inquiries but had been told Bug off we're not going to tell you anything and that's when I learned that there are actually two governments there's the government we elect and appoint and with a little bit of crossover there's a shadow or secret government that's rather transnational and Global that actually runs everything the the one that we think we're electing is sort of wind addressing and the real actions happening on sub Rosa behind the scenes so that was my Coming of Age about 30

(15:07) years ago when I learned that which was rather disturbing and um since then we've worked very hard to try to get this issue on the the front burner for people around the world not only the general public but also governments so that they could get control over these shadowy and rather illegal programs but so far they have not been able to do so we're working on it as you can see from what's going on in Washington and and uh my organization is providing the bulk of the whistleblowers and Intelligence on

(15:40) the issue to them so that's sort of where we are right now there's of course a lot more to discuss but I just want to give you a quick a 30-year overview I'm not going to talk over people sure and in the meantime can everyone please make sure to retweet this space uh make sure to retweet it let's get the word out all also in the bottom right you'll see a purple little speech box go in there leave a comment like the space retweet it let uh let's get the word out um Dr Greer I watched for the first time I

(16:13) should have I can't believe I haven't seen it earlier but I uh watched for the first time close encounters um with the fifth kind uh last night and man I have so I have so many questions um that was a phenomenal piece of work uh that you did could you maybe uh tell us about your first ever C5 experience um maybe like the first one that you ever had well the first one was the Genesis for the whole concept and the concept is very simple if you look at the other categories of close encounters so one two three and four uh which we can go

(16:53) through the nomenclature if the audience isn't familiar with it um they're all passive in other words words a C1 is when you see an object at close enough range that you can uh you know tell what the structure of it is a C2 is when uh the craft lands and leaves proper term use for them or EB and then a close encounter of The Fourth Kind is when you have an experience where you actually are on board a craft uh with these uh being but it was not something that you initiated it was something that happened spontaneously

(17:29) then a close encounter of the fifth kind is when you actually uh either usually with a group but you can do it individually which was my first experience of make direct contact by inviting them to interact with you which most people go are you Bonkers aren't you scared shitless excuse my language and I go no because they're not hostile and there's nothing that you need to be worried about except the fake aliens that the humans are putting out there on the street and that's another discussion

(17:56) we'll have in a moment but at any rate so having said that I didn't know any of this when I was 17 18 and after I had this rather spectacular near-death experience when I was 17 um about six months later after beginning to learn meditation I was up on a mountain in North Carolina uh right before Sunset and I saw a a seamless uh ET craft and that was pure silver shining it just materialized in the sky in the west southwest and and then it vanished interestingly it looked identical one I had seen with my twin sister and some

(18:38) friends when I was eight years old in 1963 uh back in North Carolina so when this happened I said well looks like the same ones hi and they sort of acknowledged them and it vanished that's all there was to the physical sighting and then I began to sit and meditate at sunset at a very deep meditation which led me into an experience very much like when I died I had a near-death experience where I had sort of a Unity Consciousness and Cosmic Consciousness experience which was quite astounding because I was raised to believe um my

(19:14) parents were atheists humanists they they didn't go into a test tube and it didn't exist so I didn't know about any of that stuff or believe in it um but nevertheless there I was and what I discovered was that the Consciousness that we all are awake by is actually an infinite field that we're usually shut off from by our individuality but there are techniques to transcend individual self into the great being the great self and and that's what happened to me although it was rather spontaneously because of the near-death

(19:47) experience but subsequently from learning meditation I learned how to do it just on on demand as it were or in that state of meditation and uh at the end of this this meditation that

under the stars at this point I open my eyes on the top of this mountain and it's Crystal Clear I mean we're up over 5,000 feet and I saw a glow over the edge of the mountain and it was that craft that I'd seen before uh the ET craft before I'd seen right before Sunset before I began meditating and then I noticed what I

(20:24) thought in my young man I just turned 18 mind I was looking over and and this thing creature walked over to me and I thought it was a deer on two legs you know in other words like when they stand up like a like a buck when they're fighting but they had beautiful eyes kind of deer shaped eyes but it turned out it was an ET it touched me on my right shoulder and I kind of vanished dematerialized best I can tell and went into a sort of a state space on on board this craft that I was on for I guess about three maybe four hours I think

(21:04) it's probably closer to three hours and uh had this incredible experience with these CS where we basically created the C5 contact protocols that are in the C5 contact app and it was a set of protocols that involved a human going into that field Consciousness that's non-local it's on the present and then searching looking uh with your mind's eyes sort of like what the CIA calls remote viewing to see where the ET craft are and then you connect to them and you uh in introduce yourself and then invite them if they're able to

(21:41) come to where you are at any point in SpaceTime here on Earth and it's a kind of a stream of laser-like coherent thoughts we call it coherent thought sequencing and you show them where you are and see if they are able to appear arrive whatever so I that's when the whole C5 contact uh protocols were learned uh and created but I didn't do anything with it except episodically for a couple years and then just sort of dropped it uh and then in 1990 I had a ET visit me and said pick up that which you have dropped which was a clear

(22:18) reference to doing this so uh you know as a young doctor I was in my 30s I decided Well if they're asking me to do it perhaps I should so I started the entire um organization uh that is behind the disclosure project and the C5 contact in 1990 but that first event was the sort of seminal event that was astonishing and the way it ended was even peculiar because I reappeared on this Mountaintop about a quarter of a mile down the ridge from where I disappeared and I had this strange s of electrogravitic or anti

(22:58) gravity filled around me so I could going down the mountain I could take a leap and it was like I was floating for 2030 feet and would land um it almost like a moon walker sort of thing but it wore off that effect by the time I got down the mountain into town but uh it was quite memorable and and enjoyable and beautiful really um but this was all by myself I was you know all alone up on this mountain doing it and it was beautiful and I loved the Wilderness and that's why I was up there in the mountains of North Carolina I sort of

(23:35) have a deep Vibe with it because my my grandmother was Cherokee full Cherokee of course and those are the mountains of their ancestors so at any rate at this point um I you know don't know what to do except I start this project but that was the first you know prolonged C5 and it was quite beautiful and not at all frightening uh at all um not at all like what you hear

about with these um CIA fake abductions that everybody thinks are alien it's a very very different kind of experience you know uh Dr G it's very uh

(24:09) beautiful Story by the way and it's very interesting how you uh came into this at a very young age uh one of the things that um well before I uh go forward with what I wanted to say I just want to say uh welcome the uh the new speakers to the panel if anyone has a question uh just please raise your hand so we can keep everything organized and everybody can get a chance to ask a question at some point but uh I was watching your um your um you know the two uh documentaries you put together and you know a couple things really caught my

(24:38) attention number one uh one of the gentlemen in the documentary said that we lost 100 Years of technology and I think you really touched on the fact that uh it's a lost Century number one and number two uh be for what for whatever it is they're protecting uh they are keeping these Technologies Under Wraps that can really Propel Humanity forward and bring us an age of abundance and things of that nature and then the second thing you touch on that I think is really fascinating um you touch on the concept

(25:15) of how we need to raise Consciousness Beyond religion um because that causes fighting as you say and the idea that these beings that we are seeing uh with these SE c5s I believe uh they are tremendously advanced in Consciousness so far but be beyond what we could even imagine and I believe you implicated that these beings are doing this traveling by ESP in the quantum field if I misrepresented that I do apologize but I think those two things that I would like you to touch on number one um the idea that humanity is being held back uh

(25:57) for the last 100 years uh to protect special interest and God knows what else and secondly uh the idea of Consciousness where we need to go and am I correct in my assumption that these beings are traveling on a conscious level I know that's a lot at once but I would love to hear more insight on that yeah well let's get some clarity on that I'm not saying that the ETS are traveling purely in Consciousness although any sentient being can I mean I'm sure a lot of people on this phone call on this space

(26:32) have had uh out of- body experiences lucid dreams where they're flying at night uh where their so-called body of light or astral body is able to Traverse remote places uh now that's different U all related and this is where I want to get into a little quick overview of the cosmology uh that needs to be understood in order for any of this to frankly make any sense and I actually have to do this from members of Congress when I meet with them as well and Senators because it's very confusing to to people

(27:05) initially um and it needs some sort of uh experation and and Clarity but the the real problem is that people conflate all things in the conscious and interdimensional field with extraterrestrial or aliens and that of course it's understandable on one level because any let's face it any civilization sufficiently advanced to travel beyond the speed of light through Dimensions uh any manifestation of their technology is going to look like magic or something Supernatural or as people would say paranormal now it's not paranormal for

(27:47) them it's like us turning on a light switch but remember if you were to take a you know your iPhone or or smartphone and show it to Thomas Jefferson's whose home is right down the hood Road here from where I'm sitting uh monachello you would be absolutely burned at the stake as a witch or a demon for having such a device it would be magic so that was 200 years ago so now I think we have to then think about civilizations that are hundreds of thousands to millions of years more advanced than we are how they

(28:19) might appear uh using the state-of-the-art of their science and technology and why we may confuse that with beings from whether they be Angelic demonic uh From Another Dimension your great grandmother rattling through the cupboards at night after she died Poltergeist all this sort of stuff and it does become confusing because one one of the sort of a theorem that I've come up with and that is all extraterrestrial Interstellar civilizations are transdimensional but not all interdimensional beings are extraterrestrials so in other words if

(28:59) you are going from point A to B in the cosmos you have to go beyond the speed of light for example and this is one of the very first questions not the CI director but his wife asked me who was the chief operating officer of the National Academy of Sciences in Washington and she said well how are they communicating across these fast distances and you know I was sort of reticent to tell her the **truth** because you are very much at risk for being considered you know nuts if you say what I'm about to say by conventional science

(29:33) people but I said look you know if you've asked this question I'm not going to assume you're ready to hear the answer so that's been my policy for the last 30 years by the way in these sort of meetings I I let the person I'm briefing drive it by what they ask so in this case I said well you know the speed of light is too slow because if you're from the Andromeda galaxy which is two and a half million light years from here and our team has had a contact with a very senior ambassador from that Galaxy

(30:03) whom we have called beu but if you are communicating let's say you're here near Earth and you send a signal back at the speed of what you and I are using right now that would take 2.5 million years to get there at the speed of light that's 186,000 miles per second now for them to reply and say good how are you doing the day bud that's another two and a half million years so that just 5 million Earth years we know that therefore the electromagnetic field of speed and the speed of matter let's say electrons you

(30:39) know subatomic particles all of that has to be transcended to go from point A to point B Interstellar and that's why all Interstellar civilizations that are extraterrestrial that are near us or have discovered us have to have mastered transdimensional physics and transdimensional Sciences now we'll get into that in a moment because it's in critically important to I think one of the issues I was brought to my attention of why I'm speaking today about various Technologies so if you're and let's say

(31:16) you have a Interstellar spacecraft that's three football field in diameter size and you're going from one star system to another in this with a group you're not going to go at the speed of

light and you're not going to go in a straight line you're going to basically the technology bends space time like you would bend a piece of paper so if you put two points on a piece of paper and then bend the fold the piece of paper so those two points are right there that's basically your you're bending space time

(31:48) through the physics they're using and you are then traversing not linearly in a line through space but transdimensional what does that actually mean it means you're traversing through other dimensions and when you are doing so your physical spacecraft the very high voltage systems around them cause it to drop out of linear SpaceTime but when it's not in a solid quote unquote materialized form it is actually traversing something very very close to what the mystics would call the astral Dimension or the worlds

(32:24) of light and it can stay in that state even when it's hovering over a place on the earth so it wouldn't be visible or detected by any radar or even or Advanced sensors so we'll get into all this later a little bit later I hope if we have time but the key thing is to understand is that when they're in that form they would to the untrained eye let's say they would be easily confused with the spirit being a being from a lower Dimension um of your great-grandmother like I said who may have passed away that you get a glimpse

(33:00) of all kinds of phenomena plural now what's happened is that there are many many phenomena plural being called the same thing alien here is the problem so when you're looking at things like this that are complex it's important to have this sort of nuance and discernment otherwise people aren't even on the same page talking about the same thing they're not talking about the same phenomenon now their communication systems are let's call it internodal let's say you have you're you're communicating back to your

(33:35) star your home star planet outside our solar system and you have to be communicating at multiple speed of light you have a device that interfaces with directed thought and we call this Consciousness assisted Technologies where your thought interfaces with this technology and it nonlinearly at the speed of the Quant of thought communicates that precise information to another node that's you know a thousand light years away so instead of it taking a thousand years at the speed of light it's instant so that is being done but

(34:12) it's there's a scientific interface and it goes both ways there are technologies that assist Consciousness so you can be in that state and these are very Advanced Technologies and then there are there are technologies that receive an interface with the direction of your thought and the instructions your thought give so it's sort of like a instead of a voice actuated system it's a thought actuated system um and those quanta of thought are discrete realities which we tend to ignore but at that

(34:43) level of let's say AI artificial intelligence and Technology it's directly interfacing with thought that's that's clear and specific not just every random thought you have to actually connect to it with intentionality and put your attention on it some of them also require to touch the console or to touch a part of the craft so that there's a sort of a bioelectric Consciousness

field that assists um there are different varieties of these obviously because there are different civilizations at different

(35:16) stages of evolution you know some are a few thousand years ahead of us and some are there's one civilization that we've had an extraordinary experience with that's somewhere on the order of a billion years ahead of where we are so I think uh it runs the gamut and if you look at this sky at night every stable star system out there has planets around it and there's some types of creatures around each one so the universe is teeming with life actually it's not empty but that doesn't mean they're all

(35:48) operating the same technology that you and I are and one of the problems that we run into with the human experience with this is the tragic anthropocentric projection in other words we project on the other species you see people do this with their pets uh as if they're human uh and as if they're human using early 21st century human technology but I remind the scientists I work with there's no reason why a civilization that advanced would be using the speed of light like we are or using energy and propulsion

(36:21) systems that we are they're obviously not going to be because look at the technological advancement just in the last 100 to 150 years from an agrarian society to what we have today so it's very important to understand that but that has implications for what I call the cosmology because what you don't want to do is conflate and mix together all these different manifestations of conscious entities into one Gish and then be confused about it it's very easy to do it because in in in in in defense

(36:59) of those who have done so um if you don't know the specifics of the science behind transdimensional physics and how these extraterrestrial civilizations operate you would be absolutely easily confused by it being uh looking very similar in some circumstances to Something From Another Dimension not another star system but this is why I always say if you're an Interstellar extraterrestrial civilization you are a priori transdimensional however there are beings that are interdimensional extradimensional that aren't

(37:36) extraterrestrial but they're beings and their intelligences and they're non-human and those all get plumped together erroneously and that is the beginning of the end of any Clarity so that's the very first point I wanted to make about this yeah now that's really interesting I mean it's it's a question of um Gods spirits archons alohan and then actual interdimensional species so that is a fascinating topic uh Drew you have your hand up uh go ahead my friend awesome thanks for uh having me on and and Dr

(38:08) Greer thank you so much for all your work I remember watching unacknowledged for the first time in uh 2018 and it was uh really eye opening um just to just to fully understand you know all those and then actually the Pentagon audits uh for the first time happened right afterwards so it was uh it was interesting having seen your work and then seeing you know these Pentagon audits you know finally try to go through of course they've all failed but I have um and they always will until they get this under control exactly exactly yep um so uh we

(38:44) covered so far I'm glad you covered uh earlier the Extraterrestrial versus you know interdimensional um aspect but I want to um I want to bring up a few aspects which uh uh forgive me if you've already talked about these subjects before but I'm not aware if you have um so there are some researchers like uh Robert Zephyr who points to some of this UFO anti-gravitic craft originating from Nazi Germany and then you know um possibly being um being reverse engineered over here or you know um developed by Operation Paperclip and

(39:24) then yes let me go through the history of that because that's very important that people keep this straight um it's extremely confusing I can tell you this for people at the Pentagon White House and and Congress also uh yes there were now here we need to go back to what the gentleman said a few moments ago you know our new by the way we have five documentaries but the newest one is called the law century and how to reclaim it and they've all been crowdfunded by the way those of you who contributed thank you very much because

(39:55) the nice thing about crowdfunding these is that nobody controls the content but us and we can say anything we want um we don't have some corporate Master saying take this out because if that happened I'd say excuse my language you anyway but um that ain't gonna happen so but when you start looking at these Technologies you really got to go back to the mid to late 1800s and I don't want to bore people with a lot of science I don't know how scientific this group is oriented but when they began to

(40:26) do the early experimentations with electromagnetism let's break that down electrical right and then magnet okay the magnetic field electromagnetic the real actions in the magnetic part very high voltage electromagnetic systems at certain cycles per second Hertz those will have an effect that isn't traditional electricity or an MRI or an x-ray or all the other electromagnetic field Sciences we have or r radio telescope at a certain very high voltage and certain specific frequencies so usually pretty high frequencies cycles per second you

(41:06) can create a vector a pointing Vector into what's called um the quantum vacuum or Zero Point Energy field and have all kinds of energy come out that you weren't putting in it doesn't violate the second law thermodynamic simply because it's been Quantified and was described first in the 30s and then Quantified in the 1950s by Dr Casimir that this Zero Point Energy field is exactly what Tesla called it infinite energy field is it's it's not quantifiable it's so vast and that's how

(41:40) you get the so-called Tesla not Elon Musk fake Tesla but the actual Nia Tesla technologies that were kept secret um where he discovered this and actually had an electric car a real Tesla running without it being plugged in and charged off a Coal Fired power grid um you also had things like the beill brown effect so T towns in brown and then later working with bfield found that that certain voltages and this was in the 20s 1920s 100 years ago you could have something levitate now what does it mean levitate it's actually the mass

(42:20) cancelling effect that happens with the angular momentum Etc changing as an atomic and subatomic level at certain very high voltage discharges so you get all kinds of weird unusual

phenomenon and this began to be observed between the late 19 1800s and the early 20th century and of course was of great interest because there were all kinds of effects including quote unquote free energy where you could have something that would run uh and create electricity out of this Quantum vacuum 0.

(42:57) energy field and it would run your house or car and you would never have to buy any fuel well that ain't a great thing for people like JP Morgan and the Rockefeller Clan and others back then because that would mean the end of oil gas coal uh Etc and so on and eventually with the electrogravitic which is the levitation Technologies you wouldn't need roads or railroads or Etc um so you're talking about hundreds if not more than a thousand trillion dollars imp on people who are very powerful and so began an effort to keep those that

(43:33) specific uh basket collection of Technologies very secret by all means necessary so those secret programs began actually in the late 1800s early 1900s many people think oh it began with Roswell or what have you but no not at all so fast forwarding then to the 40s and 30s there were um some electromagnetic weapons that were based on some of Tesla's work dealing with so-called scaler scaer Technologies and we had successfully downed a couple of ET craft that were around and the ET vehicles have been around since there

(44:12) are accounts of them in the mahabarata and in the betas and in ancient texts and cave drawings that go back thousands of years but what happened is that this early pioneering work of Genius like Nikola Tesla and Faraday and Maxwell and others that began to be then potentiated let's say or uh greatly augmented increased by the study of retrieved extraterrestrial vehicles and there are accounts of one that went down Northern Germany in the 30s that may have been the source of a lot of the research that was beone at the pinba and also even uh

(44:55) uh people like uh Vernon Brown and others and Herman oberth and others that came over after World War II to the US under Operation Paperclip but nevertheless we do know that uh because of a fascist and I don't use that term the way it's used today promiscuously um a fascist known as Paul melon a billionaire of the melon family uh he at the end of World War II went over over to Germany we know this from because his grandson Senator John Warner's son John Warner IV is has worked with us uh Paul melon went over

(45:38) with uh a number of people including Alan dullis and uh George S Patton the famous General and they retrieved a Nazi disc now the disc was different from the Bell so there was a Nazi Bell was not as advanced as as the disc the disc was not a Ramjet it was an electrogravitic but it was not fully operational this was really their big secret weapon that would have knocked all of our aircraft out of the sky and we brought it back to the United States to study it further and uh also to get more extraterrestrial material so that

(46:17) we could Advance this beyond that so we know that in the 40s there was a a crash and Downing retrieval of an ET vehicle in 42 again in 45 and of course everyone's heard of Roswell in 47 um but there are number of those those then were put into a very deep black program

although at the time legally overseen by the president and the select members of Congress however um by 1958 or so uh sometime after 19567 uh President Eisenhower completely lost control over that group it became an out-of control cabal and it remains

(46:59) so today this is why the members of Congress I meet with including Senate intelligence and others they don't have access to those projects because they're behind a hermetically sealed deep black project that we're trying to resolve that that crisis um and they have kept all of this secret now uh the the things that fly uh at hundreds of thousands of miles per hour and can make right-hand turns without decelerating that they're really moving in a uh let's call it an electromagnetic field bubble uh that

(47:32) creates a space-time bubble they can move in where there's no G effects so I mean you're obviously if you a human pilot moving at that speed and stop suddenly your your brains would come out of your nostrils I can assure you that but if you look up what those G forces are it kill you it Crush every organ in your body but these crap both the man-made ones and the Extraterrestrial ones can control for say for us oneg one gravitational field effect and so getting that perfected took some time it took from the 40s until um October

(48:06) 1954 whereupon we had mastered gravity control and we began to make some of the early UFOs that people see and call they call them alien spacecraft today but they're actually made by uh a company that my uncle worked for for his whole life north of grman and the lockit skunk Works which works with Boeing hand and glove on those as well as Ron and a few other big huge defense contractors but um I'm getting a little ahead of myself but not much and so what happened between this this loss century is that

(48:43) not only have we lost the technologies that would enable us to travel like that but we have also lost the ability to have free energy that would end poverty in the world and also end all the pollution and even if if you don't believe there is any such thing as climate change there are five to six million people who die every year of particulate matter in the air from cold fired and gas and oil uh from small airway disease and heart disease and that's the number of people who died in the entire World War II Holocaust in in

(49:15) in Germany are dying each year just from that never mind the oceans and the species time the whole planet's being killed unnecessarily when I realized this back in 1992 and three I said wow this has got to get fixed I had no idea until I briefed the CI director and and and also the president's team and all of that that that this was being handled in a way that was being kept secret but for very evil purposes uh one is to control the population uh totally under a transnational sort of global Military

(49:51) approach which is why they began hoaxing the alien threat in 19 1953 we'll get back to this in a moment and then the other problem of course is we're killing the planet and then even uh similarly terrible is the fact that there's almost half the population of the world does not have indoor plumbing three billion people don't have any way to cook their food three billion out of eight so we have enormous poverty which leads to geopolitical instability we have a dying

planet and we have a decapitated

(50:24) governance of where completely the freedoms that we take for granted are fast evaporating because we've allowed that to get out of hand for 70 years or 65 years since theate Dr G yeah Dr GRE sorry to sorry to interrupt I just want to uh get in a quick follow-up question and then uh then I'll be uh good for a second just to follow up on the the Nazi subject because I know it's a big it's a big area of interest for a lot of people in in my uh Niche okay and so so to go back to 1947 um I was wondering what your ideas

(50:57) are it's kind of a multifaced question one on on um operation high jump Admiral bird going to Antarctica with his uh Fleet of aircraft carriers and what do you think they found there do you think there is there was a Nazi presence there what do you think is going on in Antarctica today and then further beyond that question what do you think about the concept of inner earth you know like even Beyond these um you know the dumb deep underground military bases um do you think uh what do you think of the idea of like a Shambala type idea and uh

(51:34) yeah that's that's basically myh follow-up question well it's five or six questions in point of fact however um taking one at a time you can remind me what when I get forget the other five okay fair enough the the the noty efforts I don't have look what first of all let me back this up for a minute I have 755 firsthand whistleblowers and people inside the military intelligence corporate world I do not drag my junk off the internet and I do not take second and thirdhand accounts so what I'm about to say is no offense to

(52:14) anybody but I don't traffic in rumors so one thing I'm very clear on is that unless I have a firsthand credible source that is would be in a position to know I I really will just say I don't know so the extent of what the uh the Nazi regime had I think was quite Advanced we do know that they very likely deployed them elsewhere to get them when they were we were closing in on them and very likely there were assets who were in South America and we know Antarctica what became of that uh I think is that

(52:53) it got subsumed uh the people the scientists the really brilliant folks who worked on those programs got taken in through a number of clandestine operations but some not so clandestine now Operation Paperclip and became part of an organization dealing with these some with regard esoteric Technologies and capabilities back in the 1940s and to my knowledge that continues to this day we do know that down in the South Pole for example there's a massive under the Earth neutrino light array that we have a rathon whistleblower who's come

(53:34) forward and discussed um so we know there are assets there that have been developed since then as for what Admiral bird actually encountered you probably know more about than I do I have not gotten anyone who had access to any archives firsthand on on that um but I will say that whatever people think the techn Oles are out there that we're capable of in these cover programs it's worse it's more it's way more it's more than you can imagine um because remember you've thrown trillions of dollars and

(54:08) some of the smartest people I've ever met uh working in these projects for 80 plus years and you you get all kinds of breakthroughs on many aspects of Technology not just travel transportation and energy but other weapon systems and what have you uh things that cross over into what some would call MK Ultra type Electronics uh Havana syndrome type systems and so on and so forth but the the key Point here is that uh those Technologies haven't Stood Still so whatever might have happened I think there were uh assets that were in

(54:50) Antarctica back in that era whatever existed then is so far Advanced now that for most people unfortunately and just certainly the true of the news media and the UFO Community would be indistinguishable from an alien or extraterrestrial technology because you know technology doesn't stand still when you throw that kind of money and brain power at it you get some serious breakthroughs uh it took time um to do it but certainly at this point uh it's extremely Advanced um so I I think that's the key thing as for a hollow

(55:28) Earth or inner earth well there's certainly ET capabilities that penetrate Earth um now remember like for example when I've been up on uh Mount Shasta we've had these strange sort of luminous light ships emerge and interact with us that come out from about two-thirds of the way up that volcano and they're very curious and my understanding is that they've been there since lamura and moo or the continents that may have existed millions of years ago in in the Pacific so some of these intelligences and

(56:00) civilizations have been here a very very long time way before Homo sapiens by the way um more than a million years in other words and so you know you get into this question whose planet is it anyway but um the other point I'd like to make is that uh the the sort of capabilities that are let's call it transdimensional means that you can have a solid spacecraft that shifts its angular momentum and its frequency so it goes straight through solid matter and we've witnessed this now how does that happen well think about the fact that if

(56:39) it's dematerialized if it shifted into the near athermal it's not interfacing at all with uh 3D matter space time but even if it is visible and there's sun shining on it we've seen objects go straight through solid into a mountain and they are doing that because they are shifted just enough out of the alignment let's call it of our matter that it can pass straight through without a single atom touching each other now how is that possible just remember that if you were to collapse all the matter without space between the atoms

(57:21) and subatomic particles that are that your physical body is made of it would fit on the tip of a needle a pen just that is how much solid Matter is so when you expand that out into a matrix that include space in between and energy Fields some of which are just now being described in science but I think Mystics have understood it for a long time you can understand how you can take something a little bit out of tilt and you could put right through this is how the ancient Masters by the way could walk right through a solid wall that's a

(57:53) city it's a capability that's it's done through Consciousness and vibration and thought as opposed to electromagnetic technology but it's the same principle so that's another thing to

remember that's that's why there's no barrier to these objects going straight through the Earth straight through the water uh or residing in the Earth or residing underwater uh we know of an ET facility off the Marian trench the deepest part of the ocean in the Pacific and in fact we have a whistleblower

(58:25) who came forward who was on a Coast Guard Cutter when they uh retrieved an extraterrestrial vehicle that apparently we had downed uh and as you all have seen in the disclosure project materials we have the the drawings and all the information about that event from this a member of the crew who there retrieved it and actually handled the ET craft so we do know that they they do reside in very deep locations and have been for thousands and perhaps millions of years very uh very interesting thanks for thanks for that answer I think my

(58:59) follow-up question there would be um would be so there's a lot of evidence you know like you were saying there's you know there's underground UFO bases and and accounts of UFOs coming out from out um from under the water so I was wondering you know what what kind of evidence directly points to UFOs originating from you know outside the Earth as opposed to I guess the overall concept is why couldn't these things just be a part of an ancient earthborne civilization that have just been surviving underground for this entire

(59:33) time and then secondly uh final question with the uh with the Apollo missions if we had you know anti-g gravitic craft since the '40s what was the purpose of using Rockets to go to the moon and um what do you what do you think of the Apollo missions overall well in the first part of the question the followup uh you know keep in mind that there have been civilizations here before us um and that they may continue to have had a presence as no mystery they've been seen for Millennia uh that doesn't preclude there

(1:00:07) are others that are of extraterrestrial origin that are newly discovering or are not have not taken up positions in the planet or on the planet um those civilizations my understanding is when we detonated the first atomic bomb it caused a disturbance in the transdimensional field because the electromagnetic pulse has embedded within it a scalar signal that is a longitudinal electromagnetic wave that goes faster than the speed of light and it literally rips the fabric of SpaceTime and disrupts Interstellar communication and travel because it's

(1:00:48) Crossing into that Dimension now we didn't know that until we detonated the first atomic bomb but that that's why there have been so many ET vehicles and and civilizations that have been over our nuclear facilities test sit storage areas nuclear uh weapon ships on in the Navy we have so many account accounts of this it's not a mystery because it's a threat it were viewed as a threat to these other civilizations um now I always turn this around of course I mean it sells a lot of books and movies and crackpots about

(1:01:26) the alien threat thing but the **truth** of the matter is is that if they were a threat we'd be gone uh and the other fact is because their Technologies could make this entire planet dematerialize into a pink Mist in space and a fraction of a second absolutely that is a fact um so the only reason we're still here is that they are essentially non-hostile but that does not mean

that they are pleased with us because we have we're destroying the the planet we have targeted hundreds of their craft and down them if not thousands and we are

(1:02:02) damaging a biosphere that's evolved for four billion years uh with life on this planet for 700 million so I think that we're not viewed as a species in a very flattering light right now but I think they see the promise of humanity and that's why we're still here U the positive aspects of the human capabilities uh but there there certainly uh I don't want to infer that there were operational in spacecraft in the 40s as I had said but I may have gotten missed in the details uh we were studying these

(1:02:39) Technologies and didn't have the Breakthrough where we could actually Master what's called gravity control until 1954 so then to stand up some of these objects to where you could go out in the space took a little while but if you look at our um presentations and at the uh unacknowledged film you'll see the What's called the arv the alien reproduction vehicle and it was seen by Brad Sorenson who is an aerospace guy at a air show in 1988 but those were sort of antique uh craft that had already been around the

(1:03:14) solar system they're not Interstellar and they're not transdimensional but they're electrogravitic anti-grav and they had been in the solar system beginning in the late 50s early 60s so the components on the inside of the arvs were actually very similar to that mercury era uh instrumentation uh and we have a direct firsthand account of someone who actually saw that was at the briefing uh where there were a number of uh military industrial complex people at that air show classified Air Show at Norton Air

(1:03:49) Force Base in 1988 um so those craft had been out now the reason now my uncle worked on the lunar module the for northr grman it was gramman at the time that put the first man on the moon and of course what what folks also sort of vast conspiracy theorists is that 99.9% of the people working on those projects know nothing of this subject they're they're working on a conventional Space Program like the space shuttle the Apollo Mission and they're not read into which is a military term for brief they're not read

(1:04:25) into these projects at all my uncle wasn't and his his whole career was at North gr but he had heard things about all this of course uh because people whisper uh but they they were not tasked with that they were tasked with putting a man on the moon using conventional jet thrusters and Rockets and all that rubbish you know that really should have been retired in the mid1 1950s uh but they wanted to keep that secret because to disclose that we wanted to get to the moon but to disclose those Technologies would mean

(1:04:57) the end of the big industrial powers and the end of oil gas cold nuclear power all of it the Petro dollar I mean you're talking about the largest change technologically and financially macroeconomic in the history of known history of humanity so they've been desperate to keep that secret uh for that reason but also because they can control the population if they can control the economy so I always tell people we do not have a free market economy we have a controlled economy uh and they allow out only what they think would redound to

(1:05:35) their own control and benefit these covert very powerful interests uh that that sprang into well they were around before World War II but after World War II people like Paul Mellon, Allen Dulles and those guys who founded the CIA this was one of their big tasks was to keep this sort of perspective and it was a fascist program because remember Paul Mellon was an industrialist here in America but a very big supporter of Adolf Hitler and he and many others like Henry Ford and Prescott Bush, George H.W. Bush's father those were

(1:06:11) known publicly supportive fascists and fascism really was when the gilded age of Industrial interest felt that they should really control government where the government does the interests of these Elite industrial powers used to say you know what's good for General Motors is good for America sort of thing and that that is the that was that those were the original roots of fascism which Mussolini and then subsequently Adolf Hitler picked up but of course every the antifa and all the now if someone disagrees with you they just call you a

(1:06:47) fascist but it's a very specific name uh but that is what happened so those Technologies when we landed on the moon we were not alone I know for a fact that there were the crater above where we landed was crowded with these UFO objects watching and of course Neil Armstrong uh and Buzz Aldrin were told to keep their mouth shut and never speak of it um under threat of them and their families being assassinated that I know for a fact now firsthand so but the problem is is um a lot of people say well we never went to the moon or we

(1:07:28) went but we didn't you know land or it's a whole muddled thing the **truth** is we went but what actually happened was never shown to the public very very interesting I'm glad you cleared that up because that's been a big question for me as far as you know if we had anti-gravitic craft why would we you know make a big show of rockets some 30 years later my followup question there is we kind of talked about the follow question in a row five followup questions in a row come on I got a question dear let's take it to you

(1:07:59) man jeez Drew I mean come on bro it's a whole stage of people like this is your fifth follow-up question chill all right go to mute okay all right all right go ahead Ser so anyhow uh look this this subject uh Stephen Greer has gotten so big and so popular right now and it's getting bigger and bigger and bigger I come from a very Normy background you know I'm I'm not expert uh in this community or in this space at all but there's so many figures throughout the um last couple years that have popped up

(1:08:33) um you got the new guy that is testifying to Congress um you got Blink 182 guy you got the Lou Zando guy all these different figures um trying to get disclosure to happen and I want to know why there's so much infighting because every time your name uh comes up it seems like somebody in one of these spaces has something negative to say about you and I remember there was this clip from Joe **Rogan** many many years ago because I know you were on that show and he was kind of uh hinting that somebody told him that you know not to believe

(1:09:07) you or not to trust you where is what is all this infighting between the main figures um in disclosure I don't know I I'm not a political or even that social a person be honest um we work

the project at the best we can and we stick with the **truth** and direct information one thing we're very strong on and this is will cause me to sever communication immediately is that we're trying to prevent World War III so what does that have to do with your question um the plan that was hatched in the seven in the

(1:09:44) 1950s was to unite the world as Ronald Reagan said after he was disinform and brainwashed around a common alien Threat all right that was that plan began in 1953 and we have a document from the director of the CIA General badell Smith who said they needed to exploit the psychological warfare value of the UFO subject Dr jacqu Valle has a document from 1985 uh from the CIA although he won't release it I think he's been threatened uh that clearly describes the CIA engaging with these Advanced Technologies in the Abduction of

(1:10:28) innocent quote peasants in Brazil and Argentina for their quote psychological warfare value now what's the value of that to do this and torture and abduct innocent people using these Advanced Technologies made by humans and staging all these fake alien events because as Prince Hanam V lickstein explained to me in 1994 he said we need to have people hate aliens so that we can unite the world in a global configuration that would be the end of the world so that Christ would return quote unquote of course I thought

(1:11:09) it's this utter Madness but I let the man speak so I could understand what's behind this bizarre um eschatological into the world mindset in in the upper reaches of these covert groups so they feel that the only way to take care of the 8 billion MTH people malthusian crisis is to manufacture and hoax a threat from outer space which they have very convincingly done this is why of course you don't make a lot of friends when you point this out because 90% of the UFO subculture is sort of a bread in Circus

(1:11:45) entertainment situation scaring the babies out of people with all kinds of terrifying accounts uh which are actually either again confusions of phenomenon From Another Dimension and not extraterrestrial or completely hoaxed man-made phenomenon so to give you an idea how advanced these Technologies are if you have uh a man-made craft that can move off the coast California in a way that doesn't conform to any Aerospace aerodynamic systems known by the mainstream you can trick them and so that after unacknowledged came out and after it had

(1:12:23) about 80 million people see it uh they release this footage which everyone knows now it's been shown a million times on CNN and everywhere else of these objects being chased by uh David fraver and others and the F18 Hornet those were from the locked Skunk Works those were not extraterrestrial um and we know people who worked on them we have actually a uh witness who surfaced after I disclosed that who was offload loing was at a place where that same object the Tic Tac at least was being offloaded in the azors in

(1:13:01) 1991 so one of the problems is is that it's very very easy Once you have these Technologies mastered to stagecraft as they call it or hoax events that look alien for their psychological warfare value it's a classic so-called false flag or as the military would call it

deceptive indication and warning so people who I have no problem with people putting anything out there that they believe to be true what I'm trying to do is to provide enough information that we don't get led into uh let's say a

(1:13:36) Vietnam Gulf of Tonkin situation where we stumbled into the Vietnam War because we hoaxed the attacks on our own ships in the Gulf of Tonkin or where we got into the disastrous Iraq and Afghanistan Wars because we hoaxed the fact that uh Saddam Hussein had weapons which he did not have uh and which J. Cheney and his minions fully knew that he did not have but you know 3 trillion dollars later and God knows how many dead people here we are so the big one that they've been wanting to pull the wool over everyone's

(1:14:08) eyes is this alien threat from space because how do you unite a divisive world you create an enemy that's nonhuman and unite them around a military hunt a militaristic approach which uh scares everyone because people when they're terrified give up all their liberties so ironically some of the people who talk about freedom and liberty the most are the purveyors of the very disinformation that would lead to us losing all of our liberties so that is why I'm very strong on that and it's very controversial uh but you know look I

(1:14:45) mean I these are facts that we know to be true and Everyone's entitled to their own opinion but not their own set of facts so we have one witness and one military source and one document after another proving that all of these fearsome things have been done by humans using these Advanced Technologies you have people going up on Capitol Hill telling members of the Senate intelligence committee until I was asked to come in and clarify it that none of these could be ours we don't have anything that moves like that nonsense

(1:15:16) uh so one of the problems is that if you have people up there who are themselves professional disinformation ops like Luis Elizondo uh as soon as he surfaced I was told by a very senior CIA guy he's been there 45 years Tas with this specific issue very deep black but I've known him for 30 years I agree with you 100% but you don't even need the Intel every time Lou speaks he's trying to scare us but but my point is this is this is nothing new he it's just the latest flavor of the month remember that

(1:15:51) algorithm that protocol kicked in in the mid-50s so the Betty and Barney Hill abduction oh my God that abduction Obama's I think doing some movie about it that was us ET craft don't clamp onto the back of your trunk and leave marks like that so one of the big problems is we have to sort of rewind and reanalyze all these events that have happened with the understanding there are at least three things going on man-made UFO related phenomenon that looks alien actual extraterrestrial both ones that are here and ones that are coming in

(1:16:31) from other star systems and extradimensional interdimensional phenomenon those three are operating simultaneously and are all being called the same thing and it isn't helpful because that level of confusion actually plays into the hands of the ones who want to strip the whole world of any semblance of freedom and everyone's goose stepping underneath uh the theegis and power of folks who want to scare the hell out of everyone and and you know as

Franklin is ATT tribut to saying if you're willing to give up your your freedom for security

(1:17:07) you will have neither so I think that's one of the very big problems is that we have to figure out uh how to go forward with this information but not in a way that we play directly into the hands of the secret agenda I wrote a paper in 1999 and it was entitled anyone can read it's on our website and in our first first book and it's called Uh when disclosure seres secrecy and I wrote it because what's happening right now we knew was going to happen and that is the subject the facts Who start to come out

(1:17:40) but they will be spun by the Spin meisters who are embedded everywhere into two things one we don't know what these are but they're a threat to our national security false and second L we don't uh have any idea how they operate because we couldn't possibly have anything that flies like that big lie okay and we did a movie it's on my YouTube channel called The Cosmic hoax that sort of exposes all this so I it's not that I have problems with I don't you know the whole personality things I don't care

(1:18:14) you know I I mentored Tom DeLong personally uh and of course David grush he was unmasked at the time but his bosses I've been working with and and he we were providing information to him and his bosses so that he got to these facilities where he met with people who had handled this material he's telling the **truth** about that uh however he was never read into the projects directly um and moreover never handled the materials directly and never got within a lightyear of the manmade Technologies and the man-made aliens the so-called

(1:18:51) program life fors that these little Gra alien and other Critters you see then we been making those I know how they're made um they were primitive at first and robotic and they become more advanced in the last you know 20 years or so but um the all all of that is something that unfortunately it's it's very confusing and uh it's they've created this whole smoke and mirrors Hall of Horrors um and it's worked but my concern is that if we have a disclosure that plays to the hand of the agenda of this secret Global

(1:19:26) government group we're going to end up in much worse shape than the secrecy has gotten us into so that's when disclosure serves the secret agenda this is why we're trying to be very careful about this and I know you know there's a whole cottage industry that's buildt up around abductions and mutilations and evil aliens and fear-mongering but the only place that leads is to the result that the secret government who want to take our freedoms away have been wanting to do for decades I mean it's it's it's a

(1:19:57) sort of ironic but very tragic so I think we have to be very very careful with this because I will tell you a little knowledge about this subject is an extremely dangerous thing it it doesn't help the public to put out half **truths** partial **truths** and withhold all that other information so it's to say that we have these UFOs and but we have no idea how they work when we've already spent trillions of dollars in 80s years studying them is ridiculous and that's why grush is very correct in saying that

(1:20:27) we have reverse engineered these now what needs to the follow on to that which they're trying to keep secret uh is that yeah we have fully operational UFO looking objects and they are being used illegally in all manner of of chicanery and skull duggery drug running human trafficking torture abductions all that stuff uh and they're happy for the public to think all of those activities are alien when they're not so I think this is where um the **truth** is harder to believe than the fiction and I was told in

(1:21:04) 1991 when I first emerged on the scene that if I told the **truth** I'd be discredited and I say that to people the very first time I meet with like people at the Senate I said look you know it's it's going to be much easier for you to believe the myth and much harder for you to accept the **truth** but just remember we're dealing with technologies that are hundreds of thousands of years more advanced and you guys up on Capital Hill in the White House are just looking into this when there's been a covert group studying it

(1:21:36) with all manner of illegal black budget funds for 80 years and they have an 80y year multi- thousand year frankly technological uh Edge on you Advanced and so that's not a good situation I mean obviously um and and that's why it's necessary to have more and more whistleblowers come forward who directly can speak to the Technologies humans have from studying and developing these Technologies so that the public and the policy makers in the not only just us but around the world aren't deceived by

(1:22:11) those because a false flag operation won't work if we you disclose the modus operandi the the the technologies that would be behind the false flag right you're going to fool anyone and that's what we need to do so a **truthful** disclosure would be about the Extraterrestrial vehicles and that history as well as the technologies that could benefit the Earth but as well as the hoaxing of events that have been done for their quote unquote psychological warfare value all of that needs to be part of this and if you

(1:22:45) leave the latter out then everyone's going to think everything that goes bump in the night is an extraterrestrial you know that's invading us and voila you've just written a 10 trillion dollar check for the military industrial complex Dr would like to introduce uh give give me a second uh Keem we're gonna go to kim.

(1:23:07) com and then we'll take it back to you um I'd like to introduce kim.com hello hi Dr griah hi everyone nice to meet you thank you for taking time today um I have a quick question really simple Elon Musk just 30 minutes ago uh tweeted that he's confident that the US government has not made contact with non-human beings uh and then a second question is if these non-being non non-human beings are around and have you know Advanced Technologies why don't they have the morality to share this with us and to help Humanity uh to advance and to get out of an age where

(1:23:51) people are dying of hunger why are we not seeing them helping us well they have and what what happened is that they were betrayed look being part native American let me tell you any agreement like that you're going to get bent over and you're going to bent over and Road

hard um go look up the trail tears so when the ETS did such a thing and they did we betrayed them by turning those Technologies on them and using them to kill them and to keep it secret so what you're asking for would require an intervention

(1:24:29) which they're not quite yet prepared to make because until we humans get control of our own dysfunction and stand down and I mean sit down hard these covert groups that are doing this um the only way they can resolve it would be to take over the operations they're not going to do that because that I hate to sound corny it's like the prime directive you don't go to a primitive of emerging civilization and just try to impose some order on it I mean how well did that work out in Afghanistan right 20 years

(1:25:02) over there and you're going to go over to a warlord culture and impose Jeffersonian democracy I don't think so look whatever it is right back where it is now sounds like Humanity excuse me I'm speaking you you really have to have it come from within Humanity humans and human individuals leadership have to correct that now what you're asking for certainly could be done but it would then of course be immediately spun by the Spin meisters as an alien invasion which is what they're trying to avoid so

(1:25:37) it's a catch22 for the ETS the resolution of it needs to be us humans taking some leadership on this and correcting these errors now as for Mr musk's comment he would not be read in I don't care how rich you are and how many companies you own um there are presidents that aren't read into this never mind Elon Musk so everyone isn't and I don't you know I've never met the man I I think he's he's done some great things but he's not in a position to make a comment he's he's not informed on

(1:26:11) the subject I'd be happy to inform him if someone knows him personally I may just respond real quick so you saying that the non-human beings shared this with governments but not with Humanity as a whole because they're worried what this may do I mean isn't that no no that's not true either I mean there are people don't forget that Nica Tesla I'm I'm looking out my window at this where the swanana NOA Institute is up on the Blue Ridge Mountains there out of my window and that's Dr uh Walter Russell was the guy

(1:26:50) who started the universal one and the swano in Institute he mentored Nia Tesla they had contact with ETS many of the revelations NCA Tesla and many other brilliant human scientists have had have had been through contact but what happened to all his technology well he couldn't get it out JP Morgan told him if you can't put a meter on it it's not going to come out this is why we can have a Tesla fake Tesla car because you can plug it into a meter that's a electrical outlet that's running off the

(1:27:21) could fired gas fire power grid it's it's ridiculous um but you if you were to bring out something like Nika Tesla knew how to make and others uh thousands of people have come up with technologies that have been confiscated that's the whole point of the Lost Century the documentary we just released there's not just a few there have been thousands of these sort of inventions that whether through government action or individual corporations or what have you

have been sequestered and kept secret and if NE necessary the people

(1:27:53) involved just flat out killed uh so I think that um there have been these attempts but again what are they to do if we humans don't get our act together and and make this possible because they're not going to actually take over the Earth unless we got into such a situation that we were facing an extinction level event my understanding is that that kind of intervention uh well let's just hope we don't get to that point but uh until then they've done everything possible whether it's been with direct government

(1:28:29) events where they have encouraged a change one of the things that was asked in the 50s 40s and 50s was that the ETS wanted us to not pursue these thermonuclear and other weapons of mass destruction and bring these Technologies forward and live together peacefully because as me shukaku has pointed out a level one civilization is one that is peaceful globally and not destroying its environment and that that point you have sort of a ticket to go out in space and become an interplanetary civilization we're not

(1:29:04) there yet and and it's it's it's their greatest aspiration that we get there and it's our all of our aspirations I think unless you're a sociopath but the the fact of the matter is if they are listening to us right now I got to tell them they need to uh let the world know what technology exists they need to let the world know how advanced Our Lives could be if we had access to but you no you're so wrong that is our job they're not going to hack into the internet and and send a message out through CNN you

(1:29:40) know and so remember any action they take can and will be used against them in other words even when they even when they well wait stop don't overt talk me when I'm speaking just a second excuse me just one moment no you interrupted me first so let me let me interrupt you as well if you are right and all of humanity would understand that these non-humans intelligences are out there and have this advanced technology what makes you think that Humanity wouldn't rise up against the current leadership

(1:30:12) and say hey this is really important for us as as humans we need to get access to this to improve you know our our state of the world but that's what we're doing but but that's what we're doing what you're asking for is what we're doing that is what we're doing question I can't put my hand up unfortunately Ashton go ahead yeah thank you uh Dr Greer this is Ashton forb just want to say real quick hi to keemstar kim.

(1:30:44) com John who I think left and Jake but um Dr Greer I think a lot of what you've been saying meshes with the investigation I've been doing into the MH370 videos I would love if you looked at the thermal video which I believe shows a non-radiating barrier around potentially a smaller objects similar to what you were mentioning related to technology my question for you though is what do you think the implications of the technology are I know you've already mentioned that you think these beings could destroy the planet do you think this might be the reason why it's being

(1:31:10) hidden from us to me it can't be just about greed although I totally agree with your socioeconomic impact of this technology do you think this technology would be that we might destroy ourselves because I think that it could be a lot more dangerous than nukes and thank you very much for your time appreciate it oh one last part too is do you think Congress knows about this technology as well or do you think they're in the dark well well I know what Congress knows because I'm I'm up there all the

(1:31:34) time uh but we'll talk about that I think the the bigger issue is that the ETS uh their technology is been studied well enough that there's almost parity in covert human programs for for these and that is how they're being used as a weapon uh the ETS obviously have no intention to use them that way and and if they had they would have done it the instant we detonated the first atomic bomb but I also want to point out they have been working through people trying to bring this information technology out they just think that

(1:32:11) humans should lead that and not them because if they do it it's going to be looked at as an invasive forced situation and force is the inverse of power as you know real power comes from within external Force something like this is always disastrous they're wise enough to know that to to the other gentleman who was on earlier so that's why they're expecting us to come together and work together on this but the uh you know so the the ETS have no intention of doing that uh however you know in terms of forcing it unless we

(1:32:47) got to a point as I mentioned where we're risking the loss of the entire biosphere or or most of human civilization and then there would be there would be a massive huge extraterrestrial intervention we know this um now that's we don't want to go there I mean let's not get to that point please but um and we may I mean you know as as as do Bearden said don't get me wrong the fools I me blow it yet but but the Technologies here's what I've been recommending is that the level one Technologies I just call it something

(1:33:21) that would sit in your the hood of your car or sit in a closet in your house and run your house or run your car with free free Zer Point Energy that's rectified into electrical current and wattage that needs to come out 100 years ago the things that fly and the things that cross Dimensions which can be a weapon system those have to be held back and looked at very carefully unfortunately had the disclosure of those other technology Oles happened 100 years ago and we'd become a level one peaceful civilization which we're not and the

(1:33:58) biosphere was stable which it isn't then we could be peacefully using the transdimensional and electrogravitic Technologies but we're a hundred years behind the curve and for that reason when I you know and I know I'm in speaking with the law enforcement group and the Special Forces teams that I'm working with when they're they're talking about taking control of these covert black sites uh from the information we've gathered I say look you know you're going to encounter technologies that are based on studying

(1:34:32) extraterrestrial systems that are going to be thousands of years ahead of what you have so this is a huge problem and um that is the real Crux of the crisis which scares the hell out

of anyone at the Pentagon or White House or congress when this comes up because there's a covert not ET group but human group that have technologies that are light years ahead of a B2 stealth bomber uh or what have you and so how do you unwind that without hitting a trip wire stepping on a land mine and blowing things up but

(1:35:08) yes the Technologies you're 100% right uh the first phase of them could absolutely save the biosphere in poverty but some of these more advanced ones I really do think the Earth and Humanity needs to become more stable before all of those tumble out of the basket all right and and because look I mean if you're in Moga dho you could with one of these wow you know electrogravitic systems get a dirty bomb over DC in about two seconds um you know I mean you're not talking about rocket thrusters and jets you're talking about

(1:35:43) electromagnetic field and teleportation systems and all kinds of stuff in physics um so you know that kind of technology is in the hands of the very worst people unfortunately so I always tell people the situation we're in now is the worst case scenario the life saving and Earth saving Technologies are withheld and these transdimensional Technologies are in the hands of bonafide Mass murderers and and sociopaths and Psychopaths who have this power hungry desire to control the entire planet and if they have to get

(1:36:22) into a brief altercation with ETS or stage one they'll do it because that's how they can seize power from a a terrified public and I think this is why at this point there are multiple things happening there's what you hear about in the media with Congress uh there's what you don't hear about what's going on at National Security Council and White House military office I'm working with and there's what you're not hearing about from Special Force guys that are separating from military and

(1:36:53) will be involved with a law enforcement action to get this under control if the clown car in DC continues to be a clown car so we can talk about that but that you know at a certain point where it we're sort of in sort of the getting towards the end of a very long algorithm and how this plays out is going to be very important to the future of humanity in the earth and it needs to be handled well um and and not we need to be careful not to play into the hands of the folks who have AR made the architecture around this such that and

(1:37:28) the information workare around it such that everyone is primed to believe there's a threat from outer space that we need to fight that is the end of the world as we know it um so I think we have to look at this with people who understand it well uh and not go down that path but the Technologies absolutely are right um You can create an opening in SpaceTime uh you can put an energy field around an object and it disappears um you can move you can actually alter the Continuum of SpaceTime I know a scientist I worked

(1:38:05) with out at his farm north of the Redstone Arsenal where I was in a skiff with him he could turn dials in electromagnetic fields and and have Boulders move on his property from where they were uh 5,000 years ago to where they are now that kind of thing I mean time snaps and weird stuff and this was human um I mean the guy was a genius um but uh I think that

those sort of things uh have other applications however as a doctor I can tell you that some of these Technologies apply towards um healing and to diseases would be Curative and so

(1:38:45) there are many many good applications but like everything with humans you know I always joke as an emergency doctor you can take a knife and put butter on your bread you can take it and slit someone's throat unfortunately I've seen both and uh humans have this proclivity to take every advancement in technology and first turn it into a weapon of war and and when you do it on this level of the basic SpaceTime Continuum and technologies that are way more advanced than a hydrogen bomb or nuclear bomb now

(1:39:20) you're talking about something that's very dangerous if it's in the hands of people who have no ethics or moral compass and are willing to do anything to amass more and more power uh and so I think that's where my disappointment has been since the 90s is seeing that no president has wanted to take this on and many people in Congress when they learn what they're dealing with and who they're dealing with on this planet they get intimidated so you know it's it's a bit of a process

(1:39:52) um 30 years into it now since I I first brief the CI director for Clinton I I look back and I go well the big problem here is vision and courage to do it because when you're dealing with these sorts of folks you know they're they're nasty and they don't mind killing people and uh they don't mind intimidating people so I think that uh one of the big issues is how far will uh let's say bureaucrats and politician in Washington or London or anywhere else take this and to what extent this is why I've always

(1:40:27) said the disclosure project movement is a global movement of people uh and we hope the people can influence their leaders but in reality I've always viewed it if the people will lead the leaders will follow and I've been told by so many staffers of senators and stuff you need to get more people behind this you need to get more coverage you need to get the public behind this because many of the m members of Congress are afraid of one being ridiculed or two are running up against something that's powerful without

(1:40:58) adequate support from their constituents it what do you believe the correlation between just real quick one one comment about all of this so thanks first for answering uh my question one thing that I don't understand and and everything you've just said and you are a medical doctor you have that kind of training what's wrong with a sign let's call it a miracle of providing Humanity with advanced technology to cure cancer wouldn't that be seen as a very good faith move by these intelligent

(1:41:34) non-human beings to help us and wouldn't that build trust towards uh Humanity being accepting of these non-human beings but see your question is based on a fallacy your question is based on the idea that perhaps that hasn't happened happened but who's going to bring it out you you have the clout to go up against this group have at it no let me let me finish my answer snap yeah okay so are there people who've had these sort of breakthroughs sure where are they They confiscated you know there have been

(1:42:12) what the American Federation of Sciences very mainstream group said there are 5,000 and some patents that have been confiscated under inappropriate use of the national security provisions um people who don't even make it to the patent office have thugs break in and steal these sort of systems the idea uh the the reason they'll let something like a plugin electric car go forward is that it doesn't change the fundamental Dynamics at all it may be making us go backwards in fact so I think that the the the things that would actually be a

(1:42:47) game Chances are ruthlessly suppressed and I think people make a very big mistake in thinking that the organization that would want to keep whether it's a something that would disrupt the medical industrial complex or uh the energy sector or Transportation sector that someone coming forward with that would just be able to walk out there and do an IPO on Wall Street uh unfortunately that has been attempted for a hundred years and there are just thousands of people over the years that have had their devices confiscated or

(1:43:20) have been killed so let's say the ET craft lands puts it on a silver platter hands it to you or Mr Musk who's gonna bring it out to the public and survive I would love to answer that question Dr Greer yeah so necessary it is not necessary to share it with individuals we live in a world today where the technology exists to share it with the entire world over the internet in an instant you don't need to prioritize certain individuals or certain governments you can literally broadcast this to the whole

(1:43:58) world sure and that's what they're expecting us to do but we're the prime residents of the planet we've created the problem we're supposed to cure it now why I think it's um educational I think it's evolutionary you know the problem is I don't know if you have children I've raised four and have 12 grandkids but if every time you're a little toddler started to stumble and fall down you swooped in and picked it up it would never walk humanity is going to have to learn to do these things

(1:44:28) without it being imposed externally and what you're suggesting they certainly could do but it would be a worst case scenario first of all the rather evolutionary and salutary process of humans getting this right ourselves would be uh disrupted and number two I seriously doubt that it would do anything but cause world wide panic because the whole Pro the whole problem with this is that every T everything that the ETs do is turned into an alien invasion week on the History Channel let me give you a very good example this is

(1:45:03) very simple some years ago we assembled a number of people who had been at nuclear facilities where these objects had been seen and in several cases there were malfunctioning uh thermonuclear weapons that they went in and fixed because if they had gotten overheated and gone de-activated it could have triggered World War II and the end of life on Earth as we know it now in each of those cases after we assembled these folks for the disclosure project in 2001 there were charlatans that gathered them together and then respun the

(1:45:37) narrative that the aliens were invading our thermonuclear sites and were a threat to the National Security so same facts 280 degree opposite narratives and the organization that uh

would like the narrative to go in the direction of a threat is always going to hijack such an event like you suggested and turned it into Alien Invasion week so look they're way too smart to trip over these uh strip wires uh and step on those S of landmines and I think that uh while it's very interesting I call this kind of a

(1:46:17) cosmic codependency where we're expecting some big brother or someone from out in space to fix our problems I think on the contrary all things are possible if humans would evolve and come together to fix these problems ourselves and then you will see these ETS come and assist a great deal but I don't think they're going to do it as I said my understanding is that they're not going to do such an intervention until it's a worst case scenario and there are no other options open on the algorithm

(1:46:47) you're at the end of the algorithm what do you think that's what I mean mean with with lacking morality because if you have to wait for the ultimate disaster to strike before you come in and intervene I think they are lacking morality I don't like an alien no we're no we're lacking you interrupting me Dr GRE that's not polite you asked me not to interrupt you can I have the same I I thought they were interviewing me are they who who is this that they're interviewing it's okay for you to

(1:47:19) interrupt everyone but not for me to uh cross-examine you a little bit on your ideas no because it's you just keep Mis phrasing the same thing we're going in circles they're not being moral wait wait I got a question they're waiting they're waiting for us to get a Cella of morality that's it's the other way around this on this on this earth right they're just not in power that's the problem because those who don't have morality they usually rule but what I'm suggesting here is maybe make a leap of

(1:47:52) faith you know show us your in a good faith gesture that you are good beings and they have with everything you're asking share it with the whole world let everyone see it you know then it will be hard to cover it up and turn it into some secret operation if you are right and these non-human beings are out there I think they need better advice because what they are doing now is not helping Humanity at all yeah well I know that not to be the case yeah real quick uh I'm curious Stephen Greer um what do you think the

(1:48:30) correlation between religion and actual ETS are and are you personally religious I'm spiritual I I mean organized religion I think is fraught because I don't know of one that hasn't been hijacked by immoral and corrupt men to turn it into some kind of way of controlling people as opposed to enlightening people but in terms of if you strip away that um I think yes you know I I have a deep spirituality that was born of my own personal experiences in life um and I think these civilizations out there in space have a

(1:49:06) similar understanding probably more advanced um and that there's no problem with religion per se except what men do to it you know I I don't have any problems with the Genesis let's say of spiritual teachings but they subsequently fall into the hands of demagogues and people who are just you know trying to amass more power over people uh which is you know

the whole big monkey problem with humans but I think the ETS certainly have a similar understanding of of the cosmos I think they're certainly aware of Consciousness

(1:49:43) and its in its infinite form and if you want to call it a supreme or Divine being and all of that I I I'm quite sure that that's quite a universal experience and understanding U by these civilizations if I could be a little bit more precise um so the three main religions um and their scriptures there's a lot of theory now that um some of these contact from angels and God were actually ETS do you believe that well they could have been I mean let's go let's what I said started out a couple hours ago saying if you were to

(1:50:18) go back in 200 years and meet Thomas Jefferson and show him any number of things that would look Supernatural um so I think that in ancient times people had experiences with ETS with Angelic and spirit beings with higher Consciousness Etc and so on all the above but if you know have you ever saw the movie The Gods Must Be Crazy you know where someone throws what is a cup bottle out of a little plane and people in this tribal area in Africa find it it becomes this relic of worship and eventually becomes an object of warfare

(1:50:56) and it's sort of a metaphor for what people do but I think certainly um people if you take ezeziel's wheel there could be a number of references that could have in fact been um experience with very Advanced Interstellar transdimensional civilizations at the same time there may have been experiences with beings from a higher spiritual realm and and if you didn't understand it would it would absolutely look like it had to be metaphysical or paranormal and even to this day the whole UFO subject often gets thrown into

(1:51:30) the waste basket of quote paranormal or metaphysical um for that reason and I think that what we have to do is bring some updated cosmology and scientific understanding to all this uh whether it's the science of Consciousness and and non-locality but also of how technology ology from another star system would appear and manifest could very well be uh something that would uh look like magic or something paranormal and so if you go back thousands of years I mean at that time you know the Earth was flat um the Earth went the sun went

(1:52:08) around the earth not the other way around Galileo was excommunicated by the church for suggesting it the other way around it was just recently get into all these sort of problems uh and wi with you know not enough knowledge so you know knowledge uh isn't it leads to Enlightenment but you first have to seek the knowledge and the **truth** often what happens that people jump to conclusions and their minds are made up and you know that's it uh and so what George santiana said very brilliantly fanaticism consists of redoubling your

(1:52:47) effort when you forgotten your goal and so so that pretty much sums up most political social and religious movements but um so you have to avoid the fanaticism and start looking at what was your initial purpose anyway whether it's a spiritual religious organization or a political or social movement and I think in the case of spirituality and these sort of phenomenon there have been many many people who have had experiences uh with ETS and Confused it with

something from another dimension or something from another dimension and

(1:53:19) thought it was DT um and that is actually understandable uh until there's enough information that people have but also experience people have through their own Spiritual Development to be able to discern the one from the other from the other uh one good way by the way for those of you curious to tell an ET vehicle from a man-made one the Extraterrestrial vehicles have no seams uh they are not manufactured out of Parts they are extruded transdimensional as a whole that's why they're they're integrated uh seamlessly

(1:53:54) all components whereas the man-made ones there are rivets there are parts or things that come out this sort of thing they're very very different in their uh basic uh manufacturer from the the actual ET ones and this is the other thing we're going to be doing those of you who really have a deep interest in this hopefully in the next month or two we're going to launch um what we call the disclosure IC intelligence archive uh it's it's enormous amount of data and information it'll be basically

(1:54:27) the Wikipedia on this whole subject uh involving hundreds of top secret witness testimonies thousands of government documents 122 cases of of these objects being down crashed and retrieved and studied on and on and on and that we hope we can get out to the public uh you know next year early in 2024 um and we're trying to finish it up right now over the holidays the early versions of it that have not been beta tested have been provided to the Senate intelligence committee and and armed services and the Pentagon Arrow office

(1:55:04) and the white house but um the version we we're working on now will be in a database it's very searchable and uh you know it's gonna work in progress obviously something this huge I mean it's the raw data we were putting in was I don't know what 22 terabytes or something like that but that'll be available we hope to everyone soon and people can can learn more about this doc Dr G it's it's John here and um John M and I just wanted to say that I've had some awareness of this

(1:55:34) project that you're working on the database project and I think to to to provide that as a resource to this planet is going to be the one of the most fantastic achievements of your project so far um and because I've I've had the opportunity to be briefed on it how can how will people be able to access that particular part of the work because I know a couple of friends of mine have been very very excited about that and you know when you brief me on it I was like this is just awesome oh it's gonna

(1:56:07) it's gonna be shocking there'll be nothing like it ever that anyone will ever have we hope to keep it open source meaning it'll be backed up blockchain Etc but we it'll be available to the public but right now we've already lost about \$450,000 doing this or spent and we don't know what it's going to cost to get this out to the public and then what the hosting costs are going to be we're hoping to do some crowdfunding to support it sort of like Wikipedia does through people making contributions if

(1:56:43) that doesn't work we may have to put a mandatory pay wall up but I don't want to do that I want to make it so I'll wa billion people on Earth could have access to it we're still trying to do a feasibility study on that because you know this is not my willhouse as a doctor would we have data people looking at it well please send us please send us the the details of how we can help well we will actually after the New Year we're going to announce a crowdfunding project and then very shortly

(1:57:09) thereafter the sort of first beta tested version of it we're g to put a huge announcement so if you go to my website Dr step.com you can sign up it's a free email newsletter and we'll just send you a notification but I guess John you could send something out to people through this too but we're we'll we'll send out a notice and you know U you know we have few million people follow us in social media and YouTube and we'll announce it and and then we hope it just goes viral because people will be able

(1:57:40) to jump on there um what we don't know we're GNA have to have it hosted well enough that the whole system doesn't crash um due to volume because the bandwidth use is going to be enormous uh I don't know if you can even Envision this I have aund and some hours of top secret military and intelligence witness testimony the raw footage of which will be in there um all 750 whistleblowers information but not their personal names if they don't want them out but what they knew or synopsis of it all will be in there a all

(1:58:16) 145 illegal black sites around the world that are have underground and above surface facilities including the project code numbers the building names and numbers will be in there we're not going to hold any of this back so it's it's going to be you know of course risky but we're just going to go ahead and do it h because we're simply we know time is getting short foret issue Dr Greer um the the BK Community would love to help uh crowdfund and sponsor uh that project I think it would be perfect um you know

(1:58:52) our community loves uh loves your work and loves the **truth** that you're putting out um so we would love to to help sponsor that and uh be a part of that and really help get the word out especially on the blockchain overhea um I think that could be a perfect uh way for for the BART Community to to help make that happen um to the best of our ability all right uh ladies and gentlemen uh just uh just for the sake of order if anyone has a question uh please raise your hand do not interrupt anyone uh it's very disrespectful and

(1:59:26) rude so just uh with those certain ground rules uh we have a couple people with their hand up uh right now and Dr Greer uh Dr 22 has a question for you in 1984 I see you I know you had your hand up for a minute we're going to get to you and uh Jordan Jordan I Believe hold on Jordan we will get to you as well but please if you have a question raise your hand and do do not interrupt anyone uh let's keep it let's keep it uh cordial and let's keep it clean all right Dr 22 Dr Greer so yeah as I'm sure

(2:00:01) you know in December 2020 the former head of Israeli defense Ministry space directorate Heim AED became vocal about the Galactic Federation and he claims that

extraterrestrials have been communicating exclusively with the American and is government and that the USA is sharing bases with ETS Underground on Mars I I just I'd love to hear your opinion in how accurate his claims are you I don't know him um I do the one data point first of all I seriously doubt that there's only two countries are involved

(2:00:39) with u and secondly I don't know that there's an ongoing uh Cooperative situation there's one that existed some years ago uh but on Mars I do know the head of Army intelligence General Stubblebine did tell me that of course these short range meaning not Interstellar but within our solar system craft we have had been to Mars and that there was underneath he specifically said underneath the surface of Mars uh an extensive ET base uh and I've heard similar uh information from other folks who've

(2:01:17) imaged and classified sequestered systems at Nasa the Goddard space flight center some scientists I knew there and a couple other sources so I think that part of is substantially correct um as for um this sort of only Israel and America communicating and have that I doubt um may sound patriotic to him but I think it's completely not true uh and then lastly the civilization that you people say an Intergalactic group or Galactic group it's not Galactic it's Intergalactic it's Interstellar because the Milky Way

(2:01:58) galaxy is extremely small has 100 billion star systems the twin Galaxy next to us is shaped about the same as spiral as Andromeda that's a similar 100 billion star systems or so uh and that's another galaxy and my group has had a interaction also a photograph of an ET ambassador from that Galaxy so we we do know that the project it's called the mission the planet Earth is in fact uh Intergalactic not just Galactic and um the best we can tell uh none of the civilizations are hostile per se but quite a few of them are quite upset with

(2:02:38) the direction we've taken keep in mind we have we haven't talked about this we have a very very Advanced weapon systems uh on satellites and space but also groundbased as well as on aircraft and on ships on the ocean that use scalar and electromagnetic pulses hooked to what are called neutrino light detectors to pick up where the ET craft are and we strike them so now I I speak of this with direct knowledge I was just recently uh flown in a classified helicopter over two black sites out west I can't say where they are we have a CO

(2:03:19) operating whistleblower who is very senior at those places and just one of the sites I was over which was a Lockheed Works facility um have these illegal electromagnetic pulse weapons and on average knock down about two extraterrestrial vehicles per year just at one site so there's a very big crisis going on that neither the White House nor the Congress is dealing with yet because they're still asking the basic questions of what is a UAP and where are they from and how do they work and you know the basic entry level questions uh

(2:03:57) unfortunately the covert deep black let's call it the illegal secret government programs uh those are light years ahead um and we do know that's ongoing so uh in this Coalition let's call it there are civilizations of various degrees of development none of them are hostile but they are increasingly not happy about our hostility and what we're doing and keep in mind

there's a certain danger of that because technology doesn't stand still so as we have studied and applied and figured out more of the uh physics of

(2:04:37) how these uh extraterrestrial craft and communication and teleportation systems work we turned those into weapons and and those weapons have in fact been turned right back on the ETS and uh I think there's only so much of that patience that's going to last I mean at a certain point we're very at risk for crossing a red line out in space and and that will not be good and one of the reasons I know this is a problem is because I've had people in the system who worked that like this particular operator at these two black sites and I

(2:05:14) have video footage it was really cool middle of the day we thought we were going to get blown out of the sky there was a security vehicle right by one of the EMP weapons he went oh he started switching on all the sensors to be sure we didn't get tracked and hit but um a lot of what I do is risky business you can imagine but what was interesting about that I was able to film The Underground opening at that particular site where the craft the man-made UFOs come in and out it it's quite interesting uh to see the

(2:05:43) architecture of that uh way out in the desert but um so what one of the problems is that this man talk about morality and ethics he was just in tears I mean this is a special forces guy now very senior executive uh very upset with what we're doing knows it's wrong uh knows how dangerous it is and is cooperating because he he wants us to be able to put things in place to stand down those systems and keep in mind it's not just extraterrestrial Vehicles we're knocking down if there's a civilian aircraft

(2:06:19) crosses that TFR that temporary flight restricted area over this site uh or is just on the edge of it and and and the the EMP cone the the the sort of zone of that EMP and scalar weapon is too wide it they knock down private aircraft and he has actually retrieved those including the the bodies and they are incinerated so there's no trace of them left and they just put put a missing person's uh report out through an intermediary so he's very upset about both the loss of ET and human life at these facilities

(2:06:59) that he has a senior position in so we do have some people of conscience and morality coming forward but this would also explain why a lot of people say why don't they just land on the White House lawn well before they would fully materialize and get there they'd be blown out of space and blown out of the sky as soon as they cross the speed of light barrier and become 3D um it's like shooting fish in a barrel unfortunately and U so those systems top priority is to stand down those systems now I know

(2:07:33) gosh 20 years ago I met with the head of the defense intelligence agency General Patrick Hughes it might have been the late 1990s it was the end of the Clinton Administration and he the defense intelligence agencies like CIA but from the Pentagon it's the top intelligence Military Intelligence for the whole US Department of Defense and the three star general I briefed uh wasn't read in but he had heard things that some operations that we were doing covertly related the UFOs were very dangerous but he didn't know

(2:08:08) what they were and when I told him this he was extremely upset because he had not been read in or briefed on it but he he knew how dangerous that kind of stupidity is so one of the proofs that these uh civilizations aren't hostile those people I've worked with at from Area 51 from Edwards Air Force base egland Air Force base Wright Patterson Doug way Proving Grounds all the really top Pine Gap facility in Australia all those men have told me my God I mean the things we're doing if these guys were

(2:08:40) hostile we'd be smoked we'd be gone um and uh now of course it doesn't make for a good science fiction movie like you know Star Wars or Independence Day and all the Tabloid rubbish but the fact of the matter is they're given their technological capabilities and given our foolishness you know that's all the proof you need to know that they are not hostile uh but I think that we're we're in a we're in a situation now where the technology curve has gone so far up in terms of our capabilities

(2:09:17) covertly that I'm not sure how long that laress will continue and so I'm overtly telling people that we need to make a change fairly quickly and do a U-turn off the path we're on you know Dr G before I got to uh 1984 who's had his hand up for a minute so I really don't want to elaborate on too much uh this too long because I want to give the uh other speakers a chance to ask that question but I think what you just said there is incredibly important and you know throughout this whole conversation

(2:09:48) you had been saying that no they can't just land on the lawn you know Kim is saying why don't they do some type of widespread exposure and I could see how that maybe would cause Mass pandemonium so I don't think that is realistic either now on the flip side of the coin as you have said the government is now at a level where I've seen some things in your documentary where they can now quote unquote take ET home so it would be very very easy for them to fake some type of UFO attack and I do think

(2:10:21) timing is of the essence so and without getting too long winded because I definitely want to give 1984 a chance to ask this question and then we have Jordan I mean at this juncture I believe that we could potentially be a year or maybe even two years away from some type of false flag attack I do not believe we have any type of luxury of time at this point secondly as you have mentioned these people are absolutely ruthless so nobody is going to take them on one on one so what I usually do say on my Twitter account the only way that we win

(2:11:00) as a collective is with non-compliance and what I mean by that you cannot give into the objectives of their scops and that is the only way I see us being able to overcome what I feel is very very close to uh coming to partition so I yeah and I agree with you the time is extremely short and we all know that those people worked in the system and which is why people are defecting from inside they they see we're in trouble and I even had the former chairman of a Fortune 100 company contractor dealing with this issue approach us um of course

(2:11:41) he immediately had his whole family threatened with being killed but um I think that that is why it has to happen pretty quickly because the false flag operation already started

started in the 1950s with man-made crap the faked alien abductions and mutilations and all that and uh any of the scientists involved have known for years that those events are not extraterrestrial in origin they're human stage craft and staging um of course I mean it doesn't do much for the cottage industry of abductions and

(2:12:15) mutilations and ufology to say so but um because it's not as **sexy** as aliens you know raping everybody but um because people love to be afraid and people love horror movies and people love negativity and people love war but um you know this is at a point where War at the level of these Technologies is so much more uh Earth civilization ending than a thermonuclear one which would of course be enough to end civilization as we know it but the ETS I think they actually will at some point have to come forward

(2:12:52) if we keep dropping the ball what I keep saying is we're the denisons of Earth with the children of Earth we are need to take the lead and the they will then assist uh and they have they have but but it's not going to be this sort of let's sit back on our Laurels and then they hijack the internet or they hijack something and force it if it gets to that and it could it could come to that that's the worst case scenario not the best that's that outcome is what we want to avoid um by coming together I agree

(2:13:22) with you in a collective of telling the **truth** and bringing the Technologies forward bringing the information forward uh encouraging our leaders to take responsibility for this making a call for more whistleblowers to come forward who have direct information you know and and U I'm glad Mr grush came forward but he's secondhand we need to have what I'm handing over next week to the house oversight committee or a list of people to be subpoena that are directly firsthand who handled the craft who handled the bodies who've been on

(2:13:55) missions where we've down these objects those are the disclosure project people not the secondhand everything so far have been secondhand folks right um or a pilot chasing one at some distance so what we need are these uh deeper whistleblowers and and folks come forward but the more you're intimately directly involved with the project as opposed to a passing sighting such as our jet Pilots have had there with the Tic Tac the more you know how dangerous it is to come forward so I I think that that's why one of the things we asked

(2:14:31) for that we didn't get was a witness protection program for the very high value um Witnesses we have but there are some I just have one that's just surfaced from Edwards and also Nellis Area 51 who's retired Air Force officer who is willing to come forward and is willing to testify openly uh for the Congress so we we are finding some people willing to do that now um there are others that we would subpoena because they want to be forced to basically they want they want to be forced to otherwise to be in contempt of

(2:15:08) congress because they're still terrified of their non-disclosure agreements so one man I'm working with had a 80y year non-disclosure agreement he signed and he signed when he was in his 50s so you know obviously it was signed made so that he couldn't speak until he was no longer on the planet right so but he's reached out but he's going to have to be compelled uh

so it's complicated and that's what we're trying to negotiate and get through the Congress uh the next best approach would be uh law

(2:15:42) enforcement just decides to go in and stand down these operations yeah and I think that it really just comes down to uh safety and numbers these people like you said were up against extremely Ruthless People and if you don't have the safety in numbers and safies and awareness it's going to be an uphill battle uh 1984 I apologize for making you wait so long what's up my friend no worries thank you my fellow reptilians and Dr GRE I'm a huge fan of your work U my question to you is have you ever come across any evidence of

(2:16:13) extraterrestrial panspermia or any changes that have been made to the DNA or the human genome as a direct result of extraterrestrial interference um or augmentation um I don't have anyone who's been able to prove that my own personal view of it is that there's a big evolutionary Gap from a darwinian point of view that is not explained and very well maybe the result of their having been and uh ET involvement with the advancement of human intelligence and human consciousness back some time ago and in

(2:16:58) fact there could have been more than one intervention my own understanding of it is that the Earth and other planets that are emerging uh become a uh a project of of development for intelligent life in whatever sector of the cosmos they're in uh and also keep in mind that there have been civilizations on the earth for which we have very little history I have have a man that I work with who's he works under contract with it& but he's actually CIA and occasionally he is's a physicist and he's occasionally given an

(2:17:35) artifact that's hundreds of thousands or million years old uh that's a technological object long before there was known human and some of them he he says appear to be of extraterrestrial origin but a lot of them are of human origin but from a civilization or civilizations that existed pre-recorded you know sort of anti- deluvian uh for which we have no historic record um so I think that the you know the Earth holds many Mysteries there's been life in one form or another for 700 million years here homo sapiens are relatively

(2:18:15) newcomers uh and and so it's very likely there have been uh evolutionary steps taken and involvement by extraterrestrial civilizations throughout the evolution of Earth I some people have felt that the Earth May in fact have been somewhat terraformed to use a sort of treky term but where you know there a group of computer scientists got together some years ago probably about 10 years ago and calculated at normal evolutionary uh rate of mutations and darwinian Theory that the genome on the planet the genetic biodiversity on the planet would

(2:18:54) take about four and a half billion years to evolve under those um models but there's only been life for 700 million in any advanced life or much much less and so how did that happen um and there are some species on the planet that don't seem to have a very solid earth-based evolutionary source so there's some anomalies and now is that proof I don't know I mean you know ancient archaeological items like that are not my particular specialty but um I have run across that so I think your your question is is spoton that there's

(2:19:34) been some kind of involvement that goes back long before known human and certainly you know anti- deluvian pre-biblical pre any recorded history we have because I also heard from I guess everyone's heard of the Sphinx in Egypt you know in the not the Great Pyramid but the Sphinx itself is older uh and appeared to be there before the quote unquote flood some kind of geophysical event that happened it did happen uh and that underneath the Sphinx there was a project many years ago where they were going to put a fiber optics in

(2:20:12) the chamber under there to see what was present and uh Mrs brus Gali the Secretary General of the UN that I briefed initially back in the 90s with butus brusali who was Egyptian uh he was Coptic uh Christian and his wife Leah was Jewish ironically uh and uh so they would host Us in New York for meetings and um she told me that they were very instrumental and help them to organize this Expedition and they did find objects underneath the Sphinx but that at the head of the Antiquities in Egypt was actually uh had a side gig

(2:20:52) undercover with CIA all the material that was there was confiscated and disappeared I suspect some of it may have ended up in the lab of this this scientist I've that I've met with and been in his facility I've been in a skiff secure compartment information facility he has one off base and one underneath his house actually uh out in Southern Tennessee but what's fascinating is that you think about that you think wow you know what kind of civilizations you know people talk about Atlantis and loru and all

(2:21:27) that but but where there's been artifacts found so I think that there has been a very long Arc of Life on this planet that's evolved and I think there have been extraterrestrial involvement for a very very long time now the current phase of of homo sapiens the way I see it is that we're sort of at the the end of this 450,000 year in the ancient vadas in India they called Yuga big cycle that's closing and we're opening up a 500,000 year Universal cycle and right now those of us on this planet are kind of cross in the the

(2:22:04) crosscurrents and the chaos of one ancient era closing and another era of I think Universal Enlightenment and travel and peace is opening but we're caught in that little 100-year snapshot as it were out of a million years uh but that I think when all that transition takes place there'll be a lot of information that'll sort coming out about what you're asking about about the ancient connections Earth and humans have had uh interconnected through the cosmos you know Dr G what's interesting when you

(2:22:42) brought up uh the Spinx I was thinking about how somewhere in Egypt I don't know exactly where but there is a flower of life that is laser inscribed into the building and it is absolutely impossible for humans to duplicate the technology even today so it makes you think when you realize these things yep Jordan welcome Hey there thank you for the opportunity to speak quick comment regarding kim.

(2:23:10) com statement Wonder ring up why benevolent ETS don't jump in and save Humanity I think you have to look at this planet as a school with us being spiritual children in the learning process so it's likely they don't openly meddle in our Affairs because we need to figure this stuff

out on our own there's a free Free Will and karmic component to keep in mind that conversation y Also regarding hey maed and from Israel Space Program he didn't actually claim those things about the Galactic Federation the media completely misrepresented

(2:23:34) statements he he made in a book the author of the book interviewing he maed posts on Facebook and she was saying he was quite mad about how the media twisted his words ah anyway as for my question for you Mr Greer thank you for your work regarding the idea that supposedly there are no hostile aliens because if there were they would have openly destroyed our planet isn't that assumption fairly logically inconsistent wouldn't it make more sense if there were malevolent extraterrestrials out there for them to stay behind the scenes

(2:24:02) and work sort of with the human powers that be on this planet to enslave us pillage our energy and pillage our resources instead I don't understand why polarity suddenly stops where our atmosphere does well because if you have that sort of in your Paradigm and you also have those Technologies there it's you're not allowed out of your solar system now there are extra dimensional beings that are doing that but they're not evens so it gets back to the very first the introduction to this call and that is

(2:24:37) the Extraterrestrial biological entities that are from physical planets and star systems uh if they had that intent they would have never survived Crossing out of their own solar system now are there rather mischievous entities now I had this great conversation everybody's gonna get a laugh out of this little bit of humor is fun so I was at at the Vatican and there was meeting with a man named monor balduchi and he was senior Theologian to the pope back then it was Pope John Paul in the 90s and I was at

(2:25:09) his Apartments overlooking St Peters and I interviewed him we have a wonderful interview with him and also the the Vatican astronomer and a bunch of people about this where they confirmed that of course you know we're not alone and they know it and and this issue this subject what you just brought up came up very quickly and I I it was interesting because M balduchi was a uh demonologist of all things and a theologian and he said oh yeah neither angels nor demons need flying saucers but he so we started talking about this

(2:25:44) whole I call it cosmological indigestion uh where various phenomenon get mixed together quite understandably in in the early days of investigating this but um but that if there was a civilization that was from a 3D planet and star system with that intent that had a technological capability uh there would be no need to do all of that Subrosa Behavior because they could simply shut everything down and take it over or eliminate the system um now are there sort of negative entities that would have that ENT that inclination

(2:26:25) sure one of the senior members of this cabal of folks keeping this secret that I know is a a Satan worshiper and his wife is a devil worshiper and they're he he's been a colonel in the Army and you know they they're they're whacked out and they're really into that dark energy and dark side of things and they have technologies that can create a vector into those uh creepy uh dimensions and and pull things into this Dimension Etc one of the things we haven't talked

about are the technological capabilities at Cross

(2:26:59) Dimensions uh and I know this happened at Monto it happened at a few other places some of this information we put out years ago became the foundation for a series I've never looked at but I've seen clips of it called stranger things I think it was on Netflix or something and and uh but those Technologies it's like the Skinwalker Ranch out in Utah we've been out there those technologies that are human can create a vector into these other dimensions and bring all manner of troublesome things into this

(2:27:32) Dimension now those are extradimensional interdimensional Technologies and beings not extraterrestrial but it you know they kind of get all mixed together because there's a lack of a good operating Paradigm and cosmology so yes absolutely that exists but the other uh you know I wrote uh sort of an analysis of this back in the early 90s called the uh you know sort of the the cosmological uh barriers to hostile civilizations banging around the universe because for one thing the so-called Interstellar Coalition wouldn't allow it

(2:28:11) secondly uh if they did if they were of that mindset they would be where we are now and that is where we're at each other's throats in a malevolent way facing thermonuclear war and and endless Wars uh like humans are now and and so such a civilization usually implodes and kills itself before it can escape its solar system but um these other things let's call it stranger things that's different and uh so yes so but but it's yes but is what I would say to your comment but again every one wants to

(2:28:47) believe in the Cowboys and Indians of good and bad aliens because that's basically in our biogenetic programming we we we grow we're 98% identical to chimpanzees they organize into troops and have wars murder each other Etc but I think that we have to be careful about this sort of anthropocentric projection where we project our own uh state of awareness on on more advanced interst civilizations and at the same time we have to acknowledge that there are uh humans that are rather psychotic or or at least

(2:29:27) sociopathic who have enormous power they're high functioning Psychopaths and sociopaths uh that control a lot of these operations that do pursue that level of the cosmos on a negative end of it and uh get a great thrill out of it but um as I understand all this and have seen uh and and having worked with Scientists who have created pidal devices where they can tap into some you know like the N ring of hell and bring some bamy creature right into 3D running around a laboratory this is not a myth this is not some science fiction so you

(2:30:04) know that's very different though than an Interstellar vehicle with ebens on it that are extraterrestrial from another star system however because of the fact that Interstellar civilization has to become transdimensional they go from point A to B and even if they're hovering in the atmosphere or outside your window they could be shifted into these other dimensions it's really easy to confuse the two that's the only cave that's a main caveat I'm trying to provide um and that level of detail and

(2:30:36) knowledge and discernments we're going to all have to you know become comfortable with going forward because the con the universe is a very complex Multiverse hey you know uh you know what I was thinking while you were talking about all this uh the inter Dynamics and it's too long of a conversation likely to get into right now but the inter Dynamics between the let's just say the Watchers and then these interdimensional spes and what is the hierarchy there and you know I think Jordan mentioned something

(2:31:07) good um in regards to why they can't just land on the lawn is because it's a school right we're here to learn we're here to evolve and I think at the end of the day uh it's all about Evolution and I think certain people want to push things one way and other people want to push things another way and then and then there's also agendas in place which block all of this stuff but at the end of the day this whole game is about evolution in my opinion and there's higher beings and different species

(2:31:32) whether they're interdimensional or Intergalactic that are interfering in this process uh for whatever reason Dr 22 what's up my friend Hey so uh Dr Greer I I'm I'm trying to figure out the words how to ask this as respectfully as possible for everybody who's not aware uh General stle bind I I can't remember his name sorry offered You2 billion to join his team I'm curious what you attribute your longevity to as to you know why they just haven't taken drastic measures against you well again the question is based on

(2:32:14) a fallacy they had taken IC measures against this as many of you know um three people my team were killed between 1995 and 1998 I was almost killed um and someone had come to me and offered executive protection tweep and terminate with extreme prejudice against these sort of folks starting in 91 I said no I didn't want to get involved with that I'm more of a meditation teacher and Doctor healer and you know other things and I didn't want to go there and after this happened I said yes but back in 92 when General stubble B offered me

(2:32:59) that amount course he then went by my back to my wife who her 75th birthday yesterday by the way um and we're gonna have to go soon because we're going out to dinner tonight but I think that what happened is U you know they were very unhappy with what we were doing they were H most unhappy with the C5 contact what most people laugh at and dismiss was their biggest concern and the reason for that and this is where you really do a collective whoever mentioned that earlier was spoton mass Consciousness

(2:33:32) coming together to make contact with these civilizations that's what they're waiting for they're not waiting to break into the internet they're not waiting for the president at this point they're really waiting for us and so the question is is what is the responsive humans going to be so the whole Close Encounters of the fifth kind documentary and you know the hundreds of millions of people have seen it and luckily you know with the app has been in the top 10 apps for educational apps for three years now

(2:34:01) and all kinds of interesting people are out there they know who's the guy the Captain Kirk of the Enterprise William Shatner loves doing it and damiel lado and you know Aaron

Rogers all kinds of people are doing this and I the reason we're trying to create a mass movement to do it is that it's showing a sight and a face of humanity willing to enter into dialogue and peaceful contact rather than just a covert military operation targeting them and that is one of the main signals that these ETS are

(2:34:33) looking for engaging to the extent uh of of how far to come forward you know in a perfect situation I'm hoping this is my vision I had a beautiful lucid dream when I was back in my early 20s of and I was in the future I was probably the age I am now and I was at what looked like White Sands it certainly was a desert area and very very bright white sand and the entire US Government military had transformed on this issue and they were hosting an open contact event and I was there leading the C5 Ambassador team and

(2:35:14) this object comes out of a blue sky and not that large of an object it's probably 20 feet across and uh a senior extraterrestrial Elder comes out and the whole thing is being filmed and the whole thing is seen by the whole world and it's a peaceful open contact event that is where I hope we can go rather than you know rumors and rumors of rumors but I think the conditions have to be set to allow that remember we've been targeting and Downing these objects for decades we have technologies that are reaching

(2:35:46) almost parity with what they have um the US government legal government is still frankly couldn't even find the washroom in an underground base where this stuff's going on and uh the public has been totally misinformed and the mainstream media are shills of the CIA and other interests that that keep putting out false information so um the ETS are watching this but what can change is in Consciousness you know this beautiful effect they called the Maharishi effect if 1% of people are in a higher state of consciousness

(2:36:20) meditative state it can alter the other 99% in a positive way so we've had a goal of having 1% of the population which would be about 80 million people globally uh doing that and making peaceful contact and that would change the whole energy of it to where this lucid dream I had of the future back in must have been in the early to mid 1970s um could happen and and I'm still cautiously optimistic that can take place so that's what we're working towards uh and I think we can do it if we all came together uh in a positive

(2:36:56) level of Consciousness and work together in a collective you know uh Dr G it's it's interesting you bring that up and I do know you have to go soon I have to go myself um it is interesting you brought that up because uh that is the reason why the uh bar team got together it uh started off as an art project and then we started doing these spaces and what we are aiming to do with these spaces is not so much uh not so much rock the boat but uh bring awareness and you know as I've said before uh it is

(2:37:27) all about awareness because the people we are up against are the most ruthless people that you will ever fathom coming across absolutely brutal and so for to to ask someone to take them on one-on-one or 10 on 100 whatever the case is is virtually impossible the only way you can do this is by informing the populace making them more aware and then this way

the people who you work will feel more Brave to come out into the public so if you guys uh in the audience support what we do and you want to see uh more wonderful guests like uh Dr Greer uh

(2:38:05) take a look at the uh main baroin account the host account give it a follow check out our telegram uh we do have an nft collection uh coming out in January which will be a buy and burn we're expecting about 20% of the supply to be burned uh next month we'll be starting a huge Tick Tock and YouTube marketing campaign and simultaneously we do have uh Partnerships with a company called degenerate Casino uh which will be raising funds to put a lot more power uh behind this project and bring more guests like uh Dr Greer who uh you did a

(2:38:43) fantastic job today I just want to say I really enjoy your work and and I do appreciate uh what you have done uh throughout your career I think it's very impressive it's very bold and if you had a an ending statement for us what would you think it would be I think the ending statement is that people if they can to help us with what we're doing with the disclosure project effort you can follow us on on social media which I guess is on here somewhere but also with the uh disclosure project intelligence archive stay tuned for that

(2:39:17) and uh also do the C5 contact I mean just try it gather with some people one of one of the problems with this whole field is that there's too many people talking about things that they've never seen and so seeing is believing one thing I have been now for 50 years doing contact uh for 33 years I've made teams all over the world we have millions of people doing this no one has ever been harmed no one's had anything scary happened no one's had an encounter with a negative ET and I would take those

(2:39:57) hundreds of thousands of hours of people's experience and direct contact experiences over the rumors of rumors of rumors of rumors of rumors of rumors of rumors that get put out there for their psychological warfare value so I would tell people the the the foundation of Science and actually human evolution is direct experience so put down your smartphones and computers and uh go out and meditate and invite and see what happens if you do it with a pure heart and an open mind you might be quite shocked at what happen Dr is there a

(2:40:34) technique can I just can I just throw in two cents here because um I don't even remember Dr GRE but during the covid lockdown very kindly granted us an interview here at Camelot Castle and the Duke of mbor was tuned in and uh thousands of people were listening from all over England and what you had to say and you described at that time the concept of getting into telepathic communication with uh ETS and and and extraterrestrial beings and I didn't know this but at the time my five-year-old son was listening to the

(2:41:12) broadcast upstairs in his bedroom and I go upstairs and he said to me Daddy um that was very interesting I've just been in communication with some extraterrestrial beings telepathically yeah and I said well Caspian that's very interesting now I didn't know this but at the very same time his parents his grandparents who are **Russia**n they were staying over here from Kazakhstan and they were walking outside Camelot Castle and they actually filmed two uh

craft moving around outside above Camelot Castle yeah at the exact moment

(2:41:53) that Caspian had been unbeknownst to us engaging in uh some type of an attempt as a 5-year-old yeah to get in touch with with these extraterrestrial beings and funnily enough they videoed these craft above Camelot and it's very very clear that they're not satellites at all right it's not a particularly clear video it is I don't know whether this is a coincidence or whether my son in fact did manifest these craft but there's no question that if it is a coincidence it's the most bizarre

(2:42:27) coincidence I've ever well we we hear this all the time and it's because I me tell you John a pure-hearted child or P pure-hearted adult is much more likely to have contact with these civilizations and the president or the Secretary General of the United Nations or astrophysicist at Harvard because if they're pure if they're pure if they're pure-hearted and pure of spirit and clear and of mind that's what these civilizations are looking for and that's why I tell people we really need to have uh the ordinary people uh

(2:43:07) doing this and that's where it shows to the civilizations that humans are really at the point of ready to emerge into an interplanetary peaceful civilization uh but we have to show them see we have to show them yeah we yeah we got to show them our good side we got to show them we basically are decent beings and I think the greatest contribution if you don't mind me saying that you've made is is as you said if these guys wanted to destroy us they have technologies that could destroy us in you know half a

(2:43:45) second they could vaporize they could knock the air cover off this planet they could vaporize this planet in 30 seconds if if if the powerful ETS out there with this technology they have technologies that are off the scale oh yeah and the fact that we're still here is a testimony to the fact that they want to still here well they're very patient yeah they're very patient very patient incredibly patient incredibly patient and as as any sentient life form is genuinely patient and is genuinely merciful and um so I think this

(2:44:20) philosophic aspect and I think the the you know one of the things I would urge you to do Dr Greer is to codify a book of of your personal philosophy um because because I think you've you've you've made observations that are so valuable um that they should be codified and I I know your immediate project of of getting the disclosure data out to people is is an you know the the archive is is going to be Priceless but I also think that your personal philosophy is is really Priceless and I thank you so much for allowing our

(2:44:58) family to put you together with the BART community and there is a community building um I don't fully understand crypto myself but I've definitely bought a few Bart coins and I'm thoroughly enjoying watching them going up and down like horses draws and um you know let's see what happens it's I I support this project because it's it's going to be a a big community of Truth Seekers and if calot castle and if a few of our friends can help in in the export of truth then we're all for that

(2:45:30) very good well thank you guys again thanks for hosting me I've got to run and um and I wish you all the the best of luck with what you're working on and uh join us and and stay tuned for what's going to be coming out in the new year and have happy holidays and a great New Year you guys thanks again Dr G to you my friend all right bye bye okay thanks guys yeah so after that space uh I'm 100% convinced that he knows about the science and the technology that's there I don't think

(2:46:34) that he's an engineer um yes guys I get that I was muted uh he definitely knows about the technology that's out there um he mentioned several times that these would have to go faster than the speed of light he mentions teleportation he mentions the orbs he even mentioned the orbs creating a field like the bubble that's out there so you know all this stuff corroborates the science that we see in the MH370 videos we asked him about the implications that were out there of the science we actually directly asked him

(2:47:06) that question um he talked about the fact that people were trying to hide this technology he said first that they were potentially trying to I'm going to skip this break here um he said at first they were trying to you know hide this technology because the elites are trying to you know get um benefit of it in general but then when we asked him about the the technology he said that yes this technology what my camera going out again yeah I can see it going out yeah it's definitely overheating huh so we asked him about the technology

(2:47:45) and um he said they could lead to Doomsday weapons and that they would be hiding that I think um and that they would be hiding that technology from us in general and that he even agreed that some of it has to be kept hidden because we could destroy ourselves with it so I think that was some of the main takeaways in general he also several times mentioned locked Martin he actually mentioned locked Martin working with Boeing and he mentioned Grumman at this point I'm 90% sure to 95% sure these orbs that we see are from locked

(2:48:24) Martin I mean I'm even more convinced than I was before and I think that uh jez okay guys um another thing too I'm not muted anymore guys um kim.com did us a big favor and in showing how much ontological shock people have he thinks that we can just disclose this technology and that everybody will just accept it but he can't even accept what we're seeing in these videos to be real which really proves the point even people that think that we can be ready for this have no idea no idea whatsoever like the idea of

(2:49:09) teleportation is something they can't even fathom and yet they feel like oh well aliens should just give us this magical medical healing technology it's like guys you have to understand the implications it's not a situation where you can just get the good stuff it's got everything's got to come along with it right everything including what we see here teleportation we probably shouldn't even call it teleportation because it makes people think of Star Trek right this is not Star Trek we're talking about super

(2:49:43) luminal speeds here we're talking about m Mass reduction Dr Greer also mentioned about these orbs can go directly we can potentially go directly through solid matter because you

can break down you can have the objects basically become a wave function where they become so small that it's the size of a pin so it just can fly right through solid matter did I show that hopefully I didn't show that it doesn't matter either way um so you know I think the big thing with the discussion is what the implications are of the technology now

(2:50:23) when it comes to the esoteric stuff just I don't know the stuff about C5 and calling aliens and all this stuff and their spiritual Dimensions I just don't care I don't care if it's true or not I'm not interested only thing I'm interested in is the technology that's what I care about I don't care if aliens are visiting us or not I mean if you guys care about them visiting us I'm happy for you guys you know I have nothing against it all I want to know is that this is MH370 on these videos and

(2:50:53) that whatever the hell they did to it here right teleported the plane somewhere where they said where did they teleport it they teleported to the zenu dimension they teleport to zed reticuli or did they just send it to Diego Garcia military base all I want is the answers and I want this technology because it will change the circumstances of people in this world that have nothing people people say that this technology will break the minds of people which it absolutely already is breaking the minds of people but the

(2:51:22) thing is we can we can make people's lives better so that they it won't break their minds I think last thing I'll say that one of the reasons that we've had all the these disclosures and all these what 10 whistleblowers at this point and it hasn't really become Front Page News part of it suppression you know parts of the government don't want you to know Absol truth the public can't deal with it it's too far out the implications are profound and so and I understand that because I've heard things I'm just like

(2:51:50) oh man I I don't even really want to know that honestly deeply I don't even want to know that that was Tucker Carlson's response he's in a position to know one of the top journalists in the entire world doesn't even want to know that deeply disturbing stuff you know forget like saucer and technology dude won't even tell his wife or kids disturbing stuff that I haven't even told Natalie I agree with it's so disturbing I can't even tell my kids my kids ask me different stories about it and I the

(2:52:19) public cannot deal with this I I am sure that they can't guys and I I don't mean that to be rude or anything but just look at kim.com reaction in the chat from earlier kim.com couldn't even accept this to be real and he like is one of the more Cutting Edge type people out there right like even logical rational people cannot accept this technology because it complet it's Paradigm shifting it's Paradigm shifting right Tucker definitely has people telling him man that's why he's doing

(2:52:54) UFO interviews you guys think Tucker is doing random UFO interviews no way man he's got people telling him stuff so there's a new subreddit somebody created I saw today yeah Laura I'm with you Laura Hansen I don't want to engage as an alien I got enough stuff going on um if you guys want to check out the new subreddit that was set up today I think it was set up

today I don't really know I just saw a link to it I checked it out looks like somebody who's got good intentions let's see this is going to be

(2:53:25) an experiment either to see how fast they ban the subreddit if they ban this subredd it we'll know for sure 100% that Redd it is controlled by the government we'll know for sure I'm not going to have anything to do with this subredd it I'm not going to become a moderator I'll probably post content here to help them out but I'm not going to become a moderator on this subredd it that way there'll be no excuse for trying to ban it in my in my S situation it also isn't called like MH370 or anything like that as well so

(2:53:56) they can't ban it for that reason the only way they would ban this subredd it is if they're trying for narrative control that's the only reason so let's use this subredd it guys you can see it pinned to the top of the profile we're going to switch over to that one it's yeah it's the worst place in the world subredd it Redd it is the worst platform on all of social media it's full the worst human beings on the face of the Earth but we're going to try to make it a little bit better okay guys I'm going to head out I

(2:54:28) got to go take care of some family stuff I'll come out later yeah well the camera is down whatever I'm going to turn it off anyway um I'll come back out later thanks guys for listening to the Greer space and we will talk a little bit later tonight okay have a great evening or a great day

MH370x - Scammer Emails and Investigating 12/15/23 - YouTube

<https://www.youtube.com/watch?v=fxctYCCmZSc>

Transcript:

(00:18) okay great okay deleted that okay okay are we back sorry my bad guys I had to restart I apologize I'm going to try show you guys that information though my bad on that guys sorry about that can you guys hear me you guys can hear me right my bad my computer freaked out I

(01:23) had to restart I apologize my computer was freaking out my bad I was trying to fix my camera it I don't know why it keeps resetting so sorry I probably like 400 people just dropped but that's okay that's my bad yeah let's show revealing the email header I'm going to try to fure out how to do the email

(02:29) header I can't find the emails now where are they I didn't delete them did I oh we have another email from Sunny guys yeah this is a redditor folks uh wait show me how I can show them their uh how do I show this is a this person's a literal psycho huh this person is a literal psychopath smash that like button folks I don't know what it's for but Smash It smash It smash It

smash it uh here how do I show their here oh there it is view headers what does this tell us folks

(03:40) what does this tell us yeah this is definitely a psycho **redditor** **debunker** 100% what does this do what does this tell us this doesn't tell us anything n this is not a random **scammer** this is a definitely somebody who knows us definite psycho definite psycho he's definitely not Kiki King guys you guys think this guy's Kiki keking no somebody was Kiki Kiki and wouldn't say anything here if you don't know why hey on **redditors** just go read **Reddit** if you're not familiar with how insane **redditors**

(04:34) are just go read **Reddit** right now just go read it these people are nut jobs yeah we're done with this person though after this that was enough it's cool I'll look afterwards and figure out who's watching um I don't think that the header stuff told us anything though right yeah this is

(05:43) extortion just send him the money then block him on with the investigation it is okay that was fun what other files should we look at in here 's this yeah I'm getting there's a lot of people trying to **scam** me right now too people are getting a little too meta

(06:49) with it as well well this is a pretty crazy thing somebody sent me okay chat what's going on chat what are we supposed to look up chat I need help with this investigation look at the island images battery I mean we already looked at the battery information uh the battery information doesn't tell us anything what what am I supposed to find in the battery information like we know there's batteries what else it's not going to say like these batteries exploded vial suon

(08:00) what questions about the cargo I mean what do you guys think we're going to find this is not debris don't mess with L folks Ellie told my lawyer about the case she's hooked tell your lawyer I'm going to apparently need a lawyer soon for showing emails that somebody emailed to me yeah I mean it feels like pretty obvious that this was a lithium ion battery fire right I mean kind of blows

(09:04) my mind that nobody will look at the obvious scenario 500 lounds of lithium ion batteries yeah this looks like a lot of just random stuff that's not connected to this situation at all what is this what even is this what even is this rigid Pavements some of these things in here make no sense engineer I mean this is the way bill for the batteries but we know there's batteries we already know there's 221 kgs of batteries so it just doesn't really help us let's just look through the files one at a time what what even is this this is

(09:49) like what is this that's not an airplane but okay he these are a lot of random weird what is this this is like Cindy Henry trying to like look for the broken pieces of debris in the ocean maybe we found the the plane here guys this is like trying to find stuff in clouds it's like too much we've already looked to the passenger manifest I mean it's it's too hard to figure out Sunny just sent me another email another email I'm not going to even bother it's not going to give any attention we've already got enough

(10:37) they're just it's obviously some redditor trolling if it was the government they wouldn't be sending like troll like 8-year-old messages you know yeah it's trolling this is like this is what I meant man this is obviously some directed super scam it might even be like the the subreddit Discord people that's how Nut Job those people are wouldn't surprise me if so they're really getting dangerous I mean now they've got they've crossed the line to criminal fraud Sonny wants to date me sorry Sonny

(11:28) you're never going to date me I hope you have a happy Christmas though God these people are looking for satellite images that don't exist the plane didn't casually sink into the water yeah they're watching they're watching the trolls watching doesn't matter doesn't matter it's oo Sunny do you want to you want to go on a date Sunny we can go have a nice glass of Mer low sit by the sit by the beach o sounds good yeah maybe Edward C Linn went to prison

(12:33) for six years over a fake video guys I think grush is probably telling the truth I think that grush has an NDA and he probably can't talk about the real implications of this stuff the trolls want my Bobs the trolls want my Bobs yeah they want attention is what they want son you should get therapist sessions with those 3,000 people are nut jobs dude drink a martini and eat olives is this oh wow this is the sighting from the

(13:46) Kudo hovo seeing the blue stripe we're screenshotting this screenshot time whoa what somebody else somebody else foed them too somebody else Foy them [redacted] guys this is about to get spicy Sunny come into the chat Dorian yeah don't alando was just

(14:57) uh or sorry Dorian was was just making a joke guys I unblocked him don't block uh Dorian he's he's he's good he good oh this is or ory Tates dude holy [redacted] she she Foy them she foiled the NSA oh we're we're Foy in the NSA holy crap what whoa here we go here we go folks here we go oh here we

(16:04) go the NSA we need to oh we need a Foy the NSA wow let's go let's go where's my other emails we found something spicy we found something spicy executive order 13 I don't know if it's a yatsi moment yet might be sub paragraph C in section 1.4 I think that's the same one that I got rejected

(17:10) on 1.4 intelligence activities Oh it is the same one this is the same one that we got rejected for for for Edward C Lyn for Edward Lyn it was the same one but it was C D oh boyall well this is a spicy meatball moment oh boy oh boy are we making a post guys this is crazy this is crazy holy [redacted] how is this not how is this not out there why would this be classified under intelligence activities whoa tuna boy tuna I like a I

(18:21) like this I like this a lot I like this a lot I like this so much we're making a post let's see if I can not reveal my DMs here that'd be just great wow guys our our post get 100,000 views in six hours now I think we have to thank the haters cuz they're increasing ing our uh our views here by a lot 100,000 views on the Tucker Carlson thing you guys don't know Riley Tates how did this one not get more views this dude's literally talking about teleportation Danny Shan's talking

about teleportation here

(19:13) folks he talking about teleportation man put a little tag on it writing his his signature on it and then had him go into this other room uh and he waited there and he heard this kind of weird noise and this light started to appear on the table and the coke bottle manifested uh in the other room you know with his signature and stuff on the on the bottle you know and so that they they're they're experimenting with this kind of teleportation so I talked to him a few weeks ago he seemed like he thought I

(19:43) was trolling now he's talking about teleportation of cocaine guys we need to listen to this listen to Tucker say one of the reasons that we've had all these disclosures and all these what 10 whistleblowers at this point and it hasn't really come Front Page News part of it suppression part of it govern part of it is suppression he's just straight up saying that part of it suppression so of course they're trying to suppress the videos guys don't know about it but part of it is the public can't deal with it part of

(20:11) it is the public cannot deal with it the public cannot deal with it I believe in man it's too far out the implications are too too far out profound it's too profound now just take the word teleportation and now realized that yes it's too profound it's going to break people's minds man it's already breaking the minds of the **debunkers** I mean look we got people literally doing elaborate like **scams** on us that's how much their minds are broken and so and I understand that because I've heard things where I'm just

(20:47) like oh man I I don't even really want to know that I don't even really want to know that like this is how I feel when people tell me you can teleport a 777 it's like I don't even want to know that that man honestly deeply disturbing stuff deeply disturbing like saucers forget saucers technology it's deeply deeply disturbing stuff that I haven't even told Natalie I agree with you it's so disturbing I can't even tell he's talking about you can't even tell his wife my kids my kids ask me different

(21:17) stories about it and I I won't say it because this is what's being covered up right this is what's being covered up yeah we probably shouldn't even call it teleportation we should probably call it super luminal speeds right yeah pretty wild uh this clip ends here you want me to watch The N main thing at 27 minutes uh JK Philly fan what do you want me to watch at 27 minutes this one let's just find out hey this is the last hoodie you're ever going to need to buy how do I skip this SK Hood the

(21:59) second thing that bothers me is the UF no this is only this I can't there's it's only yeah I think Tucker actually knows for real I actually think he knows Tucker Carlson and I would have a pretty crazy conversation then again like I'm starting to realize like people would just think I'm no one's going to believe me he mentions the executive order who does when does Tucker Carlson mention the executive order JK you send me a link man JK Philly fan send me a link unless you already did in our

(22:47) chat yeah JK Philly fan remind me about this later actually let me just post this oh uh I can't sign in into this right here right now I have to try to uh hold on we got to take care of things right now JK Philly fan I saw your DM though I'll take care of that later I'm going to make a post O'Reilly tains was like famous for being like somebody who was suing everybody back like how long ago was that that was like over 10 years ago she was like she was like James

(23:51) O'Keefe before James O'Keefe was a thing everybody hated her that's why it's weird that it's her they tried to discredit the hell out of her as well which now I'm like really wondering DW is directed energy weapons uh no I can't speak Malay I think they speak Bahasa I could be wrong maybe that's Indonesia they also kind of speak they speak a broken English in Singapore we used to call it Singlish because it's like a combination of a few different languages so crazy is

(24:55) it w la I still know a little bit of Singlish WWE means like oh God or something like that it kind of it's not like a direct translation w we should uh make one of these as well yeah Bahasa is Indonesian so Malay I think is just Malay and usually it's like a mix of like uh English and Malay and Bahasa it's like a combination of all of them they speak kind of like a broken English yeah the satellite operator who died suddenly we could probably take a look at that after I'm done with this and then we'll probably call it after

(25:55) that I'm going to call it early so I can get some sleep I need to get some sleep tonight uh I'm not going to put all that stuff just that's good enough n Sunny is not **Jonas**

(26:58) Sunny is like some Nut Job **redditor** who's obsessed with us who probably thinks that the plane crashed in the South Indian Ocean and has some complete obsession over trying to **debunk** us or something like this how do I do this plus a full-time job not easily is that a good answer for you not easily not easily and people think that I'm anyone who's out there making up fake stuff about me grifting people like I make more money a week than I make than I've made at this thing in in totality over the last four months like and I haven't

(27:36) even got my YouTube set up for payments I do drink a few cups of coffee per day I definitely need to go to sleep soon that's

(29:19) I mean how can anyone think the United States government's not implicated in this why is there all this stuff that can't be given in the interest of National Defense this is a good find whoever put this this in there is a huge find this corroborates the Edward C Linn this Edward C Linn is like 100% linked to this now this is the same reason the same exp uh exemption that they gave for MH370 is identical to the one that we got for Edward C Linn how crazy is this yeah you want to watch the Mike Harris thing real quick I saved

(30:01) it I was showing it earlier on a podcast I did please do stay tuned in that way um we got a lot going on can I give you my best silly wild ass guest okay sure somehow somebody opened up an interdimensional portal in that plane went through it and and we don't know where it is or where it's going to come out at but somehow it's lost for the time being it will be found again fell in a hole okay fell the way fell in a hole is just weird well that would that he smiles at the end

like he knows something here look at this

(30:37) smile it's like he wanted to say something but he was too afraid lost for the time this video is crazy dude okay all right well that would stay tuned in that way um we got a lot going on can I give you my best silly wild ass guest okay there is such a thing as teleport by the way there is such a thing as teleportation somehow it's lost for the time being it will be found again fell in a hole okay all right well that would that wow yeah we need to find out if that guy's alive for the record Quantum

(31:20) teleportation's already been proven years ago teleportation does exist does exist just heads up time dilation also exists apparently people don't know that time dilation is real that's also real this isn't this isn't sci-fi this is just reality not bad this is the stuff where like this is going to break people's minds man cuz people can't accept it that people just

(32:24) can't accept the teleportation's real how else do you think that uh a UFO would get here they're not they're not moving at less than the speed of light tell you that much and we're not talking about Star Trek teleportation folks we're not talking about Star Trek teleportation we're talking about super luminal speeds my camera failed again dude what is wrong my camera I'm going to probably try to plug unplug it and plug it back in yo qar if you're out there man I'm not doing any more games with anybody

(33:12) okay no more games no more coded stuff if you send me any coded messages I'm not listening period I don't care who you are no coded messages no [REDACTED] I'm not dealing with any of more **scams** not dealing with anybody else you either just tell me straight up what you got or we're not communicating so everybody who's out there including qar and on and everybody else no games no more crap like that [REDACTED] got too real

(34:20) folks we had nut jobbers trying to like make up fake uh evidence and stuff yeah if teleportation's real the universe is a simulation which pretty much means that we have a Creator so this is what people can't handle it's not the religious people that can't handle this guys it's the non-religious ones that can't handle it how's this looking guys read over this for me I think this is good this is pretty huge this is the exact same executive order

(35:32) the Edward C Lynn one was C and D though and D is foreign relations or foreign activities this is the exact same executive order I don't care if people are here legit or not the point at this point is like I can't trust anyone no matter what you have to give me absolute proof I'm not running with anything unless I have absolute proof yeah the guys in the AA 2014 Discord are complete nut jobs those are like the most psychopath of the Psychopaths wouldn't surprise me at all to find out that they're the ones who

(36:06) perpetuated the **scam** wouldn't surprise me at all that's the level of complete Nut Job Psychopaths we're dealing with and like that's the reason why we no matter what even if they come up with 10 million more **debunks** they already have people faking that they were the person who made the videos like these people are their depravity Knows No Limits they will fake

literally any anything to try to make these videos go away literally anything it's like just that's how insane they are just leave us alone let us just

(36:39) investigate the case you guys just go [ ] off and do something else you know go jerk off in your parents basement or whatever this hell you guys do just do anything else don't talk about me here's the other best part I people were sending me a messag stuff from the Discord or from the **Reddit** earlier and they're talking about making a new sub**redd**it because there's too many Ashton supporters in there I'm like yeah we made one you guys got it banned it got banned it was called MH 370x but you

(37:06) couldn't let us have our own thing you had to control the message now they want to make another new one and I'm like well we had one and then you guys were all excluded from it and you freaked out and got me banned it's like Jesus man how about it here's an idea just stop talking about me is it that hard just stop talking about me I'm living in your heads rentree and no I'm never going to date you okay I think we're good on this right okay chat make it get big chat the nut jobbers dude make it go big

(37:56) folks this is this **Foya** is huge this corroborates Edward C Linn I think they plan weird creepy like raw file uh **scams** that's apparently what they do **Reddit** is for losers it really is every once in a while they **reddit**'s been doing great recently in terms of some of the evidence but I mean like 90% of the posts are like about me take it easy Michael have a good night man yeah we learn and we lurk uh we can close this we don't need this anymore I'm going to check my Discord because I got my people are doing work

(38:48) right now hold on this sunny guy's spamming me emails now like dude's completely off his rocker so if somebody was a smart **scam**mer they would go away because they're just incriminating themselves further it's just going be more evidence they must be feel safe they must be another ex must be in another country you must have a profile to collaborate on a list yeah JK Philly fan I'm going to take

(39:55) care of your son or something whatever it is I'll send you guys something you you earned it I got it pulled up yeah they're seething man they're seething so hard that's why they did this **scam** that's why we can't believe anything in no matter what in the future the reality is we're playing this we're we're we're doing this thing out till the end at this point I don't care how many fake de buks they come up with it really just does not matter they literally already have people pretending

(40:32) like that they made the the videos that's how Nut Job these guys are of course that some Nut Job didn't make the videos guys like they they've gone just completely off the deep end man take it easy Moonlight it's like a very very unhealthy we blocked like at least 12 people already I I unbanned like uh unblocked like over 100 people like 130 accounts and and like at least a dozen already have gotten reblocked like that's how bad these people are they just can't even help themselves man yeah the raar file was a **scam** it was

(41:20) a very elaborate social engineering **scam** and it was most likely put together by like nut job **redditors** that's where we're we're thinking right now just based on like the unhinged emails I've been getting from this person yeah it was a big **scam** yeah somebody actually made the point that **Reddit** is all about how you tell people not what you tell them people want to have it's this just 100% emotion driven reddit is just completely emotion driven cuz it's just like little kids and and like man children who have like

(42:03) no emotional control they they want to be they want to feel good it's like uh Holly Berry and monsters ball make me feel good make me feel good that's the **redditors** it's just Jesus man facts don't matter what matters is how they feel this is interesting I like this picture how do I save this why can't I save this folks huh 1920 UTC she said it was 1840 UTC whoa he's got other people

(43:16) here whoa we have another we have another witness here come on why isn't this going away 1745 there's a witness right here at 1745 holy [ ] we just found another witness OHA boy we just found another witness yeah these files are good these files are good man and kotabaru oh this is the fisherman sighting I think I think that's the fisherman sighting woman Lanka at

(44:25) 1830 these times don't match up but I'm guessing these are just estimated so they do the operation right over here somewhere around KT's boat then they teleport down over here actually so her sighting was actually over here though so we can't really trust this oh I get it well he was trying to make the times work so he fudged him a little bit Sergio kvo yeah he was trying to make the times work oh no this is Ken this is Ken look Ken k

(45:30) stabin k stabin yeah Ken was definitely fudging the times we can't really trust any of Ken's stuff no offense Ken but you kind of all over the place camera's off again dude what the we don't need to delete people for hearing gunshots or whatever Ashton got four orb'd yeah we might have to scan my computer from malware I might have to **scam** my computer from malware or maybe my C my camera's defective I don't know yeah so people looked up into that exchange thanks for the donations guys is it back it's

(46:43) back yeah liberty lockdown was like one of the best ones period I need to post that's another thing I need to post I'm too tired tonight maybe tomorrow I'll be not lazy and I'll post all the appearances there's like almost like 60 appearances I think now the files are pretty good these files are pretty good I don't know what a lot of this stuff means like burst offset corrupted data what wow the corrupted data right here this is where the anomaly happens right here moving towards whoa whoa

(47:34) whoa these were the lowest values indicating they Chang directions this is this is where the plane teleports at 1839 right there wow so the plane's circling teleports and then it's somewhere else maybe the data is real maybe the reason why there's blanks is because that's when the plane teleports I think the plane teleported almost exactly 1839 1840 UTC and then this is the plane somewhere else this is guys this is wild man I think we're just ridiculously close

to the answer on this nobody has **debunked** like any of our

(48:32) evidence whatsoever that's the crazy part twoo where's my flight path oh where's my damn flight path man there it is yeah plane teleports somewhere over here maybe we can even tell because maybe it's getting sucked backwards to the fourth orb this is a long way so if it got sent back here at this time so

(49:42) it's yeah I mean I think you could argue that this would make sense the satellite's over the Indian Ocean somewhere like where my mouse cursor is And So It Goes think they think it's going over here but actually it's going over here in fact fact is probably wow wow I think we have the ark wrong I think it's doing the exact same thing but on the other side so I think that what they were thinking here is that they're thinking that the plane's going like here what the hell man I chose the squiggly line one

(50:24) man they're thinking oh my God that one's awful too go orange they're thinking the plane goes down like this right but instead the plane it's going over here and so the pings look the same right the arcs and the pings look the same this feels like what it what it is so they don't have to spoof the data the satellite somewhere over here you got the satellite looking down so you can't tell you can't triangulate it they would have to maybe this is an operation because how do they force it

(51:30) to not ping they have to force it to only ping to this satellite so they know what they're about to pull off they're going to pull off this operation interesting I'm I'm pujabi Batman yeah there's no point in doing a mock trial with people on **Reddit** that's not that's not worthwhile at all good night people going to sleep yeah I don't think there's a virus there my camera's probably just overheating that's probably what's happening oh we didn't look at the

(52:34) emstat one yet uh I want to save this file how do I save this I'll just download it where's the one with the the dude dying this one is man this **Foya** is crazy is that **Foya** popping off yeah 3,000 views yeah that sounds about right who's this murder walking or dogs is this the person I don't know if this is the

(53:37) person or not is this the person chat yeah the trolls have gone to sleep these are the real Ashton Enthusiast hours oh is this the person guys we I think I think they're here the **scammers** here they want more attention we're not going to give them any more attention though so guys go ahead and report this channel oh this is them this is them dude yeah okay

(54:58) I don't need to prove anything to you bud get out of here troll this is like a complete Nut Job guys this person is off their rocker this person is mentally unstable and needs professional help like needs literal professional help this is interesting they just like this is this is the problem guys right is that we've got nut jobs like this who are willing to do literally anything to try to discredit the case and so **redditors** who are watching right now **redditors** I want to let you know sunny in it ruined it for you guys

(55:38) because of sunny in it we will never be able to accept any **debunk** or anything like that whatsoever because we've seen now how deranged you guys are it's an unhealthy literal Obsession you've gone to literal fraud literal commit actual crimes in order to try to keep the videos uh out of the Public's view so because of sunny in it you guys unfortunately we will never be able to accept any of the [ ] you guys are pushing we know it's all fake [ ] we know you're capable what you're capable of which is

(56:10) literally anything so if you're mad at anyone you should be mad at sunny in it okay that's the person you should be mad at he's one of you he's one of you guys very clearly yeah they committed fraud they perpetuated a elaborate social engineering **scam** on me okay you're gone Sunny Sunny's gone **Reddit** got exposed yeah we're going to try to find sunny in it as well find their real identity if I find sunny in its real identity I will stream it for everybody so that people can find this person

(57:10) track them down for **scam**ming us these people are completely unhinged yeah no Sunny is the actual **scam**mer so that Sunny is the actual **scam**mer that's the actual **scam**mer that account was the actual **scam**mer so if you guys can find that account out if you can figure out who that person is that that's that's them that's the **scam**mer right there yeah it's creepy huh this is the problem like they're willing to go to literally any any lengths whatsoever like imagine how Psychopathic somebody has to be to do

(58:01) what that person did that's just super Psychopathic stuff I'm becoming bitter dude I just had a literal psychopath **scam** me for \$3,000 and make up an elaborate hoax where they talk about their fake wife like you guys think that I'm being bitter this is not bitter at all this is not bitter at all this is me like letting it go you know how most people would react to this kind of thing they would be extremely angry man for me it's just yet another loser who's obsessed with me for the record that was the real

(59:20) person no trolling in the chat guys I also don't want to hear a bunch of meta [ ] either like don't if you treat me like I'm your kid then then you're not going to be able to talk in the chat either just focus on productive stuff okay yeah this guy gets it Ken gets it I think this pretty much proves that his crimes are linked to MH370

(1:00:54) for yeah this is why you got to take a break from the internet this is oh yeah where was the emat thing let's close this we'll come back to this there it is didn't you have a heart attack random iMat person dies yeah no not not suspicious at all these weird handshakes that only have like 10 rows of data not not suspicious at all totally normal okay I'm going to let you guys figure out if there's anything else in here I think I'm going to probably call it for tonight I'm pretty tired let me look at my Discord see if

(1:01:59) there's anything yeah okay yeah if Sunny send you guys an email or something just um just report him if you can who do I need to call guys I like lost my voice oh yeah we need to we need to reach out to somebody else somebody posted something about Edward C Lin's commanding officer how can we help uh if you guys want to

(1:03:20) go through those files I mean you you saw like this kind of stuff we're looking for what we came across today is like jackpot finding something like the O'Reilly Tates thing is jackpot that's a jackpot what we found earlier today that was huge that corroborates Edward C Linn this corroborates Edward cinn this is huge it's probably not going to get as many views as it should this is huge if you find anything like this this also tells us we need to probably Foy the NSA as well oh Sergeant you're going to sleep

(1:04:02) take it easy peace guys this is pretty wild this is huge man if you find anything like this this is huge we want to find other stuff where they uh classify it underneath the executive order for intelligence activities or interest of National Defense this is the exact same thing that we got for Edward C Linn exactly the same if you guys want to **foyer** people foer people as well that would help we want to **foyer** the Navy as well yeah it's weird how much Sunny is desperate for attention right if somebody **scam**s you usually they

(1:04:39) disappear right it tells you it's not about money it tells you that it's some personal thing with this **scammer** it's very personal with them it wasn't about money the money was just a side benefit for them right what happened was they were trying to **scam** me and they wanted to **scam** me to make me look bad and then they were like oh we'll take money for this right it was an elaborate **scam** that they had planned out the problem is like a lot of these people are just not nearly as smart as they think they are they did not expect

(1:05:10) us to crack that password that fast because I sent like eight emails and they didn't respond the moment we crack the password now they're spamming me with emails very weird very weird okay so how to fo just guys foer is easy just Google foer and then if you you have to pick like if you want to **foyer** the NSA NSA **foyer** literally just go here submit **foyer** request follow the instructions most of them are online some of them are not so this one's an online one just fill this out that's it you just fill it out and hit submit super

(1:05:50) easy guys I'll give this you guys this one for NSA yeah this new **foyer** is very interesting we want to **foyer** everybody let's **foyer** everybody about MH370 every single we can Foy Homeland Security we should Foy Homeland Security about me see if they have anything about me if they have a file we want to **foyer** the CIA we want to **foyer** NSA **foyer** the Navy **foyer** the Air Force foer everybody ask for MH370 documents let's see what she asked for again any and all documents in possession of the NSA related to the missig airline

(1:06:30) flight yeah okay so we can keep it we can keep it vague I already foed the nro yeah I already foed the nro also if you guys want to look into Sunny's YouTube account and find any information about him and email that to me as well please do that as well we can figure out they're obviously not an American based on the way they talk they're probably British find out anything you can about the sunny **scammer** send that over to me if I get the their personal information I will show it online and on my Twitter and I will expose

(1:07:23) them okay you can't fo a CNN guys uh thank you compart what does Gary think about the hatman I don't know what these words mean but thank you yeah the Navy ships will have

stuff like everybody's going to have something oh Dorian wow the refund initiative thanks man I appreciate it I appreciate it now we're not going to do anything

(1:08:29) independent of the videos we don't need to we don't need to if I expose them they won't send me the real files guys yeah exactly oh no I'm not going to get the real files oh no okay guys I'm going to go to sleep I'm going to go to sleep you guys have a good night this was fun I appreciate it um like I said number one goal it's **Foya** all the agencies in the United States if you are an American you have to be an American to Foy American agencies Foy them for the same stuff that she's foing

(1:09:19) for all documents in possession of the agency related to missing Malaysian flight MH370 this is what we want yeah I'll stream tomorrow I'll probably be streaming earlier tomorrow I've got to do some stuff though I got to go see my family but yeah I'll be I'll be streaming tomorrow so yep last thing I'll say everybody is that if you are mad that we are not giving up well you can blame sunny cuz now we will never give up no matter what because of the the fraud that was per perpetuated and the lengths

(1:09:54) that they went to so sorry about that but we're never giving up everybody hell yes talk to you guys later have a great night oh let's play you guys out yeah I'll play you guys out let's play everybody out see what we got I think I have a new one I want to look at too I want to look at one of my new things that people sent me hold on oh wait I don't know where it is where is it H okay I guess we'll just have to play the other one let's play us out folks malan [Music] 37 breaking news tonight A Malaysia

(1:10:44) Airlines flight with 239 people on board including four Americans has gone missing I remembered the line from the scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed form and says now I am become death the destroyer of

(02:42) Malayan 370 contact 120 breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone missing God I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to

(03:47) impress him takes on his multi-armed form and says now I am become death the destroyer of worlds okay folks what's up what's up what's up with it boy what a day huh what's going on huh what a day huh this is uh quite the battle we've got going on right now good news is I love strategy games everybody I love strategy games and that's what's happening right now someone said Punjabi Batman Punjabi Batman's L is on a roll I

(05:00) can't even keep up honestly can't keep up I did get reached out to by that person on uh that that supposedly found the the pictures and they're 100% full of [REDACTED] 100% there's there's no way that they found the pictures the way they're claiming that's just reality they're not going to tell me the truth though and of course they're not not going to come out and reveal themselves because they can't expose themselves that's the difference between people like me right and people like uh

(05:37) Anonymous day old Reddit accounts um so no big deal um there's some big news today somebody who claims to know reid on non reach out to me somebody who claims to know him personally and what I can share with you guys uh I have not been able to I mean how do I prove it first of all how do I prove that they actually no reged on right uh how can we prove that I'm not sure but they told me a couple things they said that Regan is not American uh which we had already assumed we had assumed that they're potentially

(06:24) from South America the other thing that they mentioned is that uh sorry I'm just trying to think through what the emails were saying um I had a few emails back and forth trying to confirm information and asked them if it was okay if I share this information they said that it is um that they potentially that redid and N potentially found that video somewhere else where it was uh later deleted and that they uploaded it they the the date that they have of the received date may have been the date that they found it or

(06:54) that the date that that video was theoretically posted yeah yeah the corridor crew is definitely full of crap those guys are definitely frauds 100% they're frauds there's no doubt about that we've pretty much proven that the cdor crew you guys know the the uh what is it is a fable the booc cried wolf the problem when you put out Hox stuff out there like the corridor crew did where they put out fake videos with fake metadata and stuff is now they've discredited themselves on anything they say and do anything they

(07:32) say now no one's going to believe anything so the fact that all these people are directly linked to the corridor crew pretty much means that it's very likely that they have somehow hoaxed this especially given how angry and upset they are at me like they're clearly pushing disinformation against me so and and they're they're angry because like I completely dunked on like this Nico loser like super hard like they they definitely thought that they were going to have some big takeaway but this Nico guy is like an idiot and uh

(07:58) you know I just it was was so easy to dunk on him because he's just so stupid and so that's why they got so upset right so now they're trying to like they're angry and they're trying to use their audience to attack me which doesn't doesn't work so you know they they debunk their

own content frankly so yeah once again cadon the big news is that I got somebody has reached out to me who uh is in contact with reeside andon and they have told me and I again I can't confirm this at the moment

(08:25) because I mean how do I confirm this information right I said like you know can you give me something that gives me proof um but they said that you know neither of them are Americans and that reeside a non theoretically pulled this information from another uh website and that there might have been an older version so this he might not even be the original source of it um right now we believe that they're potentially South American but he wasn't able to confirm he or she I don't know was not able to confirm that information

(08:58) with me yeah like those people like the corter crew is like your stereotypical redditor right people that are just completely delusional to reality like you imagine wearing those glasses man like you're living in another reality thinking that you look cool when you wear those glasses like Jesus man so arrogant so arrogant just it reminds me of that uh of that stream like I think that everybody who's not familiar with this case should watch the uh watch the the stream that I did that's the space with uh Julian and

(09:36) Danny and and TJ like that that really gets you up to speed quickly okay so um let's see what else has happened uh we were able to uh discredit Jonas uh pretty heavily some people get sent some videos that really discredited him he forgot to mention that he does uh photo manipulation and he's was big into that and he's very skilled obviously at what he does from the VFX expert standpoint which is weird because when I talked to him he represented himself as somebody who was doing uh concept art and then I said

(10:13) well you're not an expert then and he's like oh well it's it's adjacent so concept art is a completely different thing than being a VFX expert in my mind maybe I'm wrong I have a family member that's a set designer you know I I wouldn't say that they build Furniture so uh pretty interesting um and then he discredited himself further when he rejected the offer for the record for everybody watching I do have a recording of him being offered to \$10,000 and being told that he would just have to sign a statement which he's

(10:48) on Twitter he made a post saying that he was going to reject it yesterday and now he's come back and said that he wants to take it so he can give it to the families which it's a little too late for that I mean you can see that kim.com and I are not on the same page anymore with regards to the case and kim.

(11:02) com is obviously the one that was donating or I mean I have a recording of him with kim.com in the same stream or in the same uh conference where he was being uh uh you know offered it but I would imagine that offer is gone now I me once you reject it you can't just come back okay now now I'll sign it oh it looks really bad for me when I reject it I mean okay and the reality is I don't have a way to get it to the families I'm not sure why I would be able to facilitate that I literally no families have reached out to me so if I had a way

(11:31) to reach out to the families I would be telling them about the case like I've been literally trying to get to the lawyers to get it so that this case can get tried back in United States where it belongs so I mean whatever Jonas think however Jonas thinks he's going to get the money to the families that seems like nonsense and I'll just give him some more free advice take it or leave it I would not sign it thinking if you're going to make a claim that you're going to give it to the families I would not take that money

(11:57) and sign that agreement Jonas that's just my opinion for you for you because reality is now you have to figure out how to get that money to them how what are you going to do divide it up 250 ways like you're going to find all the people and track it down like how how are you going to pull that off man so obviously that doesn't seem like that would ever happen I don't know how you would even do it but you know what I wish him the best if he wants to do that and do it but I'll just say it's going

(12:18) to look really bad if you take that money and then you don't have a way to get it to the families so especially after you've already rejected it and then it looked terrible the way you rejected it so just free advice man but take it or leave it my man again I just I would repeat if you want this to go away the easiest way to make that to go away would be to delete your weird debunk video that you put out there that you didn't look in it into the case at all and yet you had already prejudged and made your opinion that you thought

(12:44) it was a hoax uh based on less than one hour having no according to you having no background into the case even after us I told you in private DMS that you should be cautious about it and you should look at the evidence that I presented that we couldn't be using a 2d uh background in this since we've already proven the clouds move and are distorted by the orbs so I mean it's up to you man anyone who's saying that I'm trying to pressure him or whatever it's like I'm just he's the one who says he

(13:14) doesn't want to be involved man so you know that that's what I would do in your opinion in my if I was in that your shoes and I didn't want to be involved I would not have made myself get directly involved I would never have made a video I would have just handed over the files but and let somebody else do it but you know whatever I I chose to obviously be involved in this that's why I put my name out there and my credibility and anyone not willing to do that doesn't have any credibility so at least Jonas

(13:41) is willing to put his his livelihood out there and what have you which you know you have to give them some credit for that for sure um all your Bas are belong to us if the orbs are superconductors why do we see heat on them that is the only thing I could think to ask great job uh so just because we have superconductors doesn't mean that they're going the whole orb's going to be uh cold so I think uh Bob I'd have to talk to Bob Greener and look at that interview once again but it's the monopole so it

(14:12) has to do with the way that the uh electromagnetic fields are being focused and so then I guess I was trying to ask him too I have to go back and look at it because it's been several

weeks now I was trying to ask him like okay is that the area where the you know the laser would be shooting out or is it I think it's the opposite so like if you have this heat signature like this half U then the beam would be shooting out this way I think is the way he described it but based on the electrical engineering that we went through

(14:40) um the way we went through the electrical engineering stuff I'm starting to wonder if the toroid shape is what allows for the fields so that the power is focused to a particular point you know that's why now I want to learn even more about electrical engineering I don't think we're going to be doing it tonight but but uh cuz I have a couple other things planned for us to do here in a couple minutes uh just for the record he was not shown an affidavit he was told uh Jonas was told by kim.com that he wanted

(15:12) to give him \$10,000 but asked him if he would be comfortable signing an affidavit to the to the effect that he was not lying about or being deceptive about anything he was doing he said uh I can't remember if he even said I think he said he had to wait on it or he may have even said that I could pull the recording up but I don't want to pull the recording up because I'm a little I just a little suspicious about you know pulling up a recording of people's private conversation um but I did record it of

(15:42) course and uh I think I could have sworn he said yes that he would but um I think he said he had to wait and like you know hear back and talk back so obviously then the next day he made the Twitter post saying that he wasn't going to accept it blah blah blah which yeah just cast more out on it so thank you for that donation um all your Bas are belong to us I hope that answerers your question so just to give you some insight oh See's well I guess we're going to learn right now oh well that doesn't work

(16:35) huh oh okay yeah see this is definitely the secret so that has to do with the shape of the toroid with the electric Fields I'm sure of it now it's actually very simple it's not even that complicated G to watch a quick video on

(17:45) toroids I love people hating on me because I have ads showing up from when I go on YouTube that's fair that's fair oh wait what the hell wait oh wait I do have the on set correctly three- hour video might be a little long for me okay I'll write it down just in case oh this is this is old I think I did all this before Oh this is the podcast list that's why we need to get that podcast list out as well would and so whe we want to know what

(18:56) the f is here here and then finally I'm okay you can handle 5c ads now we're looking at the crosssection of the wires so let's say the current comes in here and the comes in and Dot It CES go and then do okay I want to really understand this guys once I watch this this will all answer

(20:01) questions the right hand rule towards the center imagine it's trying to go towards the center right okay let me turn the volume up okay so if I want to know what just how strong that field is going to be in there I'm going to draw an emperion Loop we'll make it green so the

emperation loop is going to start here let's say just draw a dotted line around here now the field is going going this way then it's going this way then it's going this way then it's going this way and I'm going to um apply amp's law

(21:10) now so  $\mu \cdot I$  is equal to the closed loop integral of  $\mathbf{B} \cdot d\mathbf{L}$  now that's the eye through the emperion loop now the amperian loop doesn't know that this is all just one wire thinks that there's all these different wires that are going through it so if the current in here is  $I$  it thinks that there is um however many Loops there are that's how much current it think that that times  $I$  it's so if this is two amps and two amps and two amps this thinks that the amperian loop is going to if you asked it it's would

(21:48) say how much current's going through it 2 amps plus 4 amps Plus or 2 Amp plus 2 Amp plus 2 Amp you know that get that's you know all those added up so I'm going to say that this is equal to  $n \cdot I$  where  $n$  is the number of coils you have that's how much current is going through the amperian loop now um you see how the dot product disappears because  $\mathbf{B}$  and  $d\mathbf{L}$  is in the same direction the dot product disappears so get rid of this guy okay now um why because of symmetry why would  $\mathbf{B}$  be any stronger here than

(22:26) here than here than here it shouldn't be so I'm going to pull that  $b$  out of the integral and I'm left with summing up all those DLS when I sum up all those DLS distance  $R$  when I sum up all those DLS it's going to be it's going to give me  $B \cdot 2\pi R$  so the magnetic field in a toid if I bring that stuff on the other side it's going to be  $\mu n i$  all over  $2\pi r$  this is the magnetic field due to a toid okay is that focused in the middle though now um

(23:29) it turns out though that the field gets totally contained in there none of it comes goes in this section and none goes outside it's completely contained in there let me show you why I'm going to drop a imperian loop in here okay in that emperion Loop how much current is going through there how much current is going through this emperion Loop the answer is none there is no current going through there okay um well then if that's if the  $I$  is none then the  $\mathbf{B}$  is going to be none okay uh this picture is a little

(24:13) messy but let's just look one more time then remember these are dots here and these are x's and um to get the magnetic field outside of the toid like out here say right here I'm going to draw an emperion loop I like this clicking my amperian loop it's circular I know that's a really bad Circle but it's circular out here a distance  $R$  now um if I asked you how much currents going through that loop I would again say none because we might have a lot of this current but for every dot we have an X that goes with

(24:58) the so this is two amps out of the page this is two amps into the page two amps out two amps in so they always negate one another so the total current is going to be zero so that means that your field is going to be zero out there okay so field is zero here no field there no field here but in here in this region there is field what's the field in there the field in there can be easily derived as  $\mu n i$  over  $2\pi R$  if you think about that that's not a tough derivation if you understand 's law that's a pretty fast derivation

(25:50) okay thanks bye okay that didn't really tell me what I need to know magnetic field is stuck within the toid is that what what I'm supposed to understand from this okay um let me see questions questions questions what's this oh yeah let's update no I mean I think it is toids I it's kind of like we're trying to figure something out well we already know the answers and we're trying to figure out how we get there right that's the benefit we have of learning electrical engineering right

(26:47) now thanks old Protestant uh yeah the reality is like obviously I don't know everything but I would say with an extremely high degree of confidence that the videos are authentic so it's pretty scary then if the videos are real uh however they were able to pull off this picture thing I mean it pretty much has to be related to the intelligence Community you have to oh alien scientist is streaming right now oh neat um I've got another podcast in an hour and a half so I wanted to stream beforehand and put out a couple

(27:22) uh a couple of posts that are unrelated to calling people out or whatever right uh what is my personal opinion on why Jonas made that video on YouTube I'm undecided right now I'm undecided initially I I didn't think he was had any ill intents but the fact that he wouldn't delete it after he claimed that he didn't want to be part of it anymore uh kind of betrays those intentions right I don't get this idea of oh I'm going to make this video debunking it but I'm going to also not

(27:55) want to be subject to any scrutiny the moment you do that then of course I'm going to find out everything about you right and not I don't even have to I didn't have to do it people were doing it for me sending it to me all I did was just clip the videos you know so you know that's the thing there's a lot going on and I'm what's this Thor open science breakthrough this hopefully this isn't too long man sorry I'm going through here electr nuclear reactions yeah Hermes this is

(28:37) this is a little bit much we're not at this point yet Hermes yeah keep it keep it on the easy level still huh yeah this Reddit post about the the owner of the website's pretty wild I hadn't been on red I didn't look on Reddit all day except for this morning okay two things I want to post this one's interesting too where's the radar

(29:45) thing we're going to come back to this okay what are the questions are out there what's generating the magnetic energy with electric Fields come magnetic fields they come one and the same and they are perpendicular to one another uh perpendicular yeah then the direction of the currents of the power current right is going to be uh using the right hand rule with your thumb pointed forward that's what we learned the other day I can't uh imagine people's motivations and intentions what I will say is that

(30:27) people anyone who's going to not do their homework I think we've seen this repeatedly from people who've been trying to debunk us as they don't do their homework right and then they end up making themselves look like fools right repeatedly repeatedly we've seen YouTubers do it we've seen inter podcast interviewers do it where they do not do their

homework on the case and then they come out and then they get made into fools because they didn't do their homework they didn't look at the

(30:56) evidence right so I think the moral of the story here folks is do your homework before you come out you know if it's me and somebody sends me a random Anonymous email and I'm going to be pretty skeptical I I get them a lot I get a lot of those I get a lot of those um and then I'm a little bit tentative you know about reporting it out there now what the news was though just in case people want to know was the news was um that somebody who claims to know decided non reached out to me and I have not been able to confirm

(31:33) this because how how do you confirm something like that I I don't know if you guys have any ideas please let me know uh they haven't been in touch with them very recently but they they know them I'm not going to say how but they know them and that they said that reeside Anan is not an American and uh they wouldn't say exactly where they they're trying to keep the Privacy uh Keep information private but based on the way they typed I had reason to believe that they're not an American as well and that regid non

(32:06) found the video somewhere else and uh posted it and perhaps the receive date is the time the reidon non found the uh video or or the time the video was originally uploaded the the video that they found and then that could explain what Jesus what the heck why am I I'm watching something levitate over here what the that could explain why uh reeside andan uh had the up publish date of May 19th could be trolling could be could be we'll find out we'll find out I gave them my information so we'll see what happens I asked where and they

(32:55) said it was some website and they they didn't know they were going to ask people yeah you guys should definitely check out if you guys want to know what's been going on check out the podcast I did with Keith at the mic I mean I'm I just tell it how it is every single time I gave a update everything I think it's going on people were so angry in the Stream they were so angry it's hilarious all my haters just follow me around it's wild you know they must have alt accounts where they're like just

(33:25) following every single thing I post on TW Twitter it's pretty funny man pretty funny they're so obsessed it's it's wild I actually called Martin out because he was in there just like raging in the chat raging like acting like a little child and I was like Jesus man I was like what is your deal dude the people that seem the most upset are the ones that were like used to be with us and then they just went off the dad and then they feel like so entitled can you contact me offline please I'd love to talk to you

(34:06) more to ene it in synthe material you break a piece off and it that's what you say it's quite it's dangerous yeah I'm trying to get in touch with red side and on directly obviously that's the goal so hopefully that R sideon doesn't get killed I'm really really regon does not get killed could definitely use Ron's input uh what's the weakest link I don't know um weakest link in the case most difficult to prove I don't know it's all pretty Rock Solid that's the problem I mean fire scenario

(35:07) is rock solid uh the science I think is pretty Rock Solid the leaker is tons of evidence of the leaker we know the Spy satellites were there I mean I that I guess part of it that I only I try to only report on stuff where I think we have solid evidence we have 19 witnesses to a fire event I mean it makes more sense than any other story today hey cart welcome so I don't know I don't I can't think exactly what the weakest part would be maybe the 3D stereoscopic effects might be the weakest I think they can cast some doubt on that based

(35:43) on the fact that you YouTube claims there was a way I'm G have to watch this later folks we have to watch that later uh Bailey Carter thank you very much for your donation is a mean Australian dollars I don't even know what that means um the cloud update um yeah so since the cloud update we we looked on two different torrent and we can't find the pictures out there we've looked at the way back machine and we can't find anything before I think it's before 2016 from the old website these pictures

(36:21) aren't on the old website for some reason at least not the way back we found other ones but not the pictures in question and so now we've become extremely suspicious as to the authenticity of these pictures um people message me videos of uh Jonas doing interviews where it turns out he's actually uh an expert VFX artist at least I would call him an expert I mean the watching him work is um so actually very heavily relied on um photo manipulation in the beginning because heavily relied on photo manipulat

(36:57) ation in the beginning and trying to and here's him actually adding clouds to a picture look how quickly he does this your weaknesses and trying to fix to me this is a level of talent I mean just my opinion develop your skills in in the way you you still feel that you are not that good yeah and after you you will just it's about this setting up everything uh everything needs to to fit uh to be to create a good picture because if if there is something everything needs to fit to create a good picture this is obviously

(37:31) not Jonas saying those words but the person he's inter is interviewing him that pop out and looks you know pretty not on the same level that the rest of the picture it's it just shows that's not something is going wrong if something sticks out that's not in the same level as a picture it shows you that something's going wrong yeah I mean so it didn't take much to discredit Jonas he did a lot of it at the work himself as well when he rejected the 10,000 where he could have just signed a

(37:59) statement saying that he was telling the truth so it didn't take much also the website owner now says there's something potentially wrong I had someone who is it OPC I don't know whatever somebody who is very good with websites and internet stuff uh reached out to me and has been just on the attack against the the text.

(38:21) com guy because this idea that the files got updated like a week ago on December 4th is really suspicious and I work in with databases myself and it's very weird that there would be an update on a specific row that does not happen often no you don't go and you don't update every Row in your database that does not happen often there actually has to usually be an

update on that file on that row so and also when you carry over from your old website to your new one like apparently you're legally obligated to

(38:57) to have an archive and have it like carry over so um the textures.com guy has been under attack by a uh some opsc people that we have working on our behalf I don't I'm not hiring them paying them or anything they're just one person reached out to me and said I can't stand this kind of dishonesty I'm just going to you know point out everything that's wrong and I was like okay go nuts man so yeah I'm very glad and gracious to have these type of people on our side fighting for the **truth** because a lot of people can smell

(39:27) that something's not right here something's really not right with this Cloud **debunk** that was found it stinks everybody realizes it stinks and um yeah data manipulation is always tracked so now I think it was about 10 or 12 hours ago the website person was saying that uh no my mic output is maximum so you'll have to increase your sound I'm afraid oh actually no yeah I'm sorry you're going to have to just increase the sound on your side I apologize um and so they said there was something

(40:00) wrong but they haven't said anything about it so due to all of these discrepancies which there's quite a lot I have somewhat backtracked on my previous statement I will say that I uh was a little bit phased by that **debunk** that came out initially and by the pressure that I got from kim.com to try to make a statement but um yeah we're back in the game we're back in the game and we're going to keep going so yeah if you have an issue with the sound then you should uh reset your your Twitter you should update your up

(40:34) your volume guys yeah **Jonas** not responding to uh **Jonas** also not responding to the allegations that I and the questions I've asked him is also very suspicious he won't explain why he made the video **debunk** his story doesn't check out the story of the person person who found the image does not check out as well um so yeah there's a lot of suspicious activity happening right now and the reality is we're just going to push on I don't care I mean whatever why it doesn't hurt to be pushing on it's not

(41:10) like somebody came out and said I'm the hoaxer it's not like anybody came out with the video files so you know whatever yeah I mean part of it Jimmy is also real uh uh Jimmy was a real real cool guy it was fun to talk to Jimmy I mean I pretty much had to go on that podcast like right after the **debunk** came out like right after so it was pretty uncomfortable for me when I was on that podcast cuz like what am I supposed to say right yeah guys I just went over everything I just went over it all so if you missed it cuz I just explained

(41:55) the whole situation you're going to have to rewind I can't just do it every five minutes guys you're literally asking me for another recap I literally just gave you the whole recap five minutes ago just you're going to have to rewind and watch it again I can't just re repeat it every two minutes so sorry I'm going to work on satellite stuff I'm make another post about the satellites I think I always come off genuine because I am genuine right I'm just as honest as I can possibly

(42:33) be you know and I think that's that's what helps right it's part of the reason why I stream too right I think we're going to harp home or uh harp on this aren't planes tracked all the time I don't I didn't show my emails did I I just closed it I think oh yeah yeah we're gonna do more foer request too interesting so MH370 can you give me a full breakdown of everything it's like oh my God man no offense no offense any I get how not everybody's up to date on everything but just either rewind it or

(43:26) you can and go through my my twe my tweets right I mean literally all you have to do is go through the highlights or my profile pretty simple pretty simple yeah the FBI I don't even think got back to me man people jumping in asking me constantly asking you take it back to Adam and Eve all the time can you tell me the history of uh the world and Humanity please oh yeah hold on let me get to that for

(45:00) people really believe this crap it's not impossible by any means but I think it's unlikely what they don't think they were tracking commercial airliners okay guys oops I love this stuff I love this stuff folks let's see let's get a little where's our video I just love just hammering

(46:03) hammering on the evidence like a what about these satellites right here what these ones are staring right down at the coordinates I don't think they would have been looking at the exact time go ahead and take a little snapshot Aro hit the like or you're a bigot yeah yeah I mean where the hell did the plane how could they not guys like how could they not know where the plane went what do you think these satellite where were these satellites where do they think they were looking did they think they were looking the

(47:05) other way of course they were staring down at the Rogue 777 of course the feds know yo Q Shaman guy we're not calling him Q Shaman anymore he's America Shaman now folks America shaman America Shaman definitely got screwed over guys can we just at least agree on that I mean Jesus what what a nice guy we're all busy harassing Jonas on Twitter I I'm pretty sure there's literally nobody harassing Jonas that's the other thing I think is funny I have a feeling there's nobody harass him I

(47:44) think it's just a narrative they're trying to set guys asking somebody questions about why they would be making a debunk video one hour after they get an anonymous email it's harass asking somebody shout out to our Silent Partner gry Eagle Edward C Linn is a hero BTW yeah yeah he's a hero we need Edward Lynn to uh come out man oh I I I have another one they may not have been Imaging at the time persistent surveillance monitoring okay oh yeah we better take our Global persistent surveillance monitoring

(48:45) one Global persistent infrared surveillance Global persistent infrared surveillance critical National Security seems a little contradictory seems a little contradictory Mission guys maybe they weren't maybe they weren't looking seems a little unlikely guys this isn't even all the satellites this isn't even all of them Jesus guys there's more I got more you think I'm done satellite updates we're just going to hammer

(49:53) people home that there's no way they don't know where the plane is no way now I want to do the Drone thing if we don't run out of time oh well this is interesting this is the toroid thing so the field is wrapping around oh I see yeah okay so what's going to happen is what the Field's going to push through the middle here and then the thrust goes out this way resonant to roidal electromagnetic field Divergent huh that's interesting just happened across that image I was looking for my other

(50:49) one so guys if they if it was unlikely how come we have them quoted saying where is it where is it where is it there it is there it is folks oh you know what I'm GNA copy this how come we have them saying this wait let's do a new one how come we have them quoted saying that they use cers provided technical data to the intelligence Community to help solve the mystery of MH370 whoops whoopsie [Music] whoopsie

(52:54) for yeah solved what exactly do you mean exactly the hell doe super tweet wait what what's doe super conducting tweet you better not be messing with me better not be messing with me that's not the Tweet though right I don't know what that means but I'm going to avoid Flat Earth stuff guys I'm pretty sure the Earth has curvature I'm just saying if the Earth didn't have curvature we wouldn't be able to walk in

(53:57) different and both walk North and run into one another but feel free to believe whatever you want uh deir uh I'm going to need some help finding the doe super conducting tweet yeah no super Community notes has been effed man 63 Community notes in the last 24 hours that's three per hour assuming the person doesn't sleep yeah yep we got to make a post where's our link to our community not thing Community notes is 100% compromised folks where's my community

(55:00) notes thing there it is yep that's the one uh **Jonas** definitely if **Jonas** said he didn't get offered to sign any legal documents then he's a liar because I literally have him him on video so hopefully he didn't say that I mean that'll just discredit him completely if he said something like

(56:04) that so I I literally have him on video he doesn't know probably that I had it on video but I did I recorded it just in case just in case uh I don't see the doe thing so I'm just going to search so sorry deir I'm not seeing doe science oh what's this oh well we're following this one how many followers this account have 65 68 no they have less than we do I'm not sure which of these posts I'm

(57:15) looking at royy Herbert commented too which one did he comment on sorry I'm trying to figure out which one do you comment on not there there boy they make a lot of posts man they're posting every hour how does this this uh accounts have so little engagement 9 hours ago they only have 1,000 views with 69,000 followers oh there it

(58:20) is there it is got you back deir what what does this mean collapse to two oh collaps down to two Dimensions this is spicy you know it's time guys you know it's time got maybe it's just a '90s video

(59:26) game effect these are effects are pretty damn good thanks toir I really appreciate this finding this one man here you guys go if you guys want to if you guys want to Brigade it go nuts I don't even care about Community note context [ ] anymore they obviously have it under control they already obviously have it infiltrated the debunkers are obviously extremely angry at me in general um I get up guys I get up a lot three hours sitting down is not bad at all have you ever flown on an airplane before I used to fly all the

(1:00:21) time T Di electric flux pinion is essential to toids I'm going have to Google that one e Decay scale that factor to maintain dialectic flux pin I'm tall guys I'm pretty tall I'm over six feet tall yeah I'm not I would never look in guys I believe the Earth is round okay the Earth has to be round for any of this stuff to work it's like the base requirement is the earth must be round should we ratio this post folks we're going to save this for later

(1:01:24) I want to read about this oh it's a oh man they're going to get me this is a government website okay let's let's finish our post though we'll come back to this this is where they also claim they found no data of of an explosion as well very specific what the heck is this so This Is A Lie This Is A Lie 5% of the planet uh what you guys think that only 5% of the planet's only being scanned any one time I don't think so man considering this is only like 10 eight satellites and they have like 100

(1:02:25) definitely definitely uh yeah it's funny I'll never forget the face of Danny Jones when he was so enraged looking at me when I wouldn't agree with the corridor crew when they were just objectively wrong about everything he was so like visibly you could tell he was barely able to hold it back I'll never forget that face it was the face of a redditor that in real life that's just why don't you believe with me it's just wild man I'll never forget it and I'm just like yeah okay well my

(1:03:12) favorite is well you're entitled to your opinion people hate that you're entitled to your opinion can you imagine just telling someone you're entitled to your opinion just setting them off let me believe whatever you want man you interview people that are talking to aliens and all kinds of esoteric stuff it's weirding you out that I'm telling you that a plane can't crash into the ocean without leaving a debris field I don't know man we can't reach everybody folks can't reach everybody no wonder

(1:03:43) they're so happy to try to tap dance my grave dude it matches perfectly my favorite's the corridor crew it matches perfectly next sentence of course course it doesn't match perfectly these guys are just complete jokes man it's like and that or like I think I saw a Reddit post it's like can someone explain the logic on uh what was the one on like why there one of them is like what's the logic on like why you wouldn't be able to modify it it's like well what are you what are you comparing

(1:04:15) it to there's nothing to compare it to well yeah but they just modified it and randomly made it look like that what they randomly made it look like that okay go ahead and try it out tell me how long it takes you to randomly get it to look like that without without having something to compare it to they like literally don't understand the monkeys of the keyboard analogy which

is just so basic the reasons you can't explain to somebody something they're um you know invested in not understanding

(1:04:44) right there's only 12 silver satellites in total up there there's like 12 there's like 100 just like NOS satellites NOS satellites yeah can I repeat that the Earth is flat for clipping the YouTube shorts well there you go now you've got it now you've got it folks the L LOD is live streaming talking smack yeah that's fine let them talk smack man let them talk smack they're super enraged those kids are super mad like uh they're like well we were just we were being friendly yeah yeah sure

(1:05:30) you were sure you were it's like every reditor when they try to like pretend like they're taking the high road while they're just like just raging on the inside good luck man I'm glad you guys can uh you know milk some uh grift off of this uh case off of me and milk it for for clicks if anyone's watching the L Lodge thing ask them how uh Cindy Cindy Hendry is the best thing is that everybody else is is monetizing it like I'm literally monetizing it the least out of everyone the **debunkers** are the one monetizing it

(1:06:17) the most they're the ones monetizing it the most yeah we have half as many viewers as the L LOD and they have 20 times the amount of subscribers 20 times the amount of subscribers and most of them probably want to come here and watch me instead it's funny man anyway I appreciate you guys at 250 people watching is a lot considering I haven't even put it on my Twitter I don't even post it yeah there's a lot of parasites a lot of parasites trying to attach themselves to the case you see some of the really

(1:06:58) low-end parasites now too the ones that have like no followers who are like trying to make **debunk** videos and stuff like that trying to get my attention stuff like that anyone I see like trying to tag me into their their garbage stuff like I just I'm blocking them yeah just block them flap on t-shirt merch Banner yeah thanks man appreciate it what is Jesse Michaels's new episode about the Jesse Michaels Martin scarelli thing came out of nowhere yesterday huh that was pretty interesting that was fun I got the

(1:07:36) impression that Martin scarelli was not doesn't believe in UFOs though I mean I don't care if people believe in it or not it really doesn't matter to me but I told me Martin scarelli is definitely not on the inside definitely not on the inside he's definitely on the outside looking in that's probably why they they tore him down made him go to prison I imagine but there is a lesson to be learned from The Martin scy thing you can't uh you can't just have everybody hate you you got to keep it somewhat you

(1:08:17) got to be like a normal nice guy right yeah somebody said that prison humbled him but I I don't know when did this article come out this this phrase aged aged poorly 10 years later still found nothing oh yeah and let's put in here the Malaysian minister

(1:09:53) for should we name this guy probably officials at the 460th space wing nro is likely to have advanced image analysis software huh I wonder if that cers what do they mean might not

have

(1:11:10) been Imaging at the time some of this crap is ridiculous man for do they realize that we're scanning an

(1:12:18) infrared does this article even realize we're scanning an infrared what what is if you found debris in the ocean we would have gone straight to where that debris was and found it it's not like this is rocket science here cloud cover come on come on man infrared's going to have no problem is there any logical explanation for what they wouldn't have seen with satellites Jesus this is wild man orb chain rise

(1:13:22) up oh man I don't know if we're gonna I don't know if we're going to get to see Lex Freedman feels bad feels bad man feels bad do I have a gof on me guys nope no I do not Life's good thanks Sherry on top Life's good oh hold on let me check my Scaro messages where is my scarjo clone intelligence Community where is my Scaro clone I definitely feel like I'm being uh

(1:14:36) honey potted guys I definitely definitely feel that way it's weird man it's weird I think they finally maybe have decided to reach out play me on different fronts not even sure who I can trust or if I can ever trust anybody ever again oh I was going to click on this and I was like wait a minute this is us this is us this is us this is us this's us guys the third link when you when you type in MH370 spy satellites in Google the fifth link is my Is Us oh what ises chat GPT say this is total [REDACTED] this is total

(1:15:48) [REDACTED] what transponder has nothing to do with spy satellites guys wait can we talk back to chat GPT wait I think I have a chat GPT account let's let's do this real quick oops it's not what I wanted not the one I wanted I should that might be the wrong is it right oh sh it's fine Daily Star though um that's

(1:17:22) for o did he really delete him did did Julian really delete him guys is that true guys we gotta go check real quick uh chat GPT needs an upgrade guys hopefully someone's going to

(1:18:28) upgrade chat GPT where is it let's see where's my spy satellites over the region one that's not the one that's not the right one I like this one off all of this diagn information that it regly sends out I mean is that is that actually technically possible I love this one looking for the other one I think is something that I got make a new folder for these answers as well investigating we'd all like to know the answers and we are we are talking to the experts from the airline also we will get assistance from Bo in fact on this

(1:19:32) matter that will be part of the investigation wouldn't it be a basic just a basic question can an aircraft disappear I just I just cannot speculate something that we are not sure better that that's not it about this one there's a lot of rumors that you had a secret Twitter account I got a lot of weird stuff on here let's see huh where is the spy satellite one that's not it did I move it somewhere huh huh where did it go oh man I need my spy satellite one did he he really deleted it oh boy we got to go check this is the last time

(1:20:29) I'm going to search for Julian dory's uh Twitter or uh YouTube this the last time I'll ever searching this what's up guys if you're not subscribed what's up guys maybe I'm not wearing a wife beater today I put some I put a shirt on two weeks ago he did delete it wow he must have definitely realized how bad it looked for him I wonder if he thought that he might get sued for defamation over it I wonder if he thought he could get sued over it I hope he talked to one of his uh in a text message he told me that

(1:21:13) he's like Mommy and Daddy knows uh some powerful lawyers that'll work for him for free like he literally sent me something like that I was like yeah of course you're some kind of trust fund kid yeah I wonder if he uh finally talked to one of those lawyers that was my official advice yikes man look at how little views this stuff has 20,000 views two weeks ago when you have 570,000 subscribers he must be getting killed on YouTube some of his stuff has less views than some of my some of my streams have

(1:21:54) my streams with just 250 people watching get uh like a significant portion of the these views that he gets for his in-person Studio stuff that's wild he deleted it that's smart of him though that's smart of him he did a smart thing good job Julian yeah he messed up that situation super bad dude that was bad I don't have any ill will towards him I just don't care about him I'll say I don't think he's going to be the next Joe Rogan though not with the attitude that he's got see uh man how can I not find this

(1:22:42) clip though I need to get the exact quote crap guys I have too many Clips oh wait here we go no that's the wrong one that's the wrong one this one no this is that same one it was supposed to be before this where is it yeah I don't know where it is now where did I put it man oh you know what I think I did I think I moved into one of my other folders yeah there it is we are in touch

(1:23:51) with we are dude's the worst liar in the history of the world we all know that folks okay let's do finish our post up so Mission data for for

(1:25:51) for what day what the press conference this for how do you sol

(1:27:04) reconnaissance I know that's not right is it one n and two s's two n's and two s's that was close and a little bit a little off for for

(1:28:51) for how's that sound great night inattentive appreciate you appreciate you folks you chose violent slap my ass off I guess it didn't do guess it didn't go well guess it didn't go well for him you got screen grab that Jonas was never offered anything uh send me the screen grab I wonder if he thinks that I didn't record that

(1:29:55) session damn we could if he had if he actually said something about never being offered then uh his credibility is toast I mean it's already toast but he's just digging his own grave he's digging his own grave I really didn't want to share the uh the video I have of the of the um the meeting between him and myself and kim.

(1:30:20) com I mean I'm not I don't really like to do that kind of thing but uh I was uh guess we just have to be honest I was asked to record it and so I did record it I thought it was a good idea anyway as far as I know it's not breaking any laws I don't think it is um to record uh something like that and uh yeah he definitely was offered \$10,000 to sign a uh statement saying that he uh wasn't lying so if he is lying about that then his he's done I'm going to it'll be just completely bury his credibility completely bury it I mean I don't know why why he's

(1:30:57) digging himself into a deeper hole but yikes man I I don't really want to go after him anymore honestly I mean he's just making it too easy like I really don't like destroying people's credibility that's I do not enjoy it it's my least favorite part about this stuff but when people are out here like making **debunk** videos that they have no business doing whatsoever without reviewing the case without doing their homework I mean I'm trying to be nice to people like I'm telling them like like

(1:31:40) when Danny called me up and is trying and he wants to make some like garbage headline for our podcast and I'm like dude you shouldn't do that man like it's it's a it's a bad idea man people are going to come after you if you do it and of course he we agree that he's not going to call it exposed and then he goes and calls it exposed and then of course what happens everybody rails on him it's like dude I told you like look at look at Julian's comments man like look at Julian's comments that's I try

(1:32:10) to be as nice as possible about it so people can't say I'm threatening them or whatever because they always like to say that right it's like yeah whoa divos hello thank you very much man wow that's a huge Dono whoa you even got the little pink color thank you Devas you didn't even say anything did you have you even said anything in the chat wow thank you man appreciate it if you have any question I mean feel free to ask deas coming up big yeah I'd rather just go with the science but I don't want to I don't want to tear

(1:32:58) him down anymore man just it's not fun I mean what if he turns out and he's just like being used or something right like what if he doesn't even know like I'm just like the hypothetically what if he just doesn't even know that like maybe the images were modified or something and he's just like man I'd feel kind of bad but he could also be in on it he could be a good liar I don't know man I know but Divas you the man yeah the propulsion I mean I can actually just show you guys the

(1:33:27) propulsion experiment you want should I just show the propulsion experiment I have it somewhere on my I I was the one who was showing it during that wait what if I show something I'm not supposed to show okay there it is look at that dude just passed an electrical current all of a sudden this thing go flying I assume this is liquid nitrogen I assume just because of the smoke coming off like similar remember we were watching the superconductor thing where like it was spinning around the it was a I think it's a super conduct cooled

(1:34:20) super conductor seems like a similar situation going on here yeah Dave and S are two of my favorite people on this entire planet two of my favorite people on the entire planet that is

liquid nitrogen yeah it's cool yeah I mean someone just tell **Jonas** that I've got video of him with the offer that was proposed so don't just tell him not to shatter his credibility anymore man I don't want to I don't want to come after him man like just tell him to take the loss and move on right just take the loss and

(1:35:09) move on stop digging dude just delete your video man like the simplest solution like you should just listen to me when I told him right away just if he just deleted his video walked away he wouldn't be no one would be talking about him right now he's like well what would people think I think they'd think that you were trying to get away from the situation you don't want any part of it like I I don't get it are you're afraid of people telling you that oh you should have stuck with your **debunk** video

(1:35:33) like who who's going to say that you're afraid of what **Mick** West thinks of you or something like I I just don't get it there there's no reason like if you're making a **debunk** video and your credibility is being destroyed and you're saying you don't want to be part of the the case like just delete your video then like J like like like what Julian did like just delete your video the funny part is I told Julian to delete his video early on too and he didn't want to and now he just quietly

(1:35:59) did it right now he quietly did it and remember when I asked him on the space and he goes oh you want me to delete the video I'm like dude it doesn't hurt me it's not like it looks bad for me it's like obviously that you butchered this thing and now nobody wants to come on your podcast anymore because you were a huge douche to your to your guests like I don't know man people just don't get it I guess do they get paid while on the History Channel ask TJ you guys crack me up man now **Mick** West like that's part of

(1:36:40) the thing too like how quickly all those people responded to it like shows that there was some level of coordination at play behind the scenes right like they were up all night oh did a commercial just go off did a commercial just go off I if it did I can't I can't stop it if it did yeah it goes to show there was some level of coordination hit up Alex Jones again uh I did send him a message actually just congrats I noticed he was back on Twitter yeah he was back on X so I just sent him a message thanking him

(1:37:13) for being on the show or whatever uh yeah I gained some respect for Alex Jones I mean honestly guys I'm susceptible to the narratives as well so obviously I had some qualms about you know is this should I do this I knew that people would attack me for going on Alex Jones and I'm like I mean I would probably attack somebody else if they were against me and they were going on Alex Jones so whatever but you know he he was actually super respectful man super respectful he didn't go off on the deep end against me or anything man it

(1:37:46) was legit yeah well what's happening on the my live in the on my the live shows that I go on to is like they're all in a Discord like I have like a Discord of like nuts who like hate me and the whole point of the Discord is just a rage about me it's called the aa20 2014 Discord but it's cool I like to have my own little hate section you know it's like they're like uh like having

groupies right you got to have your own groupies the people like the people that follow me around are like my groupies

(1:38:17) that's how I look at it you guys are my fans and they're my groupies you know like I don't respect them at all or anything like that but you know you have them around you bring one up to just you know humiliate them and make them feel like you know make them feel special a little bit because it brings them a little bit of joy in their lives but my fans the fans are coming out and you know you respect them you thank them for coming back the groupies you just you leave them behind stage you know you let them sit in the line

(1:38:43) pretending like they're yeah they provide fuel man they really do I keep giving people honest opinions and then and like honest good advice and they just like they get so enraged that they have to do the opposite this this post pretty good is this post ready to go let's just I'll read it out to you guys United States government knows what happened to MH370 they have Global persistent infrared surveillance of the planet and one of the purposes of cers is Battlefield Spa battle space awareness let's highlight let's

(1:39:21) italicize this we probably should say what this is does space bace have a hyphen in it doesn't that locking Martin oh yeah what should we go locky Martin or or Wikipedia folks I think there's supposed to be a hyphen every rose has its orb yeah YouTube is a monster and actually anytime like anyone gets blocked here they can never post any comments on any of my YouTubes at all it's pretty funny so the people that rage here once they

(1:40:24) get blocked like they can never post again can never comment again catastrophic disclosure updates I do want to support Jeremy Reese's catastrophic disclosure stuff I think that's pretty cool I like that early articles seem to cast doubt on the idea that spy sights would have seen the plane but we've proven usa2 I was in the right location to see it at roughly 1840 UTC in the nicobar islands this is the same time and location plane supposedly turned into the South Indian Ocean the below article also mentions the

(1:41:52) advanced capability of the national reconnaissance office imaging software which should have been able to easily identify the debris fi from a 777 crashing into the ocean we found the claim from the US military should this be capitalized I don't think so that cers provideed technical data to the intelligence committee to help solve the mystery of MH370 according to officials from the at the for officials let's say from the from the 460th space Wing so where is the plane what did the United States see how exactly was cbers

(1:42:35) used to solve the mystery seems good guys what do you guys think Dom burges which which uh guy was that that was I think that was one of the grifters who like never even reached out to me or anything just like coming up with some stupid some nonsense I mean everybody's just repeating the same nonsense as everybody else we've already probably **debunked** it I don't know I don't know who Don Burgess is some nobody he's not even like he's a he's like a grifter **debunker** who's not even

(1:43:11) like on the radar I think this is pretty good what do we think oh did Jeremy I mean I can't really blame a lot of people I uh you know I even had a moment of Doubt so yeah it was a good uh it was a good play it was a good play by the intelligence Community or whoever pulled off the weird cloud images things it's pretty Advanced as well man it's a pretty Advanced play like that's why the thing I said is that we know what they're capable of now right which means that we have to I probably need to put out another

(1:44:06) statement to the effect of like we have at this point the only way we can stop right is that somebody comes out with the actual videos even then they could probably fake that too considering they could do a fake of this magnitude they most likely could fake uh somebody coming out with the videos which is probably their next play I mean how are we going to prevent that from happening I don't know that's why I think we should pray maybe I think we should pull I think we should pull the uh the Bounty I think we should pull the

(1:44:47) Bounty because if we pull the Bounty now then they don't because there's no hoaxer who's going to come forward right so if we pull the Bounty now then they can't come out later and say hey yeah and the question is like people don't even know if there is still a bounty I don't even know if kim.

(1:45:04) com still has a bounty out there I'm guessing kim.com would stick to the Bounty still but if I come out and say we're going to pull the Bounty down because obviously there's no hoaxer and I don't want to um I think this is the play I think we come out we say we're going to pull the Bounty down we don't want to incentivize people to make up fake **debunks** like they did for the cber satellite video one picture one and then uh that way when the intelligence Community yeah because it's not about money and that way when

(1:45:35) the intelligence Community comes up with a fake video next which is their next play I'd imagine is that they fake the assets for the video I mean if they can fake those pictures then they can definitely have a fake hoaxer come out as well and uh no I'm not pulling it over the jpeg no come on guys because then that way there'd be no benefit for them to do that anymore they like they person should have already come forth right they should have already come forth there's enough word out there it was

(1:46:01) already huge enough there's hundreds of millions of views there was \$150,000 Bounty they would have come forth already if they were going to because what that does then it prevents them from setting it up where they have a py come forward in the future with a fake video because if you give them enough time they'll be able to produce fake you know they could produce the fake assets like a video without the plane in it like kim.

(1:46:25) com was saying they'd be able to produce that but if we don't give them enough time to there no incentive anymore then they can't that play gets taken off the field yeah for sure that's what I think they do next right if they can fake images back like that onto the way back machine and onto a website and even onto maybe even **Jonas**'s computer like that then that's that's scary man that's really scary that means means they can they can do a lot they just need

they just need the time for it it does really feel like they were in

(1:46:56) the middle of pulling this off when we pulled out the videos that show the clouds moving though because the clouds moving thing kind of **debunks** that uh preemptively and they just played right past it yeah but as we've shown they can fake the metadata on anything to make it look like it was nine years ago that's the problem ants they can fake they can fake the metadata they've shown us what they're capable of doing right assuming the videos are real then they've shown us what they're capable of

(1:47:28) doing which is a lot and it's not that unreasonable faking those pictures is not not that crazy it's really not like **MC West** said metad is easy to fake the corridor crew literally did it already they literally did it six months ago with a fake video from three different perspectives with fake met metadata in it it's really not that hard so they could definitely pull it off off especially because they have the real videos that they could just modify the same way that you would have just modified them and turned into

(1:47:59) pictures but yeah they're going to mess up though right they're going to leave something where they messed up and what they forgot here so let's say that **Jonas** hypothetically is a py in this scenario that we've kind of come up with here right they forgot that **Jonas** gave away the game if **Jonas** had not said that the website was getting pirated I would never have thought to look for the Torrance and when we looked for the Torrance and didn't find the pictures wow that was huge if we had found those pictures in the Torrance

(1:48:32) that might have been game over and now I'm afraid of them making a fake torrent file out there and putting the picture in the fake torrent but that's why we had to act right away because when we acted right away we looked at all the torrent that were out there we looked hard and we found at least two different torrent that had every picture from their website and those torren those pictures were like one of the only ones not in there that's super weird that's super weird so they'll mess up right that was

(1:49:01) a slip up for sure right if this was an intelligence Community move that that was their mistake is they didn't think about the idea that those IM those websites would have been torrented and and pirated and if that's the case then that that would absolve **Jonas** then that would mean that he was just a py because he's the one who told me that and he he should have never said something like that if he was in on it but I don't know I honestly don't know who to trust in and what right maybe he

(1:49:25) was just saying that and he didn't realize that he shouldn't have said that either hard to say folks that's why I don't know what's all going on I'll be honest with you guys I I don't know I just know that it doesn't add up just doesn't add up yeah there's a lot more clues and that make it sketchy as well for sure guys a lot more one thing that I will admit one thing that I will admit is that I don't think the shadows in the Mount Fuji are a strong **debunk** because I

(1:50:01) think that he is his uh plane ride was probably in the afternoon but then that throws

into question the timing on the Met metadata like what what time zone was he in then because he was flying from Hong Kong to Japan so why was his phone in like I don't know 12 hours difference he or his his uh camera I mean his camera had a 12h hour difference so I mean for me like I I don't know why but his came

(1:50:34) ra shows a time of 8:51 a.m. and we asked him actually that might be in the recording that might be in the recording actually but then his his uh his plane flight was in the afternoon so I don't know that's an inconsistency as well it's not for me to have to sort that inconsistency out so he could either go with oh yeah the it was an afternoon thing which is weird because I'm pretty sure he said that it was in the morning when I was looking at the pictures with him but I'm not I don't know if I recorded I didn't record

(1:51:01) my first uh interview with him I only recorded the one with kim.com uh I talked to the guy who found the cloud images and he was unwilling to he actually reached out to me cuz in the Stream I said hey find this person he obviously was watching or whatever sent me a message and I said you know who are you and and What's your deal obviously you are connected to the **debunkers** and he just lied he lied to me so and he's he wasn't willing to come out I said you know you got to come out if you want to defend this and he he

(1:51:35) wasn't willing to and I said okay well then then you don't have any credibility right if you're and I said that I I was willing to come out with my name right and you got to see what happens like if people are afraid of being attacked well I'm not and I'm I've been putting myself out there for 4 months so you know cuz people know that we will be able to find out incriminating stuff against them right that's why people don't want to come out because they'll get exposed like

(1:52:03) easily I mean look how easily **Jonas** was exposed wasn't even hard like the the first thing we'll find I we've already we already exposed the person who found the pictures like they literally said that they did it because they were upset that their favorite YouTuber got dunked On by me and then they lied and said that they found the pictures in 20 minutes which we know they didn't find those pictures in 20 minutes it's not plausible right it's not plausible it's just simply not plausible

(1:52:29) they found those pictures in 20 minutes they weren't the pictures are like some of them are like invert the clouds are like inverted resized like no they didn't they weren't just going oh let these are the P these are the clouds no they didn't no they didn't and it doesn't make any sense that uh oh yeah the website only goes back to 2014 after the videos so they just what mind read that there was a previous website before before that that predates the videos no it was uh top down they knew that the

(1:52:54) pictures were there that's how they did it right oh I spent a few hours looking at NASA pictures first it's like okay sure you did and then I just remembered oh yeah this obscure website like the whole none of it makes any sense so I don't blame the person for not coming out but that means that they don't have any credibility either yeah exactly there's hundreds of

thousands if not millions of VFX cloud pictures out there you also can't reverse image search them either so somebody reverse image search

(1:53:25) the actual picture in Google and nothing comes up that's also pretty weird right so just another piece of evidence is that if you reverse image search those pictures it doesn't match back up to the pictures on the website why would it not do that especially if they're 11year old pictures shouldn't it match back up to those pictures on a reverse image search so yeah pretty weird weird man and just for the record as well I work with databases that's something I'm actually very familiar with no you when

(1:53:57) you update when you have some kind of update it doesn't update every Row in the database if you updated every Row in the database your update would take forever right so you don't generally just update all the rows in your database so that's also super sketchy that they had that those 11year old pictures have an update from a week ago so there's a lot of uh evidence against it that's just the evidence Bobby don't be angry bud I'm just listing off the reason why it's not credible sounds like

(1:54:30) you're pretty upset sounds like you're pretty upset I think that the the **debunk**ers are realizing that they didn't have the victory that they thought they had and now they're realizing that we're able to pick it apart pretty easily and the bad part is now this this takes away their play right they're not not going to be able to play they're not going to be able to come up with this play once again you know uh no the nobody's claimed to have hoaxed the videos ant nobody's claimed

(1:55:07) to folks the videos If think about it this way why would you come out and say you found the pictures without wanting to collect \$150,000 makes no sense \$150,000 anybody who says that they wouldn't take \$150,000 is a straight up Liar Liar absolute liar if I hoax those videos I would be taking that money ASAP I'd be going you guys all fell for it I'm taking my 150,000 like in an instant in an instant I would be taking that money anyone try that's just copium that's just straight up copium I maybe they don't need

(1:55:52) \$150,000 anyone's taking that even if you're a millionaire you're going to take the 150,000 it's ridiculous just make up some lie say that you did it because the US government paid you to do it I don't know just make something up and taking 150 Grand it doesn't matter if they I mean they don't have the source files then why would they come out at all then why come out and be like I found the clouds it doesn't make any sense if you don't have the source files you're not going to come out and be like

(1:56:22) Oh I found these images and not get paid you're going to like go and try to find those images or you're going to come out and say yes I did it and I don't have the files anymore but I did it you're not going to have some weird like I'm going to contact this person and make him come out like story doesn't make any sense man and then you're going to come out and be like oh yeah I made it and like you would just claim it anyway because if you're the person you know you made the videos you would come out

(1:56:44) and you'd be able to prove your talents right and now any movie studio you want is going to give you like lead VFX job even if you didn't get 150,000 right and there' be other ways you could prove it I'm sure I mean heck Jonas still had the pictures supposedly so why would a VFX expert not keep that n there's no burden of proof switch at all they didn't prove anything they didn't prove the videos are fake so there's no burden of proof switch so Bootsy sorry bud you're wrong

(1:57:21) and unfortunately for you you will have no say your opinion doesn't matter so nothing you can say will get me to stop working on it and I'm not going to get distracted by worrying about debunk we've already discredited Jonas uh oh did he really quote say that I mean I if he actually quoted saying he's never oh he never read and refused to sign it okay well he obviously he didn't have a affidavit right in front of him but if he even if he said that though I could just post the P the clip

(1:57:50) of the video and then that will discredit him even further I mean the the bad part is like even if he's an honest guy like he's just saying saying and doing the wrong things even if he's honest he's just way out of his depth on this okay I'm going to post this I gotta jump over to another interview here guys yeah even if the hoaxer didn't keep the source files he would have definitely still come forward to claim the Bounty there is no hoaxer guys there's not a single discrepancy in the

(1:58:18) frame we found more errors in these cloud pictures than there are in the MH370 videos look at it that way look at it that way enjoy the satellite update folks enjoy the satellite update I can wait a couple more minutes if they try to uh Community note my post

(1:59:39) then I'm going to go find the clip of Jonas uh being offered the uh the reward with the affidavit and then we will just find his post I don't want to do it but if they try to community note me with this thing that's what we're going to do although they shouldn't be able to community not me with this because I didn't post the video or anything like this on this one this is just straight up evidence right I'm probably going to I have to think about it a little bit more but I'm probably going to pull down

(2:00:14) the oh hey L hey uh Hey Banner or whoever else just joined Eve all you guys probably going to pull down the Bounty the Bounty might be incentivizing people to make fake stuff like this like the cloud picture that's my concern and at this point I think we've proven it long enough how long's the Bounty been out there weeks how many weeks two weeks three weeks four weeks I don't know how long the bounty's been out there but I think we've had it out there long enough where there's no hoax are coming

(2:00:46) forward and I also don't know if kim.com is still good for for it considering that he thinks the videos have been debunked and I'm not I mean yeah I I don't want to think that kim.com is against us or like you know under the thumb of the government but I have to be suspicious of everybody man I like kim.

(2:01:06) com from talking to him he seems like a a good guy I'd like to help him out in the future with some of his stuff he's got going on but I get the feeling that that might be off the table now which is too bad if so it's been up for a couple weeks okay I'll have to think about it yeah the rules were also not clear enough I mean I I kept about my rules very clear because when kim.

(2:01:31) com put his out it were kind of weird it was like you had to like Pride the video without the without the orbs and I told him no the I'm GNA I told him I literally have a message to him that I could pull up that says I'm going to make it I want I want the bounty to be about finding the hoaxter and the source files which is a much better requirement and and that's how I've always presented it every single time uh well I I know the other two people as well so I'm probably what I think I'm going to do is I'm going to

(2:01:58) talk to the other people um the investigate Earth and then the other person who uh the wealthy follower and I'm just going to see if they're okay with pulling back the Bounty as well I think I think that they will be and then we'll just leave Kim kim.com out there high and dry on his own right let leave him out there high and dry on his own and he can do whatever I mean I can't control kim.

(2:02:18) com I'll just say you know he's free to do whatever he wants so I think that's probably going to be the play I'll probably make another post later I also want to do the Drone thing we have that that's we have that ready to go pretty much but I I've got to jump to another podcast right now so um thanks a lot guys tonight I don't think I'm going to stream again if this podcast only goes for an hour I may come back and stream again after I want to read the super conductivity thing but I've got other stuff to do too so I'll

(2:02:45) probably just go to sleep after this because I'm freaking tired um but we're learning more and more about science and uh yeah it's been good it's been good oh you know what I didn't hear back on Sam tripley it's weird I probably need to message him again I've had so many podcasts like I'm already booked up through like Christmas and I think I might talk to Bernie tomorrow because I had some person I had some person um go back uh on me yesterday or tomorrow cuz I did something come up so I'll probably talk

(2:03:20) to Bernie tomorrow if he if he gets me back hey if any of you guys are an alien scientist podcast or watching his stream um ask Bernie tell Bernie to email me because I want to see if I can uh if tomorrow works for him otherwise tomorrow we might have a free day first free day in like a month and a half and then we can stream quite a bit and do some science and it'll be fun so either I'll be streaming a ton tomorrow or we'll be hanging out with Bernie tomorrow one or the other I don't know but looking forward to talking to Bernie

(2:03:47) haven't talked to him in a while uh should be good yeah L take it easy later everybody later Amanda appreciate y'all have a good night and just if you missed the update uh I have got in touch with somebody who supposedly knows reges sideon non and supposedly reeside aan is not an American and that they found the video somewhere so we'll see guys more to come on

that if I have something more I can confirm I will I will let you guys know peace I'm going to play us out as well hold on let me play us

(2:04:27) [Music] out7 breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone missing I remembered the line from the Hindu scripture the bav Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed

(2:05:35) form and says now I am become death the destroyer of worlds

Transcript:

(02:48) hey everybody what's up whoa whoa hey everybody how's it going hello to the uh Nut Job stalkers on **Reddit** who are watching because they are completely obsessed with me oh hey Bernie sorry man I'm 100 emails behind at the moment um I'll reply to you tonight man uh where's my oh this is it here I'll make sure I got that up as you can imagine it's been busy man but I will get you um a lot of people want to talk to me still pretty amazing uh Bernie where's the here it is here's the

(03:54) email yeah Bernie we'll talk um man I'm pretty full dude I'm pretty full lost frequency qu podcast nice dude yeah lost frequency you can send me an email if you want um reality is looking at my look at my calendar like I I'm booked like pretty much all the way to Christmas I'm not trying I'm trying to take a couple days off from podcast as well so it's going to be tough but you can send me an email uh if anyone wants to email me you can email me at MH370 xpron um most recent updates I was just

(04:43) sent two videos of interviews with uh **Jonas** Dior dioro whatever his name is and it turns out that he is actually a VFX expert who actually uh is very good with manipulating clouds it turns turns out which now I'm really questioning to what's going on now with this why are all the people who are involved in finding these cloud pictures VFX experts that are familiar with the corridor crew something is not right here at all guys something is not right should we watch the videos together I want to see what he says here so

(05:20) actually very heavily relied on um photo manipulation in the photo manipulation expert he's a photo manipul ation expert who is expert at manipulating clouds beginning because I didn't know how to utilize digital painting or I didn't actually didn't even know digital painting really existed very heavily relied on um photo manipulation in the okay guys I'm starting to get

really suspicious of this guy now now I'm starting to get really suspicious of this guy one more time for yeah I'm going to

(06:00) have to clip this to digital was a little bit awkward for me um so I actually very heavily relied on um photo manipulation in the beginning okay hello clipping hello going to clip that one up folks going to clip that one so part of the reason why you don't do pranks and hoaxes on people is because then the world looks into your background and then they find out stuff like about you which completely discredits you in my opinion this clip alone completely discredits this guy he needs to delete his video immediately he needs to delete his video

(06:41) immediately he's Associated website owner knows the corridor crew can manipulate clouds has a background of manipulating photos and doesn't want to take the money because he doesn't want to have to sign an affidavit so **Jonas** if you're watching you've completely discredited yourself please do the right thing and delete your video video please do the right thing and delete your video the fact that you're dodging all questions right now as well is not a good look man people are asking you questions about

(07:10) these images that we can't find and you're dodging them on Twitter why am I getting posts that I'm about to show right now why are you making posts like this on Twitter sorry there's too much toxicity for me to keep engaging the topic I did what I could yeah you shared a video that you should never have created because from an anonymous email this is not how people who have nothing to hide act this is not how people have nothing to hide ACT people have nothing to hide act the way that I'm acting where you

(07:44) make yourself fully available to everyone all the time none of this is adding up we why can't we find these images on Torrance that have all of the images all from CG textures.com and we can't find your images out there anyway I'm going to clip this thing of you saying that you heavily manip you heavily relied on photo manipulation to digital was a little bit awkward for me um so actually very heavily relied on um photo manipulation in the beginning because I did heavily relied on photo manipulation

(08:24) wow just wow how is it that everybody is finding this stuff or all VFX experts that are experts at photo manipulation I mean I trusted this guy but I'm just getting the weirdest vibes from this guy and he had all his stuff ready to go for like why he was on this flight from 10 years ago and his passport like okay I I mean I don't want to like destroy this guy's credibility it was not my intention in this but he's now dodging questions he won't delete this video that he made where he has no

(08:57) reason no reason whatsoever to get involved in this just because you took the pictures doesn't mean you need to make a **debunk** video you should simply just send the pictures over to somebody else yeah those martinis definitely hit me a little hard yesterday so let's go ahead and clip this make sure we got a good clip of this I didn't want to come after this guy I really really didn't but something isn't adding up here guys there it goes okay let's see so actually very heavily relied on

(09:53) um photo we didn't get the right clip Jesus okay I guess we need a couple more seconds seconds well thank god kim.com thinks he's legit I want to be clear I have nothing against kim.com but uh I got to go with my own feelings on this one man me um so I actually very heavily relied on um photo manipulation in the beginning because I didn't I think I wanted a little bit better than that let's cut off one second from here there let's try this out I just can't believe there's a clip

(10:59) that says he heavily relied on photo manipulation and I have people telling me not to trust this guy and stuff like that people that are saying they know stuff like I don't know man I don't know who to believe what to trust anymore even kim.com telling me we should give it up like what explain to me why they're where the plane is man let's dra more time so actually very heavily relied on um photo manipulation in the beginning well that should be good enough I don't know if that's hopefully

(11:42) that'll post correctly on uh Twitter where it's going to go where it's going to go I'm going to save these just in case I need these later these links okay wow yeah people are fighting back man I didn't find this directly other people found it just a heads up oh I didn't even I wasn't even showing it I mean you you guys heard it though let me switch over to full screen view it' be funny if I just showed DMS right there know how to close that there apparently another one as well where he

(12:25) talks about how he's a cloud manipulation expert it's two and a half hours though so I don't know if we're going to be able to dig through it somewhere in this interview of 2 hours and 30 minutes he manipulates clouds as well let's see if we can find it just looking through so I actually very heavily relied on um photo manipulation in the beginning jeez man that is a that's a brutal clip folks so actually very heavily relied on um photo manipulation in the beginning guys the guy who who's making

(13:08) videos to **debunk** is relying on photo manipulation he's a photo manipulation expert I'm going to send this to kim.com I'm not even going to put it react I'm just going to send him the video I just want to see what he says if he responds I don't think kim.com is going to respond to me ever again but that's fine I just don't really care hopefully that will even add more credibility to the fact that I don't care what people think about me at all yeah let's see what we got going on

(14:28) here where does he do the clouds I guess sort of a vignetting so you are merging the layers uh pretty often when you have uh some complicated scene and uh there's something that you have to add and um 2D animation so not 3D and um I was doing the backgrounds for my animation film and um I was just like oh this is taking so long I wish there was a way to do stuff faster than just drawing it because in that time I had no idea but I did not know what concept art was I did not know what textures were W he's a talented nowadays guys that he's

(15:14) a talented expert at my age that I had back then know all this stuff I didn't know any of that stuff and I think through some blog by accident I found out about CG textures and so I went

on the site and I was like you think that there's context that's going to make that sound good dude literally says that he relies on photo manipulation what what context could make that sound good Adam wow what's this you know all these I'll I'll literally post the whole the thing I don't give a crap of interesting

(15:43) stuff that I can use um and you know like I started playing around with it and trying oh the **redd**itors are here and they're angry they're angry that they're hey if you guys think it's **debunk**s go away I think that if somebody can be discredited this easy easily and that they have a literal background in the thing that we're thinking might have happened that is perfectly reasonable he can answer for himself the fact that he's running away from all questions right now does not look good the fact

(16:14) that he hasn't deleted his video yet looks extremely suspicious why is this **Jonas** random guy who just was notified about the case making 20 minute videos like this about the pictures why is he doing that right afterwards walk me through that if I'm the person somebody messages me and they're like hey there's this super controversial thing that we're trying to **debunk** here we found some of your pictures the last thing in the world I'm going to do is get directly involved that's the last thing I'm going to do I

(16:50) would literally go I need to know what's going on here I don't want to get tricked into this something I would say hey here's the pictures you guys go do it yourself right that's what I that's what what a normal person would do that's what a normal person would do a person who has expertise in manipulating photos and updating clouds sort of pretty weird blended into um my background so like wow this is going to be a massive time saer which it was and um back then there was still a forum on

(17:20) the on the website and so I went into the forum and and I said like oh wow it's really great and stuff to the things that you guys do here um but would you have any pictures of pipes I was looking for pictures of um of like industrial pipes and the guy who owns the website Marcel who's now a good friend of mine he went that's the guy he just mentioned the guy as his good friend as well that owns the website also yeah we need third party collaboration we can't trust the skype period here he is here here's him adding

(17:55) the images of the clouds highlights there there's only highlights in you you know this angle from the Sun whatever you know like mhm I think it's also about you know just moving uh away from your comfort zone and trying to to be better in with your with your weaknesses and trying to fix them and trying to develop your skills in the way you feel that you are not that good yeah and after you folks oh folks this is huge holy [ ] we got videos of this guy literally manipulating clouds and P in images and

(18:39) him and being a photo of manipulation expert you will just yeah **Jonas** buddy you're in trouble Man **Jonas** if you're out there watching you need to make a statement and you need to delete your video ASAP otherwise I'm going to have to come out saying that it's very possible that you manipulate the photos yourself this is really weird man this is beyond weird why would

this guy be getting directly involved in this and Jonas I'm just going to tell you straight up man if anyone finds out that you for some reason manipulated the

(19:13) pictures in any way at this point and put out a fraudulent video you're going to get sued for everything that you have in the rest of your life man this is wild man it's about this setting up everything ER everything needs to to to fit holy smokes man okay where could we I did not think so for the record I didn't find this other people have been sending this stuff to me because when you put yourself out like there like that people dig into your background they find all the dirt on you right and I've been nice to this guy and

(19:54) I've been messaging him about this weird sketchy stuff coming up and how the fact we can't find any of the Stu any of the pictures and he hasn't been responding so if he wants to do the right thing and make this stuff go away he should have deleted his video yesterday should have deleted his video yesterday now I'm just trying to think like do I just expose him completely with your with your weaknesses so I think and trying to fix them and trying to uh develop your this is more evidence than I could have

(20:31) ever hoped for for potentially considering that this guy faked the pictures I wasn't even looking for this I wanted to think this guy's legit but the reality is the story doesn't add up for these pictures being faked we already proved that it's that the picture the clouds are moving naturally so I don't know what's going on here I don't want to ruin someone's life but this is sketchy one of the only questions I asked him cuz I was sitting there talking to him I just thought like okay this is just

(21:09) weird how this is all going on right and then I said do you know the corridor crew and he goes yeah I've known them for 15 years I don't think he necessarily knew like I don't know if he knows them personally but the fact that he was just immediately aware and then I'm like well did you watch the have you watched a recent the video of though no no no I haven't been I haven't been watching recently or something like pretty weird man yeah I mean if he's a liar he's a really really good one is what I'll say

(21:49) if he's a liar he's a really really good one I mean the thing here's the reality about a poker players guys and telling if somebody's a liar no one ever can know 100% that's the reality that's the reality you can never know 100% of somebody's lying if you could then people would be able to win poker all the time right some people are really good liars now I'm not saying that Jonas definitely is a liar but this evidence is very very questionable very very questionable why are we finding images

(22:27) of him manipulating clouds and claiming that he is a expert at manipulation of photos why is this the guy that is coming out why is he making videos debunking the the videos and when when I talk to him why is he talking about how he knows it's a hoax and how like he thinks it's hurting the families like that's stuff that's not somebody who doesn't know about the case would say that's stuff where like they're invested right this is weird man yeah I mean you Dr voodoo you might be right man because I'm too trusy and I

(23:13) don't know maybe maybe man how come I can't T get this I can't put numbers in here to clip this I want to clip this scene right here what was this one hour materials are all there so you just 1 hour 15 your skills in in the way you you still feel that you are not that good yeah and after that's the one guys can I trust any woman in my DMs period for the rest of my life your skills and in the way you you still feel that you then not that good yeah and after you you will just it's about this

(24:20) setting up everything uh everything needs to to to fit uh to be to create a good picture because if if there is something that pop out and looks you know pretty not on the same level that the rest of the picture it's it just shows you that's not something's going wrong and you have to you have to fix it because the the picture you have to fix it because the the picture even if some parts are amazing and uh let's see what else he says here even if some parts are amazing and one fundamental stuff is I want see if

(25:10) he say anything more criminating here or or just uh not pointed accurately you you will see that the picture is is is not going to be that good as it has the potential so yeah yeah that's that's exactly right that's what I was saying before yeah yeah but also don't you know don't be obsessed about studying all the time I mean I'm that type of person wow I wonder what else is out there with this guy holy crap hey plun you're never going to post again have a great day so for the um mentally unwell **redditors**

(26:03) who are in the Stream who I know you guys are out there take your own advice and move on with your life don't be obsessed with me your obsession with me is borderline clinically unwell and I'm just telling you this uh I don't know why you guys are so obsessed but you need to get over me I'm not going to ever date you I'm never going to go on a date with you and take you out on a nice dinner and have a long conversation right um so you know just get over it guys no matter how much you hate the fact that

(26:43) we're looking into this case you have no control over the situation and you never will no matter what the more that you try to rage about it and rage about me and make up fake stuff about me whatever the more it's going to keep going it's literal psychotic Nut Job sociopathic Behavior just please grow up please I'm begging you for all of you **redditor** brains out there grow up get out of your parents basement go outside you know do something like a normal human being anyway okay yeah we're not going to address

(27:23) them anymore but I just wanted to you know talk to them for just a second because there was definitely a lot of these like nut jobs who are in watching here like raging seething on keyboards you know so you got to people definitely need to uh unplug the internet every once in a while okay cool um let me see if we got that clip worked and trying to to be better in with your with your weaknesses and trying to fix them and trying to uh develop your skills in in the way you you still feel that you are not that good yeah and after you you

(28:07) will just it's about this setting up everything uh everything needs to to to fit uh to be to create a good picture because if if there is something that pop out and looks you know pretty

not on the same level that the rest of the picture it's it just shows there not something going wrong and wow what a clip holy crap guys what a clip oh boy I'm not one to take people down but whoa whoa so I actually very heavily relied on um photo manipulation in the beginning me um so I actually very heavily relied on um photo manipulation

(28:56) in the beginning because I didn't wow thanks a lot flat times for the uh donation appreciate it man wow hey nice good job on the job interview fbw th6 appreciate you appreciate you man the Mena guy was hilarious yeah dude the men guy yesterday I remember he was saying that me 1 1600 planes crash per year [Music] boy man I mean I'm just telling you man **Jonas** definitely should be deleting his video definitely should be deleting his video that's just friendly advice people like why would he delete the video like

(29:44) dude well that's why you want the attention to stop man like then you should disconnect yourself from the situation right reality is like I don't know what's going on man I don't I really don't know what's going on I feel like we're in the middle of something that's very very huge and people are desperate to make this go away absolutely desperate to make this go away that's that's what it feels like is that the people out there are desperate to make this go away they will do anything to make it go away

(30:21) because this is the largest conspiracy in the history of the world right and uh yeah I mean the reality is we can't really blindly trust anyone man we really just can't we can't even blindly trust kim.com um you know even though I he took a huge leap of faith by putting that \$100,000 Bounty out there but then when he comes back and tries to get us to stop looking into the case I mean it it takes away from his credibility the reality is I'm never going to waiver again on this we we're just not going to stop until we get get

(30:56) them to admit the **truth** the government needs to admit the **truth** I I don't care about being killed guys I don't care I don't care at all I got over that a long time ago that would be a very desperate play that would incriminate them in What's Happening Here the only way they could pull it off is if they try to make it seem like some psychopath like one of these **redditor** nut jobs like attacked me like that would be like the way for them to try to pull it off they'd have to get one of these people who's like mentally

(31:20) unwell on **Redd**it convince them that like taking me outs the right way and have them come and find me you know yeah like where's the plane where are the people why is all the science checkout you know that's the reality and if it's fake the government should be able to come out and make a claim right this is we've had hundreds of millions of views hundreds of millions I've had over 100 million views myself so where's the where's the where's the government coming out and saying it's fake

(31:54) shouldn't they be able to say that these videos are not pictures of their stuff right the next time I see a I'm just going to tell you guys right now what we're going to do with that clip I'm not going to just push that push that clip out right now because I don't really want to start the attack against um Jonah **Jonas** the next time I see a community note on any of my content

that links to his video I'm going to post those those videos that's what we're going to do the next time so if you're a community

(32:30) notter you're a redditor out there who can't wait to community note my content with uh his video then you are going to be the one who's responsible for everybody coming after him cu the moment I post those videos people are going to be going after him big time and once again I don't want anything bad to happen to him but that's pretty damn wild man maybe different story if like there wasn't other weird stuff going on with this but there is guys I don't know how this works guys I don't know how social media Works how

(33:13) do I go to chats wait how do I go to chats oh my God that's a dog okay I don't think I'm getting honey potted but who knows man who knows guys how does this work does anyone know how Snapchat works you guys can't see this can you I hope not I hope not guys at some point I probably will

(34:17) talk about other cases right like the case is going to probably start going cold to some degree they're definitely I don't I don't know how Snapchat works man there it goes oh that that's that's a lot of videos people want to know I'm definitely going to get honey potted 100% there's no question I'm going to get honey potted guys no question I'm too weak friends I'm too your only chance is that love is to marry one of the Malaysian Witnesses so true so true um people ask why you can't do drugs

(35:13) when you have a security clearance what I mean should be self-explanatory but uh it's one of the questions I ask you on your clearance that they make you talk about is it okay to talk about this I think so when you do a security clearance there's like it's a huge process a huge process you have to fill out like a I don't even know how many pages like 60 page thing about everywhere you've ever lived uh you know you have to say this thing that you you never do drugs you have to do like any type of legal

(35:45) situations you've ever had you have to be on there um and I'm not going to talk too much more about the process other than just like that but it's it's really extensive I'm actually like what what would happen if okay I'll turn my phone off guys I'm sorry I'm being rude to you guys um and then let's let's do some stuff uh like I don't know if I if I don't get my clearance renewed whenever that happens um I'm not sure guys we're not linking MH370 to mh17 I'm happy to talk about mh17 but

(36:20) they're not the same plane uh nobody actually met the criteria for the Bounty um the Dan Islander I think a lot of redditors for some reason thought that the Bounty was for like debunking the videos it's it wasn't the Bounty for the 150,000 was to find the hoaxter and provide the source files meaning you have to provide their work so if you're one of these redditors out there who I know are listening who are like delusional or whatever your issues are like at least get the facts straight cuz I see you guys posting a

(36:57) lot lot of fake stuff on Reddit I I don't post on Reddit anymore but I check it every once in

a while because people message me and try to Honeypot me and stuff like that um but at least just get your facts right it's just it's kind of embarrassing man it's kind of embarrassing cool is it physics time what do we want to do as well yeah if you guys want to know my opinion

(37:59) on mh17 real quick it's pretty simple I was actually online when the **Russian** general separatist bragged I think it was on Facebook if I remember correctly about shooting down a Ukrainian plane and then 15 minutes later they deleted it because uh they knew it was a civilian airliner so it doesn't make any sense for that to be MH370 in any reality or any world okay so what do you guys want to do let's do a little vote yeah when is the generation Zed podcast going to come out I think that I think that he said that he made

(38:38) it available on his patreon but he was waiting to make it available out there for for everybody I'm going to talk to Keith Keith on the mic tomorrow yeah it was a buck missile launcher took it down not everything even though there's a lot of conspiracies not everything's connected folks not everything is connected um yeah two more podcasts tomorrow man it's going to be a lot of work it's going to be a lot of work man okay um so should we do science or should we do let's do a poll science or drone

(39:25) location okay there's a poll out science of drone location we've got the Drone location stuff up or I'll take other recommendations too whatever you guys want I don't care I know people love their science I don't think this Mount Fuji I think we **debunk** this Mount Fuji thing I think that the clouds can still form there not really sure clouds might be natural in that location not everything always checks out we just follow in all the leads be honest I'm not really a uh 911 conspiracy guy but you know what I'll

(40:10) just keep my mind open to everything this point when you're dealing with a conspiracy like this you you pretty much have to have your mind open about everything I want to talk about Mena Mena is the people that are really really full of themselves you guys can't see the pole should be at the top of the screen looks like people want to do drone location is winning pretty heavily Mena guys geez man okay

(41:25) hold okay let's men here um yeah okay Bernie I've got my email up I'll send you an email resp later we'll we'll figure out some time to talk Bernie for sure I can't wait to talk to you man love to talk about really whatever you want to talk about too I don't even really care it would be nice to have a little change of pace every once in a while honestly talk about the same stuff so much I'm curious when Elizabeth Lan's things going to drop as well she was a pilot she was is it appropriate to say that she's

(42:03) attractive from a podcaster probably inappropriate but I liked her she's a pilot smart intelligent woman also she had an accent I fall for girls that have accents for sure yeah I hear that xace was good I mean there was 100,000 people on it what do they talk about on the xace yeah flat times thanks a lot man so-called hoax are just happened to make MH370 disappear using rare exotic physics that actually work in real life what are the chances person was a master physicist an engineer okay we're going to do drone

(42:50) location it looks like we got enough people voting I think on this it's **sex**ist to call a woman attractive Ashton I don't think so I don't think so I want to know more about what happened on that space though okay I'm going to make a Twitter post with the stream information on it for some reason I think yeah I mean this picture's missing from the was not these pictures weren't crawled either like this is just weird man Jesse Michaels what's Jesse Michaels up to Martin scarelli we have almost more followers

(43:43) than Martin scarelli does yikes well that's that's that's tempting but I'm going to pass going to pass on that it's already 10 o' oh whatever 11 o'clock it's pretty late uh uh maybe I won't make a post for the uh stream tonight we're not going to be on long enough to make it worthwhile we'll do one for tomorrow let's do the Drone thing here oh people are donating well donating people ask me how much money I made from oh take it easy red pan I appreciate you bu uh people are asking

(44:31) me how much money I made from social media and stuff guys not very much money man I haven't even monetized I haven't even got any money from the uh from YouTube at all all these donations I haven't even collected any of it I don't even know how much it is and some of it may have expired I don't even know from Twitter I don't know maybe \$500 total over the last four months months I we've had hundreds of million over 100 million views and I gave uh a bit of it away I'm probably going

(45:06) to give away more of it as well to my followers for Christmas or to my uh admins and significant contributors for Christmas I was just giving them like \$50 Amazon gift cards do you recall a video that shows a whole being blown into a cloud after the event behind the plane yes yes we do know that no martinis tonight tomorrow's a work day guys tomorrow's a work day um but if you want to see the picture one sec guys I've got I'm getting spammed by a lot of stuff you want to see the hole in the cloud

(46:09) since you donated appreciate it for the \$5 um I me you once again you don't have to donate to get questions asked but I guess it does increase the attention I can't really deny that okay is this the one that's only a minute long yeah okay so we go near the end here so right about here where my mouse is a little hole is going to open up see that hole opens up there right here definitely something happening right there this is the and the high quality one is pretty clear too so I mean you guys see the clouds like

(47:00) shaking back and forth here too right like what do they fake that too look at this Distortion here that you see yeah this is and then what they're faking this mouse as well faking the perspective changes I just think a lot of people can't tell the difference between reality and fake stuff yeah it does **debunk** it Rob Gage in fact if you guys listen to the yeah and good night anybody who's leaving if you listen to the investigate Earth podcast today I mentioned how it feels like if this was an operation they started

(47:47) before our analysis videos came out because the analysis videos **debunk** uh the fact that the clouds they claim that the clouds aren't moving mov that means it can have been a 2d effect

right um where did I put that what's this one see here here you go okay whoever doesn't believe the clouds are moving you're about to be proven wrong just for the record when you're looking down from space clouds don't move left and right as fast as you would think especially when you're th kilometers away just so heads

(48:41) up can see the clouds literally changing oh this is the orb passing through you can see the clouds moving here right you can see that that they're not static can see this moving right here 100% moving you can see that right or what do you think that they slowly changed a bunch of the pixels around to make it look like they're moving like that like how long do you think this would have taken a make changing each pixel okay let's go back now we get over to this part oh that's the object wait where's

(49:23) the cloud moving thing is it over here somewhere hold here is okay so here's the cloud movements okay he draws lines so you can't possibly miss it you can see the clouds moving oh there it was I passed it like they're they're definitely moving 100% can see them shifting I asked **Jonas** have you looked at the video the clouds moving no I haven't looked at it I'm like well maybe you should cuz it's not like it's just shifting left and right like they're naturally moving why do any of stuff if it's

(50:27) fake no one can add any story no hoaxers is ever coming out guys no hoaxers is ever coming out let's just be real no hoaxers coming out clouds grow and Shrink as they move that's not a blur effect man that's not a blur effect like are you just like ignorant wake up man that's not a blur effect you guys are just like in your own head like the people that yell at me about confirmation bias are the ones literally just making up fake terms about how this stuff is done I tell you what go ahead and just apply your blur

(51:05) effect to the clouds and see if it accurately makes them move Jesus man **redd**itors are just literally the dumbest people on the face of the Earth there's really no other I there's just no nice way to put it there's just no nice way to put it just **redd**itors are just so stupid okay let's take a look at this I told **Jonas** to look at the stuff man yeah it's definitely not a blur effect these people man just place a just do a blur effect you just make up crap dude that have no idea what they're talking

(51:54) about thanks going go ahead and take that go ahead and step that I don't have a thing where the zoomed in

(53:23) copy of the uh cloud thing though so this is Port Blair here somewhere yeah I mean that's definitely within range they should have been able to see the plane from Port Blair 100% if panang can see it all the way out to here then their radar should be able to see it here as well unless it just somehow barely doesn't see it yeah thanks a lot simatics okay simatics I'll put that in my science stuff for later we've got a lot of stuff for science guys I don't know we're not going to get a lot done

(54:08) tonight on the science front I'm going to try to get some more sleep and it's not stay up

till like 3:00 a.m. or however late it was last night pretty late yo also if Martin's out there if you're out there watching Martin just keep my name out of your mouth man just keep my name out of your mouth I don't want to badmouth you man you know what you've said to me in DMS just don't say my name don't bring me up you didn't want to be part of MH370 don't be part of it go back to

(54:47) your own stuff go back to your own life do not bring me up it's like how much these people are obsessed with me is just getting freaking weird man okay for

(56:24) go wait I mean the way to rebunk this **debunk** is to discredit um **Jonas** because since he's the only one who put his name out there I'd prefer not to do that I really prefer not to do that but I I feel like he just doesn't understand either if he's an honest person he doesn't understand what he's putting himself into and if he's a dishonest person then it all kind of just adds up together okay let's see else we got

(57:41) here oops that's not what I wanted okay I have too many windows open [Music] okay for the people who want to know Punjabi Batman is trolling you when he says the videos are fake so just a heads up people thought that he was being serious he's not I just he was messaging me earlier I figured I'd check and ask him I better I better reply and also like if you're on **Reddit** and you send me like the the like you need help thing or whatever like you're going to get your whole account banned like I just I report that every time and

(58:44) they it's a 100% permanent ban every time so don't do that I mean I know that **redditors** are just that low but yeah uh no I'm not going to ask **Jonas** about any more other stuff than what I've already asked him he can if he wants to speak publicly I think he should speak publicly now at this point is the theory that Jones's computer was hacked and the fake images were planted I see a tweet from two hours said he said he had a backup on an external WS backup and the picks are the same I mean that's

(59:25) pretty weird to have all that but sure you know what I don't know maybe he was directly involved he is an expert at manipulating photos at this point the fact that we can't find the images anywhere else and he's the only source means that it's all in him now if he's not willing to delete his **debunk** then all unfortunately he deserves all the uh attention he gets the same way that I get all the attention that I get right the way that I make myself credible is I put myself in front of everybody all the time and let people

(1:00:01) watch what I do so that's really that simple man I gave him my friendly advice my honest advice straightforward I told you guys what my advice was it's up to him man if he's watching these videos he knows if he's watching these streams he knows the videos that I have that damages credibility pretty severely uh VFX expert that manipulates photos and clouds happens to be the person that is the person that's putting out **debunks** about this pretty weird man that also happens to know the corridor crew pretty weird

(1:00:47) man nobody can find these pictures on the internet you know post dat pre-dating the

uh the videos and it still doesn't explain why all the evidence and what happened to the plane refused to sign an affidavit saying he's not lying pretty bizarre man why not sign a true statement and take \$10,000 I'd take it I'd take it in heartbeat somebody where have me sign an affidavit right now uh no I'm not blackmailing here it is right here I'll let you guys watch I'll let you guys watch somebody sent me

(1:01:33) these these videos so I actually very heavily relied on um photo manipulation in the beginning did you get it should we watch it again so I actually very heavily relied on um you want me to post put right now so I actually very heavily relied on um photo manipulation in the beginning so actually very heavily relied on um photo manipulation in the beginning here's manipulating clouds in another video to be better with your with your weaknesses he's very accomplished he's good at it trying to fix them and trying to he's

(1:02:09) really good at manipulating clouds develop your skills in in the way you you still feel that you are not that good yeah and after you you will just it's about this setting up everything uh everything needs to to to fit uh to be to create a good picture because if there is something that pop out and looks you know pretty not on the same level that the rest of the picture it's it just you mean they out of context what context you think missing and you have I'll post the whole CLI I'll post the whole interview I

(1:02:42) don't care I got the whole interviews what contacts do you think's missing yeah the fact that he says the expert at photo manipulation is game over man that's game over the guy who found the pictures that supposedly have our clouds in them is an expert at photo manipulation and makes a video about it within like an hour of getting a random email this destroys his credibility entirely completely destroys his credibility you guys realize that right I mean I might just make a Twitter post about it on X right now should I

(1:03:22) just drop him on X right now guys like what are the chances of that exactly just so that nobody thinks I'm blackmailing him should I just post him right now okay I'll let you guys vote we'll let you guys vote vot we're going to let the Democracy take over folks should we post them now or should we wait and post them tomorrow or some other time

(1:04:33) you guys decide you guys decide you guys vote some people say wait till tomorrow I mean people are voting yes here so if you want if you want it to be tomorrow you better vote no I don't want it to seem like blackmail either so I don't want it to seem like blackmail so maybe it's just better to post it now 70 votes I would rather do other stuff but I'm going to leave it for you guys to determine no point waiting okay maximum

(1:05:39) effort looks like everybody's voting yes here we go yeah I need to post in now it might seem like blackmail you're right I I do have to post it now I think because otherwise it'll seem like blackmail I agree let's make sure it's like the whole clip here I want to make sure it's everything heavily relied on um photo manipulation in the beginning so actually very heavily relied on um photo manipulation in the beginning so actually very heavily relied on um photo manipulation in the beginning so I actually very

(1:06:44) heavily relied on um photo I'll just add the whole link here I'll give you guys the whole link I believe it's this one I mean I don't know what contacts you guys think it might be missing so I'll make sure I add it in the bottom I mean he's talking about his his experience man what what context do you guys think there should be what context could there possibly be man what just explain to me chat what what context do you think there could be missing I'm an expert at photo manipulation but I never did photo

(1:07:44) manipulation like what context could there possibly be there's no context that changes it I'll post the whole interview let's just listen let's listen listen to more of the interview so that together real quick I didn't like it I wanted to use my Mouse um I was studying animation at the time like I was really into to the animation so I love drawing you know um but the transition to digital was a little bit awkward for me um so I actually very heavily relied on um photo manipulation in the beginning because I

(1:08:15) didn't know how to utilize digital painting or I didn't actually didn't even know digital painting really existed and then um I think I discovered devian art and start what what other what else should I be there what else what else do you think there is other than that what else should I clip should I clip it longer clip it at 2:10 um I was studying animation at the time like I was really I'm just going to post a clip of the whole video and I'll just say the time where it happens I love drawing you know

(1:08:47) um but the transition to dig to 2D animation oh yeah I've already clipped the part about the manipulation of the clouds should I you know what let's use our thing and let's make let's see if we can use our video software here we can maybe tie them together the longer clip doesn't take anything

(1:09:53) though yeah it's it's 2:21 as the time stamp you can just see it right down here at the bottom of the screen so I love drawing you know um but the transition to digital was a little bit awkward for me um so I actually very heavily relied on um photo manipulation in the beginning because I I can clip it better if you want I mean I just okay I'll you know what we'll do a better clip just cuz everyone's freaking out thinking that it's not fair or something I don't know I'm going to clip it at

(1:10:28) 2:10 whatever why not right 2:10 use my Mouse um I was studying animation at the time like okay I can't use my Mouse um I was studying animation at the time like I was really into 2D animation so I love drawing you know um but the transition to digital was a little bit awkward for me um so I actually very heavily utilize digital painting or I didn't actually didn't even know digital painting really existed and then um I think I discovered devian art and started putting my up there and um yeah slowly the the ball

(1:11:28) began to roll and I got comments and likes and shares and all this stuff and um yeah then commissions started coming in and I think by 2011 I was working on my first film what film was that studying animation at the time like I was really into 2D animation so I love drawing you know um but the transition to digital was a little bit awkward for me um so I actually very

heavily relied on um photo manipulation in the beginning because I didn't know how to utilize digital painting or I didn't actually didn't

(1:11:59) even know digital painting really existed and then um I think I discovered devian art and started putting my my crap up there and um yeah slowly what's going on chat uh who donated thank you very much for Boomer fat firm handshake thanks a lot man appreciate that okay I think we're clipping it right now we haven't made the Twitter post yet from 210 to 226 is fine yeah that's about what I did I I've made it a little bit longer no he didn't just take a picture he

(1:13:04) tried to **debunk** the videos with a YouTube video that has a million views on Twitter and then claimed he didn't want to be part of anything it's not really it's kind of contradictory man it's completely contradictory for being honest you had I didn't like it I wanted to use my Mouse um I was studying animation at the time like I was really into 2D animation so I love drawing you know um but the transition to digital was a little bit awkward for me um so I actually very heavily relied on um photo

(1:13:41) manipulation in the beginning because I didn't know how to utilize digital painting or I didn't actually didn't even know digital that clip doesn't feel right what is wrong with this clip like that clip's not right let's try again yeah I mean he build a 20-minute **debunk** video guys if he want to be involved he shouldn't have done that I've told him several times he should delete his video if he doesn't want to be involved he doesn't seem to care so it's up to him then I'm posting it because I don't want

(1:14:25) anyone to think I'm trying to Blackmail anybody I just found these imit videos like probably right before I got online here tonight yeah this rate it's going to be a while till we post something huh I don't know what digital painting is I don't I don't know any how to do any digital stuff I've told you guys I can barely even put a video together I'm like I was really into Tod animation so I love drawing you know um but the transition to digital was a little bit awkward for me um so I

(1:15:06) actually very heavily relied on um photo manipulation in the beginning because I didn't know how to utilize digital painting or I didn't actually didn't even know digital painting really existed that's the clip go I love drawing you know um but the transition to digital was a little bit awkward for me um so I actually very heavily relied on um photo manipulation in the beginning because I didn't know

(1:16:12) how to utilize digital painting or I didn't actually didn't even know digital painting really existed I think that's pretty solid that's pretty much perfect clip right there yeah probably he doesn't say he's an expert you're right let's make sure we're not I was really into Tod animation I love drawing you know um but the transition to digital was a little bit awkward for me um so I actually very heavily relied on um photo manipulation in the beginning because I didn't know

(1:16:56) how to utilize digital painting or I didn't actually didn't even know digital painting really

existed time like I was really into Tod animation I did this is this is pretty much a quote it doesn't have to be an exact quote should we just should we fully quote him should we just fully quote him is that the better way to do

(1:18:08) it should we just quote him someone says should we just quote him I'm like I was really into to the animation I love drawing no um but the transition to digital was a little bit awkward for me um so I actually very heavily relied on um photo manipulation in the beginning because I didn't know how to utilize digital painting or I didn't actually didn't even know digital painting really existed time like I was really into 2D animation so I love drawing you know um but the transition to digital was a

(1:19:04) little bit awkward for me um so I actually very heavily relied on um photo manipulation in the beginning because I didn't know how to utilize digital painting or I didn't actually didn't even know digital painting really existed time like I was really into Tod animation so I love you know um but the transition to digital was a little bit awkward for me um so I actually very heavily relied on um photo manipulation um so I actually very heavily relied on um photo manipulation in the beginning because I didn't know how to utilize

(1:19:41) digital painting or I didn't actually didn't even know digital painting really existed time like I was really into 2D animation digital painting or I didn't actually didn't even know digital painting really exist Ed time like I was really into to the animation so I love drawing you know um digital painting or I didn't actually didn't even know digital painting really existed time like I was really into 2D animation I love okay direct quote is better right that way it can't seem like

(1:20:13) we're saying anything incorrect I don't want to be taking anyone out of context here yeah sorry about that I had to I had to quote it think we just posted just straight up like this right manipulating his quote by directly quoting him in

(1:21:19) context how am I manipulating this quote I think we're just going to post it like this right I want to make sure that everything is directly what do you mean manipulating the quote what what are you talking about it's literally verbatim you're manipulating this quote by posting this quote literally verbatim in context full full context what do you mean there's more than one quote it's literally his whole the whole thing that he just said he never brought it up which is pretty weird doesn't say oh yeah I'm an

(1:21:53) expert at photo manipulation he talked about okay I'm posting it chat you guys are being weird man there you go you're being weird chat that uh the **truth** can't be defamation my

(1:23:18) man you guys should probably check out what defamation means think that the **Reddit** are angry right now huh hey guys nobody made **Jonas** make a video guys nobody made him do that no one made him make a **debunk** video man it's not that he thinks he did he 100% did more than just respond he made a **debunk** video so he's going to lose all his credibility for the rest of his life it's not my fault we got more should we post the next one or should we save the next one I don't want to I don't want anyone to think

(1:23:59) that I'm trying to Blackmail anyone I'm just trying to put the information out there as soon as possible I'm just posting the facts man yeah literally put quoting people in contact is not what defamation is think that **reddit**ors are about to start seething pretty hard right now going to start seething pretty hard how could I ruin someone's career he's the one who's making **debunk** videos no I think I'm just going to I don't defamation would be if I add my own editorialization I'm just going to

(1:24:57) post the stuff with him uh in making his own um I mean it's just him just it's him being quoted man I think it's pretty clear why it's important I don't think I have to add any context on this one uh Nathaniel I don't think I have to add any post the next one too yeah coping and seething will commence now yeah I kind of want to let this one Maul a little bit though you know oh he talks about manipulating clouds yeah I think we let the other one

(1:26:08) marinate a little bit I don't want to go too hard just yet everybody knows I have the other one I'm going to post it I'm not asking him to do anything just for the record as well I did not know these videos existed of Joon until after I had already asked him to take down his video the only reason why I asked him to take down his video is because he didn't want the attention and he was complaining about the attention and I told him that you shouldn't make a **debunk** video that puts you in the center

(1:26:38) of attention if you don't want the attention I've been very clear with **Jonas** from the very moment I talked to him what he was getting himself into Cena bite you're gone from the chat buddy you won't be posting here ever again go back to **Reddit** go cry about it somewhere else go cry about it somewhere else somebody's asking about MH370 and Jesse Michael space we should go take a look at that yeah now all of a sudden the coping

(1:27:45) and seething begins zero followers goodbye if I go and take a look at you posting my thing and you've got zero followers you're probably going to get the boot let's listen uh that video itself it's tough man I'm not a VFX expert um a lot of people like have him on have him on and like it's tough because I'm I spend a lot of resources per each video and it would be back if it like turned out to not be true and I like you know we like we put out like this big son of kind of production around around the thing um I

(1:28:33) don't know I mean Salvatore P kind of jumped on it and was like you know this is this is definitely like terrestrial Tech within dude like spicy sort of this is is somewhat damning and it seems like Ashton's even kind of said you know this this has been sort of falsified like something that I've heard in regards to AI that nobody's really been talking about um I can't remember if it was in her newest book or in like one of the recent podcasts but Diana Pula talks about how one of the ways she thinks AI

(1:29:07) is like going to affect disclosure is the fact that like there's going to be technology to unreact all these documents that have already been put out there I was kind of wondering like what you think the timeline is on that and also like it's weird like I kind of agree in the fact that you said like disclosure is not on their timeline and the like the bill and everything seems sort of

like bread in circuses because we got everything from Jacob and his emboldened speech or whatever you guys can see that I'm in

(1:29:37) the xace right [REDACTED] and then we also have I don't know if you saw but uh Bob Bigalow was just on Jeffrey Mishkin for a few interviews and when one of them like they brought up the imminent domain thing that was in the bill and he actually laughed and he said like matter who comes after it Congress or whoever I'm going to probably take off the Bounty I'm going to take the Bounty away you're never going to find it I just kind of wondering what your thoughts are on those things thanks yeah I've heard

(1:30:04) similar the reason I'm going to take the Bounty away is I think that it might be um causing people to make fake stuff you can't do that if it's a private Corporation and I don't want to be I don't think there's coming forward again whose names get tossed around constantly it seems like some times they were literally talking about me a second ago um this is real Martin Scarelli right here I don't know I don't know what exactly to to make of uh their abilities to actually kind of take over

(1:30:31) how do you say his last name correctly how do you pronounce his last name i Ross kard I was watching a Kad interview the other day and he brought up a really interesting point that I think is actually more impact on this than the others because if they've got a contract with the government then if the contract is written with any sort of formal structure the government able to call stuff that was handed over but Ross actually mentioned private companies private aerospace companies that have done recoveries of their own Val of

(1:31:01) apparently nonhuman craft and so if a private company did the retrieval and if the private company didn't declare it at the time that they retrieved it then that would be a real eminent domain problem yeah i' I've heard him say that too and there's like meteorite law and stuff I I think that's the exception to the rule I think this stuff was collected around Atomic stuff generally and was collected via that secrecy protocol and then doled out via the Pentagon to these companies to work on

(1:31:31) and so on the flip side of like you know I think in some ways like these these companies were like asked and like they you know and were kind of put in a tough spot or whatever and then now they just they gotta they got to give up the goods and and yeah I I don't I don't have a sense on like the government's agency or ability to sort of I need 150k nobody's going on to collect the bounties so it doesn't seem seem necessary honestly Turner can can just uh you know work through McConnell and just do this you know it's it's it's

(1:32:02) it's it's so ridiculous but uh I don't I don't I don't know the question like operationally like if the thing had passed um would would the craft have actually been been seized it's like it's really how martinelli linked to this exactly kind of confused this is like uaps right does he is he into this stuff um you know atomic energy act CIA doled out but yeah that account mess me by mention though quickly on that point when um we worked on government contracts in in that area before um and

(1:32:33) I've had it clarified by other people that audited the did as well that yeah I AG have to meet a certain set of requirements such as ISO accreditation and stuff like that to do work for the government so ask if they have questions for me won't talk too long one thing I've said for a while is that's the Avenue where the Congress should be able to have proper oversight because the contractual misadventure you know area I don't have a way to put my people should have oversight for and I've always suggested

(1:33:03) that put my that's the area they should Target to try and you know define whether these special access programs have proper protocols to Define National Security you know protection of equipment uh protection of secrets to other governments so I you know just to mention these companies have to comply to these things they might not pass the audits but they have to have the systems in place and that should be fully traceable provided the government is giving the you know the right which they should have as the contract owner to be

(1:33:34) able to inspect the contracts and validate their you know the proper processes have been followed SC yeah I wish this were an actionable conversation in the bill was was going to pass and that was going to that was or the bill was going to pass in original form rather it was going to happen but uh yeah um um interesting traceability I don't know I don't know maybe Big's right maybe you're right I'm not sure um I think I know we were just talking about MH370 so I don't what what's your your take I

(1:34:05) know we were texting oh yo yeah what's up man yeah nice to hear you talk to you Jesse also I see Martin skelli in the chat it's just kind of blowing my mind because you know I know what the heck anyway welcome nice to see you man nice to see you dude um yeah I was just going to see the people have questions I mean reality is So This Cloud **debunk** came out a couple days ago I made a statement on it saying that these clouds do look to be like you know similar if not exactly the same as the ones in our videos and a lot of stuff

(1:34:33) has come out since then um people haven't been able to find these pictures on like Torrance that were like full rips of the entire website from the old uh old website that uh predate the videos so it's just a little bit odd in that respect and so now I've kind of backed away from it a little bit in terms of my previous state St Ms and I think the just be reality of this now is especially because of like the nature of how big this conspiracy could be in terms of people don't know like the US government being implicated in The

(1:35:02) Disappearance of MH370 um that I think the US government needs to make a statement like if the videos are have been faked to some degree somebody hoax them for whatever reason the list of requirements is like pretty long and it would basically have to be a state actor in order to pull it off so the if they're fake and somehow these clouds are in our videos here then I think the government should come out and say yeah these are fake they we definitely didn't see the plane despite having spy satellites staring right down

(1:35:29) at it um and otherwise they should just come clean with it now I don't know if they'll do that but that's my opinion on the current situation and for the record for everybody listening

like I will not stop investigating the case until that happens um you know I think that there's people have so much to lose for this type of situation I think that Jesse can kind of understand this too related to the David grush stuff as well where like if this stuff comes out like people have been lying people have been ruining

(1:35:56) people's lives people have been probably violating the Constitution we've probably been misappropriating money why we can't pass any audits so there's like a lot of reason to for people to lie about these videos any questions on that no it's interesting man I mean I know he spoken I just I I don't know what to make of of the whole thing I mean it's uh the videos as possible what's that go go for it hi hi Ashton I haven't spoken to you since um all the drama um but I wondered you'd

(1:36:31) mind if I just ask a couple of questions um firstly for those who don't know but they probably do know kim.com kim.com was so convinced by all of this he actually put money up for somebody to **debunk** it um so I just want to show the strength of how resilient and how excellent particularly Ashton was in probing and going deep into the whole scientific makeup of this to make sure that it wasn't **debunk** if somebody like kim.

(1:37:06) com can put money behind it that's pretty solid um but I don't think and I don't believe it has **debunked** everything to me it **debunk**s The Disappearance of the plane at the end part of the investigation but it does not **debunk** the fact that I believe the US they were involved with it and probably behind it that doesn't absolve all the weird things happening with amasian government the Malaysian Minister himself on tape it doesn't **debunk** leg fact that the American Military have that type of Technology because a lot of other people

(1:37:39) came forward and demonstrated it being used or had evidence of it being used in other places and I don't think it **debunk**s the fact that there were a lot of pieces of evidence that came forward from other physicist scientists whatever of a lot of the technology that ashon talked about that I personally still believe has a lot of legitimacy and for me was a bit of a scientific discovery it certainly made me go off and look at certain parts of physics that I've not even known of before so I just want to

(1:38:12) say thank you and thank you for the honesty behind it yeah I appreciate it I think just to respond to that too I would say that and I'm just I'm an investigator that's just been following the case right I people think that I'm emotionally invested or something but the reality is that I'm not I just want to know what the answers are and so let's just say hypothetically these clouds uh **debunk** the satellite video or if people think this zap from a 9s video game **debunk**s the technology for some

(1:38:38) reason like that still leaves like 10 pages 12 pages of evidence that we have of proving that satellites are staring at the plane proving there's no way this plane could have crashed into the ocean without leaving a debris field with no acoustic detections no black boxes is in the most expensive and extensive search in history not finding one piece of the plane right so there's there's something wrong here even before I saw the videos I knew the United States

government probably had to know more I would

(1:39:01) honestly be relieved if the technology part was fake I would be relieved if the orbs and the zap were not in this video because I think that if they weren't then nobody would question whether or not the videos are real they'd be like yeah Ashton have you ever have you ever entertained The Meta conspiracy that say it was a state actor that produced the videos because they were trying to distract from the fact that some very more prosaic funny business was going on around the you know whatever Precious

(1:39:28) Cargo was on that player like that you know the thing was sort of taken out like you create UFO videos at the height of UFO Mania and you know send people off the trip this is me totally speculating I have no idea no no that's totally a reasonable uh question people actually ask that a lot like well what if a state actor did it right and I think that there's only there's a few problems with it first is like first of all where's the plane right like we didn't find a plane anywhere um but the

(1:39:53) other issue is like with respect to the thermal video we see this forward- facing gravity engine and we see this non-radiating barrier around the orbs and it's like nowhere in any UFO video that I've seen the last six years have I seen anything like that you know people talk about like okay these orbs are you know somehow manipulating gravity but like to actually see it in the video makes me wonder like who came up with this if like did they fake this because that's what they how they really work or

(1:40:18) is they you know you know I just can't understand like how they could be creative to come up with it and then the other part's like okay well which government did it did the US government do it to implicate themselves in in the dispenche of the plane because you put this video on CNN and CNN viewers with their CNN brains are not going to go oh it was the aliens that did it right they're going to be like no the US government's covering something up and you might say okay well maybe **China** did it the weird thing about **China** is that

(1:40:42) they hacked Malaysia the next day on March 9th because they knew something was wrong and they stole crisis Medi minute notes and classified information about the plane the next day so to me it doesn't really make sense for them to do it um and then **Russia** I just don't really think is capable enough like maybe I'm not giving them enough to credit but I definitely would entertain those ideas and that's another part where too if that's true then the US government definitely should be coming

(1:41:06) out and be like oh nope these were hoaxed by **Russia** to make us look bad or something I don't know what's your um base case like description of what you think happened and then your percentage confidence on that yeah I think it definitely is a fire event from the lithium ion batteries the 221 kilograms 500 lbs of lithium ion batteries in the cargo bay you know these things are super super dangerous a lot of planes were taken out before between like 2010 and 2012 related to these batteries I've got

(1:41:39) somebody who wants to go testify about it that has experience testifying on the hill that they run away lithium ion battery fires were hugely dangerous that they were like trying to get the safety regulations increased back in like 2012 and that makes the most logical sense based on the flight path of this emergency flight path where the plane's going dark turning around going to panang which is the correct airport you would go to in such a situation and then the question is like why Malaysian government says we've got the minister

(1:42:06) of defense like money Penny was just talking about admitting that they say that the plane was unidentified but that they knew it was a civilian airliner and they knew it's not hostile which makes no sense because if it's a hijacking scenario or even a pilot suicide scenario that's a hostile situation so how could they know that the only thing I can think of is they know the situation of the plane they know it's a fire they know it's an emergency event and they probably have communication and

(1:42:28) they probably didn't release the communications um and they only released the good night Malaysian Airlines flight 370 part and maybe that's the classified information that **China** stole um and then the part is well okay if the rest of the video is somehow fake it's like well why does it corroborate this event because the only reason why you're going to cover up something like a fire on board an airplane is because you did something else that needs to be covered up like the technology we see in the videos and

(1:42:53) then the other part that kind of corroborates it is that this plane is not going to last eight hours if it's on fire it's actually pretty miraculous it lasts for an hour and 20 minutes which is what we needed to do to get to the point in the videos where it gets to the nicobar islands at the exact location where the plane supposedly turns into the South Indian Ocean at exactly 1840 UTC at the exact time where they say they lost contact with it the very next day like there's just too much corroborating

(1:43:19) it so what's thing sorry quickly is the letter that Ashton received on a **foyer** request which was not only evasive um it chose some wording Ashton you'll have to read it along the lines of the national security reasons we cannot tell you anymore which to me was a bit of a giveaway that's pretty fascinating yeah what was that again Ashton the yeah so and then the other part is like well and I think Jesse we didn't talked like probably months ago but we were talking about like well why would you do this

(1:43:50) right and so we've kind of evolved our understanding a little bit too is that the 20 freescale semiconductor Engineers seem like the most likely reason why you would maybe deploy some technology to save the plane or do whatever for a cover up because they're directly tied to uh United States Aerospace and defense we found an NSA secur 2005 security report that talks about commercial emergence of room temperature superc conductive microchips that references free scale semiconductors nine different times in it talking about

(1:44:19) their microchips talk about how within s years they will be ready for production but only if the US government gets involved so you could say okay we're either preventing these

people from getting to **China** maybe this is some kind of Espionage event some elaborate started the fire got made them go here you could say they're trying to save them because they have some intellectual property that's very important um you could also say it's like a test because if this plane can't land at panang and

(1:44:44) trying to try to land in the ocean it's going to be doomed like this thing's going to rip apart everybody's GNA die so you could say that they're just testing it but the new scenario or theory that came up is well maybe they there's like one person on board This Plane that's like really important that has really connected right and they just call in their rescue me button and they're like hey you guys need to save me here like my plane is effed and we're all going to die and it could be one of

(1:45:09) those Engineers maybe it's Philip wood the IBM executive I don't really know but um that's the thing about this mystery is that like we don't know everything I can just present the facts in the best likely scenario in my opinion but but we leave it to everyone now I I think we should get Martin's take yeah I want to hear it Martin are you with us all I I have nothing uh intelligent to add otherwise I'd be happy to join okay fair so you want to next part yeah so the part about the leaker right

(1:45:45) so we're sitting there and or I'm sitting there one night and I'm going like I feel like I have a good idea just from watching the videos like what the mindset of somebody who **leaked** this video would have been they're probably US military personnel because the military assets that were seeing in both videos mq1 C Great Eagle cers system which is space based infrared system uh likely an operator because someone has to have the capability to remove the HUD data to use the rathon camera to add in

(1:46:11) using the onboard software this thermal layer that we see they probably had an emotional reaction meaning they were probably there that night because the first video that we can find says received March 12th 2014 which is just 4 days after the plane disappeared they cropped the Drone out of the satellite video and the satellite video was the first one that was released indicating that they probably weren't trying to damage intelligence there might be other assets that were cropped out as well they might have thought they were

(1:46:36) looking at UFOs themselves because the video says air satellite video airliner in UFOs and it took like eight weeks for the person to actually publish the video after they supposedly received it based on the up the publish date so they might have had to be convinced that this video is even authentic just like when we look at it even 2023 we don't even really believe it's real because we don't have the basis for it so I'm sitting there and I'm looking up people that have been charged with Espionage um you know will

(1:47:03) for attention of classified data will for attention of National Defense information and I it took me like two weeks I wasn't finding anyone I looked up all the famous people you know the Chelsea Mannings the Edward Snowden all these people nobody had a profile that fit and then all of a sudden I started doing date range searches and I find this guy Lieutenant

Commander Edward C Linn and I would say I'm 99 to 100% sure that this is the guy I first thing I started seeing is signals intelligence all over every single news article about

(1:47:28) him and we had been talking about how these assets are all linked through signals intelligence you can actually even Google right now Sig int payload and the very top hit will reference the mq1 C greasy Eagle which is the Drone he gets a code name for his arrest it's called Rogue Archer which is like this feels like something that would have to be related to intelligence or defense his deployment is super narrow he gets the assigned to this Squadron the vpu2 uh the Wizards which is like a they fly spy planes including the Lockheed

(1:47:57) Martin ep3 Aries 2 which if you Google that you'll find out it has realtime tactical Sig in and full motion video intelligence his job was actually to take the data from the onboard system and the battlefield situational awareness from all the videos that they have on there and relay it up to leadership the deployment started February uh February 2014 the month before the Malaysian Airlines he gets reassigned to March 25th 2014 2 weeks after the plane goes missing the investigation into him began April 2nd

(1:48:27) 2014 a week after he gets reassigned his next assignment was the brg so whatever they had him doing after that was like basically go sit on the bench and they're basically just investigating him and in May of 2014 he gets caught with two flight manifests in his flight suit from a deployment that included search and rescue code names so what other search and rescue could there have been in that narrow of a window of time the defense argues during the trial that the classified information in questions available on the internet and then the

(1:48:56) state or the government comes back and says well just because it's available on the internet does not declassify it um I'll kind of skip the rest of this but his charges were that would have resulted in life in prison from the Espionage charges was the first major incident of Espionage by an active duty member since the end of the Cold War they redacted his charge sheet he had a bunch of knowledge that they claim was useful to adversaries they tried to like OB fisc all the stuff related to him and turns out it's not really a spy case

(1:49:22) there was no evidence whatsoever that he exchanged any information from anyone from China um then he end up taking a plea deal uh after he they wouldn't let him out of uh like the pre-trial confinement and they wouldn't really show any of the reason why he was like a huge risk or anything like that and even after he took a plead deal he got 9year sentence and we actually found his appeal and in his appeal he even argued that the sentence was uh overtly harsh compared to other people they denied his appeal um he even argued that the people

(1:49:54) they had people testify as to how much damage he could have done to uh National Defense um which like I'd love to see what whatever this thing is it's available on the internet if it's not these videos you know um he ended up taking uh responsibility for the two offenses of classified information that he was actually guilty of and I think that's all he ended up getting from the uh the plead deal so I Foya the FBI and NCIS and I'll just read part of the NCIS response which they responded back to me

(1:50:23) in under a week I got a response from the head of government information sharing unit senior associate Council K Richmond and said you know in response to your freedom information request to NCIS Edward C Linn we found one investigation 2014 I'm just abbreviating right now we've carefully reviewed the documents and have withheld them in total under **Foya** exemption one exemption one protects from disclosure of information about matters specifically authorized under the criteria established by the executive order to be

(1:50:50) kept secret in the interest of National Defense or foreign policy uh so when you look that up you find out that yeah it's related to either National Defense or foreign policy the it's an Obama era exemption where he had opened up **foyer** request to make them more available and easier to get and yet this is one of the rare exemptions that can be applied where they can still deny it so if it's not a spy case like what did this guy disseminate if it's not the videos and why were they trying to throw him in

(1:51:17) jail for nine years after a plea deal interesting [ ] I don't know I mean if I were you I would look at the amount of search and rescue that went on in that period between end of March early April um 2014 like when you're like it has to be that you might be right I don't know I don't know how many cases like that occur in like a week or two period or whatever and so I'm guess there was a flight from Spain to France that disappeared many years ago it actually turned out to be through turbulence they

(1:51:50) knew almost exactly where the plane lost contact it never lost communication at any point and they still didn't find it for two and a half years just to give you some context yeah so are is that a that's like a counter that's you're just saying like A's raiser as a result well what what I'm saying is that there for me I haven't seen a plausible Theory as to why any actor would engage a type of you know Tech to disappear a public commercial aircraft an act of war against Malaysia or any of the other

(1:52:23) things that have been implicated which would have been acts of War I I was living in Malaysia in qual Alpa at the time when this happened so and and I was working in the aviation industry so I'm just saying um from a reality point of VI yeah and I I guess the other the other only small point I'd push back on ash or not push back on I just say it's like where you should look what you should look into is like how many cases of Espionage if if you **Foya** other cases of ESP like how many times do you get

(1:52:53) the exact same letter back uh and so you know if they a bunch of cases where you don't but it's it's almost like inherent to that sort of uh transgression where like if the guy is in trouble for like disclosing classified stuff or whatever be a monster you know like it would seem that you'd probably not be able to get to the bottom of that is a civilian trying to Avy it like in general and this is not this is not uh you know uh a reputation it's gonna fo stuff go deeper or whatever where like you know I think you

(1:53:25) should tomorrow we're gonna Foy us some more stuff I don't know like like is is is that not a generic response in that in that case I guess would be media reports that the American

government who were trying to send a particular poison over to Kim Jong Yan this is all reported um were using Malaysia as the airport and the base through which to Transit the bio um uh whatever is the stuff that they were going to poison him with because they couldn't get it through international air transit and it was in fact found in Malaysia in a

(1:53:58) Malaysian Laboratory um and the Malaysian government were under the assistance that they should support the US in trying to get this through the air Authority so they could get it directly to that's a press report I can't confirm or deny whether or not it was accurate but it was at the same time so I'll let others jump in but I guess is the question is the what how would that be connected so you have like room temperature uh super conductors on the plan and then you also have man I want do more science I don't know if we're

(1:54:34) gonna get poison I don't know like it just feels like there like a ton of take it easy to P Mash like if you were trying to construct like a coherent narrative what is that yeah I think that's the part where I can't answer right like we need the government to answer and that's why I want them to make a statement on the videos cuz you know like Kent said and other people say and people ask me all the time why would they do this where do they go like I I'm not a suici or I'm not psychic right

(1:54:59) like all I can say is that it makes no sense for this plane to have crashed in the South Indian Ocean this pilot suicide narrative makes no sense there's not any evidence like finding a couple pieces of debris from some random people 18 months later isn't really proof that a plane crashed into the ocean somewhere so you know I'm with you there like I I I guess I'm I don't know about the I'm with the [REDACTED] the pl there's so much weird [REDACTED] and by the way I think a lot of these Netflix docs are like Look Away

(1:55:27) type documentary like it's like you make a dock on [REDACTED] you want other people to like not you know the the Epstein equivalent or whatever so I'm I'm with you and then I guess I I I don't know like what my you know I don't know what your percentage confidence is but I'd be curious on like the video itself because that that's where I feel very lost and open-minded but I just don't know what to what to sort of make of it and if anybody else wants to jump in yeah could I just mention there's a lawsuit that's

(1:55:55) just been taking place a week ago where the families of MH370 have added another lawsuit and this is one of the reasons for for one of the better word to cover up there were serious deficiencies in the Manifest it showed 2,000 kilos of mangotin that weren't in season didn't exist at the time and the 221 kilos of batteries could have actually been 2,000 kilos uh there is evidence to suggest there was 2,000 kilos of batteries on board the ship I just wanted to mention one thing as well I've been part of

(1:56:29) trying to recover an underwater vehicle that um fell off one of our Platforms in the Black Sea we spent over a month with rovs over €1 150,000 at the time and we knew exactly where it fell from it was on a platform in the Black Sea and yet we could not find that thing uh within 4 weeks we spent too much money never recovered it tuck aviation industry there's been

23 parts that have been linked to a 77700 so far that could have been part of that craft and you know she that's some evidence but it's not enough

(1:57:06) evidence all I'm saying we for me the most important thing is not the answer it's how we're getting there and trying to support each other and be clear about the way that we you know how we get there how we talk to each other and how we think about it while we're well I agree I agree that's important sorry to cut you off Kent that's important just I can say one thing I think that's important but I think the answer is probably more important sorry no I I just I I the finding still

(1:57:34) out to this day that they don't know like the the conclusion is they don't know and that's 10 you know more than 10 years can I ask you one question who there thean government the fa every investigation so far has not come to a conclusion documentaries have but no official investigation has put a conclusion as to what happened to m370 it's still that's fair that's fair yeah just to kind of change topic a little bit I kind want to ask Jesse something and because I think that even more so than just the videos is a

(1:58:10) discussion about disclosure in general what it means and my personal opinion on the UAP disclosure you know act and what's been happening in Congress is that I don't think it's going to be very uh effectual like I don't think that A lot's going to come from it just because the stigma I think that's out there about aliens let's just be real about it and about UFOs in general like I talked to my parents about it who are older right and they're like what does this mean to me what do I care about with

(1:58:35) this right like one thing that I would advise on humbly is that maybe we approach it from the perspective of the conspiracy angle of you know where's this money going it's going to these third party contracts let's figure out like what they're developing these Lockheed Martins northr grummond Bigalow airspace Boeing even uh battel Institute all these people that are just getting billions of dollars from the government right like can we open up their books figure out the stuff they're doing

(1:59:01) because to me if they are reverse engineering uaps whatever then the public has a right to know but to be honest the only reference to aliens was the possibility that somebody would think the domes the three domes that was shown might be from a non-human origin now we know from last week from **China** who did a press release with a video about their unmanned drones that they're using and firing throughout the South **China** Sea that to be honest look exactly the same as what we saw on that video it's more about quantum

(1:59:33) mechanics and physics and electronics and progression in technology and AI that it is about aliens yeah and they're masters of Ip uh stealing and IP manipulation and all sorts of intellectual property theft so I wouldn't be surprised in if they have already started deploying similar technology hey guys I hope you don't mind if I uh jump in here real quick but I just wanted to follow up on what Ashton just said um which I think was just a fantastic point in terms of perhaps a more systematic approach um

(2:00:06) that doesn't necessarily zoom in too much on any one specific sort of event although I do understand the benefit of investigating single events especially if there's a lot of evidence to look into but I'm just curious where everyone here stands on you know a more systematic approach for example something along the lines of a select committee in the House of Representatives um you know like the UAP disclosure act the original legislation language was obviously very strong and a great step forward but in my opinion it

(2:00:35) was still very much a passive approach that kind of expects a lot of agencies to be forthcoming with the information that they have um and without you know subpoena powers and enforcement kind of powers uh that that would bring I find it hard to believe that you know these agencies would really collaborate without something a little bit more active um and in my opinion something like a select committee which historically has been able to uncover some pretty gnarly stuff um whether it's you know MK Ultra or project Mockingbird

(2:01:07) and those kind of things um I think there is something to be said for a select committee so I'm just curious if people here are also supportive of those kind of initiatives I'd say yes because look which is not far from where I'm sitting and my father who actually came from a town near Lo this an interesting conversation we're in 400 people in the UK what happened at Lo everything we add everywhere we go we add like 100 people found out had it not been for some very brave people doing it on their own

(2:01:37) expense pushing the US government again and again and again because things didn't make sense and I don't want Ashton and other people to give up on MH370 because I still believe that maybe something similar behind it Martin yeah so I can time in here I mean I think that like Jesse you know we've seen a lot of mainstream and of course the great T along uh we've seen a lot of mainstreaming of this idea and this these sort of questions and I'm sort of pivoting to to UFO for a second but like

(2:02:11) you know um you've seen a lot of people like V ramaswami who is my biggest investor back in the hedge fund uh days he he's a pretty straight shooter and I think that if there's somebody if Government changes to a point where you have people like vake uh maybe people like Jesse I don't know people like that in government and they're given unfettered access people like myself or who knows Tucker Carlson is rumored to maybe become a vice president in Trump's Administration could there be a

(2:02:41) group of people that is trusted within this community sort of just has cart lach you know one way or another tells the **truth** my fear is that and again I I hope nobody takes offense to this is that there's a community of people that's subset of this community that will basically not take a denial for an answer and if for argument sake of Jesse were given by personally by the president full gamut and it doesn't have to be Jesse I'm just picking on him for a second but it could be somebody else

(2:03:13) that this community trusts and is given full sort of ability to go through government files they come out and they say look there's nothing here um what I fear is that's not enough

for a lot of people that want to believe of course if they come out and say there is something here then we have the maybe the most momentous moment in civilization's history and it's it's really a big deal but the question is what happens if that isn't the case and who could who could be trustworthy enough to take that job on and V I think

(2:03:43) personally has said that that he's willing to appoint somebody to do that yeah no to totally man well I just don't care that much either way there's so much open source stuff that like I it wouldn't marelli might make me like him I don't know I wasn't the biggest fan of this guy but I'm trying to get past all my UFOs anduk with Witnesses ICBM security personnel and you know missileman radar operators who've seen stuff like what you know what about that what about you know all these historical cases and the John ma

(2:04:17) stuff like there's just so much bias that like for me my like belief in the existence of the phenomena is not at all predicated on anything the government says or or or or doesn't say um and then if they were to come out and say like what's that I was gonna say that helps a lot I mean it's obvious the government doesn't have a monopoly on **Truth** yeah ex exactly um and then there are like variations of things that could be going on inside the government um I believe Dave Grush and his testimony and I think it it cor it

(2:04:54) corroborates so much obscure reading that I've done so many other sources that like you know he's definitely not coordinating with where like I think that stuff's real as well uh if somebody were to come out and and say it I want to say something Patrick I'd be like you know go go [ ] yourself because you're probably sort of compromised in some way and so I'd look at it like you know gradations of you know how how how tied to special interests the person is and then if you know they're they're fully

(2:05:28) independent and they say that so they're you know they're not Edward Condon they're not Sean Kirkpatrick and uh these for you martinelly are people who historically I think are yeah let's just say like in Condon's case I think he was he was he was definitely kind of an atomic Insider oh now he wants to be involved with atomic secrecy um and so you know I think he was sort of incentivized to do something there and then you know I don't know what Kirk Patrick's story is but just clearly like to me being obstruction

(2:05:56) intentionally obstructionist so if somebody seems like a good a good faith actor um you know I'd hear them out but uh I I I do think that uh the government is in possession of of material at the very least and then I believe in the kind of ontological **truth** of of the matter but yeah I don't know if anybody else wants to try yeah can I I'm gonna kind of add to that like steal a quote or paraphrase something I think Eric resp not even a denial we need like why aren't the best Minds on

(2:06:25) this where are the we need a select committee of like the best physicists we drop the next one should we drop the next and also examine that idea to drop the next video like fundamental physics like **truths** that have been kept secret since World War II era which is a whole another thing right and like you said talking about like uh Thomas Townsen Brown and

you know even more obscure people like Emanuel Velikovsky and you know it's like okay there's something here here there is something like has it been suppressed and you know we need the

(2:06:52) best scientists and as much as I love you know the top down kind of aspect of disseminating of information and **truths** you know if the best scientists all had got together and started a YouTube channel we're like Hey listen this is what we found this is what we're finding and this is for the people I think I'd be just fine too you know people it's a different world we're in right now than it was 50 years ago so well I'd like I'd like to say that that has kind of been done on Ashton's

(2:07:21) hard **truth** he's gotten multiple scientists together that say that these videos appear to be real in relative to their theories and I don't think that any of the **debunks** that have come out have gone far enough to actually disapprove the videos and even if the videos were somewhat in question there is so much evidence that that something happened to that plane in that location that any of the **debunks** that have come forward have not described the alternative which is their proposed reality what happened to the

(2:07:57) plane in that location and I think that this what we really need to do is like ash you said focus on pressuring the government to make a statement and also finding a way to get the Edward C Ly if not him personally to make a statement some sort of way to corroborate the story I mean there's just too much about too much evidence about this story that I don't think a **debunk** of the video can really make it go away there needs to be an official explanation of what happened to that plane because it's obvious at this

(2:08:35) point that someone knows what happened to that plane yeah I think to me it's like the plane itself is interesting and then the the video is like I don't know that that feels really [ ] hard to dude F yeah it feels like this recursive like endless thing where yeah I mean the physics the physics inside the video of the the geodesics and the gravitational pole of the orbs and then you have you know the scientists that Ashton have talked to on hard **truths** that come out and say that exactly what they're seeing is what their theories

(2:09:12) are saying what type of quote unquote teleport telep uh you know teleportation would look like with the with the orbs passing through the clouds like this is not just some sort of hoaxer that went and it did it so like any of these types of come you sent me an email about why you got blocked and I think that you know why the video is fake it's like I'm not buying that because there's don't speculate on stuff you don't know Budd that puts the plane in that location if you're trying to do damage control for

(2:09:41) people looking weird can I say one thing uh to add on to what you're saying I think um I've only been following this for two weeks and I really appreciate space and the opportunity to talk but one thing I want to say is I don't know Ashton never met him never actually talked to him but he strikes me as somebody that if evidence came out that it was [ ] he would just say okay it's [ ] let's move on so I don't I don't know take that for what it's worth but um yeah I appreciate the opportunity

(2:10:08) to speak it's not worth much I mean he already put the statement out that said that not worth much it's not he said he was going to pull it all back I feel like his stat a little uh short-sided and early who because there's Ashton's statement he put St you're getting nitty-gritty man no he already put a statement out saying that he thought the video based on the evidence was fake oh it's fake so if you read my exact words I think you'll you kind of add in a little bit I'm literally here so you can

(2:10:37) just ask me my opinion right speak I mean it's fine but you know I think people Tri they will I think I was pretty clear about the saying the investigation wouldn't stop until we got answers and what I said was that I can no longer say the videos are authentic given the light of that evidence um and in the last 48 hours I think there's been a lot of Doubt as to whether or not those cloud images were really authentic that were out there so um I actually I think I regret making that decision I think I was a little bit pressured into

(2:11:04) it by kim.com who was basically our biggest supporter kind of telling me in private that I should come out and and make statement like that because otherwise it would damage my credibility the reality is I don't give a crap about my credibility I don't give a crap about what people think of me or anything related to that I got so many messages from people that I know are connected telling me that why are you giving up on this like you are so close to proving this and getting forcing them to make a statement people that were disappointed

(2:11:31) that I just realized it's not about me it never was about me you know and that no matter what until we get a statement from the government we can't stop you know now if there if the government comes out and says yeah we faked this here's the video files like okay that's one thing but somebody saying like oh I've got some pictures that magically just showed up after four months and I found them when some Six-Day old [Reddit](#) account was you know looking at some website and somehow was able to Rainman

(2:11:55) and figure out these clouds if you invert them or clouds that match like doesn't make any sense right the story makes no sense at all and so you know the way given so yeah go ahead go for it sorry I was just gonna say so that's the thing like the more I thought about it the more I'm just like okay like I just I can't get behind this you know like something it doesn't really add up here um and terms of that that case there but yes if like you know some some hoaxer were to come out print all the source files whatever right

(2:12:25) explain the situation I i' for sure would like you know move on from it it's not that kind of situation cool man one um buddy of mine that knows decent amount about satellite imaging uh said that the thermal overlay something he is not used to seeing at all and is highly anomalous and uh so that is that something You' thought of at all yes so the thermal is actually just on the drone on the mq1 C Great Eagle there was somebody else that made a post that dm' me as well that said their Buddy's an expert at those drones

(2:12:59) and they work for General atomics and that that drone video is accurate to what it would look like and that we know that the Ron cameras do have the capability to add a thermal

layer um those are very highly Advanced Electro IR cameras so from that perspective we don't see any issue and the thing too is that like uh we've just right before these cloud pictures appeared we actually posted two highly detailed analysis videos that show that the clouds in the satellite video are actually accurately moving and

(2:13:27) that they're being distorted when one of the orbs passes through it in fact right before the orb passes through it because this orb has this forward-facing gravity engine that we see that we've never seen anywhere in ufology so it's just very suspicious because that implicates the fact that we have the clouds moving accurately from a high altitude you know where it's not like they're moving like left and right they're like moving moving like up and down a little bit um you know indicates

(2:13:51) that you wouldn't be able to use a 2d visual effect in the background um and so a lot of the stuff it's really just a matter of the weight of the evidence of it now I don't want to make this all about myself but go ahead sorry ashon I was hoping to jump in with a question for you um and then I hope you really don't take this the wrong way because again I just want to make clear I think it's completely valid and I totally encourage the investigation of literally any case that that has the evidence to to dive into

(2:14:22) and I think the MH370 obviously there's something uh worth investigating there my only concern is that at least to me it seems like more of a downstream if you will for Life a better way of putting a downstream issue related to perhaps the more kind of fundamental **truth** that's being explored um if we consider you know again the testimony of David gush an extremely credible witness who's come forward and basically said forgot what I was ear all time is true uh essentially we are not alone we have the UAP

(2:14:53) retrieval reverse engineering programs he's given a whole set of let's say very falsifiable very ver claims he alleges that he has a list of Cooperative non-cooperative Witnesses locations where these craft are held uh where these programs are where do you see in you know it's it's I I hate to put it in these kind of terms but in terms of prioritization um let's say if we had the choice of confirming d gush's claims versus confirming uh what happened to MH370 um which one would you kind of

(2:15:24) rank in terms of priority and again I I'm not saying we shouldn't do both um but my my perspective would be that if we if we get a a binary answer especially if it's it's confirming David gush's claims it seems to me that it would lead organically also to shedding some light on on some of the programs related to to what may have happened with MH370 yeah no I totally support David gush I think that everything he's saying is 100% accurate to be honest with you now it's hard for me to believe

(2:15:50) that there's aliens or whatever here but you know I'm I think that somebody going in front of Congress under penalty of purgy is a really big thing so um I totally believe in his stuff and I I take this situation too where like one leads to the other right if he were to get that confirm sure I I 100% be clear I don't want to be distracting from anything else is out there but

also my opinion is that that will never happen they're never going to disclose this information in our lifetimes is my

(2:16:14) opinion and I want to ask Martin something as well based on his statement that he was just making like or have him think about this as well because I think he's around my same age as well and I think Jesse probably as well but um you know if we look back at the presidents that have all like going back to Clinton possibly that have all like said that they would disclose this information I think Obama said that he would as well I think even Trump on campaign Trail even mentioned something about it you notice

(2:16:40) it's like they got the call right after they get in office and all of a sudden they go quiet about it Clinton leaves even on record saying that he will go and figure it out and then like says I got blocked on every way which way right from what my sources have told me that I can't believe the random people that I've met related to this people that are connected on the inside as well that like there's a Waring faction out there that they have ways where they can protect it even if you try to disclose

(2:17:04) it that they can literally like put the stuff in a person's name and have them flee the country during an investigation so that no one will be able to figure it out it's like how do you battle that I'm curious to your guys thoughts and maybe Martin's thoughts as well yeah I mean I know Jesse I mean he can speak for himself but you know for me the world of like High Finance and politics mixes pretty pretty closely and so you know the the people that these are people that all need to raise money and they

(2:17:34) raise money from the same people every year and you know I think that again because of Jesse's efforts and others the mainstreaming of this topic is getting in the ears to a degree that is unprecedented of of the right people and people are interested in this uh you know and I think that this is something that people really care about and there are some honest people left out there that um will actually do what they promise to even though that's not what politicians are known for and I think if we ever are going to get some more

(2:18:06) disclosure from at least from the US government it's it's going going to be you know in the next several administrations probably not the last several because it just hasn't been that interesting to everyone and we've seen a fever pitch of of you know kind of the maximal interest in this and maybe it just keeps growing and growing but ultimately there'll be some interest in that and v in particular not just because of because I've known him for a long time but because he's very much an

(2:18:34) outsider where he said that he's going to fire half the government you on day one based on their social security number and this is the kind of person that I think is the Deep State kind of antidote and if there's any way to any sort of technology for a guy so it almost it's almost like I think you would need your own statecraft to to go within the the animals of government which is just an enormous amount of data it's enormous number of people you basically need a commission that had you know unbelievable power um you know I'm

(2:19:03) reminded of a friend that worked in the White House in the Obama Administration and I said's making like I said to him you know because you know White House pass he was able to get the year of the president he was an early backer of his and I asked him I said you know tell me about the conspiracy theories are they aliens etc etc and one thing that he said to me delete people's post just because we don't agree you know uh a leak happening for what we ate for lunch today we can't you know there's no way

(2:19:27) we could suppress something really Saucy like UFOs or or things like that you know we just don't have anything that interesting um relative to what the public imagination is and again maybe that's true maybe it isn't but the reason I'm interested in this um kind of thought experiment is that I do think you could create a group of people that are trustworthy enough to this community to sort of put it to bed one way or another and maybe that putting to bed so to speak is not a fully fif yes answer

(2:19:54) maybe it's sort of like and here's some data and again I think you have people like Trump and V that just don't care you know enough to to not do it and I think that they'd almost like enjoy and relish the opportunity to sort of thumb deep states in the eyes now again you know you sort of talk about this metaphorical call that certainly Rings true it does seem like somebody gets a call and then a president or something says oh okay now I see why we can't say anything you know and that's the sort of you know

(2:20:26) imaginary call that that may or may not happen I I certainly don't know uh but I do think there's a group of people that could get to the bottom of it that that would be trusted enough um and I do think that because you know these you know it would never happen I I think for Democrats but I certainly think for somebody who's so anti-de state so anti sort of government you know people like that are you know very few of them and generally when they say that and they actually become part of government they

(2:20:50) forget their rhetoric immediately and they enjoy you know being part of the the government and being part of the deep state so I again you know the other option here is the impossibility of actually being able to go through government archives you mentioned some ideas and some thoughts as to how they could be suppressed I think you know just the voluminous nature of government documents and things like that may make some of these materials Hard To Source at the same time you know uh a full commission that that would do this I

(2:21:16) think would be really interesting and again talks on on the campaign Trail you know to the extent that you know this is paired with donations from somebody very wealthy um you know it easily could be done uh those quck Pro cloes happen all the time people pay you know one guy I saw on the funding Trail for decades was the owner of the Jets Mr Johnson you know really good guy smart guy nice guy and a billionaire and would give money to Ramy would give money to just anybody running on the Republican side and lo

(2:21:45) and behold he he gives money to Trump he comes ambass um to the UK and you can

buy an ambassadorship it's it's that easy but would wouldn't you rather buy a seat pretty interesting discussion you know and I think if you donated 100 million bucks to a campaign you would get a seat on this commission and you know these politicians don't care about any of this stuff so descrip I think that you're right that there's this kind of like metaphorical like possibility of a quote unquote call whether that's from the

(2:22:12) head of the FBI head of the CIA who knows I don't know but like I do think that there is you know this option to actually push this through from a campaign legislative perspective Martin I totally agree toe proba show up in person but yeah you're right this this case needs to be brought to the Forefront not about is the video real is teleportation real is it UAP or is it government made basically the evidence that we have shows that the outcome of this plane someone knows about it it's most likely the US

(2:22:49) government if we can get a presidential candidate to say that I will declassify MH370 we can get the disclosure of this the UAP Community the UFO Community all the people interested in disclosure can then rally around it and if Ashton's wrong he'll totally admit that it's wrong I mean he's shown that he's capable of doing that but we can rally everyone together this around this and at least get this Cas disclosed because something fantastic happened to this plane or at least something deeply

(2:23:23) hidden I is a great candidate for it Trump's probably a great candidate for it as well I agree no one on the Democrat side is but if we can rally around this case and at least commit to finding the **truth** about this case I think it will make a huge difference and that's what we should do yeah real quick I just want to jump in and agree with Martin and say that um just let me I'll just say that you guys can jump in CU I was want to say that if you do have anybody that needs help in terms of ripping the information from

(2:23:51) the government uh on the political front let me know because I think that as you mentioned what it would take is going to definitely be a group of people that are coordinated that know what they're looking for that can jump in there and dig through the case and really bring the bring the heat honestly against some of these people because they're going to try to hide it really well and so anyway I just humbly nominate myself if you if anyone's interested Ashton um the video from the Drone was that was was that fear was

(2:24:19) that Fleer or was that that was the thermal video that was the thermal video or yeah so it's an electro IR with the overlay added on it the thermal overlay yeah okay and then do we have Fleer data on so it it most likely is a Fleer camera like these Ron cameras are like super Advanced Electro IR M mq1 or whatever so it is technically like forward facing or forward looking infrared I think yeah and then isn't isn't most forward looking infrared all like the nits videos just black white based on signatures yeah so that's where

(2:24:50) it's like the person would have had to know how the camera works and then remove that HUD data and then add that thermal layer over the top which these thermal layers I'd have to find my source for it but somebody looked into the cameras and showed that there's like a

rainbow pet from those cameras they can add in there just for this but you have to put custom settings and they do it for situations like we see in the this video with the orbs and stuff so you get more intelligence about what you're looking at there to let certain

(2:25:15) stuff stand out like how we see the heat signal that's um in the monopole of the orb where you see this like partial heat signature on one side of the sphere um so just stuff like that in general is the purpose so you'd need some sort of postprocessing with the color pet or whatever so somebody would need to be intimately knowledgeable of the system itself yeah and if I was putting a team together like I would look for videos like that my guess is there's other ones out there that are classified right that

(2:25:43) are not probably in the public sphere but that you would need people who are experts that have ndas that can go through that stuff and you know I think the big question like I think Jesse you and I have talked about is like how do you get this out to the public in a safe way like given the implications of this technology and this is the last thing I'll say I don't want to uh monopolize this but you know what I tell people too is like is that a particular where people say you know the aliens come from

(2:26:04) is 40 light years away which means it would take 40 years at the speed of light to get here that's like a Generation ship right we've got if if there are be somehow visiting us they've got to be able to get here faster than that in my opinion and then if you take that technology and just think of the other implications for it like the biggest one that scares me the most is like a doomsday weapon like thinking of like the movies where the super villain comes up with a way to like destroy the planet or whatever right like that's the

(2:26:30) part that scares me about this yeah I don't know I mean as we as we spoke about uh privately like and as I said I think somebody earlier asked me if I'm Pro disclosure I was like most ly unless you can build like a you know 100,000x you know hydrogen bomb or something with like everyday materials like I don't I have no interest in uh you know if if CLA fukes could have like not existed and like we could not be like living in this like unstable multi-polar world that we're in right now be and so um uh yeah I think if if

(2:27:11) there are implications there I'm I'm not I'm not pro that coming out but um yeah this is Tech that's unlocking of um ending the sort of scarcity Paradigm we've been in that would be [redacted] awesome but yeah I don't know that that that was my main question around the the the the Fler thing is uh uh just been doing some Reddit searching and uh people are talking about kind of you know you they're not used to seeing they're used to seeing the black and white and and oh no uh just been doing some Reddit searching

(2:27:49) and uh people are talking about kind of you know you they're not used to seeing they're used to seeing the black and white and and um it would take sort of some sort you know press the refresh processing for for that to occur but it sounds like I guess you're saying that somebody would need to be intimately knowledgeable of the camera and know how to put this sort of rainbow pallet in afterwards hello hey hey Jesse I got I got a work early in the morning so

I just want to ask you a question and then

(2:28:21) bounce because I got to go to sleep if I may for sure so something that really kind of bother press you know obviously the the government is being very uh secretive they're not it's honestly a very complicated situation dude I don't even know do I mean when you add the history to this toping and everything that's happened like how the [ ] how do you you know tell the truth right and not even worrying about technology just everything lives that have been ruined you know people made to be look crazy

(2:28:54) there's a lot of baggage and uh damn it screwed up where's the thing mixer just going to pretend that like these claims are are not there like what's going on there like where is everybody like there should be an effort to try to debunk that you know and then you got like people like Chris blo um which I guess he has been getting a lot of attention but it's all like secret stuff and MH370 I don't know man but I do know there's a video out there too the turkey video of 2009 that has uh

(2:29:39) been a challenge to the bunk but yeah what's what do you think if do you think those things are important and we should keep an eye on and that's what that's do D I'm a huge fan by the way um yeah I'm going to shut up but what do you think yeah man no I I appreciate the question um and I probably got a bounce after after this one but I appreciate everyone for showing up this is awesome super spontaneous on my part and and if uh Tupa and and um uh Dr I'm gonna drop how to pronounce your name but uh uh uh

(2:30:13) if you guys want to um you know stay and and and keep doing this like go go for it but um uh yeah I uh there's so much open source stuff and I think all the things you mentioned are worthy Jesse uh I sent you a a message and I would appreciate if you read my DM thank you in the landscape of right let him answer me damn it let him just let him answer me all right um that's probably my you right so yeah that was it for that I'm sorry i m s a message SEC honestly I'm not excited about going after what's his face uh Jonas

(2:31:15) here see if he responds 12,000 no response oh should we hit him with the next video what do you guys think [Music] yeah hit him with the next video okay I don't

(2:32:21) want to hold it back I don't want to hold back gu um do it level up what was it called I don't want to make it seem like I'm holding anything back oh how come I can't hear anything after

(2:33:35) you you will just it's about this setting up everything uh everything needs to to to fit uh to be to create a good picture because if if there is something that pop out and looks you know pretty not on the same level that the rest of the picture it's it just shows there not something's going wrong and you have to and trying to to be better with your with your weaknesses and trying to fix them and trying to uh develop your skills in in the way you you still feel that you're are not that good yeah and after you you

(2:34:16) will just it's about this setting up everything uh everything needs to to to fit uh to be to create a good picture because if if there is something that pop out and looks you know pretty not on the same level that the rest of the picture it's it just shows that's not something's going wrong and you have to and trying to to be better in with your with your weaknesses and trying to fix them and trying to develop your skills in in the way you you still feel that you're are not that good yeah after you you will

(2:34:56) just it's about this setting up everything uh everything needs to to to fit uh to be to create a good picture because if if there is something that pop out and looks you know pretty not on the same level that the rest of we ch is going wrong and you have to and trying to to be better with your with your weaknesses and trying to fix them and trying to uh develop your skills in in the way you you still feel that you are not that good yeah and after you you will just it's about this setting up everything uh everything needs to to to

(2:35:43) fit uh to be to what do you think this perfect just go with this just as it is everyone says it looks good okay here's video CL back extremely Talent good boom okay we're going to destroy this guy's credibility doesn't make me feel great I mean you know gave him give him advice this is what happens when you have stuff that's damaging that comes out against you guys that you have out there on the internet you know

(2:36:52) yeah I mean I think we just yeah it is what it is what's the significance of him modifying the clouds in the background of a picture what do you think man what you think the M shows that he 100 % has the capability to AFF fake those pictures and we haven't been able to find any of these pictures on any of the torran that are out there so we're destroying his credibility it's just that's the reality of it we're just destroying his credibility people sent me these videos and I took a look at it and I

(2:37:45) said holy H crap holy crap I mean did I think there was be videos of **Jonas** just admitting that he can manipulate photos and that he's got pictures of him manipulating clouds and backgrounds no I don't think there would be anything out there like that but if you have this kind of skill and you happen to be the person that comes out and gets told about some pictures and then you make a **debunk** video what do you want me to say man he did he he didn't even reply to my message to him before he didn't reply to my message where's

(2:38:23) let's see where at here did you reply yet NPC 3431 bye look at all these people making like one like one follower accounts where where's his response man where's his response at was here looking for that response like the more he doesn't respond here the more sketchy this is actually getting this is just getting sketchier and sketchier remember uh like 30 minutes ago when **Jonas** wasn't responding to anyone and didn't want to make any posts and didn't want to be part of this now all of a sudden he's replying to

(2:39:11) messages within like five minutes of me making the posts he's not sleeping man Michael F you're going to get blocked buddy stop running defense for people Sony you're gone the moment you cry about being blocked you get permanently blocked like I don't have to deal

with anyone I don't want in my replies act like an adult or you don't ever get to post in my replies if you can't figure it out you need to grow up The **redditors** Who who are furious at me are just terrible people that need to grow up man that's

(2:39:50) I'm speaking to you right now random **redditors** grow up stop acting like children Michael don't do damage control for people you don't have any reason to be doing damage control for he lives in Japan it's morning time Jesus man my email is MH370 xpron feel free to send me emails if you want people already posted this to **Reddit** in my video I thought it was people were oh somebody St they stripped the video okay that's smart that's smart

(2:41:18) wait did Jo Jay Brown post this he did I don't know if that was the best move J Brown posting it but anyway okay um yeah I can't stand **Reddit** red is the biggest source of disinformation on the entire planet biggest source of disinformation entire planet how have I been handling the backlash I just don't think about anybody who I don't care about pretty simple pretty simple uh it's it's late I got to go to sleep guys but it's been good sorry we didn't get to do any science tonight um I wish we could have done

(2:42:05) some science tonight guys but we ran out of time there'll be more time for science in the future uh so I appreciate you guys being out here tonight I do have a lot of stuff to go through we we doing a lot yesterday man figuring out that thing about the how uh electricity flows through space was really interesting really really interesting that was really cool so we're definitely going to do more science um tomorrow oh we didn't finish the Drone post we got sidetracked you guys made me do other stuff o this

(2:42:40) is I guess I can save this as a draft or something well I hope that works okay yeah that might work I'll save that for tomorrow we'll do the Drone deployment tomorrow guys we'll do the Drone deployment tomorrow a rewind for the **debunking** the **debunker** um let me close this what's what's Ken sign here this was from a few hours ago right yeah this was hours ago so we have not been able to find these images on any torrent the way back machine doesn't have the pictures in question uh prior to 2014 or 2016 whatever it is and then

(2:43:23) a lot of people have been telling me that **Jonas** is sketchy and so I got sent a video where I said take a look at this they said take a look at this clip me um so I actually very heavily relied on um photo manipulation in the beginning because I didn't so he's experiencing photo manipulation and here's a video of to here's a video of him actually manipulating a photo with clouds cloud images where the where narrator or the interviewer is actually talking about how you can't make any mistakes

(2:43:57) otherwise people will be able to identify them and he's extremely talented you can watch him look at him go just it's about this Talent setting up everything everything so the person that made this **debunk** video be to create picture because if if there is something that look at this how fast he is looks you know pretty he's extremely talented so the fact that this is the guy that was **debunking** our video after getting Anonymous post and this does not add up at all like how did somebody find this right and the weird part two is this

(2:44:36) came out after we already proved the clouds were moving and when I asked him about the clouds moving and he goes oh well that could have been easily done that's not a kind of response that somebody who doesn't know would say if I say hey there's a picture of the video the clouds moving you would go oh wow that's interesting I should check that out but he goes no that could I could easily do that like what you could easily do this you could easily do this look at the the way these clouds move this isn't just simple like shaking

(2:45:06) back and forth they're actually like becoming smaller and bigger right like this see this this isn't a blur effect or anything like that that's being overlaid over it look at this Distortion we see on the right here as well like all this minor Distortion that we see here is not is we're not looking at some still background and I actually posted this video to him he won't respond so what's going on man stop playing with wild animals L definitely wearing Sketchers and this is the part where we

(2:45:48) actually literally see the clouds moving here yeah is this one I could do that in 20 minutes like that's these VFX people like the fact that he's talking exactly like the **redditors** who are trying to **debunk** the videos is not a good sign for him not a good sign the fact that he knows the corridor crew not a good sign the fact that I'm like I'm getting weird when I was talking to him I'm getting weird Vibes and then I'm just like hey do you know the corridor crew oh yeah I've known them for 15 years I've been

(2:46:16) following their stuff like but no but no I didn't see the recent video what you didn't see the recent video okay you don't know who I am even though like you know exactly what's going on and you're making **debunk** videos clouds are literally moving can literally see the clouds shaking moving here oh I could do that and whip that up in five minutes you could whip that up from scratch without anything to copy from it's funny how everybody talks about how they could do it nobody does oh it's not worth my time with that

(2:46:59) this accurate at this accurate Distortion atmospheric inter or not or this accurate interference in the background first movie he worked on was Cloud Atlas yeah I mean it doesn't look good for him it's called discrediting someone it's called just discrediting someone last night the final nail was driven into the coffin for these airplane disappearance videos a user on **Reddit** found the original amazing a user on **Reddit** amazing the the corridor crew has made a a short about it already what a coincidence

(2:47:39) guys what if they should I think Nico this douchebag this guy's like one of the biggest idiots on the face of Earth I made him look like a jackass like literally got every single thing wrong that he claimed in the in a gotcha piece about me and then sat on a couch like an **[ ]** trying to make fun of me like Nico I hope you're okay I'm not g to say anything mean I'm not I could say mean stuff to you but background images on textures.

(2:48:09) com amazing how Co how coincident is it props to Ashton for finally conceding but Ren knew all along when he said it's a still frame it's a it's a still frame guys it's a still frame is it a still frame guys what do you think guys is it is it a Ste frame what do you think Nico you out there is

it a Ste frame Nico is there a Ste frame what does this say on the screen here what do you think chat is Ren correct in the background with his uh Jordi Le Forge glasses wannabe on this is why you don't listen to

(2:48:44) idiots on YouTube folks this is why you don't listen to idiots like Ren and Nico and whatever Jordy lege is talking about guys so just a heads up this is why you don't listen to them this is why you come to your own opinions right let's play them off let's play them off before we go to sleep tonight guys let's play them off let's show Corridor crew attempted Recreation and our official response to their Recreation I'll end it with this tonight guys actually I'm going to play this no I'm I'm going to do it directly

(2:49:21) from here's our official response to quter Crews best possible Recreation of the videos folks this is their skills let's watch oh look at that wow that looks just just like our videos oh wait no it doesn't look anything like our videos just a doesn't look anything like them I'm gonna have to have a talk with my nephew wait whoa whoa you know what I want to see it the video is not show it to me it's not it's not working don't what an interesting thing that Nico Nico and the cter crew know the the

(2:49:50) guy that we were just talking about **Jonas** knows them that's the whole thing did your nephew make that Nico did your nephew make that o cringe that's a that's their best Recreation possible best this is the corridor crew's best create recreation in the videos guys what do you think exact match is this what the jury just saw I'm gonna that's the whole thing unfortunately yes that is not what the whole thing was supposed to be Not only was the animation so poor but it glitched and just froze

(2:50:25) up that's the face of someone you can trust folks that's the face of someone you can trust so again we only saw like five or six seconds worth of video but it it was crazy it was absolutely crazy it's like the the defendant smoke Trail wasn't even similar they had 5 Seconds of whatever garbage that was I'll just say that video it's these guys are called the McDonald's of VFX artists right and there's a reason for that because it's trash anyway uh so I'm going to play us off

(2:50:58) with the MH 370 [Music] track breaking news tonight A Malaysia Airlines flight with two 239 people on board including four Americans has gone missing I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to

(2:52:07) impress him takes on multi-armed form and says now I am become death the destroyer of worlds there we go folks hope you had a good night uh I know I had a good night it was fun we're back to being spicy you like it um thanks a lot everybody for hanging out tonight yeah that that one's sick man that's alien addict guys I hung out with them for a little bit today U make sure you check out the uh investigate Earth podcast for my latest thoughts on the situation right here make sure you check this out it's a good

(2:52:47) interview with them they're my favorite people honestly out there we are not going to give up until we get an answer from the government uh I don't care how many uh Millennial uh YouTubers uh don't like it but if they're convinced the videos are fake then there's no reason why the government cannot come out and uh say so so

(00:29) for Compu e

(02:29) for for

(04:29) okay okay chat oh my mic turned back on weird okay whatever hold on oh look at this okay chat okay chat what's up uh boy I don't know what's going on right now this is getting pretty wild don't forget to change your magnetic rocks I think it's pretty hilarious how people who believe in magnetic rocks and Aliens talking to them have a hard time believing that a plane could move faster than the speed of light pretty bizarre pretty bizarre but uh wow yeah uh there's a lot of rebunk happening right

(05:28) now um let's save this actually give me a sec where the hell did that just go okay science yeah there's uh headphones are back on I don't even know why I have the headphones on there's a lot of sketchiness in these pictures guys a lot of sketchiness no one has been able to find any proof that these pictures predate 2014 we've pulled a uh we pulled a torrent and they're not in the torrent that we found Ken is saying that he can't find them on the archive uh the the torrent guy him the

(06:22) the textures guy himself is somehow claiming he still has a folder with these pictures still in it which makes no sense at all guys what this guy still got a folder called Jonas's Japan trip from over 11 years ago but do he only upload like five things a year and never changes computer I mean I'm trying not to follow the conspiracy Rabbit Hole here but yikes something is not adding up here at all not at all they had me pretty demoralized when this first came out and now I'm just like wait what now I don't know anymore I've had

(06:59) like five people messaged me saying that they are like cyber Security Experts and that these pictures don't add up in my DMs and emails yeah I don't know I think that the only way we can go forward with this oh I want to talk about this too yeah well how does this guy have the uploads from his PC from 11 years ago that he's got a folder called Jonas's Japan trip doesn't what well what is his categorization on his on his uh on his server I want to see it so yeah hey

Johnny if you got mental problems man and you just like think

(07:46) that it's over I'm glad you can move on bud so you're going to get blocked you'll never have to deal with this you don't have to watch like like people that think it's over feel free man feel free to go I'm going to say the same thing that I said last time the reason why we're still here is because of all the people that were gloating saying that it's over you're the reason why it's still going on so pat yourself in the back you played yourself pat yourself on the back

(08:12) you're the reason why it's still going and it's not been **debunked** so enjoy and you know what you can move on and do other stuff and if you don't move on and do other stuff then we'll know you're not being honest so feels bad feels bad the sad part is I was ready to move on but then all of a sudden I got everybody trying to dunk on me before things have been solidified now it turns out there's a lot of doubt being cast on these pictures like a lot like a lot a lot so maybe you guys

(08:43) uh what do it say had a little premature uh celebration is that what they say oops whoopsie hey I tell you what guys why don't you guys get the **redditor** who found these pictures to reach out to me and we'll bring him on stream and he can tell us about about exactly what he did to find the pictures does that sound like a good idea for everybody I think that would be a really good idea anyone on **Reddit** message the weird account DK whatever it is tell him that he wants uh the Kim wants to give him a reward and

(09:14) that we want to talk to him and we want to ask him about how he found these pictures let's see if he wants to come forward turns out uh **Jonas** was not interested in the reward interesting very interesting I've asked **Jonas** to delete oh well that's DMS well Jesus man do I care about any of this whatever I don't care you guys didn't see anything you didn't see anything that matters didn't see anything that matters um I asked **Jonas** to delete his YouTube video because if he's getting

(09:51) harassed then the easiest way to not get harassed is to uh delete your YouTube video that is claiming a **debunk** that you made you put out with in a couple hours having no background in the case whatsoever somebody messages you and you put out a YouTube video trying to **debunk** the videos within just a couple hours pretty pretty bizarre now you won't take a reward for it and it was not 145,000 no it was not it was a small fraction of that in fact I'm just going to throw it out there because I don't want to be koi

(10:25) about this okay let's just be honest and be open about it **Jonas** was offered \$10,000 \$10,000 just for finding the pictures I was on the stream with him um and he's turned it down now 10 grand the only stipulation was that he would have to sign something saying that what he was claiming was true and that there would be that he knew it all all the statements he was saying were to be true so I don't know who turns down 10 grand in that situation I certainly do not turn down 10 grand in that situation

(11:02) I'm definitely taking the 10 grand in fact I am a little bit jealous cuz I I would have taken

it yeah so I think we should be honest about it and uh yeah again if Jonas is listening or watching I think he should delete his uh YouTube immediately because people are using that YouTube let's go check let's go check our profile here oh look they're using his YouTube to community note me amazing amazing who the hell is this who the [redacted] is this why is this this this is a bot account why is this bot account listed

(11:52) this is a literal bot account what this is a literal bot account guys literal bot account remember I always have the receipts this is a bot account by some kind of fed spook debunker let me go pull up the receipts on this guy by the way if xif data can't be manipulated does that mean the Philip wood picture is real man I got a lot of spook stuff in my invent in my uh history Jesus I have a lot sorry guys hold on I have way more than I thought oh my goodness just remember I have all the

(12:55) receipts every time where's the one this bot account posting like the same thing everywhere get ready for it folks where' it go you guys ready for it get ready you know it's coming bot account literal exact copy paste on Bots oh I've got more too there's more than that if you think that's all you are wrong where's my where's my screenshot I have a screenshot of them all side by side too somewhere love

(14:00) it love it UFO interest is literal bot account folks literal bot account amazing all the exact same reply astonishing who's this run by who's this run by what's this guy's oh he got rid of his his real name on here it's Scott something or other probably because he knows he's a freaking spook and people would track him down this account is a literal bot account run by a literal bot what was his name Scott something or other Scott gimple or something like that not gimple I don't know anyway remember guys I always have the

(14:42) receipts I would reply but I don't want to give them any more attention so Jonas delete your YouTube Buddy and then maybe we will uh you know people will stop bothering you okay uh yeah I don't know man I don't know I don't know not sure what's going on we can make a post about it the way I'm thinking about going on here with is that um yeah we don't need to debunk anything nobody no hoaxer stepped forward we have \$150,000 Bounty so if you think that the if you think that the videos are

(15:40) fake the only thing you should be focused on is since you know where the assets came from now you should be trying to track down this hoaxer right if you're not if you think the videos are fake and you are sure about that and you're an honest person the only thing you should be doing is trying to collect \$150,000 Bounty right now that's the only thing you should be focused on and if you're not focused on that then you're a dishonest person what do you think PUD are you wor are you out there

(16:06) trying to track down the the hoaxer and get that Bounty let me know pude I'm talking to you in the chat I mean you're so certain why aren't you spending all your time trying to collect \$150,000 Bounty you know what maybe what we should do is have the government weigh in right they can settle this let let's have the US government just come out and sell us that we're

not looking at their mq1 C Great Eagle and not looking at cbers think if the government comes out with that then yeah it'll be

(16:44) great yeah this guy got blocked as well this guy was full of crap for sure pervine guy I had him marked early on yes so an anonymous person contacted **Jonas** using a burner email account and claimed some weird crap about how everyone was going to be hunting him down or something like this and shows him the **Reddit** post next thing we know **Jonas** is making a video claiming that he can find all these things in his picture he actually couldn't even find the pictures on the website but somehow this **Reddit** account

(17:24) claims they found it in 20 minutes which is definitely not possible and more I thought about it last night the more it makes no sense whatsoever like there's no way you're finding random clouds and random pictures on a website no chance of that and people already did reverse image searches and they weren't able to find it back in August so something here is not right it feels like someone knew there was a picture out there that they should go find and then you know worked in Reverse not the way way that you would think

(18:01) of and it feels like **Jonas** was used as the middleman because the other people don't want to tie their real names to it cuz then they could get tracked down and it would turn out that they would get discredited easily I imagine right that's the real story here and the part that is the biggest problem is that the videos corroborate the real events of MH370 the real events the coordinates are in the real location we have two videos with both the same clouds in them the and and as I sat through the last two

(18:32) podcasts I've been doing the last two days I couldn't get that shaken out of my head this still represents by far the most accurate story of what happened to the plane it's not even close no one's even close to how much evidence we have we have more evidence than every single expert today I was on a podcast earlier today where the woman is a pilot and she's saying that she doesn't believe the suicide narrative and this guy is trying you know what his evidence was a BBC article list linking to the

(19:02) flapper on that that's his evidence that the plane crashed I just laughed and I said I can **debunk** this guy in five minutes I don't even know I don't even remember his name honestly he was supposed to be like one of the top experts and I'm like does he mention that the flap rounds not matched with the unique serial number oh no of course he forgot about that does he mention that there's a literal exact replica of the plane scrapped in October of 2013 exact replica of the m 9M mro no of course he forgets about

(19:32) that does he mention that there's debris that has burn marks on it consistent with a honeycomb pattern of a Boeing no he forgot about that these experts are straight up clowns dude straight up clowns yeah here's the article I got linked I still have it up I just show her on stream I pull it up and I just highlight this part right here and I go oh look it has a serial number but it doesn't let mention the fact this isn't a unique serial number the unique serial plate that's bolted onto this thing is

(19:56) somehow missing oh okay okay well turns out the 9M mro is an exact copy of the 9M MRK that was purchased whoops so the reality is I think that we might have to put out a statement saying that the only way these videos can be **debunk** if they find the hoaxer and until then the US government needs to make a statement we've got too much evidence because here's the reality they're going to push out some other fake **debunk** next right if they can if they can do what is required to f those images then they're going to be able to

(20:32) do basically anything they just have what they have to do is a simple thing make a statement make a statement on the videos that will put us to bed right well I think Kim is extremely skeptical as well I think he's skeptical to technology is my opinion of Kim right can we really teleport a plane I mean he told me he told **Jonas** I don't want to live in a world where we can teleport planes right I don't either man **Jonas** was told exactly where to find the image by the person who emailed him sorry for cheating into the

(21:23) thing I'm skeptical of Kim in the same way I'm skeptical of everybody but I don't get the vibe from him that he's trying to discredit the case he came up with the best one of the best plays so far which is the \$100,000 Bounty I didn't have to go along with it when he pulled back I didn't have to pull back either but I took his advice and you know I mean I think my opinion then was still correct like at that time it felt like those clouds were very I mean accurate right I can't come up with an logical

(21:53) explanation even now I don't think I can but I just think there's a lot of Doubt onto the authenticity of those pictures and then the problem that the videos still corroborate what happened to the plane there's no hoaxer who's come forward so where's this hoaxer man after all the attention we got yesterday where's the hoaxer even people want me to be the hoaxer because they realize that there's no explanation for why a hoxer hasn't come forward but you guys know there's literally no chance I could be the

(22:25) hoaxer I literally couldn't even freaking edit a file earlier today there's no way I can create perfect masterpieces of military technology I'm not in this for the nyear long run if I have to I'll get a million people to corroborate my whereabouts anytime we want over the last nine years a lot of It's been traveling for work Jesse Lun thank you for the donation or Super Chat whatever it is uh could the government F the radio Transmissions from the Pilot's previous flights to throw off where the plane is

(23:01) actually going if the government can fake images and stuff like that which would be which we pretty much need for these images to be matching the clouds then they can do pretty much anything if they can teleport a plane they can do pretty much anything man they can do pretty much anything I can do pretty much anything um let's see what we got going on here this is also pretty weird one of the images is just missing the key image here that matches the clouds just isn't on the way back machine the other ones

(23:57) are CG textures just missing not there okay we might have to build a case here so let's start collecting stuff copy link uh do I need this anymore this is supposedly when he took the

picture might keep this just in case you think people that are hoaxers stream every night and watch you watch all their work no I don't think so man I don't think so might do something like

(25:16) this he should take down his video because he did a **debunk** video after being told like within an hour about the situation had no background of the case and randomly knows who the corridor crew is I literally just asked him do you know who the corridor crew is yeah yeah yeah I've known about them for like 15 years and followed their stuff and I'm like oh well have you seen their recent video about this no no like I I don't want to badmouth **Jonas** I think that I don't think I don't get the feeling like he's

(25:44) a bad guy but this thing's not adding up at all man to a degree where like this is the biggest conspiracy ever people have everything on the line here people will go to prison for the rest of their lives over this there's trillions of dollars some lawsuits at stake here right if there's people that are so disillusion that they think somehow I'm involved in this like they what what I'm sitting here the one blowing it up man [Music] h

(27:12) it's a tough situation guys reality is I'll just be I'm going to be perfectly honest with you guys about everything my thought process I'm not sure a that the world is ready for this I think chat you guys are ready for this I don't think the larger world is ready for this technology I've come to conclude that they're not I'm still pushing forward cuz that's MH370 but I would have been probably happier if the government had just paid me like \$10 million early on and let me just be on the inside and the

(27:37) know and then I can just watch all the normies just having no idea walking around Ethan buddy get get mental help Ethan this says no one cares about you bud no one cares man if you think that the videos are fake get the hell out of here go somewhere else why are you here being obsessed like a psychopath why am I living in your head rentree is it because you know that maybe something is wrong and that there's maybe evidence there I like this stupid Narrative of oh this is Flat Earth now bro if Flat Earth

(28:14) has an Evidence list as long as our evidence list then I'm going to start believing in Flat Earth okay the reality is the Earth's round because that's how gravity works because mass is interacting with SpaceTime when you can find a flat Earth list of evidence this long with two videos and 19 Witnesses a craber and a fire event Ethan then tell you what I'll start believing in Flat Earth with you okay otherwise yeah I'm a Mena member oh my God Ethan he's a Mena member guys oh he's Mena oh wow well oh boy gez we got

(28:49) to really uh bow down to you mena basically means you have mental issues and that you think you're falsely Superior to others that that's all it means IQ tests don't actually mean anything and if you were actually intelligent you would never call yourself a menum member Jesus man I can't believe you said that unironically dude Ethan you're like the worst type of people on the internet Ethan I'm going to rag on you a little bit because you seem to want it there's documentaries guys there's

(29:17) documentaries on Netflix did you know that do you have to you might have to be a men member to know that there's documentaries on Netflix you mean one of the worst documentaries in history where they think the plane was shot down even though the debris literally doesn't scale to the pictures the one where Jeff wise thinks that the plane went to **Russia** despite the fact there's like 12 radar systems that would have seen it hey Ethan since you're a Mena member why don't you tell us how a plane crashes into the ocean without

(29:42) leaving a debris field use your big Mena brain help us out how does a 777 crash into the ocean without leaving a debris field let's just start right there come on Ethan the crowd is waiting we want to know how does a 777 crash in how does the most extensive search in human history with 42 planes and 39 boats and with satellites everywhere how do we not find a debris field of a 777 crashing into the South Indian Ocean I'm not going to block Ethan I want to hear his answer he's in Mena guys I'm guessing we're not going to get

(30:22) an answer are we what happened you mean the Air Force AF 447 they found black boxes they found debris that was in like 2008 how do we not find a debris field it's been 10 years we couldn't find one piece of the plane the official search didn't find one piece of the plane Ethan before you leave tell us how a 777 crashing into the ocean doesn't leave a debris field God Mena is really uh not taking the best anymore huh I'm a Mena member just words of the wise Ethan I'm just I'm being nice now

(31:00) never tell anybody else that you're a Mena member never never say that you're a Mena member to anybody else okay it's not a it's not a badge of honor it's like wearing a helmet when you're walking around yikes man yikes I thought you were joking at first are you just going to repeat stuff like you're just repeating CNN headlines why don't you just use that big brain and tell us how a 777 crash into the ocean doesn't leave a debris field that's all you have to ask that's all

(31:39) you have to answer it's a simple question how does a 777 not leave a debris field how do we not find black boxes despite the fact that we have pings that say that it's supposedly as long arc on the long seventh Arc we don't find any black boxes how does the Sosa system the one that heard the Titan sub pop a few months ago how does that not hear a 777 crashing into the ocean how about how does two more hydrophones not hear it either I think we've got a grade A CNN brain here folks there's nowhere else to go the

(32:11) ocean's pretty big but the problem is that uh this official narrative has it running out of gas there's nowhere else to go my man now we pissed off Menon now guys I love how when people when dumb people think they're smart and they want to talk down to other people that's my favorite those are my favorite people to rag on right I don't pretend to be the nicest guy but when people out there want to rag on somebody else and claim how they think they want to be like oh you believe in Flat Earth like I I

(32:45) literally do science topics Ethan that explain how gravity actually works right so my advice would be don't ridicule anybody else when you live in a glass house I'm sorry I had to pick

on you man but you know be better next time Ethan be better man try to be a better person than General that would be my advice to you maybe open your mind up a little bit and think that maybe you don't know everything that's happening in the world and maybe what the TV tells you isn't all there is to the world and I hope

(33:16) anybody else that wants to try to ridicule as well before you do take uh take a look at Ethan grab he's just a you folks anyway so the um when I was on this podcast as well earlier today the uh the guy apparently the experts like oh they've been able to figure out from the the flapper on that like the plane was gliding casually into the water I'm like this is like reading the tea leaves here man it's like there's no way you can figure out what degree the plane was crashing from the the rip of the flapper on it's just like

(34:00) literally a broken piece like this uh Ethan man you need you need mental help Ethan I mean that in the most uh honest and sincere way buddy you really do man you really do whenever you think you're better than other people that's probably uh you that's the problem my man it's probably you that's the problem I would say that you're not half as smart as you think you are whatever you think your IQ is just cut that in half buddy cut that in half you're the one who can't figure out how

(34:34) uh 777 would crash into the ocean without leaving a debris field not us folks not us we like you though man we like you every once in a while it's nice to have a punching bag um I want to do a little bit of oh there was some memes out there too who was making memes for me oh and just in case um I'm going to go ahead as well and say that I don't want anyone to donate to me like I do if you need your money please do not donate to me you don't need to donate in order to get my attention if you have

(35:08) questions you can just ask the questions but of course I obviously appreciate people that donated and I don't have a way to prevent it I you know I'm not going to be completely against it I think you know some people want to donate they've always asked me some people ask me to turn the stuff on so appreciate that but of course you don't have to um that remind me I actually do need to check my email real quick what see

(36:26) this huh well that's interesting I showed Sal a picture and he said I can't show the picture in chat looks like a satellite station us space force weird weird folks oh Ethan's still here uh Jonas rejected the offer folks Jonas rejected the \$10,000 offer Ethan so why do you think Jonas would reject a \$10,000 offer where all he has to do is sign a statement saying that everything he's saying is true hey Ethan would you reject

(37:31) \$10,000 would you reject \$10,000 that somebody's just going to give you and all you have to do is say that everything you're saying is true I mean I know I wouldn't but I'm just curious if you guys were I was actually jealous he was going to give him 10 grand I get nothing the \$150,000 wants me to go find is hly enough for me to go find the hoaxer doesn't feel right to accept 10 grand that doesn't seem right at all what do you mean I wasn't convinced I made a statement saying I was we're going to move on in a second

(38:21) here no I want to answer I want to answer the **debunk**ers guys doesn't feel right to accept 10 grand where all you have to do is say that you weren't lying pretty weird man not going to lie I think he's an honest guy but if I was **Jonas** I would delete this YouTube video if I don't want to get any more attention there's 869 th000 views on this 869 th000 views 869 th000 views on this it's pretty weird man he's not wealthy I was in the meeting with him

(39:26) and Kim so just saying it's not just that that mixed with the fact that now people are casting major doubt on this is starting to get to be problematic no one can find these images before 2014 we actually pulled up a torrent and the images aren't in the torrent either so what the hell and we have this other thing that we just pulled up as well I mean I haven't made a post yet but I'm starting to wonder if I need to make a post people are asking me what's going on if I need to make a post here the image is missing in the archive

(40:25) as well it's also missing in the archive but the other ones aren't the ones that don't match are but the ones that match are not in the archive pretty weird man it's pretty weird at this point I think we have to make a post and just say that due to the questionable nature of everything going on the weird way that **Jonas** made a **debunk** po **debunk** video within like a couple hours and how he's not accepting the money now but he's keeping his **debunk** video up there like he needs to delete his **debunk**

(41:09) video like ASAP uh hold on it's also pretty weird that he knows Corridor Digital and he knows the owner of the uh owner of the website that stuff got posted on both those are pretty weird weird pieces of evidence man 800,000 views this just does not add up this does not add up man it's not add

(42:18) up big brain Ethan here thinks that we don't have evidence but he thinks that what what do you think Ethan you think the pilot suicided the plane in the South Indian Ocean where we didn't find a debris field where there's literally no evidence of suicide whatsoever I imagine like what if you held yourself to your own standard Ethan do you think your ideas would hold up to scrutiny your own scrutiny of course they wouldn't of course they wouldn't you're just a straight up clown Ethan don't ever tell anybody you're in Mena

(42:46) ever again man it's honestly embarrassing man yeah the same people that exf data said exf data is easy to fake are now all of a sudden not all on board the exf data and people sent me stuff about the exf data doesn't actually prove the pictures from 20142 sorry I'm getting a lot of messages here

(44:05) someone get a hold of uh someone get a hold of this guy someone get a hold of this guy we want to figure out who this guy is what his real name is and how he found these pictures and why he has only a six day old **Reddit** account and why he's tagged himself with definitely CGI someone find this guy I think kim.

(44:39) com wants to give him a th000 or \$10,000 either 1600 planes crash globally a year bro Ethan are you like special 1,600 Planes hey L and hey Dorian hey I what's up yeah I don't think

men is the name of the organization you got bro hey Ethan what if I told you this Ethan wants to know why not get a hold of the Top Gun editor if you have yet to do that but why not use it as proof what about this I did get a hold of them Oops I did get a hold of them how funny is that I did guess your Mena brain didn't work out that time

(45:43) yep I did look it up yeah okay let's look it up guys let's look it up it's actually more than I thought this is actually accidents not plane crashes by the way because if it was plane crashes the number of deaths here wouldn't be 300 so this is how Mena Works guys first of all you apparently can't Google second part is you don't know how to use logic if there was 1600 plane crashes there would certainly be way more than 376 deaths one plane can account for 300 deaths yeah poor Ethan Man Poor Ethan he's are getting

(46:34) brutalized tonight turns out everything Ethan knew is true is a lie rip feels bad feels bad he's getting red pill'd like crazy right now okay yeah let's not let this derail the stream guys um I can't decide if I need to be making a post or not feels like I need to be making a post I don't know though I don't know if I want to I don't know if I want to set myself up for something this has been

(47:53) wild yeah this doesn't make any sense why does this guy have an 11-year-old folder called **Jonas** Japan where what computer did he pull this up on CG textures unor photos unor **Jonas Jonas** Japan he goes to Japan all the time he lives in Japan this is all the pictures he's got dude literally lives in Japan granted he only worked there for four years so maybe that's explanation I don't know it's amazing how these people have perfect records of all their stuff from 11 years ago if you ask me for myself

(48:28) from 11 years ago you know what I would say it's all gone I don't have that computer anymore yeah Lang you have time to roll blunt go for it my man enjoy it as well you know take an extra hit for me I wish I could do it but I've got a security clearance so I can't do drugs instead I can just drink folks instead I can just drink oh sorry you're getting ads I think you can probably just skip them well hey man if you think those are the pictures that are correct then you should get in touch with this textures

(49:20) guy and you should figure out which people bought those pictures so that you can find out who the o rais and collect \$150,000 which still stands by the way I also spelled bystander wrong I kind of thought that but I went a little fast should we do science or should we do make a post start a poll I don't really know just don't really know guys don't really know what the right play is here vote guys do some science or make a post do some science or make a post do some science or make a post make

(50:25) sure you guys vote oh wait I got to buy stuff no I don't is this going to be copyrighted looks like science is winning science first is never a bad idea I think we're going to have to learn the fundamentals though all right now we're going to talk about the idea of an electric current and the story about current starts with the idea of charge this too loud so we've learned that we have two kinds of charges CL we first we'll just make up two little charges like that and we know

if they're the opposite opposite sign be

(51:27) a force of attraction between them and if they have two like Signs here's going be a repulsion two here's two charges that are both positive and these charges are going to repel each other that's pretty close this is the basic electr idea and the same thing for two minus charges they also repel so how's that charges is that audio better does that balance better unlike charges attract that's one I'll try that and now we need a place to get some charge and one of the places we like to get charge from is is copper copper

(52:03) wires Copp looks like this copper atom has a has a nucleus with some protons in it and it also has uh electrons flying around the outside electrons in orbits around the outside turn draw the electrons like this so there'll be orbits around this nucleus pretty good circles and there'll be electrons in these little minus little minus signs there's electrons stacked up so we're starting with the basics guys here tonight I'll make it just a little bit louder I'm going probably go to like that so oh it was very low okay hold on

(52:45) should be better now um the reason why I start in the basics is whenever you want to understand and learn something you have to understand the fundamentals you have to start with the fundamentals in this and even farther out there's electrons so there's a a a kind of a interesting looking Copper at copper the symbol for copper is cu and it's atomic number is 29 so there's 29 electrons or is it I forget atomic number that means there's 29 protons inside here and there's 29 electrons outside one proton

(53:20) it turns out just as a coincidence for copper that the last orbital out here has just one electron in it that guy right there and that's the one what that is the easiest to pull away from copper and pull have it Go participate in in in conduction in in electric current so when uh every if I have a chunk of copper every copper atom every copper atom will have the opportunity to contribute one this this one lone loan only electron out here if we look at another element like for instance silver silver has this same same kind of a

(54:04) electron configuration where there's just one out here and that's why silver and copper are such good good conductors all right so now we're going to build let's build a copper wire so wait why does only the outside uh electron Break Free what did he just say there I want to that one more time element like for instance silver silver has this same same kind of a electron configuration where there's just one out here and that's why silver and copper are such good good conductors so the one electron

(54:39) flow can flow so now we're going to build let's build a copper wire here's here's sort of a not sure if drinking is a copper wire it's just made of solid copper it's all full of copper atoms weak Bond huh and I'm going to put a voltage across this yeah I'm not here's our little battery for the people that think that this might be a scop or something like that it may not be exactly correct you know maybe there's other ways to interpret it but we need to understand what the fundamentals are this is the

(55:12) minus sign this is the plus side and we'll hook up a battery to this I'm like going back to high school like physics right now and what's going on in here inside this copper inside this copper is a whole bunch of electrons and they're passing through it right that are associated with atoms it's a neutral it's a neutral piece of metal there's the same number of protons as there is electrons um but these electrons are a little bit loose so if I put a plus over here that's this situation right here

(55:46) where a plus is attracting a minus and so an electron is going to sort of Wander over this way and go like that and that's going to leave sort of a net positive charge in this region and so these electrons are all going to start moving in this direction and down at the end here an electron is going to come out of this battery travel in here and it's going to go in there and make up the difference so if I had a net positive charge here from the electrons leaving and going to the to the left this battery would fill those in guys

(56:20) we're getting smart and I'm going to get a net movement of charge of negative charge around in this direction like this the dod is going to be knocking on question how how do I measure that how do I measure or give a number to that amount of stuff that's going on yeah so we want to quantify that we want to assign a number to the amount of current happening here so what we do is in our heads put a boundary across here so just make that up in your head and it cuts all the way through the copper and what

(56:47) we know we're going to stand right here okay and we're going to keep our eye right on this boundary down in here I hope Ethan's watching man and as we watch what we're going to do is we're going to count the number of electrons that move by here we're going to count them how and we're going to have a stopwatch and we're going to time that and so we're going to get basically this is charge it's negative charge and it's moving to the side and what we're going to do is at one little spot right here

(57:17) we're just going to count the number that go by in one second get charge per second and it's going to be a negative charge moving by and that's what we call current and it's the same as water flowing by in a river that's the same idea yeah that's our current all right now I'm going to set up a different situation that also get produces a current and this time we're going to do it with water water and salt so here's here's let's build a tube of salt of salt water like this so we're going to

(57:57) pretend this is some tube that's all full of water I'm also going to put a battery here let's put a another battery okay and we'll stick the wire into there and we'll stick the wire into there and this is the plus side of the battery and this is the minus side of the battery okay so water spoil it for me chat what's going to happen water and this does not conduct there's no free electrons available here but what I'm going to do is I'm going to put some table salt in it this is ordinary

(58:32) salt that you put on your food and it's made of sodium that's the symbol for sodium and chloride CL is chloride sodium chloride is table salt if we sprinkle some table salt into water what

happens is these dissolve and we get a net plus charge here and a net minus charge on the chlorine so out here is floating around Na's with plus signs and Cl's nearby really close nearby with minuses okay I don't get it but okay maybe it'll come to me maybe it'll come to me someone explain to me chat

(59:15) let keep it even all right now when I dip my battery wires into this water what's going to happen is this Plus charge this plus charge over here from the battery is going to attract the minus CLS so the CL is going to move that way a little bit and over here the same thing is happening there's a minus sign here there's a minus from the battery and that's going to attract this and it's also going to repel CL minuses and so what we get is a net motion of chlorine moving positive charge sodium moving right plus Q going

(59:58) this way and we get minus Q going this way huh and how do we measure that current how do we measure that current well we do it the same way as we did up there with copper we put a boundary through here in our heads we stand here and we watch the charges moving by and what we're going to get is some sodiums yeah welcome everybody this is we're learning a lot here moving this way this is boring for your moving this way just like we showed here na a we have to learn we have to start with the basics though we have to so there's

(1:00:39) going to be plus charges moving through the boundary and minus charges moving through the just real quick after we get through the F the fundamentals we'll move on to stuff that's more complicated but we got to start with the fundamentals so apologize the opposite direction and if I take the total sum of that for example if I see one and go this way and one Cl go this way that's equivalent to two charges moving through the boundary hope that makes sense it's equivalent to two charges one going this

(1:01:06) way and one going this way and because they have opposite signs they add together and make two charges in this case current this guys can type or write pretty well again to charge per second okay neat in the last video we talked about the meaning of current and current is defined to be the movement of charge amount of charge per second we looked at a copper wire where electrons are carrying the current and we looked how long has our government had AGI probably at least since 2010 would be my guess also add a assault solution where both positive and

(1:01:56) negative ions are carrying the current across IM hang we keep track of how many charges are moving so now next we need to talk about how do we Define a positive we have 59 energy points guys 59 energy points current what is a positive so I'm going to move this up a little bit I don't know what it means but and we're going to get to something that causes some confusion but we'll try to clear it up here it's going to get confusion the positive sign this is a convention that we use the positive sign for current is the

(1:02:29) direction that positive charges move so that's the direction this is the direction a positive sodium ion moves this is the direction a negative this is useful for electricians chlorine item moves when I assign a positive direction to the current the overall positive direction is

going to be in this Direction that's plus current plus current this is where I start to get confused all right and the same thing actually holds for a wire if I draw let's go back and draw my wire again if I draw my if I draw my copper

(1:03:13) wire and inside there we know that all these little electrons all the electrons are moving in that direction so  $Q^-$  is moving in that direction and when I assign a direction for the arrow for current the current Arrow points this way plus current so for instance if I had 10 electrons per second that were moving in this direction here I would say the current is + 10 charges per second in this direction okay and you ask yourself if it's always electrons carrying current why on Earth do we point the

(1:04:00) arrow in the other way and that actually goes back way back in history to our friend Ben Franklin Ben Franklin is the person who said who basically made a decision that said the charge on an electron is minus now when he made that decision nobody knew there was such a thing as an electron so Ben Franklin oops if anyone has any better understanding the year probably talk to salor P soon pretty well I want to be SM person who assigned plus and minus as being the two types of charge that existed and when he did that he had no

(1:04:44) idea nobody had any idea I'll probably talk to Salvatore Pas in um January that there was such a thing as an electron electron was discovered by a physicist Alf ask have you done a video **debunk** of the corridor **debunk debunk** reaction um the corridor crew we we have an official video should we should we watch it real quick guys let's watch it real quick this is our official reaction to the corridor's crews uh reaction video we have our own reaction video to the reaction video This Is by Hermes by the way I

(1:05:18) don't know if he's in theat directly from uh this guy this is our this is our official reaction to the reaction my client showed up for work on the day of the incident and this is just a second uh I'm gonna have to have a talk with my nephew wait whoa whoa you know what I want to see it the video is not show it to me it's not it's not working on I don't I don't understand um perfect Recreation guys what did JY just saw um that's I'm going to that's the whole thing unfortunately yes that

(1:05:55) is not what the whole thing was supposed to be Not only was the animation so poor but it glitched and just froze up um so again we only saw like five or six seconds worth of video but it it was crazy it was absolutely crazy it's like the the defendant is getting hosed he's showing very clear frustration he's banging his hands on the table when the his attorney can't present a simple video it's my favorite is the part where it get you show you see animation so poor but it glitched and just froze up

(1:06:25) um my favorite part is Jordy the forer with his glasses dude what the hell man I Kim Iverson shows me this video and I'm like I can barely not laugh when I'm staring at this guy like what is he wearing dude what are you wearing my man how can you wear this on a video like seriously I'm wearing button- down shirts my dude's got the Jordy Le Forge glasses going on they show like this this is even a joke this is literally their whole Recreation this is the literally

their whole Recreation right

(1:06:58) here that's it this is it right here this 5 Seconds of video is this what the jury just saw that's their whole Recreation unbelievable get this man to the Hol deck is get him to the H Not only was the animation so poor but it if I had any respect for the cordor crew which I really didn't uh whatever minimum respect I had was lost on that day anyway name j Thompson anyway Jesus man in the air too funny man 18 too funny 97 that was when the electron was discovered and believe it or not if we do the subtraction here look at this

(1:07:43) it's 150 years for 150 years of electric research we were able to figure out a lot of really good things assigning current what is this m going in the opposite direction of electrons and metal and it's all okay it's all okay one of the questions that's often asked by new students is well why don't we switch it around so the current points this way why don't we why don't we assign an electron why don't we make current go this way yeah why not I don't get it why do current go the other way so

(1:08:18) why didn't we just switch it around well we had 150 years of experience and now we've actually had another 120 since the discovery of the electron and we've managed to get by with this we have not chosen to do it one of the reasons we don't do it is because it would basically it it would be a big mess imagine if for instance in say in the United States we decided oh driving on the right side of the street is the wrong side of the street we want to all drive on the left imagine the the chaos that would cause now before we made the

(1:08:50) change everybody managed to get where we're going and after the change everybody would get there going but the change over we don't change it because it's so costly and the same thing with electricity we can do perfectly well talking about current going the direction of a positive charge just like we did here with the Positive sodium going in an electric going in in this direction this is actually how electricity is is conducted in your body so it's not uncommon to have positive charge moving around that's that's the

(1:09:21) definition of current in a nutshell we put expl anything to me but sure voltage time let's do a few more voltage is one of the most important quantities and ideas in electricity and in this video we're going to develop a a intuitive feeling for what voltage means but it has to do with potential energy of uh electrical charges and that's what we're going to cover here is we're not going to do a derivation but we are going to do a a intuitive description of what voltage means we're going to start with

(1:09:52) a analogy to gravity gravity and voltage are really similar ideas you see I'm going to draw a a mountain here here's here's some mountain side with snow on it oh a mountain of snow guys and I'm going to put a mass here here's a mass of some mass  $m$  and it was lifted up to the top of the hill somehow by a ski lift by a mountain climber something like that and if I put it on top of the mountain and I let it go the potential energy that it has is going to be dissipated as kinetic energy and that mass is going to roll

(1:10:29) down the hill to here all electricity has a magnetic component and as it does Can it can do some work it can do some it can hit some trees let's draw a tree and it it can run into a tree and knock that tree around it can hit a bear it can bounce off rocks all kinds of things so that's a mass rolling down a hill now if I draw Banner this is a way to think about voltage think about voltage being Another Mountain Top My Heart Belongs to four orbs and this time we'll put a battery in here this is our battery this is what

(1:11:02) a battery does for us it actually I h how much does L look like uh Scarlet Johansson oh oh okay okay well you know what builds our Mountain battery I have to be careful about beautiful women reaching out to me now to the top of the hill coming out of the battery terminal the negative battery terminal and if I release this it is going to roll down the hill banon and eventually it's going to return to the bottom side of the battery but the same thing this is the image you have in your head when we hook up a circuit along the way I can put in

(1:11:50) different circuit components like resistors I got to focus Capac or and I can make this electron do work and bump into things as it goes down we're trying to learn science here the amount of voltage here is proportional to the height of this mountain a high voltage is a high mountain and a low voltage is a low Mountain the electrons are pushed out the top by the battery roll down to the bottom doing work along the way and this is where we do our circuit design interesting so the higher voltage the more power

(1:12:25) electr fly and we do our circuit design and study over here I don't know about so this is this is a pretty good analogy for thinking about voltage as you begin to build your circuits sorry what was the chat saying it's going to take up to four years before Ashton has the knowledge level to accurately uh be able to intellect weigh on electrical engineering that's just a ba nah we're going to do a lot faster than that next time it's not going to take us four years guarantee that maybe if you're in Mena Tes when we

(1:12:57) start to study electricity we need to get an idea of what is current and what is voltage and in two earlier videos I talked about the idea of current and voltage these videos are pretty fast so it's not bad current and voltage does anyone know Ashton from childhood nah I never had a childhood nobody knows me from childhood I'm actually waiting for some of my uh like high school or whatever friends College friends to message me and be like hey I saw you in Alex Jones so I'm surprised it hasn't happened yet

(1:13:31) and and what they meant and when we talked about current kind of happy it hasn't though it's easiest to describe current when we talk about wires let's say talking me redit and pretty wild and for the record I don't care all talked about a copper wire and inside it was there was electrons in it and they have a negative charge we know they have a negative charge and if we put a voltage on them those electrons would move in some Direction like that so if I put a plus the higher the voltage the

(1:13:58) faster the electrons are going to move voltage over here the electrons are repelled by the minus voltage and they're attracted to the positive yeah I want to address this question UFO

net says why was Jonas concerned with debunking the video why would he care say yeah I took that pick now let me get back to taking clear picks through Windows why is he making a video about how the clouds match why was Jonas making a video within a few hours you get emailed by a random Nutter who says hey man everyone's going to care about you now

(1:14:30) and now you go and start making videos matching clouds make a 20 minute video matching clouds within just a couple hours this is the thing that bugged me about Jonas everything else about him seems straightforward but Jonas needs to delete his video If he's not going to accept a reward he needs to delete his video If he's not going to sign a statement saying that everything he said it's true he needs to delete his video ASAP cuz if he doesn't delete his video then it seems like he has dishonest

(1:15:01) intent that's the thing if he doesn't want to be bothered and he doesn't want to have people bothering him about potentially being some kind of spook he needs to delete his video we're gonna probably have to make a post about this if he doesn't delete his video in fact I might have to message him for for

(1:17:15) so um is there a way I can show this without revealing my DMs I'm going to show you guys so that you guys know that I'm messaging Jonas about this because I don't want there to be any uh misstatements or anything about what I've done here okay just to make sure everybody realizes I'm not threatening anybody here or anything like this I'm just going to read it out loud for the chat hey man I'm gonna have to make a post about how weird it is that you aren't deleting your video while not accepting

(1:17:49) \$10,000 where all you were told to do is sign a statement saying that you aren't making anything up it seems dishonest that your video has nearly a million views and you made that knowing nothing about the case while admitting that you know the corridor crew if you want this to go away the easiest thing would be to delete that video otherwise it looks like you have dishonest intent I have to be honest why would you make a video matching the clouds like that at all I certainly wouldn't be doing that if I

(1:18:14) received an honest email like you did that's the last thing in my mind would in my mind would be getting directly involved so that's my message to Jonas just in case anyone tries to make anything up about how I'm threatening somebody or anything like that which people love to do for some reason so you guys have seen it it's on the chat we'll see how Jonas responds it's uh it's middle of the day for Jonas right um we'll see how he responds to that anyway let's go back to our sign

(1:18:54) science I have to agree with the chat on this one it just seems it seems really weird man seems really weird voltage that is called an electron current so talking about current in terms of what's actually happening in inside a wire makes some sense it's easier to understand current and the these electrons are moving around and whenever we talk about this we'll talk about it specifically that there's an electron yeah for the record it's Mill of day for Jonas right now so it's not nighttime or anything like that he's in

(1:19:34) Japan so you show me pictures of him being in Japan current going on here now at the same time what I said in that video and I'll say again is the convention for describing current is this this is called the say why are we talking about electric current like this when currents going the opposite way man this is just confusing dude the convention we've had for hundreds of years is that current is the direction that a positive charge would move if there was a positive charge there so whenever we talk about current

(1:20:14) from now on it'll always be conventional current and in fact we don't even need to mention conventional anymore it's just current current is the direction that positive charges would move if we ever talk about electron current then we'll use the word electron current now as a reminder when we talked about voltage holy [redacted] guys I managed to find the pirated complete collection of CG textures from a site called G CG peers only Tor from 2008 is active I checked all the sky files the set pictures recently shared

(1:20:48) by Jonas they're all missing from the collection holy F crap folks now we've got multiple people who have been searching we found one from 2014 that was also missing Jonas's pictures this is getting too creepy folks and can also let's check out for ourselves Ken check the archives and they're not there either and for the record Ken and I don't even see eye to eye okay so we both don't like liars though I don't know this guy I don't I don't know how this works

(1:21:53) somebody else is going to have to do this I'm going to put this in chat for somebody can somebody in chat confirm this for me the fact that these pictures are not there is pretty damn weird um for sure well Ethan why don't you go ahead and prove us wrong Ethan go ahead and prove us wrong I just put the thing in the chat for you bud sounds like you're having a lot of mental delusions tonight my man why don't you tell us more about how many crashes Harper year wow this is a complete collection and it doesn't

(1:22:32) have the pictures in it wow wow wow this is pretty damn weird guys this is getting pretty damn weird we might be having to make a post here if this debunk falls apart guys guys we are not accepting any debunks unless it's literally the person who hoax the videos with proof that they have the source content that's the only way after this [redacted] there's nothing I can believe after this this is wild man how can these pictures not be in the archive how can they not be in random Torance that people have of literally every picture

(1:23:21) the file look at the file sizes on the these guys 105 gigabytes 37 gab for the full collection how are the pictures not in there that's literally every picture from their whole website and all of a sudden the only ones missing are Ethan's pictures that are supposedly the ones that debunk our videos that's pretty freaking weird man well seems pretty easy if you think the videos are fake then you need to find the hoaxer this was built up by analogy the analogy was to of course there's no ho guys real down a mountain top so

(1:24:04) here's our Mountain that's why nobody's looking for the hoaxer because they know there isn't one out there to find they're not wasting their time because they know that you're never going to find a hoaxer remember this and I built a battery or another voltage source like

this if people are honest the only thing they would be looking for is the hoaxer so that they can get their 150,00 instead of trying to find random cloud pictures there's no freaking way anyone's going to find oh this cloud

(1:24:28) looks exactly like this Cloud give me a break dude give me a break and we said what a battery does is it pumps out energetic electrons and they go down a hill roll down hill and go back into the back into the positive terminal of the battery and when we design circuits what we do is we we we put stuff in the way of this electron on his path and this is where we build our circuits okay that makes sense so the the electron current is going in this direction here down the hill the electron the conventional current direction or

(1:25:05) the current direction is this way so now I'm going to redraw my circuit and my battery I'm going to flip the battery around it until the positive terminal is on the top and I'll put my circuit over on the side over here like this I might need another Martini for this folks might be a late night folks there's my circuit that I just Satur let's connect those circuit if anything happens to me by the way then you know everything is true this is the plus side obviously I'm not suicidal but I'm in Cas any plus side

(1:25:36) goes with the long bar and the minus side goes with the short bar there and the current direction here the conventional current direction or just playing current direction wait no wait that's regular current is in that direction out of the positive back the negative from now on this is what we mean by current and we know that the electrons are in here they're heading around this way like that but that's okay this is the this is the nomenclature for conventional current or just plain current this is going to be

(1:26:03) confusing as hell man this this current crap is going to be super confusing why do they have to mess this around have this going like the wrong way yeah what I like is that people will say that were you what is it uh confirmation bias but people that are looking at Clouds saying that this **debunk** stuff it's like oh well that that's confirmation bias hey Ethan what do do you think we could end the homeless crisis if we had power that infinite power I think so it's funny people would try to say that what trying to make some **[redacted]**

(1:26:39) about uh me not being prepared for the homeless crisis is literally what I care about man the most in this world yeah obviously haven't listened to anything I've been been saying where's the science where be thou do thou science down here we'll save this video for later uh whoever just messaged me that old shoe I'll save that for a little bit later thank you probably tomorrow you guys want to chill for a second while I uh make another Martini or should I play a video for you guys do you guys think that we got a copyright

(1:27:38) strike for that I really have no idea man I'll play a video for you guys while I'm making a martini real quick kind of surprised kim.com hasn't hit me back with this yet this is pretty weird man what's going on with all this stuff wait where was that link where was that link at uh oh where was that link folks that's not it oh here it is okay we're saving this into our message we should save this as fake

(1:28:43) Cloud def Cloud **debunk** [ ] let's call it Cloud **debunk** [ ] guys uh let's save it to our desktop put that over here let's let's look at a few more messages chat we looking under Landscapes Aerials okay I work all in on videos being real but

(1:29:48) turns out **Jonas** was also working for heavy VFX Studios the exact same time yeah no there's there's no uh I wish there was somebody who would come out be great if they could just prove bring all the the source files telling us how they knew what the cber system and uh M q1c great Eagles looked like that' be pretty pretty sweet why they faked these videos of MH370 how they happen to corroborate the real events and location that'd be real sweet what what is this oh hello okay which one's ronal pondal this

(1:30:43) douchebag oh Ron we got you buddy we got you buddy oh yes yeah give just FYI anything you guys can find at Ronald pandaly give it to me I want everything on this spook this guy's a literal CIA operative I want everything on this guy everything you can find me about Ronald pandaly find it we're going to drag these CIA Spooks who are discrediting the case straight into the open no more hiding these little Spooks no more hiding boys I want everything on these guys I want to know everything about this guy his life everything he's ever

(1:31:47) done oh well I showed DM so that's okay I don't like Spooks and I don't like when the CI is messing with our case who are these guys copy these guys too where I I got a Channel created just for this and I'm saving all this stuff in you know what in fact Rona pondal is getting his own channel I hope he's watching this right now too if he's watching you're not as half as smart as you think you are Ronald best thing you can do is admit the **truth** about these

(1:32:51) videos I have a feeling he's one of those egotistical people that will think he can just take down anyone he wants to this is getting spicy boys John Alexander is the guy in the middle on that on that picture okay got it we're gonna we're going to figure out who John Alexander is as well the I bet you these are some old Spooks who think that they're Untouchable I think they can just do whatever the hell they want I guarantee it this guy over here is John Alexander on the left this one's got to be Ronald pandaly

(1:33:39) right here this guy right here this is his wife right here who looks like she's about 12 years old yeah okay I get it this is Ronald pandaly got it got it smells like some rats to me oh they're sneaky they're sneaky I bet you if I had to guess who's in charge of planning fake pictures you're staring at him good luck Ethan they already figured it out if you if you don't think I've been under attack 24/7 for the last five months like go look at **Redd**it go look at **Redd**it man that's why I'm talking about

(1:34:24) dragging these guys into the Limelight let's see if we can find anything else real quick sorry we're getting this sorry we're getting distracted here I want to be friends with this guy you guys ready for meme time I'm Gonna Leave This one for you guys

(1:35:26) while I make Martini real quick oh I've already found out about stuff about Ronald pandaly man Alexander's Army CIA yeah I like this Cameron Grant Cameron guy I was already

following him so that's a good sign it's a real good sign okay AFK five minutes folks we're going hard tonight we're going to be going for another hour it's going to be a late night for that

(1:37:17) okay Chad it's that time of the night chat this is the time of the night where I talk [REDACTED] about Jack sa sarfati that's who we're looking at on the screen right now so this Jack sarfati guy is also a spook connected to these other Spooks and he's also a nut job who thinks that he has superpowers and that the government hire him as a young age while because he's some kind of X-Men or something with superpowers and he thinks he got messages from the future psychic messages from the future this this is

(1:38:00) actually true guys this is actually true also he hates dogs as well he literally hates dogs and he thinks that uh iie Geller has psychic powers like this is these are the kind of Spooks that we're dealing with yeah where is my pup where's my dog you fluffy she's chilling she's chilling we're good she's chilling this dude hate hates dogs man just Jack sarfati is like the literal worst human being on the face of the Earth right after mcwest I sent this dude a message being like hey man I appreciate you I think we

(1:38:49) could get along like you want to help me with some of the science and his response is like you're an idiot what the [REDACTED] and I'm sitting there like who are you I'm like I'm like who even are you dude I'm like can you just be like a cool guy nope I'm gonna be a jackass and I Google this guy and this every single time I have like uh people be [REDACTED] to me and I look them up they're always some nut job like I always some Nutter like the orb guy who's like talking about how he's an orb expert and

(1:39:27) I read I I do read a review on his book and it turns out he's just like a total nut job or like Jack sarfatti and I figure out like oh he thinks he's some kind of X-Men who's got like psychic powers and [REDACTED] I'm like dude what is wrong how how is every single person who's like these main detractors how's this guy even in the CIA no wonder our government's like so screwed man no wonder the US government's so screwed man hey Ethan I hope you're having a good night man hope you're having a good

(1:40:10) night I'll probably never get into Mena John Alexander is all over the invisible College I might have to make a a thing for John Alexander no I don't judge anybody either like I I don't care if people are nut jobs but I ask him for help and then uh he acts like a jackass to me I I'm fine I'll show the DMs I don't give a crap I'll show the DMS guys guys I always carry the receipts I always carry the receipts and then I just all all I do is just Google people like it's not like I

(1:41:00) have special powers I just Google people and then you find a bio where he's literally talking about how he thinks he has psychic powers like oh I think I have psychic powers and also I think Erie Geller who's bending spoons has psychic powers too you guys know the old saying that people that live in glass houses shouldn't throw uh shouldn't throw stones like that's uh yeah exactly just don't throw stones when you live in a glass house man if you think you got psychic messages for the future and that you uh you're some

(1:41:48) kind of special X-Men who gets uh you know uh recruited by the CIA to look into weird psychic stuff like don't go dissing on what other people believe man it's the same as the people that believe in magnetic rocks and and talking aliens talking to them saying that science isn't legit it's like oh you believe in macroscop at Quantum coherence well you're crazy I'm going to go talk to my alien friend now and just to be honest I I don't care about people that talk to aliens yeah it's kind of like also like TJ our

(1:42:29) favorite our favorite person we haven't talked to TJ in a while man he's been afraid to I think jump onto the uh jump onto the uh the streams with us but um it's like the Skinwalker Ranch people saying we have no evidence it's like you're Skinwalker Ranch like tell me about the dog man smoking cigarettes some more man Jesus sorry guys we're at that portion of the stream where I just rip on people while I'm stuffing blue olives we're almost done and then we'll get back to the

(1:43:17) science when I asked **Jonas** to delete his video he says it would be weird if he deleted the video why would that be weird I mean it would discredit the **debunkers** but it's not going to be weird it's weirder that he doesn't delete the video while not accepting \$10,000 in my opinion it's really weird he's not accepting \$10,000 like hey I made a **debunk** video uh from my pictures and you're being offered 10 grand all you have to do is sign a statement says you're not lying nope I don't want to accept that but I'm happy

(1:43:52) to get the the the million the million impressions no I'm definitely not sweating it takes a what if the orbs hit a fla on oh you're being serious maybe maybe yeah the memes dude the [Music] memes whoa wait what what the **[redacted]** what John and his wife Victoria she looks like about 30 years too young for

(1:45:00) him well John Alexander if you're also a spook and you're also out there welcome to my list I knew there' be more we're make a new channel for you too every one of these Spooks is going get dragged into the light the more they come after us the more they make some fake **[redacted] debunk**s the more we're coming after them we find out that this **debunk** was falsified by the government oh my God am I GNA not going to be happy the funny part is like if all this stuff was true I wouldn't even talk crap

(1:45:46) about the people who've been talking crap about us I just don't care about them like when you win guys one of the the uh things in sports is that when you you win a game you should act like you've been there before you know act like you've been there before act like You' won a game before the people that were trying to tap on our grave yesterday like those are people have never had a win in their life they're just losers right never had a win in their life they're so excited yo yes we

(1:46:14) won right all my flaps of serial numbers weird weird Ethan I was just meing on you bud I don't care about you at all my man you seem like you're a little bit obsessed with me while you're watching

(1:47:16) me in my channel but I don't mind man you're good entertainment okay sorry guys one more blue cheese all of the stuff and then we're good to go yeah you got to act like you've been in the end zone before man it's a good lesson for people that have never had a win in their life act like you've been there before you know what blows me away about the internet in general is how many people are just absolute losers man absolute losers like they've never had a win in their whole lives

(1:48:01) man like full-blown adults acting like little children right like acting like little children you know and what I'll say is I didn't get along with y yo Shane at first I thought he had a lot of problems in his life but at least he's honest man at least he's honest at least is an honest guy and speaks what he really believes you know I respect that I respect when people just actually speak what they really believe and they don't lie even if it's not even if something I don't agree with okay blue ches olives have been

(1:48:49) stuffed okay what do we got going on in chat here yeah I still have that security clearance as of now at least I don't know what's going to happen I have to renew it in like a year or so we'll see I don't even care if I lose a security clearance I'd be able to do drugs that'd be nice maybe I'll do whatever the dmts and whatever they're called dsps whatever the ones that were supposed to make you have uh see things I don't know maybe Jack or F can tell me which are the right ones I

(1:49:32) got to do to have the psychic powers I was in a uh I was in a uh stream with the alien attic guys I'm going to do another stream I'm going to do another stream with alien addict again tomorrow because those are my favorite guys and I love how we brought up they brought up the like the drugs and how like drugs can make you I don't know um open your mind or something like that and I'm like what is I don't know if it was DMT is it DMT DMT and he says it like dixo treson or whatever it is and I'm like yo you said that a little

(1:50:16) bit too quick you got to you got to pretend like you don't know what it is right away is it DMT I don't know I don't know man I don't do drugs is qar on posting on Twitter I don't want to get qar on killed I don't know if he's a memer or not I can't really decide he might be straddling the line just so that people don't take him seriously I'm not sure what's this yeah yeah this is this is pretty weird man did anyone get a hold of this weird six day old account let's figure

(1:50:53) out who this guy is I don't mean to like dox him I just mean like if he wants a \$10,000 reward for his amazing efforts in somehow finding these pictures please tell us how he did so maybe you can detail exactly how he found the pictures is he like the Rainman he's the Rainman out there just oh these picture these clouds look the same I don't know guys uh oh what's this what's all this uhoh oh somebody found a match yeah but this is this is not in our videos right here this is not the same one this is clearly not in our

(1:51:55) videos so that's not that doesn't matter so wait one of the other raw is found but not the ones that we need if that's true it's going to get wild dude wow this is going to get wild man I keep like my heart keeps sinking thinking like they're's going to find the picture but they're not

finding it getting this is getting freaking

(1:53:01) weird man it's getting hard not to make a post N I kind of want to chill now kind of want to chill now I just don't I don't know what the hell's going on man I really don't know what the hell is going on oh wait where's the qar on this one wait no this qar on one because I talked to Jonas and he's not I don't think he he messed with it I like these people like oh they the

(1:54:12) CIA whatever fake the video okay well where's the plane bro where's the plane right yeah we'll probably post tomorrow oh somebody said to be careful asking questions about John Alexander oh well that just makes me want to dig into him even more yeah if you're on here John Alexander Ron pandaly I got I got folders already set up for you buddy I got folders set up we're going to find out everything there is to know about you who's this who's this

(1:55:26) yes you saw I played Diablo 4 you guys got me uh start with this one I suppose a man 1% okay this better go faster than I want than that read UFO to God to learn about what Alexander is doing right now with orbs interesting what was Ashley saying I like Ashley crack me up Ashley what something about absence of evidence what about 12 what about 13 pages of evidence what about 13 pages of evidence what about a plane not crashing into the plane crashing into the South Indian Ocean can't leave a debris field what about that

(1:56:34) logic pretty sure there's no way I can be a spook if I'm just revealing my DMs and my uh hard drive and all my videos and the crappy blizzard games that I play or played Once Upon a Time okay sorry guys I'm getting distracted okay we're going to come back to this close that out let's do some more science friends okay what else we got yeah we're burning that Midnight Oil tonight i' I got a solid Martini here so we're going to be up for at least another 45 minutes we might have to play some video

(1:57:17) games later on not tonight but at some point we got 13 pages of evidence guys but somebody magically found some cloud pictures in 20 minutes cuz they're the Rainman and then instead of just posting it under the real name they messaged some guy and told him that he should post it under his name using a burner email account so it couldn't be traced back to them that's not suspicious meanwhile we're going to look up all these CIA Spooks and figure out who the hell they are okay let's do some science okay oh I don't like math guys I

(1:58:06) don't want math what's all this math here preparing to study electrical engineering math oh no no no no no no no no no no no no no no I think we can skip this part okay the concept of electricity arises from observation yep that's good we observe Force like gravity at a of distance the sources Force okay named charge so I think was it Banner who was in the chat basically saying that maybe electricity you have to think of it as like a field makes sense so electric charge is very powerful Opposites Attract like chares

(1:58:56) repel conductors and insulators this is probably going to be important I don't know it's going to be hard to oh yeah we might have to do Maxwell's equations next we might have to dig into maxel equations if this is it um it's going to be hard to do electrical engineering without

math you guys are 100% correct on that oh I missed the Ronald pandaly chat me where is it oh there it is there it is sorry guys I got to post some image oh we already had those good good good good good good good good nice we already got um we already

(1:59:49) got channels for Ronald pelia info good good good I imagine that doesn't make them very happy but neither does fake **debunks** of pictures that appear out of nowhere for us it's cool man it's probably just all fake so in that case the CIA has nothing to worry about I mean if the CIA is messing with us and messing with these videos then I guess they'd be really upset and let's be honest guys the Chinese have already figured out these videos okay I mean we've been blowing them up for months we've been blowing these videos

(2:00:35) up for months the Chinese haven't figured these videos out then they're just not in not in the same level we're at I got nothing against Chinese people I mean come on man who cares oh Max World equations make calculus look easy okay conductors are made of atoms whose outer or valence electrons have relatively weak bonds their nuclei okay when a bunch of metal atoms are together they uh gladly share their outer electrons with each other creating a swarm of electrons not associ with particular nucleus a very small electric force can

(2:01:23) make the the electron swarm move guys this is creepy this is like a superconductor right so we can create a superconductor if we have the right Metals it's not going to require a meta material copper and Lead create Ikk99 is Le a conductor h h it helps it's it feels like we have like the cheat sheet you know I need to know about pointing vectors and I don't know why you spell

(2:02:26) it with a Y is that like a troll thing or is that actually like right pointing vectors is that right pointing vectors no N N's on the other side pointing vectors gotta learn about that Arvin Ash for Maxwell's equations is that how you spell it guys we're going to figure out some we're GNA figure out some freaking science folks sometimes it takes six months for conspiracy to come become a fact I agree I agree I need some more conspiracies because all my conspiracies keep coming true

(2:03:42) okay we're going hard tonight chat there's a lot of people here I didn't even post on Twitter people are probably wondering why I'm not posting on Twitter well CU I'm drinking martinis eating apples I'm chatting with 200 my best friends this is getting interesting guys so we should remember what salvator Pas Bob Greener Dave

(2:04:47) Rossi and what Herbert d uh Herbert d uh jeez Roy Herbert told us right the electron clouds around the atom stretch into form in response to the force but the electrons do not depart but what if there's certain conditions where they do what if certain conditions allow them to depart and if that's true is that how we create a superconductor is that how we create the macroscopic quantum coherence electric force can always be turned up high enough to rip electrons away this is how we create super conductivity even for

(2:05:44) insulators this is what happens to air molecules when you see a spark so if we spark

something the electrons are being ripped away wow wow is that the Scher swinger limit or whatever it's called wait yeah the swinger limit yo uh Dan Clark tell me some more swinger limit is that how you spell it I'm not a good speller when I'm drinking there's an H interesting so the electrons are less prone to move but you can force them this is something Dave Rosy told me as well is that what do you say you can create a superconductive

(2:06:33) property with anything this might be how you can turn a plane into a macroscopic Quantum coherence event semi semiconductor so a semiconductor is somewhere between the two silicon our ability to finely control the insulating and conducting properties governed by theories of quantum mechanics well this is interesting let's copy this currents flows opposite to elect to

(2:07:48) electrons I thought current was Q drinking this Martini might be a mistake folks it's interesting table salt will make it become a current so electrons drift okay sorry if I'm not me hitting all the the chat messages the key for these crafts isn't super conductive it's the insulation properties yeah no I'm with you uh th600 Mike there's definitely a combination of the insulating properties as well as the

(2:08:52) superconductive properties here please keep the right-hand rule of electrical flow I don't know what this stuff means guys you got to talk to me like I'm a 5-year-old Hutchinson Effect okay guys this is getting good we're we're going to learn some stuff I'm excited about this hey Ashley you're on fire apparently plus I don't know Party Time play some Christmas music okay I'm going to play some Christmas music Christmas music pretty sure this isn't copyrighted either so it's like double

(2:09:56) win have a little Christmas music while we do a little bit of uh hopefully that it's not too loud let me make sure I didn't miss any chats a gamer Ray hit my new newly fertilized egg Mena Ashley you're just you're brutal Ashley I could just block Ethan out of here but I'm actually enjoying his presence okay th600 Mike I'm liking what you're saying here it's very hard to have an insulator not break down at such incredible voltages that what makes Ros material is very special so the materials I think were

(2:10:53) what bismuth zinc and magnesium bismo zinc magnesium sorry I'm just thinking chat so if you have a super powerful insulator like what if bismuth is the answer right where it's the one that's in between and what if that one's so powerful that it allows for the superc conductive properties on the outside and then the insulator doesn't break down interesting maybe it's a combination now I'm thinking really interesting bismuth has the highest D what does Di magnetism really mean though I feel like the dod is going to be

(2:11:55) knocking on my door pretty soon we're advancing our understanding of uh electrical engineering really quickly here silica dioxide so silicon plus two oxygens piso electric effect I'm already starting to understand stuff yeah thin alternating layers of bismo zinc and magnesium starting already makes sense to me we're not going to be able to get through all this tonight guys we can only learn so much science in one night at 1: in the morning or 2: in the morning

whatever time it is whatever time it is locally for you

(2:12:47) guys I as you apply a magnetic field to it the resistance increases should we drop a magnet through a copper type well this is going to be sweet hope you guys are ready for this chat I'm going to I'm going to pause the music hold on am I running okay I'm going yeah let me guess it's going to stop yeah holy crap that's weird do that again wow that is wow wait what hold on am I running okay I'm going yeah wow do that again that is holy

(2:13:51) crap that's awes why did it show some Tim thing hold on am I running okay I'm going yeah we don't need sound for this why is why is there a Tim pool thing show up what is this is this right now is this the coolest thing ever why is this happen happening it's getting slowed down for some reason I feel like I'm looking at something very important here some reason I feel like I know about Ken wheeler but I I don't I can't decide what I think about Ken wheeler I've got to try not to judge

(2:14:40) people so when you apply magnetic field resistance increases so that would mean that this copper have a high di magnetic property resistance is increasing so D is copper highly D di magnetic yeah it is lead is one as well huh so maybe there is something at lk99 what if you add bismuth to it they repel magnetic fields bismuth

(2:15:47) folks charge objects move in response to electrical and magnetic forces current actually isn't about meters per second that's really interesting it's not about speed so that would make it that would make me think it's more like a Field hold on I gotta see if there's any scar [redacted] messaging me feels bad no scar [redacted] feels bad guys no scaros bismuth is the only material that does

(2:16:50) not Plateau this effect from thermal or magnetic input when you say it doesn't Plateau means it just can keep the effect can keep getting stronger and stronger wow I'm going to copy this this seems relevant feels like we're understanding something here feels like I'm learning something yeah I feel like I missed out like I shouldn't have slept through so many physics classes guys oh man the capacitive charge oh well if somebody has 300,000 YouTube

(2:17:55) subscribers obviously they know exactly what they're talking about just a joke yeah this is th mik how to warp SpaceTime basically just through voltage seems to make sense laws of inversion write that one down I feel like I'm going to definitely knock over my drink here I feel like I've already learned like a whole semester's worth of school here in just the last hour or two damn bismuth is that much stronger so bismuth is the money

(2:19:03) right lk99 is a combination of copper and and Lead which is interesting because both of them are highly di magnetic where there's electricity there's always magnetism you might going to get into Walter Russell I don't know definitely definitely feels like we are onto something here getting excited damn Ashley getting going hard don't ever talk to me again Ethan love it Ethan's getting brutalized in the chat feel bad he probably likes the attention oh let's play the music I don't know what they did with

(2:19:52) the people guys I wish I knew I can speculate but I I don't know what happened with the people on board of the plane if you guys want me to speculate I'll pause the the thing real quick I think that China knew and figured out that what happened and then they held the United States over a barrel over it and said I mean what's China going to do though what are they going to do like oh the United States orb the plane like what if China comes out and be like the United States orb the plane guys like

(2:20:20) everyone's going to go okay China you're nuts right no one's going to believe that [ ] so it's like you might as well they pretty much just try to get their people back right and then just yeah who knows we got to figure out what exactly entanglement is hey Jimmy you saw a shooting star sweet damn Ethan you want to be wrong again Ethan my man uh oh uhoh uhoh uhoh here's what's been found 2017 is that 20 pieces that doesn't look like 20 pieces to me guys does that look like 20 pieces to

(2:21:10) you that looks like three pieces this is definitely not they did not find a huge piece like this I guarantee if they found each P like this that have been on the the front page they basically found some tiny Parts even if you add all this stuff up it's under 1% of the plane they found three tiny pieces this flon is not nearly as big this is like six feet across this flon right here this plane is huge man they found basically no plane whatsoever no plane but the tiny amounts that they did find are consistent with the fire event

(2:21:54) in fact some of them have burn marks on them feels bad Ethan wrong again where's the parts that look at the is this the one with the burn marks on it this one I think it might be that's a ruler right there or this one right here that they found with the Rolls-Royce engine logo Byfield Brown effects I've heard about it actually I've I've heard about the bfield brown effects I think I I wrote a I think I wrote a tweet about it I don't remember which one it was it was in I think the mezer I think it was in

(2:22:55) my science piece on the mezer effects if I'm remembering correctly yeah Thomas Town said Brown yeah I did read about it which guys does anyone remember who's been following for a while it was like 2 months ago where I did my science pieces I think it's the meznar effect one you guys ready for this I got a lot of freaking I got a lot of videos guys I have a lot of videos hold on uhoh super conductivity uhoh meeser effect uhoh floating rocks who is in the floating rocks again look at this thing just literally

(2:23:58) floating man floating over a magnet room temperature rock floating over a magnet that's pretty neat man you want a hoverboard there you go there it is there's your hoverboard hoverboard look at that thing the the magnet's on the side of it anyone want to see some flux pinning guys Ethan can't be wrong he's in men so guys guys he can't be wrong he's in Mena guys let's let's go look at our piece called debunking the debris this one's for you Ethan okay we're getting sidetracked we're

(2:24:55) getting sidetracked yeah that was a magnet rust rustom rustom sorry if I'm butchering your name so I'll do a little uh commentary this is a magnet in this guy's hand right here and so

this magnet here this is like a I don't know microphone or something this is not relevant this magnet here is not even below this rock this lk99 and this is important because if you're experiencing flux pinning okay the music's bothering me hold on if you have flux pinning then you can actually move the magnet all the way around it

(2:25:33) and The Rock will just say suspended right here no matter what and that's why it's important that the magnet's off to the side we have other ones where the magnets down below and a lot of people would ask well flip the magnet over the top cuz if you flip the magnet around for the mees ER effect because What's Happening Here is that parts of this material are superconductive and other parts are not so some of the magnetic fields are warping around the Rock and then other ones are going right through

(2:26:00) it and what that does is it means it's literally just gets stuck it floats it floats in space look at that that's why like it's St kind of sticky and then kind of doesn't it's because parts of it are allowing the magnetic fields to flow through and other parts are not just to prove it they use this circle thing and they show you there's no strings it's not being held up by a string God I would freak out if I had this in front of me that would be freaking sick and then just to show you that it's

(2:26:37) not fake they just take an actual screw here and they just stick it to it that's a magnet yep that's a magnet wild man yeah super conductors feel like that's feel like super conductors feel like cheating what's this video uh oh quantum levitation here we go folks hermes's coming through big time you guys ready yeah but this is a cooled super conductor right a little bit different but yeah same idea it's just stuck in place right and again so he flips it upside down because exactly when you flip it

(2:27:35) upside down it's still stuck in place cuz the magnetic fields are flowing around it and just keeping it completely stuck now imagine if you could do this at room temperature without having to be super cooled now you can start to enable some basically just magic and imagine if you have like multiple of these that are all in the exact right orientation with one another now you can start to amplify their energy and power or their magnetic fields with one another yeah this is pretty damn cool notice how it just sticks right on top

(2:28:19) of the magnet now you're creating your own geodesic right you're creating your own gravity field into a degree or a fake gravity field even if you spin it on its side it stays exactly in place this is wild man I would stare at this like all day how is there not like 20 people around this guy what are these other people in the background doing these are like hey can I get my nails done back here like dude this guy is spinning super conductors around on magnets oh he's going to do it underneath it oh

(2:29:00) man what where how is there not like 50 people around this guy do they think it's a magic trick this is like what uh liquid nitrogen or something or what's the whatever they use to cool stuff right I can't remember carbon dioxide something like that I don't know damn that's sweet yeah man this is the secrets of the universe we're staring at right here good video man

good video Yeah Ethan go look for the hoaxer bud 150 Grand I'm not going to lie to you guys these blue cheese Martini or olives are

(2:30:09) amazing yeah how is the corridor crew not able to recreate the whole thing now that it's so easy I thought they said it would only take like an hour now they even have the assets man the energy density limitations that would normally require compact fusion reaction can be overcome using aerogel designed to hold a vacuum to create a buoyancy I just saw something on alien scientists uh page about this about aro gel what is aroel sorry we're getting sidetracked but it's interesting whoa I refuse to click on

(2:31:03) Wikipedia absolutely refuse what up Barry is least dense solid this piece has a mass 2 g that is only a few times the mass volume of air which kind of makes sense because is 99.8% air in fact some aels are so light that if you removed all the air from them they would be less dense than air I I have long been fascinated by AEL so actually flew out to arel Technologies in Boston to find out why was AEL invented how is it made why is it such a good thermal insulator and what is it used for okay we are going to try an

(2:32:02) experiment to demonstrate the insulating power of AEL so over here we have uh two th600 mic was making Dipping Dots guys using the liquid nitrogen was that it was liquid nitrogen I've been drinking so I'm I'm surprised I know as much as I do is this another video oh yeah you already showed me this one I don't I don't get it though I just don't get it it's cool but I don't get it onboard vacuum where did where did my other video go setups one with a glass petri dish and the other one with AEL on top both

(2:32:45) are made of silicon but with very different physical structures we're going to see how long it takes to melt these chocolate bunnies with a bu Tu in teh have a look at this experiment we have a Flur t1020 which can uh see temperatures up to 2,000 de C it's getting pretty hot yeah you can see that the glass is getting really hot and after just a minute it's starting to smoke oh okay it's definitely melting and smoking oh yeah here we go uh I would say that's a phase change we've got uh liquid chocolate situation we

(2:33:20) have some smoking bunny uh over here the bunny is actually sort of melting over and look there it's sort of tilting to the side all right I think we're going to call that a melt what what is that on on okay put it under the arel not only did the bunny melt quickly the petri dish cracked under the thermal expansion so now let's try the arel let me guess nothing nothing's going to happen so how was arel invented back in 1931 a guy named Professor Samuel kler had a bet with his colleague Charles learned now

(2:33:56) the BET revolved around jellies like peanut butter and jelly jellies now the thing about jellies is they are actually a combination of liquids and solids I mean they're mostly liquid but it's embedded within this 3D solid structure so if you think of a gel like jello has a skeleton with Nano siiz pores that gives it its rigidity and then that's about 1% of the gel so the BET was this could you remove the liquid from the jelly without affecting what they're using aerogel Alloys to claim that the orbs and the

(2:34:32) craft that have been seen are balloons this explains the February shootdowns uhoh Epiphany time whoa huh is that why they called them [Music] balloons guys we're learning some crazy crap right now this is awesome I don't even care about making Twitter posts right now I'm honestly just care more about the science the solid structure I mean if you just evaporate the liquid out well then the solid structure shrinks because as you remove liquid molecules they pull on each other and they pull on the solid

(2:35:33) structure around them basically crumpling it from the inside now Samuel kler solved this problem in two ways first he realized you could replace one liquid with another inside the jelly just by washing it um so th600 Mike yeah they've been seen since the 30s but how much of the ones we're seeing are ours now I think the ones we shot down were not were not non-human intelligence I think that they are China's or rushes thoroughly so you could swap out say water for alcohol and then if you take the jelly and put it in a high pressure

(2:36:11) vessel called an autoclave by heating it to the high temperature and high pressure point called the itical point of the liquid that liquid transformed into a semi liquid semi gas called a super critical fluid at this point there is no longer a distinction between liquid and gas those molecules are no longer pulling on each other and so once you've depressurized the vessel that solid skeleton that 1% of the mass of the gel is Left Behind intact except for where there was Liquid in the pores before is now gas and that solid

(2:36:42) skeleton that nanop solid is what we call aerogel wow kler published his findings in nature in 1931 wow so they're able toate the liquid with the thermal camera but coming up on 3 minutes there's still no sign of melted chocolate so we're going to pull out a thermac couple and just check the temperature underneath the bunny like underneath the airel and see what what the flame temperature is you can kind of see that the parts of the bunny are getting hot but it's not the bottom of the bunny it's all the around

(2:37:12) the bunny exactly that convective heat is moving up and around the arel so you can see the thing is getting red hot and by four minutes the bunny is looking a little soft pretty good though considering how easy it is to melt chocolate can I put my finger here be careful it's not that it's hot it's that it's brittle right it's brittle but yeah totally cool to touch right it is it is warm to the touch he made AOG gels out of all sorts of things he made them out of eggs he made them out of rubber out

(2:37:43) of nitro cellulose and included in there was silica actually right here on the table I have some examples of uh some silica gels this is a a wet silica gel it's kind of rubbery carve out a piece it is um 90 for links 7% alcohol inside of its pores and then the remaining 3% solid is amorphous silica just can I it as we don't get copyright kind of rubbery not that strong so was I cracking it there or was it already kind of cracked oh very easy to break very crumbly the next step is to replace the alcohol in the

(2:38:21) gel with liquid carbon dioxide we're about to see liquid CO2 liquid CO2 has the advantage of being nonflammable plus it's got a low critical temperature open up and I see it

flooding in there yeah it's flooding in there it goes just flooding it into the you can clearly see arel it's is so much cooler on top what temperature is it on the bottom we're at 600 right now 600 that's 1250 right now notice where the bunny is melting it's melting right on is not the answer the flame kind of crawling up and

(2:38:56) over something that can be used right oh bunny down well not a bad result cor crew already debunked this guys I'm interested in in tasting some of this chocolate turns out it was a video games effect all the whole way along whole time is it hot it's warm warm and delicious we're not seeing it in the orbs that was great once the liquid CO<sub>2</sub> has filled all the pores of the gel it's time to take it super critical it was easy I would say kind of a spiritual experience the first time that I saw a super critical fluid we'll get to do

(2:39:30) that here I love how much you're into these autoclaves I love air gels to make a super critical fluid we can heat this with a hair dryer actually satellites go east to west I don't know as we approach the critical point the surface of the liquid becomes go any Direction they want weird huh that is like weird waves in there yeah I'll speed it up so you can watch the surface disappear Al together you're now looking at the super critical fluid of CO<sub>2</sub> wow in this state the CO<sub>2</sub> can be vented without affecting

(2:40:02) the solid structure and what you're left with is arel wow if you look at arel on a light background it's almost impossible to see because it is pretty transparent but see it look at it w on a dark background wo then you can see that it has a slight bluish color and it's bluish for the same reason that the sky is blue because all those tiny little nanoscale structures they scatter the light according to ra scattering and the intensity of light scattered is proportional to 1 over wavelength to the power of four which means it scatters

(2:40:41) shorter wavelengths like blue much more than it scatters yellow or red and for that reason aerogel looks opaque in the ultraviolet and transparent in the infrared now what do you think this would look like if I held it up to the Blue Sky what do you think we would see would it look Ultra Blue no it looks yellow and that's because the air gel is actually scattering out that blue light and so what passes through and makes it to our eyes is the longer wavelengths like the yellows and oranges it's basically the

(2:41:16) same effect as looking at a sunset I want some when you see the yellows and oranges of a sunset it's because the blue light has already been scattered out by the atmosphere the light had to pass through before it reached your eyes so effectively looking at arel against Blue Sky is like looking at a portable Sunset the nanoscale pores of the aerogel are also what makes it such a good thermal insul what the hell no commercials folks we're not watching Honda commercials here um yeah when people attack you usually

(2:41:49) it means you're doing something right guys usually it means you're doing something right people don't give a crap about people that are making up fake stories definitely hot you might think that because arel is largely comprised of air like 99% air it's already that has the same thermal properties as air but that is not correct it's actually a better insulator than air is

that's because the width of the pores is smaller than the distance air molecules travel on average before colliding with something their

(2:42:20) so-called mean-free path hence it's really difficult for the hot fast moving air molecules below the aerogel to diffuse through it and transfer heat to the top of the AEL this is called the cansen effect it is so weird because Canen effect you know you don't expect something that's transparent to block the heat that well but this really does and that's why NASA used AEL insulation on the sojer Rover spirit and opportunity the Curiosity Rover and they plan to use it on future missions to Mars why does it need insulation the

(2:42:56) electronics because uh they don't want the electronics to get cold during the cold night so be honest they're definitely using these aerogels you kidding me something that that's that powerful NASA has also put aoel to more exotic uses notably to catch dust from a comet as part of the Stardust Mission so the particles were traveling about 6 km/ second relative to the aerogel so when they hit the aerogel because the aerogel is uh a very low density material very very porous material uh the particles

(2:43:27) actually enter the aerogel and as they travel through the aerogel they they get they basically break apart the network that makes up the aerogel and they lose energy in the process and eventually come to a stop this is good for capturing particles because if a particle like that were to hit a solid surface then it just stops you know immediately and just vaporiz and vaporizes so should we expect to see aerogel in our everyday lives anytime soon one of my running jokes is when they build skyscrapers in Antarctica

(2:43:55) they'll they'll use aerogel as thermal insolation why do you say that well because then they'll really care about how just how thermal efficient is because it' be so cold there right so instead of having you know 10 ft of fiberglass insulation you could have 6 lnes or something of of air scientists are currently working on reducing costs and increasing durability and that's that's true they they do have some elas yeah there we go so it is not hard to break they've already made a lot

(2:44:28) of progress for example original silica aerogel is hydrophilic there we go now this is a hydrophilic aerogel so once we've done this is that piece of air gel ruined now pretty much but there are ways to make it waterproof so so if you want to see that next Generation subscribe to the channel and this was the water dropping right through that folks yeah no there's definitely aels that play I don't know that our orbs are happening but peace everybody who's going to sleep we're going to be going

(2:45:07) to sleep in about 5 10 minutes or so why is the music not playing it's a little too loud [Music] Mercury is pretty interesting too yeah Mercury is very toxic though it's pretty interesting [Music] G is the acceleration due to gravity

(2:46:13) okay yeah so the farther the electron has to travel the More Voltage you need to get it to move is that accurate then makes sense so the electron is going to be doing work as it goes

through the circuit and it needs more voltage to go through the circuit I get it makes sense does that make sense to you guys fam huh your messages are going through full of the brown stuff I Haven I haven't even been paying attention to Ethan for a while what was he saying yeah Ethan's yeah Ethan's a man member guys don't make fun of

(2:47:14) him for both the ball and the electron the trip down the hill happens spontaneously they move towards the lower electron State all by themselves we guide electrons through wires make them flow through electronic components circuit design basically yeah I'm just imagining like a computer yeah the Batel institute's another one huh I should probably be calling out the battel Institute as well I the other the uh third party contractors third party contractors are probably sitting here just going uh what's the one where they look the BT

(2:48:04) meme or wait where's the one where they look to the side the third party contractors I haven't called out are probably just looking doing the side look which what's the side side look one uh God dang I've been drinking too much the longer the copper the more resistance makes sense what which video THC Mike I'm making you a moderator you can post links now THC Mike or th 600 mic THC mic you can post links now uh th600 Mike my favorite are the people that believe in all kinds of woo but they just don't believe in like actual

(2:49:14) science it's pretty funny man THC 420 um how many equations do we have to get through here guys I'll go to that link in a second um th600 voltage is the energy transferred per unit of charge we can insert these power equals voltage times current okay

(2:50:24) good is this going to be long math math is a lot yeah that's why we have to start the basics uh th600 mic is cuz the equations grow on each other Barry babbitt YouTube Victor anti-gravity and levation I'm going probably save this one for tomorrow I don't know if we're going to have enough but I want to look at th6 THC mic answered by cassa by Lutron imagine you have a giant circuit consisting of a battery a switch a light bulb and two wires which are each 300,000 km long that is the distance light travels in

(2:51:17) one second so they would reach out halfway to the moon and then come back to be connected to the light bulb which is 1 M away now the question is after I close this switch how long would it take for the bulb to light up is it half a second 1 second two seconds one over I was told there wouldn't be math guys I was told there would not be math so if you light that switch how fast would it take wait the whole circuit length is that so it should be  $1 / c$  seconds no speed of light if the whole circuit is the speed

(2:51:59) of light and it goes all the way [Music] around I don't know usually or none of the above none of the above you have to make some simplifying assumptions about this circuit like the wires have to have no resistance what do we think chat what do we think is the answer what do we think is the answer chat okay I guess otherwise this wouldn't work and the light bulb has to turn on immediately when current passes through it but I want you to an answer and put it down in the comments so you can't say oh yeah I knew that was the

(2:52:35) answer when I tell you the answer later on hm I don't know this question actually relates to how electrical energy gets from a power plant to your home you know unlike a battery the electricity in the grid comes in the form of alternating current or AC which means electrons in the power lines are just wiggling back and forth they never actually go anywhere so if the charges don't come from the power plant to your home how does the electrical energy actually reach you okay this is important when I used to teach this

(2:53:17) subject I would say that power lines are like this flexible plastic tubing and the electrons inside are like this chain so what a power station does is it pushes and pulls the electrons back and forth 60 times a second now at your house you can plug in a device like a toaster which essentially means allowing the electrons to run through it so when the power station pushes and pulls the electrons well they encounter resistance in the toaster element and they dissipate their energy as heat and so you can toast your bread now this is a

(2:53:54) great story I think it's easy to visualize and I think my students understood it the only problem is it's wrong for one thing there is no continuous conducting wire that runs all the way from a power station to your house no there are physical gaps there are breaks in the line like in Transformers where one coil of wire is wrapped on one side a different coil of wire is wrapped on the other side so electrons cannot possibly flow from one to the other plus I mean if it's the electrons that are carrying the energy

(2:54:27) from the Power Station to your device then when those same electrons flow back to the power station why are they not also carrying energy back from your house to the power station I mean if the flow of current is two ways then why does energy only flow in One Direction these are the lies you were taught about electricity uh oh guys we were taught lies oh this is going to be weird look at bees they fly they can't fly they levitate wait is this the same one oh no we already got this one we not good sorry just make sure guys we're

(2:55:13) learning some stuff here tonight late late morning stuff that electrons themselves have potential energy that they are pushed or pulled through a continuous conducting Loop and that they dissipate their energy in the device my claim in this video is that all of that is false so how does it actually [Music] work in the 1860s and 70s there was a huge breakthrough in our understanding of the universe when Scottish physicist James Clerk Maxwell realized that light is made up of oscillating electric and magnetic fields the fields are

(2:55:54) oscillating perpendicular to each other and they are in Phase meaning when one is at its maximum so is the other wave now he works out the equations that govern the behavior of electric and magnetic fields and hence these waves those are now called Maxwell's equations but in 1883 one of Maxwell's poting is thinking about conservation of energy now if energy is conserved locally in every tiny bit of space well then you should be able to trace the path that energy flows from one place to another so think about the energy that

(2:56:31) comes to us from the Sun I mean during those eight minutes when the light is traveling the energy is stored and being transmitted in the electric and magnetic fields of the light now

pointing works out an equation to describe energy flux that is how much electromagnetic energy is passing through an area per second this is known as the pointing vector and it's given the symbol  $S$  and the formula is really pretty simple it's just a constant  $1/\mu_0$  times  $\mathbf{E} \times \mathbf{B}$  now  $\mathbf{E} \times \mathbf{B}$  is the cross product

(2:57:08) of the electric and magnetic fields now the cross product is just a particular way of multiplying two vectors together where you multiply their perpendicular magnitudes and to find the direction you put your fingers in the direction of the first Vector which in this case is the electric field and curl them in the direction of the second Vector the magnetic field then your thumb points in the direction of the resulting Vector the energy flux so what this shows us about light is that the energy is Flowing perpendicular to both the

(2:57:39) electric and the magnetic fields and it's in the same direction as the light is traveling so this makes a lot of sense light carries energy from its source out to its destination but the kicker is this pointings equation doesn't just work for light it works anytime there are electric and magnetic fields coinciding anytime you have electric and magnetic fields together there is a flow of energy and you can calculate it using pointings vector to illustrate this let's consider a simple circuit with a battery and a

(2:58:19) light bulb this is the battery by itself has an electric field but since no charges are moving there is no magnetic field if you have a video from Hal P send it to me put it in the chat we're going to not watch it tonight but we'll watch it next time so the battery doesn't lose energy when the battery is connected into the circuit its electric field extends through the circuit at the speed of light this electric field pushes electrons around so they accumulate on some of the surfaces of the conductors

(2:58:52) making them negatively charged and are depleted elsewhere leaving their surfaces positively charged these surface charges create a small electric field inside the wires causing electrons to drift preferentially in One Direction note that this drift velocity is extremely slow around a tenth of a millimeter per second but this is current well conventional current is defined to flow opposite the motion of electrons but this is what's making it happen the charge on the surfaces of the conductors also creates an electric

(2:59:28) field outside the wires and the current inside the wires creates a magnetic field outside the wires so now there is a combination of electric and magnetic fields in the space around this circuit this is why it doesn't matter isn't it this is why it doesn't matter isn't it the loop shape is manipulating these fields isn't it so according to pointing Theory energy should be flowing and we can work out the direction of this energy flow using the right hand rule around the battery for example the electric field is down and the magnetic

(3:00:05) field is into the screen so you find the energy flux is to the right away from the battery in fact all all around the battery you'll find the energy is radially outwards energy is going out through the sides of the battery into the fields along the wires again you can use the right hand rule to find the energy is Flowing to the right this is true for the fields along the top wire and the

bottom wire but at the filament the pointing Vector is directed in toward the light bulb so the light bulb is getting energy from the field if you do

(3:00:43) the cross cross product you find the energy is coming in from all around the bulb it takes many paths from the battery to the bulb but in all cases the energy is transmitted by the electric and magnetic fields people seem to think that you're pumping electrons and that you're like buying electrons or something which is just so wrong for most people I think to this day it's quite counterintuitive to think that the energy is flowing through the the space around the conductor wow but the the energy is which is traveling

(3:01:14) through the field energy and magnetic fields fast how do celebrities like Justin Bieber and The Rock generate wow wow I'm starting to get it already anything you have about Howa I want to watch I have a reason to believe the haling even though the electrons go two ways away from the battery and towards it by using the pointing Vector you find that the energy flux only goes one way from the battery to the bulb this also shows it's the fields and not the electrons that carry the energy I mean how far do the electrons go uh in this

(3:02:07) little thing you're talking barely move they probably don't move at all now what happens if in place of a battery we use an alternating current Source well then the direction of current reverses every half cycle but this means that both the electric and magnetic fields flip at the same time so at any instant the pointing Vector still points in the same direction from the source to the bulb so the exact same analysis we used for DC still works for AC and this explains how energy is able to flow from power plants

(3:02:41) to homes in power lines in inside the wires electrons just oscillate back and forth their motion is greatly exaggerated here but they do not carry the energy outside the wires oscillating Electric magnetic fields travel from the Power Station to your home you can use the pointing Vector to check that the energy flux is going in One Direction you might think this is just an academic discussion that you could see the energy as transmitted either by fields or by the current in The Wire but that is not the casee and people

(3:03:17) learned this the hard way when they started laying undersea telegraph cables the first Transatlantic cable was laid in 1858 it only worked for about a month it never worked properly there are all kinds of distortions when they tried to send enormous amounts of distortion I mean they could work it at a few words per minute what they found was sending signals over such a long distance Under the Sea before we finish this I'll just let you know like I have reasonably from sources that how knows exactly what's

(3:03:45) going on he might be one of the most connected people out there P this is wild I mean I had a reason to believe the electrical engineering was where it's at but now I'm like totally totally on it guys I can't wait to do our next part I almost don't even care about what's going on on Twitter honestly at this pointed and lengthened it was hard to differentiate dots from dashes to account for the failure there was a debate among scientists William Thompson the future Lord Kelvin thought electrical signals moved through

(3:04:24) submarine cables like water flowing through a rubber tube but others like Heide and Fitzgerald argued it was the fields around the wires that carried the energy and information. Fields ultimately this view proved correct to insulate and protect the submarine cable the central copper conductor had been coated in an insulator and then encased in an iron sheath the iron was only meant to strengthen the cable but as a good conductor it interfered with the propagation of electromagnetic fields because it increased the capacitance of

(3:04:58) the line. This is why today most power lines are suspended high up even the damp Earth acts as a conductor so you want a large insulating gap of air to separate the wires from the ground so what is the answer to our giant circuit light bulb question so what's the answer to the question then the fields or what's carrying the energy so how fast will it flow none of the above is what I'm going with well after I close the switch the light bulb will turn on almost instantaneously got roughly  $10^{-8}$  seconds so the correct answer is well

(3:05:44) close I think a lot of people imagine that the electric field needs to travel from the battery all the way down the wire which is a lightsec traveling right from the battery it's traveling from the battery directly to it because the field is right there the pointing vector is pointing directly at it so it doesn't matter how long this is folks the pointing director is the pointing vector is making a field between right here and the light for the B to light up what we've learned in this video is it's not really what's

(3:06:17) happening in the wires that matters it's what happens around the wires and the electric and magnetic fields can propagate out through space to this light bulb which is only one meter away in a few nanoseconds and so that is the limiting factor for the light bulb turning on. Le now the bulb won't receive the entire voltage of the battery immediately it'll be some fraction which depends on the impedance of these lines and the impedance of the bulb now I asked several experts about this question and got kind of different

(3:06:50) answers but we all agreed on these main points so I'm going to put their analysis in the description in case you want to learn more about this particular setup if I get called out on it and people don't think it's real we can we can definitely invest the resources and and string up some lines and make our own power lines in the desert you're gonna get called out on it I agree I think you're gonna get called out I think that's right I think it's just kind of wild that this is one of those things that we

(3:07:21) use every day that almost nobody thinks about or knows the right answer to these traveling electromagnetic waves around power lines are really what's delivering your power wow wow hey now that you understand how electrical energy actually flows you can think about that every time you flick on a light switch and if you want to take your switches to the next level the sponsor of this video Cassa by Lutron provides wow awesome video amazing video THC 600 Mike you definitely earned your you earned your mod mod ship No

(3:08:00) Doubt holy crap I feel like I just learned like five years worth of electrical engineering in like 15 minutes wow guys we might have to watch another video the electrons are just a

byproduct wow [Music] power appears to be a DI magnetic field phenomenon I don't quite understand that yet yeah my brain's starting to get full

(3:09:06) we might have to do oh this is the one I just put up okay were there actually updates in physics maybe mid century that that's to the no that's Eric Weinstein right I mean it quieted down because nobody ever got I don't know if we're going to be watch this down because they did get somewhere and it went black ladies and gentlemen it's finally here the much anticipated conversation with Eric Weinstein and Hell put off the world's most brilliant physics mind of our time is the son of the country country's most

(3:09:44) prominent and important anti-gravity researcher of the 1950s I don't know what any of this is how is an electrical engineer and Laser physicist former NSA and CIA how was a senior adviser to atip the official government UFO investigation program that ran from 2007 okay this is getting weird I've basically talked to everybody so far Aerospace he also founded and ran the cia's psychic spy program called Stargate out of Stanford Research Institute in the 70s does our government have a protocol to wield Stig so

(3:10:22) basically Weinstein and halut are like two of the most important people okay everything's starting to add up to me now this is wild man I can't believe how close I am to a lot of these people this this is weird man this is so weird I mean I literally have Jesse Michaels phone number as a tool for keeping its programs secret certainly there are parts of the government who consider that to be their job that was I'm going to show you a way to potentially make money by pairing Amazon with the power of AI with clutter and Atmospheric

(3:11:07) effect a voice an authorial voice that wanted to disclose more and one that said Over My Dead Body and man the videos are real man the MH370 videos are real man what are the implications of this man what are the implications of this guys I see why there's so many people talking to me now I didn't know any of this [REDACTED] man I was just just guessing based on what I could understand from physics as like an idiot and now I'm understanding it more and I'm looking at this and I'm just going of course this is real of

(3:11:53) course this is what happened to the plane no wonder they had to keep it quiet they think somebody faked this like how would somebody even think to fake this super conductive harmonic orbs no wonder people are messaging me no wonder they were messaging me I'm sitting here just spilling the beans as an idiot just like I didn't even understand electrical engineering they're able to use toroids to essentially create a type of gravity well amplification of the energy by manipulating the fields and the fields are able to be manipulated

(3:12:43) and focus to a point where they can break down the vacuum state of of space time it looks like magic to us but we just don't understand it not only that they're able to use Advanced Computer programs to form the pattern as well this was 2014 they were able to do this the plane's just gone people think we're looking at 90s video game Graphics here I just I think the world is just [REDACTED] sorry for that word but I don't know if the world's ready for this man I think we live in Idiocracy I think we just live in

(3:13:36) Idiocracy I think we're getting Dumber look at this non-rating barrier why does regicide not include this zoomed in slowed down version they want to show us exactly how the how the orbs are working why do we think it's getting distorted here why is it getting distorted because the electromagnetic field from the electromagnetic field from them interacting with one another that's why when they close in it's because it's like magnets they repelling at the same time they're attracting and repelling they're definitely creating an

(3:14:29) amplification of of the forces here somehow so strong that breaks down the vacuum State this is causing the electrons around it to break free from the plane so they definitely need to have a fourth orb how else do you know where this plane's going to go to you know look at this blur that you see here yeah we're going to watch that video tomorrow yeah I need to I need to learn

(3:15:36) from how instantly as fast as I can but I know somebody who knows how so that helps a lot yeah my intuition like one thing I've always been good at what I'll tell you guys even when I took physics class there was this one test I took it was about thermodynamics and it was about trying to measure what the relative temperatures would be with an insulator in between and I remember I got the answer right but they gave me an F because I couldn't math out the equation since this this feels just like that where it's like I

(3:16:13) was able to understand from intuition what's happening but I was not able to explain it you know in layman's term or in like scientific terms I guess is the right way to say it that's what this feels like this is why we have to start from the beginning with understanding the basics catastrophic disclosure there's nothing they can say to **debunk** these videos what the people that they **debunk**ing these videos to are people who are idiots already that's what I've come to realize me look at what we're looking at man

(3:16:47) we're looking at a [ ] drone part of my French but we're looking at freaking drone here man of course you can't **debunk** this this is a real video yeah I don't even know what to say next in my next tweet the problem is so many people are just idiots right and they think they're so smart and that's what's wrong with the world today is everybody thinks they're a genius and they're all just idiots that's that's the main problem right A lot of people are just only going to be able to believe whatever CNN

(3:17:33) tells them that's what they think is the smartest people on TV oh it's got to be whoever's on TV that knows what's going on instead of just like learning it yourself God Dam man what was the thing about Crocs the shoes they made people look like idiots were Crocs yeah we literally live in Idiocracy man th600 Mike we literally live an idiocracy man asymmetrical capacitors I'm going to write that down we've already understood like half the terms I've Wroten down written down here as well even without understanding the

(3:18:25) swinger limit I already think I figur it out yeah there is CNN in Malaysia I lived in Singapore they have CNN you just get like the the international version I'm glad that the trolls can appreciate it as well I'm definitely not talking to Jack sarfati he's a spook and he's an idiot

I'm going to talk to people who aren't idiots I I wouldn't trust a goddamn thing that Jack sarfati told me if Jack sarfati told me that the sky was uh green or blue I'd have to go out there and check make

(3:19:10) sure I haven't talked to Gary Nolan I get a weird vibe from Gary Nolan I'm just I'm going to be 100% honest with you guys about everything I I get a very weird vibe about Gary Nolan I'm not sure what his deal is I just don't quite get him we didn't make our Twitter post yeah we have to show people the the rest of the **truth** uhoh they found it I mean this is not in our videos Man someone saying that this is in our videos is not even the same clouds it's not even the same clouds what am I looking at

(3:20:10) here that's not the same picture that's clearly not the same picture what am I looking at here guys whatever it's not this is the one I already replied to read my question Dorian katuni to be honest with you guys um did anyone match the clouds to **Jonas**'s I don't know but

(3:21:15) I honestly don't even care anymore don't even care anymore uh you guys want to should we show Jack the the Jack um sarfati messages I feel like we should feel like we should H I don't know what to believe anymore guys this is so conf confusing to me this Wall Street advisor person seems

(3:22:22) to know what they're talking about yeah this image doesn't match this image down here at all although this one's definitely not even in our videos either so I don't get it man who did I block huh not real images for

(3:23:50) we're going to literally Force the dod to knock on our door we're literally just going to force it I'm 100% sure I'm a I'm a 100% sure take it easy Ashley you've been uh awesome I'm I know it's getting late we're definitely going to get sleep yeah Ethan's definitely a closet believer guys Ethan it's okay buddy we'll get you on our side we'll get you on our side **debunked** on bright Insight I don't know what that means what's bright Insight anyone know yeah Jack sarfati believes in a lot

(3:24:29) of nuts nutso stuff and honestly I'm not even against it but since he decided to come out against me I'm just going to trash him every chance I get what's the uh guys you got to remember your Bible guys just remember your Bible Matthew 6:39 or 37 wait that's not right do not judge and you will not be judged do not condemn and you will not be condemned forgive and you will be forgiven Jack sarfati would be good to remember his Bible I don't know what the Spooks did here but they pulled some **[redacted]** I'm 100%

(3:25:19) sure they pulled some **[redacted]** if this guy's looking at the pictures too and saying he he found something wrong it wouldn't surprise me because whatever they pulled here is not real I don't know what they did and who they met who they interfered with but we know these videos are are real so whatever they're kind of **[redacted]** they're trying to pull here we'll figure it out not I'm not concerned he didn't even pull the raw files so it wasn't even raw files Jesus man oh boy why is it so weird that **Jonas** didn't

(3:26:23) collect the money and wasn't afraid and and didn't want to and was afraid of signing the waiver man tomorrow morning we might have to come out hard against Jonas and the other people as well what's this yeah this this guy is not definitely not trustworthy oh they already deleted the post I don't know what's going on man there's so much [ ] disinformation flowing right now I can't believe what's going on oh boy I don't know what's going on

(3:27:33) man they deleted their post after this is getting sketchy folks okay guys bright Insight is Jimmy what okay what did I say about oh okay hold on sorry guys oh you thought it was debunked on bright Insight um well Jimmy interviewed me on the same day that the cloud debunk came out but if you watch it you'll see that there was a lot willing to apologize to us here's my apology Aiden I why why do people that were wrong want apologies from me literally got every single thing wrong try to debunk me try to talk crap

(3:28:25) about me and you want to ask me for an apology did you find some random pictures like it's just weird man do people think that I'd be messaging people asking for apologies after improving right here's my apology to uh the the lore Lodge little kids suck my balls suck my balls Aiden I tell you what when you want to come and suck my balls then I will uh go ahead and apologize to you it's never going to happen not in your lifetime little kids you were like 10 years old when the incident happened don't even

(3:29:06) try coming at me like that go back and find Cindy Henry guys here's what the Lura L believes in guys what was her name Cindy Hendry there she is this is what the lore Lodge believes in guys they believe that you can match match parts of the plane from this this is what the lore Lodge Believes In These Guys these guys are freaking idiots I hope their girlfriend fake girlfriends are watching they think you can match up the M on an airplane to satellite picture like this the L Lodge kids are absolute effing idiots I just want to be

(3:29:47) 100% clear and their followers are idiots too and when they want to apologize to me then maybe maybe I'll think about you know unblocking them maybe but probably not most likely I'll never talk to them again and they're not relevant and they don't have anything to do with this case they can go back to hunting Bigfoot or whatever stupid crap the L Lodge kids do next time grow up and if your girlfriend ever wants to be with a real man let me know how's that how's that for an apology Jesus

(3:30:25) man you let me know when you get real evidence okay and I'll be happy to talk to you again when you want to match up pictures on a satellite that doesn't even have scale that's correct and talk about oh well do you they just quarantined off a 500 square miles of the ocean and picked up all the debris yeah okay man Jesus man oh you know what guys I'm going to pretend like I modified something and say that it matches on my uh picture here and uh pretend like I believe in what Mick West tells me

(3:30:57) guys you know what just go back to watching CNN lur Lodge there's your apology how how about that did you like it I hope so go ahead guys and send them this clip I want to make sure that the Lord Lodge gets it and so that they can make sure that they heard my apology

Jesus man it's like picking on little kids it's incredible how egotistical these people are with thinking that they're going to demand an apology from me like the guy that the guy that made the video just refused the Bounty because he didn't want to sign a

(3:31:36) statement claiming that what he said is true what is this and he if he does the right thing he should be deleting his video like tomorrow and if he doesn't delete his video tomorrow well we'll see case ain't going away so feel free to talk more crap about me if you want I'm going to sit here we're going to learn the electrical engineering and uh yeah we'll figure out how to teleport an object I tell you what people man okay guys well it's been night it's been a a night uh and you know whatever

(3:32:39) I'm real it was possible I'm real as possible I appreciate you guys hanging out we're going to figure out uh some more stuff here I hope that our detractors hang around to watch us again tomorrow I I don't mind the free views I like how everybody's just like totally obsessed with me too it's pretty funny that's how you know there's something going on right like I don't bother flat earthers because I just don't care because I know that gravity exists so I'm going to watch a lot of

(3:33:11) that uh that video probably tomorrow I'll probably save some as well for us yeah I don't know I want to be friends with kim.com because I think that he's very well funded and so we could maybe we will be able to actually just literally teleport something in the future I I want to work I want to get in touch with um Jeremy Reese because he's a smart dude who has a lot of scienti scientific people on and so oh God I'm slurring my speech already so maybe we can figure out to teleport an object man who knows anyway

(3:33:43) it's been a good night tonight guys and I hope you guys have a good one and yeah we will uh be in touch peace everybody have a good n Jack good one yeah

Transcript:

(00:48) I figured I should stream this not going to answer as many questions in the chat today I'm going to try to just write this I don't know exactly what we're going to say we need Edward cin to come out yeah I can't lie to you guys as much as I want

(01:54) to the videos aren't fake guys no one's ever going to come forward guys no one's ever going to come forward to claim these videos are fake nobody created these videos that's the reality can't deny that the clouds the cloud uh **debunk** out there did tons of damage but the

reality is the evidence just Stacks up too strong Stacks up too strongly even when I sitting there go talking to Jimmy corsetti yesterday didn't feel right something was wrong something's wrong they played a strong move that we

(02:38) might not be able to have counter for but the reality is that evidence still Stacks up too strongly if people want to know why I'm still going this is what I'll say because of all the people who are trying to claim victory you're the reason why we're still going your dishonest attempts to try to tear me down and the case down down or what gives away the facade you know if something was really fake you wouldn't have so many people trying to claim victory and dunk on people over it right if I were the one if the videos were

(03:13) proven authentic I wouldn't be trying to dunk on other people be the last thing I'd be doing I wouldn't give a [ ] about other people goes to show how dishonest they are so what I want to say is for the people who've been trying to dunk you're the reason why this V this is going to keep going you're the ones who are causing to continue just remember that where's the song I want there it is so one other thing I want to say before I start writing this I'm G pause this real quick I spoke with Jonas yesterday twice

(03:58) I spoke with him with kim.com he was definitely on an airplane definitely took pictures right but what really caught my attention the reason why I made that post last night is that he told us that he was contacted by somebody saying that via email using a burner email account which I'm not going to say the name of the email account but it's definitely an account that was literally just made for this sole purpose of messaging him that had some weird comment about how people are going to start contacting him and

(04:29) that how big it's going to get and that here's the here's how you can find the files because he told us he has hundreds of thousands of pictures there's no chance he would have ever been able to find the picture no chance they literally told him exactly which files to go look for uh they said that they were somehow able to find his phone number from some archive edit date like it's way too complex and it was linked directly to potentially the six day old Reddit account so the six day old Reddit

(05:00) account the one that P posted this thing saying thank God this has all been debunked blah blah blah that has no explanation for how they were able to find these pictures and a needle and a hay stack they falsely claim that they found them within 20 minutes like there's no chance man I'm looking at the cloud pictures after being told that they match and I still can't even figure out what they're looking at there's no way that somebody randomly was looking through cloud pictures and like oh these

(05:22) clouds are exactly it we found them it's not even a needle and a Hay stack situation it's just completely implausible it had to have been set up and so then the thing that caught me off is that Jonas said when he was talking about it goes he tells us that he gets a message from somebody saying this is where you should go look for these pictures blah blah blah because it makes sense right Jonas is a guy that is an honest person and so when he looks at it he goes oh

yeah these clouds look like they match

(05:51) right blah blah blah and he's immediately on board with it and so they picked somebody who they knew would be able to be somebody who has cred ability right because he's an honest guy you wouldn't be able to prove that he's doing anything dishonest um it's just it it reeks of intelligence Playbook just reeks of it guys and then he says but here's the thing because we ask him kim.

(06:14) com was asking smartass questions man I'm so glad that he was asking there because he had a separate interview with him super nice to Jonas probably nicer than I was at first because I was highly skeptical at first when I first talked to him and I want to apologize to him for that but um kim.

(06:32) com was asking all the questions about the pictures and everything and then he asked well can we get in touch with the owner and figure out how many people downloaded the pictures because really we should be able to figure out how many people downloaded the pictures within like what 70 days how many people could it be like one two can't be that many people this is a tiny website so if there's a hoaxer out there the why aren't the debunkers trying to figure out who the person is who bought the pictures right like shouldn't they be

(06:58) able to prove who the person is who hoax of videos then if they think that these were faked from it the fact the fact that the bunkers have just like claimed Victory and given up is also super weird um and I told Jonas like our stuff moves he's like well people could have added the effects sure man well where's the hoaxer at man where's the hoaxer the \$150,000 Bounty is still out there kim.

(07:20) com hasn't rescinded it so where's the hoaxer and I'm not going to say exactly how much Jonas is going to get from kim.com but it's not the Bounty okay it's a fraction of it small fraction but it's still really generous offer frankly in my opinion for somebody who just found some pictures right and so then Jonas says well what if he said the website used to have a big problem with getting pirated and that what the Pirates would do is that they would take all the pictures and they would turn into a torrent and then they would people would

(07:55) download the Torance of all the pictures and so he said well maybe the the person who hoaxed it that got it from there and I just reversed that logic last night I was sitting there thinking I'm like wait a minute if there's a torrent out there somewhere theoretically that torrent is going to have different images on it if if somebody actually if if this really was a sophisticated operation that was conducted here to take the clouds from the videos isolate it using Ai and then to insert them over real images that

(08:26) could be found later on then what that would mean is that there's a torent out there that has these other images without the clouds added to them that haven't been manipulated and if that's the case then and this is a long shot for sure right like this requires like pretty sophisticated disinformation it would require the intelligence Community I mean we're talking

sophisticated operation and even Jonas said with kim.

(08:54) com it's not impossible for them to have modified these what was it 24 or 14bit raw files it's not impossible he even admitted it when I was talking to him I'm going take a look at my notes and the only people that could have pulled something off like that is intelligence community so this is the chance here if you want to know if you want to be able to prove that the videos are fully authentic they screwed up what they did is if they if they pulled this play they gave us an ability to prove the entire videos are real yeah the reason why I feel better

(09:31) is because I figured it out I figured out what they did because here's the thing the evidence Stacks up too strongly it Stacks up too strongly just doesn't explain any of this stuff that we're seeing right these these cloud pictures so I'm sitting there trying to figure out how did they outplay us right how did they outplay us this is the only explanation that makes sense on how they would have outplayed us is that they inserted the cloud images over to real images and they set somebody up who's an

(09:58) honest guy to quote unquote find them so that the internet will go oh this this F this guy finds the pictures right but here's the thing if we can prove they modified the pictures it's all over we win the whole thing proves the videos are real proves that the intelligence Community is trying to cover them up it would prove everything it's kind of like a situation where they they play their ultimate play but then we just counter it yeah editing the raw file would be a Monumental task we're talking about

(10:26) something that would be an operation that probably would take over a week like they would have had to plan this out just plan this and they might have because the videos were getting so much attention and they had no way to debunk them they would have needed a real operation they would have needed a serious operation in order to make an undisputable debunk make a strong play and if you think about it doesn't even debunk the second video right why are the clouds matching two videos so it's pretty bizarre no they that's just the last

(11:04) time they were updated in the database rotary so you guys got to got to stop thinking about all these the debunks that the rebunk that I've seen that are out there don't stand up to scrutiny okay the picture the website was changed in 2014 the reason why there's edited dates on there is because that's when the database was updated most recently that doesn't prove that they were modified on that day so what only way guys if you want to focus on it please listen to the words I'm telling you please listen to

(11:32) the words I'm telling you need to find the torrent that predate even potentially 2014 of CG textures clouds if you can find the Torrance from CG textures clouds that have pictures that don't match these pictures and they have like you know they're similar but they don't they don't match or whatever then that's going to be absolute proof that the pictures were manipulated that would be absolute proof that the pictures were manipulated and if we have absolute proof the pictures are manipulated it's all over we win that

(12:10) means everything's real that means the intelligence Community has been manipulating it and they put out a very sophisticated attempts to discredit the case the only way only person who could have pulled this off is an intelligence community that would be the only way so I'm telling you that's that's what has to happen that's that's probably the only way that they're going to get caught if this is the case I agree it's a long shot for sure it's it's a long shot now that's not the only

(12:38) way it's that's not the only way we win though we have other ways to win too the other way we win is this what you see on the screen right now we need Edward C Lyn to come out whistleblower protection and say that the videos are real now imagine how risky this is for him guys imagine how risky this is we'll do an explainer on the Drone video in the next few days because it hasn't been **debunked** but what we need to do is convince Edward cin that he needs to come out as a whistleblower that's pretty much our

(13:23) only hope I think that the intelligence Community will have covered their tracks it'll probably very very difficult to find a torrent that has the original pictures before they modified them if they were smart they would have wiped out any links to any old pirated Torrance I agree rotary we don't even need the videos for a lot of what we have out there and for my future appearances that's what I'll focus on as to not try to discredit the case in the eyes of many people I'm still going to show the

(13:58) videos and what happen have you but I'll have to focus on the conspiracy angle and the other stuff guys Edward Snowden has nothing to do with this let's let's keep this in the realm of realism okay what happened in the last 12 hours I slept for about 10 of those hours God I slept for a long ass time and I feel a lot better now yeah the Torrens are mainly probably pulled but here's the thing if somebody has the old torrent somehow if somebody has the old torrent then uh that would also prove it

(15:00) that's why I made the post so I made the post John of course the NSA can get into people's files on computers that's not even something that's even questionable right like of course they can doesn't prove anything we need to know what they can prove we don't need people to make a testimony saying yes the NSA can access people's computers of course they can of course they can the question is how can we prove it um what was I going to say yeah so the reason why I made the post is first of all they can definitely

(15:30) read the messages in our Discord you should assume that the intelligence communities can read every single thing that you post anywhere even if it's encrypted 100% they can read it okay I'm certain of that uh so what this means is that's the reason why I had to make the Twitter post because it's a Race Against Time they're going to be looking for any torren trying to wipe them off the internet to make sure that there's no way that they these videos can be proven to be altered but what that means is we need

(15:54) to reach as many people as we can that are out there either we have to find the torrent somewhere before they find it or we would need to have somebody who has the torrent on

their PC that has been out there beforehand but the best way is if we can get either reici andan like who's regicide andan why is this person not come forward why is reeside andan not come forward does that mean that they also went to prison as well can't figure it out maybe they weren't an American I don't know I don't know so what are we going

(16:36) to tell Edward cin do you think think the second video will get the same slap down we know what they can do now they've shown us what the capabilities are of their their apparatus they've shown us what they can do they can manipulate files out there they can use AI to insert images in there so they've kind of given away their capabilities with this play it was a very very very strong play there's not much we can do about it in retrospect other than what I already stated about trying to find torrent of

(17:29) prove that they were manipulated um so yes we have to make sure at this point that we realize what we're really up against right we have to realize what we're up against they're going to be able to falsify pretty much anything they need to do to discredit it the case they can uh I mean I mean they could come come after me they could take me out I mean with this kind of capability with this kind of desperation there's a lot they could do yeah they could get to Edward C Lin they could ultimately we're up against

(18:19) somebody who's way more powerful than we are way more powerful they could do anything guys they could do really anything the coordinated attacks on me are not organic either they they have control of a lot of people in the uip community uh Etc that that I've been sure about for a long time can you turn on membership for even \$1 a month Super Chat will allow people to be members I don't know what that means I don't I don't really understand how social media works or YouTube so if you can explain my channel

(19:09) what the significance of that is maybe yeah the big question is where are the passengers where are where's the plane where's the plane right if you think the videos are fake where's the heck where's the freaking plane big question where's the plane right Anonymous if Anonymous is out there and wants to help find the original sources of these pictures before they were modified it's game over if we can find versions of the these pictures that don't have those clouds in them it's

(20:01) game over straight away game over or if the clouds have been manipulated to some degree to look like our clouds that would be game over we'll get into the science later tonight guys but right now I want to write this article I'm just thinking about it the depth of the ocean is not deep enough to not find black Boxes by the way either they should have found the black boxes too none of this adds up n this adds up I also need a video too if anyone can think of any video turn on membership options for your

(20:49) YouTube I'll take a look at that later people can look in the way back machine that might help as well but I imagine they can manipulate the way back machine if they can do what if they can do what we what they did here and they can have the AI clouds get inserted into images and onto **Jonas**'s PC from a a raw file then they're going to definitely manipulate the way back

machine so just be careful about that we can't even be sure that manipulate the way back machine before we saw the videos yeah the way back machine can't

(21:34) really verify guys that's why that's why we have to find the torrent from somebody else who had the torrent of these torrent of these pictures if somebody had the torn of the pictures from CG textures.com of the clouds and they can compare them to the raw files that Jonas released and we can find a discrepancy then we just simply win I thought about that last night and I gained New Hope because I thought wow wait a minute if what they did because I kept trying to figure out how could they have pulled this off right I was

(22:06) skeptical of Jonas I talked to him I thought Jonas isn't lying to me he really took pictures that day on the airplane I looked at all the debunks that the rebunk of people out there I looked at all the rebun out there I thought I'm just going to say the stuff that I've already said I looked at the rebunk I I didn't find anything that was very credible except for the one that looked very weird is the one where it looks like the plane was airbrushed out now I'm thinking about that one again but the

(22:33) the ones with the dates and the modifies none of that stuff stands up to scrutiny so that's why I haven't posted any of that stuff but what Jonas told me that he was contacted by somebody and that it was potentially the same person as the six day old Reddit account that posted it on Reddit and the way that they phrase is like everyone's going to be coming looking for you blah blah blah was really weird man like just the way that they he read the email to us to to both kim.com and I and it was from a totally

(23:01) burner email account as well like why would you not if you're if you're a random person and you're digging around for the pictures and you find this dude's pictures you're gonna why would you be afraid to email them on your real email account doesn't make any sense you might even be able to get a reward why is he using a burner email account and a burner Reddit account the answer is cuz it's one of these debunkers that might even be connected to the intelligence Community themselves there's no doubt

(23:32) about it and if we were to reach out to this Reddit account my guess is they don't want to be identified because they're full of [ ] this whole thing just stinks whole thing just stinks for sure it's the same Playbook as the icy slide [ ] as well plus Reddit is the is completely under government control as well so it's just why would they all the stuff coming out here like it just didn't feel right of course and I even said this on the stream yesterday it felt like someone was cheating and I still think that's what

(24:13) happened yeah Jonas uploaded the pictures we found the date February 9th is when they were uploaded to the website CG textures February 9th if you guys want to know he was in his 20s when he took the pictures we asked about his age as well he wasn't 10 years old he was in his 20s when it happened I'm trying not to dig down too much into the conspiracy angle but you have to realize that these videos being real are the biggest damaging thing in US history to us intelligence by far not just that the amount of people and what

(25:07) people have to lose uh Stacks up into the trillions of dollars for these these videos would take down locki Martin these videos would send many people to prison for the rest of their lives these videos would cost potentially trillions of dollars in lawsuits just the lawsuits from the families to the US government would be in the hundreds of billions look at it from this perspective Alex Jones got fined a billion dollars for quote unquote lying about Sandy Hook right how much do you think the US government's going to get fined for or

(25:46) sued for by all the families of the victims for disappearing the plane for lying about it for 10 years we're talking hundreds of billions of dollars so they have a huge huge yeah they're never going to let any of this stuff happen they have a huge uh reason to try to keep these hidden and put pull out all the strings send all the intelligence communities to try to discredit them yeah the six day old Reddit account finding the images in 20 minutes is the most unbelievable thing I've ever heard about in my life we actually have proof

(26:27) I have proof that other people tried to reverse uh image search back in August and they weren't able to find the pictures how is this account all of a sudden able to find them when I was looking through metabunk to find uh how's this account able to find them in 20 minutes no chance no chance guys six days faed Reddit account finds the pictures in 20 minutes there Jonah said he took hundreds of thousands of pictures hundreds of thousands doesn't this this stinks this this is account that likely sent Jonas

(27:17) the message the burner as well and so then I said okay well I was looking up the trajectories of the satellites where is it I was looking up the trajectories of the satellit so I went to the metabunk website somebody on August 20th was reverse engine reverse image searching on the clouds and couldn't find anything this was months ago now somebody all of a sudden found all the perfect clouds in 20 minutes this is directly from the metabunk website a August 20th trying to run reverse image searches on the clouds in the alleged

(28:04) satellite videos nothing so far any companies might have famous stock image compilations of clouds that might not be indexed on Google Now somebody comes along and in December when the thing's getting heated up a burner account just it doesn't add up especially in the weight of all the evidence that we already have and now this random fake account pops up and says they found him in 20 minutes on the textures.

(28:43) com website Jonas himself couldn't even find the image even after being told that it was out there he searched through the website he couldn't even find his own image this guy found it how no way this is not even a needle in the hstack situation this is just like straight up impossible yeah my channel thanks a lot for the donation man I'll take a look uh I'm not going to do it right now I'll look at the YouTube settings maybe I'll set it for members for \$1 or something like that uh later d370 DPX 3709 d d y 2b1 i 6

(29:26) I this thing just doesn't stack up so I thought about this and I thought about talking to Jonas and when Jonas told me about the torrent thing that's when I had the idea I thought wait a minute and this was late last night by the way the weather is seems accounted for so they

found images that were close enough right with the same types of clouds that they could use the picture the original picture has to be genuine I think the original picture again this is why we need to find the the non-modified version of the

(30:31) pictures if you find the non-modified version of the pictures then we have absolute proof that the intelligence Community planted the pictures or modified the picture it makes sense because here's the play and this is what I would do if I was them so this is exactly I'm going to explain what I would do exactly if I was them guys first of all you have the best hackers and best resources on the planet you find a place pictures on the internet that have have similar look and feel to the ones in our video you run an

(31:02) AI to strip out the certain clouds from the video that you want to have planted in some other real pictures then you go on the internet you plant those pictures those clouds onto the pictures using AI you replace the pictures the fake the real picture with the fake picture the new one that you've planted the clouds into or modified the existing clouds with the AI and then you uh modify the the data around it so that it show shows all the original shows the all the time stamps all showed the original time

(31:32) stamps you might not even have to do any of that you even go through the way back machine make sure you hit every single one that's uh been accounted for and you change those as well you make sure that those all show the new updated picture I would imagine this operation would take at least a week maybe a couple weeks in the making but you have a whole team of people do it that's no if they can teleport a plane that's no problem whatsoever that's that's exactly what I would do if I was trying to discredit

(32:00) the case it's smart play really smart play how do you counter that how do you prove that they did that and even if you try to prove that they did that then people are going to think you're a conspiracy theorist right but and I thought I was thinking about I'm like well there's nothing we can say about it right like even if they did that and this is why I had to come out the statement because even if they did that there's no way we can prove it but then I talked to Jonas and then he told me

(32:25) that he had been contacted by somebody and then he told me that the torrent might exist out there that somebody might have pired these pictures before they were manipulated if somebody pirated the pictures before they were manipulated then that means that there might be Originals out there somewhere if somebody can find The Originals out there that weren't from Jonas's computer and weren't from the website then that could prove that they had been manipulated they might have made a big mistake if we can somehow find those

(33:14) pictures Jonas does uh artwork guys we're not going to go after Jonas there's I think he's a good guy I don't I don't have any reason to believe he's not I talked to him for a couple hours yesterday on two different calls so sorry guys I'm not going to recap the whole situation for every single person that joins so you can take a look at the uh early recording you can take a look at the recording yesterday if you want uh otherwise you can just try to get caught up so not

personal or anything like that

(33:49) I just can't I can't just recap everything every five minutes um guys I need a couple minutes I'm going to I need to get another coffee before I write this there's another angle that we can play as well though the other angles that we need we need Edward cin to come out we need Edward cin to come out yeah we don't care here's another thing so FF no JG or GJ JG um the debunkers don't matter we don't need debunkers to believe anything it really doesn't make a difference what the debunkers believe so if you're

(34:52) concerned about the debunkers go back to the post I made yesterday morning okay this is what I want you to look at if you're concerned about the debunkers what is this [ ] what is this [ ] adding more Community notes my stuff I don't even care about the community notes guys makes no difference the people that think they're fake have no reason to be involved and they can just leave anytime they want right so we're not trying to convince the bunkers I don't really give a [ ] about the bunkers they don't they

(35:41) don't matter so just a quick heads up I'll let you guys read this we need to do a followup to Edward cin I think that we could also get the government to admit that the videos are either real or they can say that they can't make a statement about them as well would be another way there's still angles of attack on this so I never said I was going to stop I just said that we can't claim the videos to be authentic given the weight of the evidence yeah I'm sure they listen to the call between us there so just a

(36:25) heads up they can listen to literally everything doing they've been doing that for a long time yeah Sergeant Kam kamacho that's what we need we need to have a message that gets these people to come out somehow that's what we're going to work on here okay so that's what we're going to work on once I come back with coffee I need about three minutes guys and I'll be back with coffee okay hang tight back okay we need to get

(41:44) hyped let's get hyped folks where's our theme song wait I can just I can just play it we also need an appropriate video to add I was thinking of the Spider-Man 2o if you guys can think of a better appropriate video let me know chat's on fire today guys let's go guys we're hyped where's our theme song God I have too much I have too many videos here it is I don't hear anything malan 370 Contact 120m [Music] 9 breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone

(42:53) [Music] missing [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed form and says now I am become death the destroyer of worlds yeah sorry I balanced it a little bit sorry guys I love this this damn intro I'm

(43:57) going to play it again because this thing is just freaking amazing in fact before all my streams from now on I'm playing this just if we ever do a documentary this is going to be the beginning of every tonight A Malaysia Airlines flight with 239 people on board including four

Americans has gone missing [Music] I remembered the line from the Hindu scripture the Bhagavad Gita bav Vishnu is trying to persuade the prince

(45:03) that he should do his duty and to impress him takes on his multi-armed form and says now I am become de the destroyer of worlds the way he says that Oppenheimer says that creeps me out man the way Oppenheimer says that just creeps me out let me see what's going on in my chat people aren't going to give up on this and I'm glad cuz you guys are the ones that are keeping me going you know what you know what got to me the most yesterday today I was sitting there in Jimmy Corsetti's chat uh discussion and he's

(46:02) reading the messages and he's going lots of people still say this is real everyone's still saying this is real and then that's when I realized like this isn't just about me it's about everybody uh where is it this one that's not it crap man I've got too many videos folks please do stay tuned in that way um we got a lot going on can I give you my best silly wild ass guest okay sure somehow somebody opened up an interdimensional portal in that plane went through it and and we don't know

(46:44) where it is or where it's going to come out at but it's somehow it's lost for the time being it will be found again fell in a hole listen to this guy okay all right well that would Don Lemon level's weird man uh 12 cm32 bud I need you to chill with the Caps I'm going to have to bring out a nightbot guys night bot's coming out folks nightbot will regulate you guys nightbot in the chat folks you know what that means all caps will get you guys your stuff deleted be careful yeah is that my grand

(47:27) dad that interview is wild bro should we Foya some more people as well we should Foya some more people as well folks let's do that good call whoever just said that you know what I don't even care if I don't have any more interview requests I I want to get back to investigating I I'm exhausted with interviews we're going to foyer the doe Navy CIA we're going to Foy everybody we're going to foyer everyone who else we foyer we already Foy the FBI I didn't get anywhere for the NCIS thanks fifth kind appreciate it

(48:52) man no you can only foil government agencies I don't think darp is a government agency either FCC I don't know what we'd fo them for NSA yeah heads up don't use more than three characters don't use more than three emojis don't use all caps night will get you uh I I wouldn't release anything related to Jonas guys I'm not going to dox Jonas I'm not trying to make this about Jonas my opinion is that he's not directly involved in this he might be getting used indirectly but he's not directly

(49:45) involved I'm certain of that also if you've been messaging me I am getting like dozens and dozens of direct messages so I can't respond to them all I'm trying okay what

(51:24) for for I don't think I need a lot of help with

(52:51) foas the only thing I need to know is what we should Foya for and I'm okay with that

yeah the person who took the pictures just happens to be a graphic uh um concept artist who works in tandem with visual effects people for the contracts we'll never get anything out of foing the contracts though it's a good idea though Jonas isn't a liar by the way I'm sure about that although his stuff was he had all his documentation like ready to go a little quickly but maybe he's just a very organized

(53:36) dude he said he would have never been able to find the pictures without the person emailing him and telling him where to look yeah I don't want to I don't want to attack Jonas guys people of course are are going to attack him and I told him when I first messed him I told him he needed to be cautious this r a post I will highlight because

(54:51) this is corroborated by what I told you guys last night I was given the exact date and location he told me straight up that the person somehow found his email no I'm not frozen somehow found his email and uh through some type of metadata or something on the old archive and that they were able to use a geolocation on the exf data based on an island that was in the picture so like whoever found this picture was extremely sophisticated and how they were able to find this picture this was not a random person searching

(55:28) on a website and finding this in 20 minutes that's not how this picture was found no chance he was directly contacted by email from an email account that was a burner email account the person that claimed to have found the pictures was a burner Reddit account as well six day old one everything about the situation here stinks the fact this was also on Reddit again this is the emo of the intelligence Community just like with a VFX debunk exactly and why is Martin back on here now all of a sudden Martin may have

(56:16) been compromised he was part of our investigation early on and then went totally off the deep end it was super weird man very weird I'm not going to hate on this guy but what I'll say is that Martin has a lot of issues and the fact that all of a sudden he's back into this when he told me he was trying to get out of it and not be in it this very very weird for

(57:48) I'm pretty much done with redit anyway yeah this was this is my only suspicion about Jonas here was how quickly he had already been in touch with the owner got permission to post a content and make a 20-minute video within just a few hours of being contacted was very bizarre but I I talked to him and I I vetted him and I I think that he's he's not directly involved I think they used them because they needed to have somebody else claim that they found them that wasn't the intell Community right

(58:26) this is how you pull it off this is what got me really suspicious why wouldn't the person that found these pictures be the one to come forward right and and reveal themselves the Jonas thing moving so quickly was very unusual too very unusual because they made him think that it was legit right they made him think that oh yeah here's these pictures you took and he goes yeah I took these pictures but they don't make them they don't have them realized like he's not going to remember the clouds that were

(58:55) in the pictures 10 years ago right so what do you think guys if we reach out to this guy do you think he's going to reveal his identity to us I have a feeling he won't reveal that what if we offered him \$10,000 to this guy but he has to sign an affidavit saying that everything he found is real and that there's no hoaxing going on yeah we're never going to find a hoaxer guys no hoaxer is ever coming out with these videos I love the the flat earther [redacted] like why would you even come on to this post to even make this comment

(59:33) unless you have skin in the game right weird very weird for just thinking right now yeah we have videos of clouds moving we have videos of orb puncturing

(1:00:38) holes in the cloud you can actually see it interfere with the the cloud before it even gets there I mean look at this video guys so here I'll pause it right here you can see the clouds already starting to be distorted and you can see the very clear hole form this is why when I I had to think about everything last night pretty deeply and kind of think that wow wait a minute we

(1:01:43) just have so much evidence and even talking to Jimmy coretti I'm sitting there going man I can't lie right like we just have too much evidence nothing else adds up he says well what's the what's the best story and I had to say well the best story today it's still the fire scenario by far right and then where's the plane Jimmy corsetti was telling me going where's the plane we follow every lead that's what's next we follow every lead we wait and see if anyone can prove that the clouds

(1:02:11) were faked somehow yeah and why was Jonas even showing the clouds and making a video at all that's the only thing I had suspicious about him at all but the answer is cuz he's being set up right he's saying hey look at this we found this and he's going and looking himself and then that's what tries to give it credibility in fact if you look at the community note on my post that they put on there they actually even referen his video this was definitely set up definitely definitely definitely they made it a little too

(1:02:49) obvious this is part of the reason why I started to sniff that something was smelling bad here with this so if anyone's if anyone wants to blame for why we're still going hard on this it's the people that tried so hard to debunk it they gave away their they gave away their intent if they had just let it quietly die then I probably wouldn't even be online right now doing this but instead they tried to come down hard so they're the only ones to blame for this to keep continue going so if you're out

(1:03:21) there and you're upset and you think that this has been debunked well you only have yourself to blame I was actually ready to let it go guys Jonas took the pictures yes he took the pictures you guys if you guys haven't caught up you need to watch the early stuff I I can't repeat it every single five minutes for people okay yeah good point nocturn

(1:04:53) for for for for

(1:06:53) for thanks for the donation I know althia you ever heard of mural online software for

collaborative projects it would allow everyone to go away solve problems for you without needing to drive every single button click is this an advertisement is that a bot either way thank you very much for the donation I suppose I guess you just got a free advertisement we not you got a \$10 advertisement thank you very much I don't know what that is but it sounds

(1:07:57) interesting guys yeah the the updates everything on the websites could have been manipulated for sure keep in mind we're talking about people who can teleport an airplane so anything online can be manipulated 100% an operation like this would have been probably weeks in the making I'm guessing they've been may they maybe have been working on for a while if this is really what happened if this really was an operation uh vyak I actually asked about the clouds I actually asked about the clouds as well maybe that's an indication as well

(1:08:39) we're looking at cumulus clouds but Mount Fuji is 12,000 ft that's actually a good point we need to check into this guys there may be an inconsist see between the clouds and Mount Fuji huh I actually asked **Jonas** about this this might be a good element of **debunking** guys listen to what vinak said in the chat look at the picture if we can prove those are cumulus clouds which only form between 1, 5,000 ft like we did in our video H but that Mount Fuji is 12,00 ft it could be proof that what we're seeing

(1:09:26) is a manipulated picture not certain but it's something it's something that can add up we should take a look at that follow that lead follow this lead someone said something about Mount Fuji that's interesting but there is a weather pattern picture that shows that there it does look like there was low altitude clouds I like that honor we'll prove the science right guys

(1:10:33) that's for another day or for later today we're going to start learning about electrical engineering starting tonight I've never been more driven to learn about science and go back to school potentially my whole life yeah vgnc I think you're on some I think you have a good line of thinking here man I think you have some good lines of thinking there should be some if the videos have been faked some or the pictures have been faked to some degree we should be able to figure it out can we take can we look at other

(1:11:08) pictures of Mount Fuji and see if the clouds compare the website changed in 2014 guys so that's why you can't find the way back when you have to go back to the old one I talked to **Jonas** Firs hand I saw his face I know what he looks like we had a long conversation if he's an intelligence asset then he's a very very very good one I I think that he's guys I played pro professional poker for like a while so I have a really good idea when people are lying it's not it's it's a very subtle thing

(1:11:54) this is why a lot of the people these bigname people avoid me because they know that I can tell if they're lying like instantly this is why people like Ross Kart doesn't reach out because he knows I can tell that he's full of crap in about 5 seconds it's probably the reason why Lando blocks me as well like these people know that I can expose them in like three seconds any conversation I have with them what's the quote Magic Arthur C Clark

(1:13:11) right did he write it was he wrote it right h transistor Theory Hermes

(1:14:27) careful using all caps guys nightbot on the prow nightbot on the prow you guys want to know why I'm learning science because I want to force the dod to come knock on my door we're just going to reverse engineer this crap I don't give a I don't give a f I don't give an f man at this point I don't even give a crap if we give it away to **China** or **Russia** they better come they better give me a call especially if they're going to come at me like this with these [ ] **debunks** exactly Hermes that's why we're

(1:15:07) going to electrical engineering hey cadon for for

(1:17:22) for we're going to attack on all fronts if we can find the image without being being modified we can win if we can have Edward C Lyn come out we can win we might be down it might be the fourth quarter we might be behind but this doesn't mean we've lost we have to appeal to Lieutenant Commander Edward cin it's one of the only ways we need him to come out this is somebody who I know probably more than one anybody on this

(1:18:27) planet after investigating him I know what type of person he is he's a good person who just wanted the **truth** who's patriotic military personnel and no I'm not LARPing Edward C Lyn will break through any [ ] if Edward C Lynn comes out and says the videos are real it also proves the intelligence Community fake the **debunk** and it means that everybody who's been posting fake **debunks** is potentially compromised it would expose hundreds of people as being disinformation agents which is why they're so desperate

(1:19:14) to make it go away right the amount of people that have stuff to lose has never been bigger this conspiracy is the biggest conspiracy in the history of the world that's why so many people are so upset about this this is why so that's is why the community is so divided it's the reason why so many people are attacking me because they have everything to lose everything to lose all these UAP celebrities all these fake **Foya** requests wannabe celebrities like John Greenwalt you know they have everything to lose

(1:19:51) their whole lives are on the line if this comes out it invalidates everything that they've done their entire life's work I understand why they're upset but I don't give a crap about them the real heroes are the people like Edward C Linn this is somebody we needed to take a sacrifice for

(1:21:18) CG textures.com was where it changed in 2014 according to **Jonas** and the owner of the other website yeah the intelligence Community will be trying to wipe out any Torrance now because they'll realize that there's a way that we can prove what they did that's why I had to make the post because the reality is it's probably a race we might not even be able to find the original Torrance anymore it was a while ago as well the best bet would be if somebody randomly happens to have them on their computer I didn't even want to make the

(1:21:58) post about it because first of all it'll make me look like I'm jumping down the rabbit

hole but second of all um I didn't want to give away our play but they have been reading our Discord and I already mentioned how I come my thought process so that was the reason why I did it even yesterday I thought well it might be safer for Edwards than if this goes away right it might be safer if if this goes away but we need him for the **truth** for

(1:23:36) oh I'm going to taunt the intelligence Community I'm not just taunting them we're at their door and if you think I'm done with that you have no idea you haven't been watching me very closely if that's the case I don't give a crap at all I will expose the Spooks I will expose every single one of them and drag them into the light Ronald pandaly I know you're out there I know you're watching I will drag you into the light and all your little spook buddies so that everybody knows

(1:24:15) who you are just to say that again Ronald pendency I know who you are I can find everything about you I will drag you into the light if you keep coming after us I wish you the best good luck if anything happens to Edward cean I will look up every single CIA agent including Ron Ronald pandaly and I will make every single thing about them public every single thing out there if you think I haven't been searching you're out of your mind if you think you're hidden you're not you're not

(1:25:25) just look at what we did Malaysian Airlines you think we can't find out about information about the Spooks yeah we can for for

(1:27:52) it's for for for

(1:29:51) for [Music] for for I got the

(1:31:01) clip thanks carono sure even just uh my headphones are on I've got my sound off that's why even just going through this right now has got me uh starting to get emotional he's the guy he did it for

(1:32:51) for for where did that chat go the freak hell I'm waiting I'll show you guys the clip

(1:33:54) after I've got this Banner you got to watch out spamming or nightbot is going to get you bud here it is this is the one this is the scene right here [Music] when do they say carefully he's a

(1:35:02) [Music] hero you're looking at the topic right now gently okay I think we need right here I'm trying to clip this real quick for

(1:36:58) the I see Attorney General Inspector General intelligence Community Inspector General 6

(1:38:33) it's kind of long maybe that's too long 3 minutes might be a little too long for a clip huh let just see what we do here he's mine you want to get to him you got to go through me we're just going to do the whole clip well we're not going to be monetizing this one because we got to

watch this video for

(1:40:38) what do we think chat for the people like Paulo who want us to stop I just want to remind you that you're the reason why we're still going you're the reason why we're still going when you want to know why we're still going it's people like you people that are brain dead like you are that live in a a mental prison of your own creation that feel the need to lash out at people that don't think just like you do you are the ones who caused this to keep going just remember that just remember

(1:41:50) that the reason why people don't talk about Flat Earth is because no one cares people only talk about stuff they have a reason to care about yeah Spider-Man 2 is pretty good though the OG ge's I'm trying to get this clip downloaded it's just not going though maybe it's too long probably just shorten it somehow it's not going this is probably pushing the limit of how long this should be as well for

(1:44:19) error record okay maybe I'll shorten [Music] it come on what the hell like about here see if that'll work for

(1:46:04) man why is my clip not working trying to clip this scene it's not working I literally read the chat non-stop what are these percentage for

(1:49:19) for damn the I can't clip the scene heck man maybe if I do it in a different version try this one again this one probably not

(1:50:29) going to work either God dang it man he was a this one's just got mad popups like just non-stop popups what is this what did we put in 640 915 49 let that let that flow maybe that'll work see if any of those work can't down your clip from this

(1:51:41) website yeah these clip websites just don't work let blow man let me try something else Banner you got to chill man you're like way too out of control man with your messages dude just relax shouldn't be getting hit by night

(1:52:44) out that much man just relax yeah I slept well I slept really a lot yesterday I wish if I download this maybe I can edit it myself is that to play probably right just download the whole clip and then edit it myself that's probably my best bet did you know that now you can use see I think that's what I'm going to have to end up doing here

(1:53:56) just grab one that doesn't have like stuff over the top of it this one's got one as well how about this one this one's they all got water marks on them so annoying yeah they've all got water marks oh well I guess they deserve it that's not it uh let's do this one maybe that one's not good either could just do movie clips this one sorry I'm looking through Clips trying to find the AL of water marks from the thing jez

(1:55:04) man surprised everybody's allowed to upload these to YouTube there's like hundreds versions of these why they all stop before the Doc O Part ridiculous this man how do they all

stop right before the important part okay I'm just going to pull this one actually just do the movie clips one I guess Jesus man take easy guys once I post this video we're going to I'm going to take off I got to go do some stuff crap actually I probably got to go like

(1:56:09) ASAP this one's got all kinds of uh things on it with captions okay this is the one use this one got captions for people too let's download this one I'm going to try to edit a file here guys should be fun this not sure we're going to get stuck here we'll see oh yeah that's what I should have done yeah what am I even thinking here I can just use snippet the problem is it's going on to it's going to hit my uh it's going to hit the copyright thing if I try to snip at Wild's playing

(1:57:11) didn't I download some software see if we can use this software guys uh how does this work I don't know how any this stuff works no free updates needed um okay whoa scared the heck out of me holy crap how does this work how do I edit it oh here we go uh oh look at this oh look at this neat oh this is only one minute how do I

(1:58:15) what the heck man how does this work this isn't right wait where does this end this isn't I want this how do I edit this out see someone needs to teach me how this works are delete oh look at

(1:59:21) that okay wait didn't I just delete it why is it not gone man deletes what a part I want it's like this this is neat so let's see what we got now this seems pretty good

(2:00:30) right okay save this how do we save this so what do I do now how do I save this folks export select Eclipse that's not what I want save I don't understand how to play how do I save this now this is so much work what do you do how does this work is's this button if you haven't been able to figure out that I'm definitely not the

(2:01:34) hoaxer should be able to figure it out now I don't understand how you save this does anyone know how this works how do I save this I want to turn I've got my clip I just all I want to do is save it God dang it man file save as save project this is a project file this not the I don't want a project file I want

(2:02:37) the actual clip I don't get it what's this software called export selected clip I I really have to log in

(2:03:51) oh okay there it goes save Spider-Man to MP4 recommended blah blah blah save we're going to change this location downloads select folder export what's this A man what the hell man of course you guys told me this is free now I got to pay for crap oh okay I already paid apparently \$80 of course it's \$80 buy huh

(2:05:34) okay I'm I'm buying this apparently of course can't explore Clips unless you pay nearly \$100 sorry guys now I got to do a confirmation email man okay Wonder share now I've got to

(2:06:43) register dude what I already purchased and let me see here hold on guys okay I don't

have a password there it is there's the

(2:07:48) password okay I think we're good I think we can export it now ah it's exporting that was uh that was a struggle [Music] huh I can't move it right now it's stuck why because Spider-Man's awesome adwar maybe D okay let's open the folder and see Spiderman to oh yeah it works perfect perfect folks perfect perfect oops oops that's not the right one you got to be kidding me God dang it

(2:08:53) you can't remove this either can you I can't remove it no no no no wait I can't lose this hold on I'm scared now I have to I have to repost everything now because of that I just added the wrong video clip holy [REDACTED] can't believe how bad I just messed up right there guys oh man I attached the wrong clip there's no way to remove this either as far as I know does somebody know how you can remove a clip there's no way to once you've added something like there's no way to remove

(2:09:29) it you have to like literally make a brand new post my god dude oh my God Jesus man add the wrong clip add the wrong clip okay what was the other post I'm just I'm not going to delete that until we've posted this well whoever's been donating thanks

(2:10:34) a lot for wondershare hopefully it's not malware hopefully it's not malware dude what sure okay let me close some stuff here all these clips I've got let's just do one more read of it chat make sure we're good I'll answer some questions if you got guys nothing's free man nothing's free they all have like things where you have to pay and what have you every single time they always do

(2:12:47) for for let's go chat let's go whoever just donated uh gunama gam mua Richard Dolan may still reach out to you through Twitter according to his response to my personal post on his site he does not know the video he didn't know about the videos as

(2:13:50) of two days ago yeah I've got to bounce I've got to take care of some stuff I've got some podcasts I'm doing later tonight as well but we haven't stopped the haters can keep on hating doesn't make any difference doesn't matter to us thanks a lot for the Richard Dolan thing um he followed me then unfollowed if he wants to talk about the videos I'm always free to talk about anyone every any the videos anytime everybody make sure the world knows about what happened MH370 everybody if

(2:14:29) anything were to happen to me I would want you guys to keep telling the truth about what happened to the videos as well so I appreciate you guys you know that we'll talk soon and have a good evening everyone I may come online after I do investigate Earth podcast today we got stuff we got to go through we got stuff we got to talk about I appreciate everybody

Transcript:

(02:19) hey chat what's up what is up well well hello hello here we are oh it's been a day guys it's been a day have a feeling we're not going to get to talk to Lex folks feels bad feels bad but positive note uh yeah we've been doing good work we've been doing really good work there's still something up with this case guys there's still something up with this case so let's ask some questions what what questions you guys want to know what do you guys want to know today what should we do probably not going

(03:14) to dig too much into work today just because I'm I'm tired it's been it's been a rough one we're getting beat up out there yeah more hard truths yeah I was talking to royy Herbert probably going to get him on but I want to prepare with him a little bit make sure I got the science down before we meet probably won't do a hard TRS this weekend just because everything's going on thanks a lot red ketchup thanks Dorian appreciate you man um who sent me a thing Barry babbitt yeah oh thanks a lot benator

(04:00) appreciate it buddy yeah um somebody wanted to know did they get to you or are you just tired and want it to be over uh the answer is I can't deny the clouds guys cannot deny the clouds so I can't deny the clouds I mean it's too accurate I talked to this guy Jonas and there's something a little bit off with him but I can't I don't get the feeling like he's like faking the pictures or anything like that from him I mean I asked him some pretty hard questions and stuff like that and yeah other than the fact that he you

(04:56) know was trying to play the fake compassion card about it and saying how easy it would be to fake like I there's just nothing solid there so that's the reason why I had to come out and admit that you know that the the clouds are a match they seem to be I'm looking at the raw data here um Kim is might be paying out but he's not paying out 100,000 no he's not paying out 100,000 so yeah no and I did not sell out although I wish I would have sold out I wish IID get paid out instead of having to just not going to give up but

(05:34) sucks right yeah the evidence is really strong guys so um I mean you can listen to my Jimmy coretti thing today I'm GNA post on let me post on Twitter real quick I'm G to post my YouTube on Twitter here delay ads insert ads I didn't know you could do that one sec guys let me just make sure that

(06:41) posted it's not the most flattering picture not the most flattering picture there folks kind of want to play some music H thanks Bob thanks everybody yeah the interview Jimmy was good was good um I'm just going to pull the chat over here so it doesn't look so weird when I'm staring at it yeah it's been a long day I mean there's more to come in the future I'm pretty disheartened too Bill or William Bill William but everyone tells me that we should look at the

positive side you know of what's

(07:34) been going on we were backed into a corner I mean I'll just tell you guys full disclosure in terms of what happened uh you know it feels like some we got Hoodwinked feels like when you I'll tell you what it feels like for our sports fans out there yeah Greer is still happening for the sports fans out there it feels like when your team loses at the last second like somebody hits a three and you're down you're up by two and then the opponents hit a three at the buzzer and you lose or like somebody

(08:08) like like in football when like they throw a pass interference flag uh on like a Hail Mary or something you know and so it feels like we just kind of somehow they pulled one on us that I can't really figure out and because we can't figure it out didn't really have a lot of choice so I chatted with kim.

(08:28) com earlier and he was ready to pay out and I told him like hey man don't don't pay out right away like something doesn't add up here and he was like well man the clouds just look too perfect and we looked at it and it was like yeah I mean I there's nothing you can really say to deny it man clouds like match too many clouds match right so uh you know I convinced him that he shouldn't obviously pay out the full amount because we had set the we had set the thing to say that you have to find the hoaxer and the the

(09:01) source files and no one's going to ever find the the hoaxer guys it's my true opinion no one's going to find the hoxer because there's no hoaxer on these videos I don't know how they managed to find clouds that perfectly match but there's nothing we can say about it right and so that's the reason why I made my statement out there because the reality is we would have lost more credibility if I hadn't at that point like we just can't argue with the clouds matching right we don't have any solid

(09:33) argument so that's that's what happened today that's what the the situation um but yes the Greer stuff is presumably still happening I mean I still imagine I'll be talking to him but you know uh the Youtube nobody's been able to prove that YouTube can actually convert 2D videos to 3D videos so it's speculative I understand that YouTube claims that they had the capability but nobody's been able to prove it so either way I I don't know it doesn't really matter because we don't need the 3D

(10:11) capability but it having the 3D capability would say well we've got the satellites there um **Jonas** showed me his his computer with the images on it and I mean I I grilled him about why it was really suspicious about the situation the timing the way he came out against it the way he he like tried to claim how easy it would be to fake even though he's not a VFX expert um but he's got all the receipts he's got all the receipts unless he's directly involved and if he was directly involved then he's a pretty good liar I'm a really

(10:50) good judge of people who are lying and it's not like a situation where like I don't want to tear this guy down so yeah he show well I don't I mean you can never really be sure right but he

showed me and I'm like Hey how do you find these he like oh I have all my images I have hundreds of thousands and I have them categorized by country and year and I looked you showed me the Japan 2012 files and uh I mean there's no way we could know if he downloaded them ahead of time right but he showed me the the

(11:22) properties on it and so it said you know January 25th 2012 8:50 a.m. and the location is you know right south of uh Mount Fuji there so the only way that this in my mind I I just they don't seem like they're fake like they would have had to find exact clouds that match I just I mean I can't wrap my head around it guys I really can't so we got to we got to take the loss on this one I think not a lot of choice right and I've looked at the supposed uh **debunks** out there right so or the rebunk

(12:00) and the weather does seem I think the weather does match and not 100% sure on that so if you guys want to double check the weather January 25th 2012 850 a.m. just south of hamu Matsu near Mount Fuji I also asked him about why there was no like if he was taking a picture out the window of a plane like why it wasn't distorted at all and why there was no dirt or anything because I've never seen clear windows and he was saying that he found some Clear Window and took a picture out of there which was a little bit

(12:32) weird uh but again just you know just sometimes when you just get outplayed you lose you got to just take the loss you know so however it is you know we got to we got to take it on this one I think um it was a little weird that he knew the corridor crew I mean I just asked you know the corridor crew he's like yeah I've you know followed them for 15 years we came up in the game together I'm like huh that's weird thanks a lot Mark appreciate it man man the reality is oh let me oops how do I how do I make the chat

(13:10) come back chat where'd you go come back chat there we are um no both videos haven't been **debunked** I mean not even really one has been **debunked** but it's hard to argue against seeing a bunch of the same clouds in there right but yeah even talking with it yeah the Clear Window thing was pretty weird man um even talking to Jimmy coretti today right I mean the evidence is overwhelming man something happened to this plane right now there is cloud movement that's what I told him too and he's like oh well you can add visual

(13:53) effects to Cloud movement and it is kind of weird that this **Jonas** guy is like trying to make these arguments about how you could fake it like he almost just felt like a **redditor** um but you know again we just there's not I I really I don't want to tear them down guys I don't want to tear them down that's not how I want to be anyway right I don't want to be tearing people down there's definitely something not quite right about this I just can't wrap my head around it yeah so I don't

(14:27) know yeah apparently **Jonas** takes pictures of clouds on a flight apparently kind of bizarre but yeah yeah I mean we got to follow follow the evidence even if it it hurts so some of the other stuff uh the exif data stuff like the 2014 is when uh the website changed over so I guess people would have to look at the old CG textures website if that's the case the airbrush

thing cadon like I don't know I could just be an artifact it's hard to say it feels like the airbrush thing is a bit of a reach to me I saw it you know

(15:23) I saw the airbrush thing I'll pull up some of the things for you guys to be clear guys the whole thing is not cancelled but it's kind of an uphill battle man it's kind of an uphill battle so we're going to try to do we'll talk about what's next here in a second guys yeah you can't take people down unless you're 100% sure they're scammer like you really can't um so let's not let's not reveal DMS um so this supposedly is when there's

(16:28) some kind of conversion from the old website to the new website according to Jonas but I don't think anyone's been able to prove this just yet but this is a supposedly what's up with this these dates on here that are post date the videos uh and this is the same as Ken's post again same dates 1025 2014 which is weird because that's my birthday but whatever um so I don't know maybe there was some kind of thing that happened here on the create date I mean I came at this dude pretty hard with the the evidence

(17:17) right and he didn't really shake at all so either he's a pro or he's just being honest and then here's the weather which like I think someone is arguing you can these are like high altitude clouds that don't match but he was adamant that you know he took it somewhere right down here 815 850 a.

(17:38) m which we saw these clouds don't match but if someone can remove this layer I think that there's like other low altitude clouds underneath which would be our cumulus clouds but this if anyone is still convinced then that those cloud pictures don't match then this would be the place to go to is the weather uh satellite imagery here and try to find uh better better matching or something like that so let's see what questions we got ladies and gentlemen um so I'm not okay let me see here we're not giving up but I mean we

(18:21) just took a huge blow so that's the reason why I'm you know the attitude I'm in you guys ask me ask me better questions ask me better questions ask me what you really want to know ask me what you really want to know I'll answer anything have you addressed why the Edward C Linn case fits so well I think that Edward C Linn leaked these videos uh the cloud comparison I mean I've got the raw files but I think the this one was one of the ones that this is one of the ones where I showed him and I said how do you take

(19:08) this from a window of a airplane this this Cloud down here is the one that matches one of them I don't know which one the one is that like supposedly like I don't know I mean I'm not like I haven't ruled it all out I think maybe it's this one where they claim that this was the one that matched is our videos or something but yeah the manipulation of the metadata though Punjabi is not looking far enough back 24 2014 was supposedly when the website was switched over Lulu come here it yeah I in still an uphill battle let

(19:56) me see what other questions I mean the witnesses all corroborate the uh fire event I said that on Jimmy coretti today I mean Jimmy coretti basically said he thought it might be

suicide and I I went pretty hard against him even though he Jimmy corsetti was a really cool dude really nice guy man even beforehand with Jimmy corsetti he's like dude you you set yourself up for a good thing here he's like you're doing the right thing you shouldn't be you shouldn't be upset and all that stuff you

(20:24) know uh if you're not if you haven't been up to speed then the big update was that people found some pictures from 2012 supposedly that have a bunch of clouds that match our satellite video now no hoaxer came forward the guy who says that they were his pictures says that he did not hoax the videos he was not involved and I I'm sure he was not at least involved in hoaxing them so that's why we didn't pay out anybody because no hoaxers come forward I don't think a hoaxer ever will come forward um

(21:00) O2 gam me why would he take the pictures because he sells them to that website apparently he knows the guy or something yeah the dog's taking it pretty well she's doing good she's doing good good questions do you think these videos were a Honeypot for Lynn good question Garrett no I don't think so I think that the science in the videos will eventually get proven to be real I don't know how they would have done this thing with the the clouds but some there's got to be some explanation out

(21:33) there no I don't think it' be too hard to fake the **debunk** uh n Nacho Man Randy sandwich but the question is how how'd they pull it off how'd they pull it off I don't have an answer yeah if the plane was on fire it did not go for another six hours right how did they find nothing it doesn't make any sense and this is I asked I talked to Jimmy coretti about it as well the most damning part of the **debunk** is that a lot of the clouds are perfect matches that's the problem a lot of the clouds are perfect

(22:05) matches it's undeniable they're like basically perfect matches my gut tells me there's something wrong with it I I don't know what I can't figure out exactly what feels like we got played over by the intelligence Community but can't prove it so we're not giving up but we do have to realize the situation we're in where everybody's just going to say that you know they're fake because some some cloud pictures and there's really not much you can do still planning to talk

(22:30) to Greer Dr Greer space is definitely still happening um and yeah I hope I get to an ask a bunch of questions to him I I'm supposed to be able to be a speaker so I think so could the satellite been video been created after the Drone video I mean anything's possible yeah so the **debunkers** are not are going to give up for sure because now they've got their Victory but theoretically someone would be able to reach out to the owner of the videos and of the pictures I mean and say when who bought those within the

(23:08) shorttime window that we have out there right I mean theoretically they would have had to have got those assets somehow or they could have stolen them I guess uh speak to FBI agent John daza thank you Dorian for the donation man he said years ago that the cabals plan to take over the world through DP drip feeding the public with alien propaganda he said UAP Tech

would be use down to down planes it's interesting where' that go oh thanks Dorian appreciate it man uh no we're not gonna we're not going to dig into this dude's background

(23:43) we're not we're not going to do that we're above that we're above that guys I'd rather lose and be cheated than win and be dishonorable doesn't discredit the Drone footage guys but but you know it's going to be hard for people to take us seriously after this it's going to be hard yeah it was nighttime but the pictures match a little too closely pictures I mean it's not a matter of what's right or wrong it's a matter of just being discredited I think that one's the CL

(24:28) right there that no that's not it I don't know I'm not going to go through them all right now but some of these pictures apparently like perfect matches or something so it's not just one Cloud there's quite a few clouds I think that match if you guys can somehow **debunk** it that would be huge but I don't know check out **Reddit** work with Punjabi Batman if you can figure that out would appreciate it uh there was a video where like there's quite a bit of matching going on yeah um he showed me the screen shots of

(25:28) the the the photos of of the properties on his computer that showed the the date in the exact time they were taken I mean it could be faked but it doesn't seem like it's faked uh I haven't confirmed all the clouds Chris but the reality is uh you know in order for people to discredit it we don't they don't need to prove all the clouds they just need to prove some of them match uh Zach to your question are you questioning the validity of the videos now personally I think the videos are still real but I can't deny that the

(26:08) cloud uh **debunk** does significant damage right so that's why I have to publicly come out and state that we can't can't really say that they're authentic with uh this type of evidence that shows that there could be Assets in them that come from these pictures so that's the brutal part frankly um yeah that's just honest opinion you guys want to thoroughly go through the things uh I told salvator Pas about the situation yeah he wasn't too happy about it he actually offered to do a an Emergency

(27:04) hard **truths** podcast with me but I told salvator Pas that he should try to disconnect himself from me in the videos when he does his interviews because it won't play well for him if he does sucks but I love that guy thanks Austin awake appreciate it man oh banner I missed your Don know thanks man oh there it is hey mate from what I can see the orbs seem to be yo-yoing up and down right before the flash in the satellite video not the Drone video um oh that's B to oh yeah that's B for snooch sorry thank you that

(27:42) one um they're not uh yo-yoing what's happening is the frame rate's so low that it looks like they're yo-yoing but they're actually spinning around the plane there uh Banner where did I miss your Dono bud anyway Banner thank you I'm not oh there it is yeah I missed it how' I miss that I I messag You full pixel the clouds okay let's take a look sorry I'm mess in Kim real quick

(29:05) let's see um where where do you messag me the clouds banner I I don't see me oh here there is this this isn't the clouds though hold on how do I pull this up without revealing my DMs

and guys just to be clear we're not going to be giving up this isn't giving up um I'm going to be doing more stuff and more investigation but you know probably not tonight that's all let me try to catch up on the questions real quick have the orbs been **debunked** no no I mean a lot of it has not been **debunked**

(29:48) guys but and I even told him like the fact that the 777s matching the correct uh capabilities is some of the the most damning evidence that the footage is real I told them that the clouds match and that they're moving I mean just the weight of the evidence guys we have two videos that show the same events same clouds we have parallax in the clouds we have moving clouds we have clouds being distorted by the orbs like there's just a lot of evidence but the cloud **debunk** is just going to it yeah that was kim.com Jewish it was

(30:29) kim.com decision to pay out this guy but he's not paying him 100 Grand I was like you're not paying this guy 100 Grand come on yeah I told him about the coordinates as well I mean I grilled this **Jonas** guy I mean I told about the coordinates all this stuff so that he can understand why I was skeptical of him because I was super skeptical um am I little relieved to return to normalcy or not a little bit to be perfectly honest with you guys I was kind of hoping for a way out of this cuz I do believe that the footage is real

(31:06) and I think that the implications are uh staggering and that's why like part of me is a little bit relieved but I'm just I'm really disappointed just disappointed I underestimated the intelligence community in terms of what they could pull off I think uh that's my true opinion and that's why I'm disappointed pointed in it um but yeah but I mean part of it's like okay maybe I won't get disappeared now because nobody thinks the footage is real anymore uh as well done for staying rational mate could have been very easy

(31:50) to dig in but I would say the science is still a sticking point for me how did the creator know exactly so what we're going to be doing in the future is still working on the evidence of the case if anything else comes up if this somehow gets rebunk fine right but I can't just be flip-flopping back and forth and I I'm going to learn electrical engineering we're going to still do uh science and mem streams and we're going to learn and you guys are going to come along with me if you want and we're going to learn

(32:19) physics and electrical engineering and we're going to figure out how to teleport an object until the dod comes knocking on our door that's that's the next move we're just going to force them to knock on our door we're just going to prove that the science is real because I'm 100% convinced the science is real um and I think that's to me that's the exciting part as well how do I feel about **Jonas** being friends with the creator of the textures I I gilled him on that too uh but like

(32:45) what am I going to prove there right final location Diego Garcia playing wi to Diego Garcia somehow **truth** Warden Soul thank you very much sorry I'm really far behind in the questions yeah it's brutal it's brutal the metadata from Punjabi Batman's post is most likely because the uh the website transitioned over to a new website let me see I mean there's a lot of

little details that don't really add up still guys reality right uh uh oops okay well whatever oops well showed DMs I mean let me just make sure let's

(33:43) see what we showed there so somebody in [Reddit](#) I'm not going to show the DMs I mean you guys probably saw if you look doesn't really matter um asked me if I got paid off or something like that no I didn't get paid off we just took a loss that's all there is to it guys we just took a loss I wish I got paid off man it's been sweet if I got paid off but nope nope um this is the one that Punjabi Batman's but these dates are uh the 2014 dates here uh I don't know these are before the the

(34:53) videos though the October date is uh when they move to the other website supposedly so that's the answer to punjabi's thing okay we dealt with that one uh let me I'm going to message him and tell him okay hold him that sorry I'm pretty far behind the questions so that is the Punjabi one yep person came out of nowhere and said they took these videos from a plane

(35:55) and they're also a VFX artists in incidentally enough yeah so it just sketchy man I don't know could thanks Jake could they orchestrate a scheme I don't know I just again I'm not going to tear people down without proof guys if somebody if somebody lied about this and and made this up then they're going to hell for the rest of their lives they're going to hell sure so I hope they didn't do that cuz that would be really disturbing um they changed formation before the pattern they didn't change

(36:39) they just reoriented before the The Flash so the orbs start off in a normal a triangle pattern well not normal I mean there's nothing normal about this but they are like mapping the plane here and then they go into a vertical pattern sorry there's a lot of questions I'm probably missing some of them uh it's fishy that I'm flipping do I seem like a guy who's flipping guys do it seem like a guy who's flipping how do I refute the clouds matching if you can give me a way I can refute it I'd appreciate

(37:19) it we're not giving up but I'm just going to I'm going to keep going on it no um let's see yeah some of it doesn't add up um yeah I mean some people say the plane is blurred out again like you guys got to realize like if I come out like that it doesn't it doesn't add our credibility doesn't add our credibility takes away quite significantly yeah so like Joe says if

(38:26) we're that the plane's teleporting and people are showing us pictures right that these these clouds match it's pretty it's pretty damning pretty damning I don't know which of these images it is not that one not that one this one I remember this Cloud down here it's probably this one this does kind of look like an AI picture though doesn't it kind of looks like an AI picture anything's possible guys [Music] but uh I mean it's not that it's all over guys you got to chill a little

(39:29) bit have I heard of Chris Bledsoe I heard of him but I'm not familiar I wish they got to me guys I really do I would have loved to been paid off for this but sadly no we didn't make any money off of this we didn't make any money off this I'm not going to give up either we're going

to try to prove it a different way through science okay sorry I missed a bunch of questions yeah guys I get a lot of stuff from different cases I don't really have time to go through all of them unfortunately if I missed your Dono I

(40:15) apologize I want to thank you there's just a lot of messages yeah no source files no pay that's why I'm not paying anybody not only do you have to have the source files but you have to have the hoaxer so I mean I've been pretty clear about that I mean until that comes out like I'm not going to be able to give up on the case entirely if somebody does I mean no one there's never going to be a hoaxer that comes out I think we've already figured that out yeah I'm disappointed too guys I'm

(40:43) disappointed too I'm disappointed that I let you guys down that's what I'm disappointed on my best guess if I had to guess if somebody was somehow hoaxing this is that or like faking these images is that they did some kind of reverse Sur and was able to find similar pictures that have the exact same Cloud [Music] somehow yeah they could have reverse engineer pictures but I talked to the guy and it just I looked at the pictures on his desktop just doesn't I looked at the profile the uh properties data on it

(41:15) so it doesn't seem like doesn't seem like it you know the clouds could not have been used in both videos I know I agree guys I agree I agree I just can't explain why the clouds match sell out I wish I sold out gu yeah K stabbin says October 2014 and I asked and they said that the um the website got Chang in 2014 so I don't know if they can figure something out that there's not any data from the old website who knows maybe see if you got blocked from the cloud thing yesterday when I said don't post

(42:18) the cloud thing well I'm sorry sometimes I have to admit when I'm wrong uh where's that donation it's all donation here somewhere how do I miss that whoever just donate oh there it is Dorian thank you Has anyone used the Wayback machine to find the cloud photo from 2014 uh we can only find it from 2016 right now but maybe someone can dig through the old website and find the cloud picture out there I don't think anyone's found it yet I think there was at least four clouds that match guys I'll give you guys more content but

(43:01) not tonight we're just doing the stream tonight yeah I saw Ken's thing it's just not quite conclusive enough guys I mentioned the October thing as well so how do they match this I mean I don't even know how somebody even matches this man I don't even know how they do this oops I don't know if you guys want to rebunk the videos then uh I need you guys to do overlays of the clouds with the videos and show us that they don't match that's what we need that's what we

(44:10) need uh I looked at the original pictures guys that's the problem so here's one of the clouds that supposedly matches right here here's some more clouds supposedly match supposedly this whole section matches so if you can **debunk** this guys if you can **debunk** these then you'll be my best friend six day old account so yeah go ahead and do so you'll you'll be my

(45:25) favorite thanks El appreciate the information I think we just got outplayed I think we just got outplayed guys it's not about a backbone it's about having some credibility to the case see if I missed any other messages if I missed your Dono let me know appreciate it appreciate all the donos yeah I think that the lengths the intelligence Community might go to seems a little bit scary but what we're dealing with is a situation where literally they whole everything's on the line people will be going to prison for

(46:07) the rest of their lives talking about trillions of dollars of lawsuits uh I'm still convinced that United States government's implicated in The Disappearance of the plane definitely definitely still convinced I mean the evidence is overwhelming right evidence is overwhelming we're not going to dig too much into it tonight just because of the situation and I'm going to do other stuff yeah trusting six day old uh Reddit accounts yeah probably being duped guys probably being duped it feels like that feels like we're being

(46:53) duped yep but can can't uh can't prove it that's the problem can't prove it if you guys want to prove it we need some people who are VFX experts ourselves to Overlay the clouds and show how they don't match yeah like CDs red said they they seem to match I mean I can't I just can't deny it man I checked out the subreddit guys if it gets rebunk then we're back in the game guys then we're back in the game then we're back in the game it's not it's not game over yeah I think the science is still

(47:36) real and that's why we're going to push for the science right I wasn't joking guys we're going to learn electrical engineering so there's a good question are you stopping because of kim.com first of all I'm not stopping uh but I did talk to kim.com kim.

(47:56) com told me that he would like to work with me in the future on other stuff and he appreciates the effort that I put into it but he gave me advice too that you've just got to realize from the pr perspective like this isn't people can't believe that you know the CIA altered some some pictures right it's too much it's just too much strictly stats chill out man I would tell you if I was paid off okay I'm not I wish I was man I wouldn't be upset if I was P if I was being paid off okay so just relax thanks Banner wow wow Jake holy crap thank you

(48:55) man that's huge man yeah so the way we go forward guys is we just prove the science is real thank you Jake so much that's huge me means a lot to me man uh because I think that you know what I learned from uh Dave Rossy is that anybody can learn this stuff man you don't have to be educated anyone can learn this you guys should learn this as well and so I'd like if you guys came here with me and we learned it together because I think that we can still change the world if we you know if we learn the science

(49:29) ourselves like we can we can learn we can figure it out I mean the power of this community is incredible incredible wow there's a lot of people watching right now and I think we can figure out the electrical engineering aspect of it we're going to start with Maxwell Maxwell's equations and then we will we are looking at these videos we know that this stuff is real so we can figure out how it works and this will help us to understand how the science really

works right yeah wow this is a lot of lot of chats

(50:13) going on here um and also like we just uh this has been an awesome journey and I don't want to taint it guys I don't want to taint it and I don't want to I don't want people to think we're crackpots right cuz this community isn't you know people are special so that's why we had to we had to do it you know that's why we had to you know admit that the clouds are too close right doesn't mean that we have to change what our beliefs are how many times would you say you've watched the video

(51:00) thousands probably thousands yeah zepi zephicus yeah I mean so we're just supposed to believe that some guy took pictures on his way over Japan a decade ago and notices his photos are this obscure photos so apparently people emailed him they found his name they started emailing him and then he they gave him like the exf data the date and then he was able to figure it out from there so I don't know I couldn't find any hole in his reasoning or his logic as much as I wanted to man trust me I wanted to

(51:54) man yeah thanks uh Ben M1 1980 appreciate it man I see you in the chat or in my uh DMs yeah and even if like you know we can work on other stuff Kim didn't ditch me I I felt a little bit let down but it wasn't his fault I mean he gave me smart advice he's not the only one as well a lot of other people have also agreed um that you know what I what I did with the message was the right play I think it was the right play the the people who are against us didn't expect me to come out with message like

(52:57) that they expected me to Double Down sometimes you have to you know make the best out of a bad situation and what that message tells people is that this investigation was genuine and that it wasn't about **scam**ming people or grifting people or anything like that it was about getting the **truth** right that's what we did is we created a conversation that wouldn't have happened otherwise we got people more attention to the videos that would not have happened otherwise yeah **Jonas** isn't the issue here guys I I

(53:29) don't think he's the the one at fault um you know we just we got a little bit outplayed I think if people figure this out I me even asked him could the could the video the files have been edited without him knowing right so you know when we do the science what we're going to is we're going to rewatch Bob greener's hard **truths** we're going to rewatch Dave Rossy and salth pador P's hard **truths** I'm going to learn how to upload those so that we can upload them to an audio location so that

(54:01) we can start to get more attention to what we're doing from that and I want to try to get more and more physicists and Engineers on and I want to talk to them about this kind of Science and then we're going to learn it ourselves folks we're going to learn it ourselves that's the play yeah sometimes you have to bow to logic and reason right if you want to be taken seriously sometimes you have to bow to logic and reason talk about The Parallax so The Parallax actually I think is mostly seen right here watch

(54:38) when it zooms in so when this Zooms in this is where you can see we're looking at the C the clouds from a slightly different angle they they their size goes up as well so there's definitely clear Parallax that we would see here from this Zoom that we see which is a natural Zoom the shutter changes as well like the the bouncing up and down becomes more prominent the more they zoom in which is also very accurate so I mean I'm still convinced these videos are real but we just it's hard to argue

(55:05) for their authenticity given the light of the **debunk** that's out there uh for the people who are asking what the **debunks** are it's the cloud **debunk** I mean I already showed it you got to rewind if you want to see it yeah too many circumstantial details I mean it's just it's hard right yeah I already showed you guys the comparison earlier yeah

(56:27) and just nobody's really asked the questions that I would thought you guys would ask but uh you know you guys kind of did ask about being relieved like if they're willing to go to this kind of lengths then they would definitely be willing to kill me over this stuff guys if we ever got to the point where like it's going to have to get out there so part of me is a little relieved that I might not get killed over this anymore but the other part of me is like they now that they know what I can do like they might

(56:54) they might take take some action against me I don't know but if they ever do this is what I'm going to say I'm not suicidal I would never kill myself I would never hurt myself and if anything happens to me then you know these videos are real so now you have it on record don't forget it if the vot if the Drone video is released before or after does it matter not really I don't think it changes anything but the Drone video is released afterwards we know for sure um I'm over 40 years old that's

(57:25) what I'll say I don't know what mg 39 X's yeah ultimately I'm not going to be convinced the videos are fake until the government comes out and says what really happened to the plane I have not been on the toe podcast but I have a feeling I won't get as many um requests for podcasts after this I think the problem for **debunkers** is to find the hoaxter find the hoaxter right they should be able to find the hoaxter you know okay I think I just saw some big donos coming in I'm going have to skip some questions if I miss

(58:10) your question uh go ahead and Reas it I I want to get to some of these other ones yeah you guys can look at the satellite imagery um I have it somewhere around here OG gaming thank you for the \$5 Dono so he still has the same I asked him about the computer situation as well from 2012 I said dude how many computers have you had since 2012 I've gone through like five computers he's like yeah I did too but I he saves all his pictures apparently he's like very organized interestingly enough so yeah I mean I just don't think

(58:48) he's I don't know he doesn't seem like he's been uh compromised yeah something is not right here I wish everybody keeps asking if the CIA got me guys I wish man I wish dude I wish man audit to audit thank you very much man holy crap thank you sir appreciate your humble response and self-awareness your investigative skills cannot be denied and I look forward to

seeing what else you can do I appreciate that audit to audit a lot of people have told me similar stuff like that and uh yeah yeah I look forward to see what I

(59:44) can do as well um I'm not sure what's going to come next in terms of Beyond MH370 we are going to keep investigating three MH370 any new stuff that comes up up we still have stuff about where the Drone came from and stuff that's on our lists for evidence right the NC boy stuff like there's still so much stuff that doesn't make any sense right um but we're going to save that for tomorrow potentially uh not sure if I'll still do the disinformation piece maybe maybe the CIA stuff These Guys these guys beat

(1:00:28) us I'm sure the CIA was if if these video If These Cloud things were faked it was the CIA that pulled it off they did a good job they did a good job if so I thought that they were going to be garbage and yeah they they definitely pulled their Hail Mary out yeah I I mean I can't convince you guys I know if you want to think that I got compromised I mean you can think it there's not much I can do oh yeah David uh sir David Martin actually put in another 100,000 today but it's not really going to matter

(1:01:06) there's never going to be a hoaxer that's going to show up doesn't matter how much money it is actually I should tell Kim that yeah I mean **Reddit** is really the source of biggest source of disinformation out there man all it takes is very little yeah the reddit the if the hoaxer is out there they would have the source files as well and and thanks again to uh Jake and audit to audit those huge donations are awesome awesome man uh I don't need help with the 5-second intro anymore I got a few 5-second intros now

(1:01:59) I got some pretty cool intros actually I appreciate it man the **Jonas** guy was 10 years old when he took those pictures was that true I forgot to ask about how old he was I don't think he was that young I think he's a little older uh yeah Justin I'm not quitting I'm not quitting just it's just GNA be a hard road so we have to kind of reimagine what we're going to do right every time we post people are just going to say that it's been **debunked** by by the clouds right so we got to think a little bit

(1:02:57) more intelligently about our next move right could the intelligence Community do it maybe maybe nobody threatened to kill me just be honest nah didn't happen the **debunk** does feel like a trick but like I was telling other people earlier on it's a situation where it feels like you got when you lose by somebody cheats in a game right but but you can't quite prove it yeah I still H I still stand by everything that I've said and all the people that tried to **debunk** all the fake **debunks** that we were able to to

(1:03:40) disprove we **debunked** all of them we just this is one we can't **debunk** we can't disprove this one can't disprove this one I wish we could um it's it's several clouds I think we we showed it earlier guys several clouds No it's not clear that it's fake I mean if it's clear it's fake to you that's fine you don't have to hang out but we're going to move forward with the science because it's it's not clear to everybody that the videos are fake the science will check out over time I don't

(1:04:16) know if it'll be in our lifetimes but it'll it'll check out eventually what it needs now for Lieutenant Commander Edward Lynn thank you very much Paige for the Don know he's probably safe he's probably safe for now this will this will protect him the less heat that's on Lieutenant Commander Edward Lyn for leaking his videos the safer he is he would be he' be in a lot of danger if we forced him to come out lot of danger goodbye Lex Freedman yep who knows man maybe I'll get to talk to him

(1:04:50) about something else or maybe he'll still want to talk about the case sometime time maybe a 10 year anniversary right who knows rest in peace Lex the dream the dream uh if the stock Cloud oh thank you very much for the donation uh CDs R if the stock evidence is real that means the whole video is 100% fabricated from scratch right that seems difficult if not impossible yeah yeah I mean I think that there's it doesn't make any sense really a lot of the stuff right hey tuac Cabra here yeah if I was the hoaxter I would have

(1:05:28) collected that money too guys I I could use that money that's a lot of money that's more money than I have I'm not that rich uh by quite a lot too um but yeah I mean I think that I I still think that the videos are probably authentic it's just we can't really prove it anymore it's going to be too hard it's going to be too hard that's why the only way we can still prove it is if we can prove that the science checks out that's it right the clouds only match in the one video I

(1:05:58) mean obviously we're the same clouds are not in the Drone video I mean although that we the clouds look like they are I mean it does look like we see those same clouds there guys I'm going to show the [Reddit](#) thread one more time I don't want it to be true just as much as you guys okay and there's there's other videos that people opposed to I mean it's this is too close guys how am I supposed to argue against this now this one maybe you could argue this one's not really that good uh but yeah so again

(1:06:55) if you want to help go prove that those pictures don't match prove that the clouds don't match if you can do that I'll be happy to support you and come back hard on it uh for tempt trigger the reason why it's not hard proof is because just some having some clouds match doesn't mean that uh the videos are fake why why did know hoax are come forward how come all the evidence Stacks up how come we have clouds moving how come we have clouds being distorted how come we have parallax how come the clouds match into two

(1:07:35) videos right there's still a lot of questions that really don't make any sense for them to be fake and again why can you not find the hoaxter now there's no reason to not find the hoaxter right how can we not find the hoaxter if we now know where the sources came from how does this random person have the pictures on their computer from 2012 but the hoaxter can't figure out where where's the hoaxter they should have all the files right uh at this point nine years later I don't know if the people even lived

(1:08:07) through the event yeah I think that the narrative we have right now is still the best narrative 100% to instinctive emu enu or instinctive U um I do think that what we have is still the best narrative if you listen to what I said today uh on Jimmy corsetti then yeah we still have

the best narrative even without the videos I even said that on um on the concrete podcast that we could almost prove that this conspiracy exists even without the videos like I think we've done that much work so it's not that we're giving up it's just that you know

(1:09:02) it's been a depressing day man what do you want me to say yeah unless the hoaxer is a multi-millionaire I don't know how they wouldn't come out for 250,000 in fame or at least 150,000 there's not going to be a hoaxer that comes out though guys there's no hoaxer out there that's going to come out it's not going to come out because if they match then people are just going to argue that the uh they were just produced right they were produced by that composite or whatever I mean you guys will see we're

(1:09:40) not going to totally give up but you'll see the damage duck Vision where did the cloud pictures come from they came from this guy Jonas who's had them on his computer since 2012 he showed them to me so unless he is somebody who is either beating you used or manipulated the pictures then and I just I talk to him and I don't know I don't get the impression like that then it is what it is right we can't really argue against it I mean the hoxer could be dead I mean how old do you think the hoxer was right

(1:10:09) how old do you think the hoxer was Jonas is now probably dead the hoxer could not need money come on man it's \$150,000 everybody loves money that piss half a million you guys are funny still better than the Netflix documentary deir I agree we were crapping on the Netflix documentary quite a lot today it's Netflix documentary is just atrocious man yeah I'm not a fan of debunkers guys I hope that the debunkers can find um the hoaxer Willam I agree man I wish I hadn't folded either I second guessed it

(1:10:57) a little bit as well but it was the it was the only play I had man it was the only play I thought about it a lot I thought what can I do here I mean you when kim.com comes out against you and he's our main supporter and the main person putting up 100,000 right it doesn't give us a lot of moves right doesn't give us a lot of moves the choice was either to be branded as a nut job or to you know admit reality that the pictures match you know can't deny it um and that's what I did right I didn't let's read my

(1:11:31) statement guys I mean I think a lot of people are misinterpreting my statements I'm just going to read it wait where is it um let me just see duck Vision thanks why would you have the pictures of clouds not the rest of the source images after 11 years I mean he's not the one who hoaxed it he said he's not the one who hoaxed it you know Jonas said he took the picture I mean I saw the the data January 25th 2012 8:50 a.m.

(1:12:18) just south of Mount Fuji at hamam mutsu Ma hamamatsu so you guys can look it up if you want he showed me the the uh properties data on it showed me the properties data so yeah they have to hide the physics that's that's what this comes down to is it's it's too dangerous it's too dangerous it's too dangerous I'm telling you guys the hard truths right now the stuff that I wish didn't happen right it's still the right thing to do uh you know it is what it is yeah somebody theoretically used Jonas's pictures theoretically

(1:13:03) right uh it's not that I care what people think of me it's that I care that people uh respect the case otherwise we just become like Bigfoot Hunters right this way at least we don't need the videos to prove the conspiracy guys the evidence is overwhelming what the videos do what admitting that the videos are could be uh fabricated does is it gives the government an out on the physics that's what it does gives them an out on the physics that's what they've wanted this whole time they've wanted to be able to

(1:13:39) not have to admit that the physics is real and that's what the admitting it does right yeah **Mick** West is a disgusting person **Mick** West is one of the worst people on the face of the planet Absolut one of the worst people on the face of the planet almost 99.9% sure he's on the government payroll **Mick** West is definitely going to hell when he dies and he'll deserve every single minute of it no doubt just the worst person on the planet absolute worst human being on the entire face of the Earth Yep metadata can be faked guys but

(1:14:19) it's not about what we can what can be faked it's about what we can proof we're going to be consistent right we argued that the Philip wood picture is legit we're not going to go ahead and we say that all of a sudden everything's metadata right we can't come out and say that everything's faked like that it's just in a face of overwhelming evidence you have to uh you have to face it right so Edward cin deserves a pardon right he does but the problem is he's already done his time he got out man

(1:14:53) it's not like it's 2017 or 2018 anymore we missed our chance to save him he came out the reason why Kim's opinion is so important is because he donated \$100,000 to the c or he put up the \$100,000 Bounty right and when you put up the \$100,000 Bounty and like now he's one who basically allowed us to get to this point so when he comes out against and says oh I'm going to say it's fake it's like we it screws us man it is what it is yeah we're going to do more hard TRS podcast most likely the next person is

(1:15:30) going to be uh royy Herbert You could argue Kim's my Handler not really he's not I mean the government's trying to take him down as well but he says he does want to work with me again in the future and I respect him I think he's a good guy I think I would love to do stuff with Kim um so you know I respect his opinions and I think he was giving me good advice in general so yeah we could talk about the woo now if you guys want Edward cin is not kim.

(1:16:17) com I'll still take a bullet for Edward C for cin but I think this this protects him guys did Kim get paid off um no I don't think so no I don't think so they're still trying to take Kim down they're still trying to take him down man and if he did get paid off well whatever then I made a mistake okay so here's my thing I've spoken with kim.

(1:16:43) com I respect his advice after having reviewed the raw images myself and prepared to make the following statement the cloud images seem to be too close to be coincidence a rational as a rational and logical person I do not have a way to explain them matching to such a high degree after talking with **Jonas** I do not believe him to have any Mal intent that's still true I don't think that he has any Mal intent I'm not going to interview **Jonas** I can no longer claim that

the videos are authentic due to the

(1:17:07) evidence due to this evidence Kim has agreed to make payment to Jonas for supplying the assets that may have been used to fabricate the satellite data or video since no hoaxers Has Come For and Jonas admitted he did not hoax the videos the Bounty conditions have not been met so \$150,000 will go unpaid but the offer remains should this person come forward the case remains unresolved the body of evidence uncovered from investigating the videos is extensive and the fire scenario still presents the best evidence-based story

(1:17:35) to date MH 370x will not go away we will continue to seek the truth of what happened at the plane we will learn the secrets of advanced science unknown to the public we will render the system obsolete I will continue to stream and do every appearance is requested of me I have happily talk about the case and discuss the hard truths this community is special thank you to all the amazing people I've met on this journey as a normal person put into an extraordinary situation I couldn't be more grateful and look forward to the next

(1:18:11) chapter right you guys can talk about whatever though yeah they did they did US dirty on the stock stuff right the stock images right nah Kim could have if Kim wanted to play us he would have done it a while back guys he would have done it a while back yeah finding the cloud images is like find a needle in a thousand hay stacks it's a I agree I agree bluee martinis probably tomorrow night tomorrow night uh I mean I didn't really admit de feat I just admitted reality I mean when you read this statement that's on the screen right now

(1:19:02) does that sound like defeat I think this is the way I had to handle it yeah we can't force things to happen the way we want we can come up and think about it thanks old Shu I appreciate it man they tracked the picture back to Jonas by uh looking up the exf data pictures info and they found an email on one of the old pictures supposedly I mean it all seems a little bit convenient but the debunkers went hard they had a they had a plan here on this but it is what it is man they outplayed us on this one the problem is these there's too

(1:20:01) many clouds that are perfect matches I wish I I wish the butthole argument will work here but it doesn't I wish they put me on the payroll maybe they will put me on the payroll man maybe after this the CIA will uh after it cools down a little bit maybe they'll instead of killing me maybe they'll give me a job that would be nice I could use it yeah something is fishy going on I just can't figure it out I thought about it last night and this morning I just can't figure it out what how they played us

(1:20:43) over yeah I'm not even going to block you for being rude you know who you are let you deal yeah so Jimmy Jimmy hit the nail on the head right they wanted me to do the opposite what we did was not what they wanted me to do they wanted me to fight this so that they could use it to discredit me that was the play here that's I figured it out right because the reality is they already had they already had enough people to con believing that the the clouds matched right and so the play here was to get me to come out where they could

(1:21:28) then play the same Q and on card that they were trying to play on me with having coming out support of Jake Chanley and so that they could say that oh Ashton's just crazy blah blah blah right so this is where my only play Then was to come out and say I've got to I got to make the statement that I did yeah that's that's a good question it's okay though guys the community will stay we will still render them obsolete this is what I would say to you guys who doubt and question and everything there's a new guard coming in

(1:22:06) we have a present that's like 80 something who's got dementia right if you look at these UAP people that are out there they're all super old they're outdated their mindset are outdated there's a new guard coming in and even some of you who are older like I am I mean I'm not I've got some Boomer in me right um you know we are still young enough that we can replace the Old Guard and when they leave and we come in we will change the system from within right if Jake Chanley makes it to

(1:22:38) be Congress I bet I can go have a meeting with him right and then we can start to change things who knows maybe I'll run for Congress one day I don't know not really thinking about any of that kind of stuff at this point but the reality is like we can try to change the system from within we are cannot give up right yeah right after Chan and Infowars then this drops I mean I thought about it all man I thought about it all but this was the this was the this was the only play right now so uh that's why you know I thought

(1:23:13) about what comes next here and what comes next is we still put out more evidence to build the MH370 case even higher I've made contacts with people that you guys know who my contacts are at this point right people like Florence aangi uh people like all these podcasters who are super connected wealthy connected people people like kim.

(1:23:35) com who's fighting against the government literally every single day right like we're fighting against the most powerful nation in the world and like Jake Chanley said I thought about what he said in his space to us man we can't be trying to fight them it's not about polarization it's trying to it's about just making them obsolete we're waking people up we're changing their mindset we're having people realize that UFOs are not about uh like nukes and like little flying saucers right we're making them realize it's about this technology

(1:24:14) that's hyper Advanced out there right we're creating a force that go up against the most powerful uh Nation the world here so uh this has been awesome let's do some questions they've tampered with you somehow and um one thing so what what if they gave me a scarjo I hold on let me go talk to my scarjo guys got a they gave me a scarjo guys had me sell out had me sell out with this card Joe n we will we'll we'll be back tomorrow you know with more stuff let's listen to what Jake said

(1:24:58) guys and I just we're not I don't like the idea of going up against because then we're we're creating a polarized position what I like to think is we are circumventing these individuals by doing it ourselves and being the change that we wish to see we are not protesting we are investing in each other in the future in humanity in our children in the environment we are um

rendering the old system obsolete we're not using our energy to fight the old we're using our energy to build the new we are making

(1:25:34) the old globalist less than one percenter full spectrum dominant system Obsolete and in that sense there's no need to fight I mean these people are already on the defensive that's why they're censoring us you see what I'm saying because they know they can't compete dude you can't compete with the **truth** so can't compete with the **truth** and we're doing it ourselves when I heard him say those words I thought man Jake's a better guy than I am right Ian this a hard to believe Jake spent years in

(1:26:04) prison man years in prison for wandering around the capital man which you know admittedly people say okay it was Insurrection or whatever narratives you want to come up with but do you really think this guy was trying to hurt anybody no man no chance and he doesn't even want to fight the people that put him in prison you know he doesn't want to fight the people that put him in prison he just wants to do it ourselves and make them obsolete that's that's somebody that I can respect you know so I learned something from

(1:26:38) him and I'm getting emotional thinking about it okay yeah I mean if somebody can **debunk** the **debunk** then it's going to blow up even bigger guys the evidence is still out there the evidence is not going anywhere what is your **truth** about the Holocaust okay we're not going there I also don't talk about Israel Palestine stuff or anything that is I also just all the politics stuff just seems so inconsequential I'd rather just learn about the science I'd rather just learn about the science learn about

(1:27:15) electrical engineering try to understand from reverse engineering what we see in these videos um how it all works man that's so much more important than the rest of the crap so much more important yeah stop at the rude to the family stuff guys I actually told I I actually called **Jonas** out on this too it's like oh this is the hoax is bad for the families I said they had never got any answers man and what I told **Jonas** and I'll just say this straight up I looked at him in the face and I said said hey **Jonas** what if the videos are

(1:27:55) real what would you do to yourself for having tried to make them go away with this right would you apply your own judgment to yourself so that anyone who says that we're hurting the families I would ask you this what if the videos are real what if this is actually real then what would be what how should we punish you for lying about it for saying that the videos are fake you know let's Matthew 6:36 s guys I've actually memorized it do not judge and you will not be judged do not condemn and you will not

(1:28:37) be condemned forgive and you will be forgiven people need to remember their Bible sometimes hold yourself to your own standards stop like stop thinking you're better than other people tempted trigger stop thinking you're better than anybody else man stop thinking that your opinions are the only thing that can be right you know change your attitude be a better person man people with that kind of attitude are what's wrong with the world today I'm just going to read it out because I think that you deserve to have

(1:29:09) a little bit of criticism back at you but continue to say the video is real and pushing to **debunk** it when it's obviously fake is wrong how about you hold yourself to your own standard tempted trigger and everybody else out there that thinks like you you you don't you're not the Arbiter of what's true or what's not right so that's what I would say to you guys you know just hold yourselves to your own standards and I I'm saying this is somebody who was atheist Once Upon a Time who then became agnostic who then

(1:29:48) after looking into what science can really do realize that there's more to this world than what we've been lied to about and I still believe that be better than your old self like old Shu says everybody should be trying to be better than the old self all the time even myself even myself and this is what I told people too about you know crying about the families the families got no answers man they got no answers the official narrative the official narrative is that we don't know what happened to the

(1:30:17) plane that's the official narrative so are we going to stop fighting of course we're not going to stop fighting of course we're not going to stop fighting man but I can't deny that we just took a big hit that somehow that they found all these these uh clouds that match right it it sucks it sucks it doesn't it doesn't change the evidence doesn't change all this evidence that we've got but in the minds of a lot of people the CNN brains and the **Reddit** brains and everybody else it's convincing even

(1:30:52) people that aren't **Reddit** brains and CNN brains is convincing man so we've got to find another way we've got to find another way man now what I'll say is too is that I've got a lot of connections now that I've made right like I want to still I want to still change the add to the conversation right yeah I'm familiar with the nimt incident I I think that we need to change disclosure we need to move the disclosure conversation forward right definitely choose the move the conversation

(1:31:32) forward yeah so we're only going to go for about 10 more minutes guys so I can get some sleep tonight um and find my scar Joe out there scar Joe wherever you are yes I'm familiar with the nits incident I believe commander fraver and Ryan Graves and uh David grush personally um yeah I believe them all I think that I I mean I've said from the beginning I think that these videos can prove the implications of what those people have said to be true right yeah we're going to keep doing hard **truths** but I don't think we're

(1:32:14) gonna be doing one tonight Banner have a good night man have a good night and I I'm not afraid uh the reality is that I'm more afraid of this going quiet than I am of it of anything happen to me while this is going on I think it's more likely I would get disappeared after this goes quiet when people have got over it right I think that there's more likelihood there of that happening yeah how can you stay in the conversation and be friendly with popular YouTubers is presteing is by presenting the hidden

(1:33:03) evidence test that has been hidden from us I'm not sure exactly what that means but I think that we continue have to push the the science that's been hidden from us and we have to

push the boundaries ourselves so what I would like for our streams to do is the same thing they've always been doing man the same things we've always been doing which is a little bit of advanced science and then a little bit of memes right this community we've built a community here already of people that are open-minded people that know that

(1:33:32) there's advanced technology out there that's being hidden from us and that we can meme on anybody we can meme on anybody guys and so the reality is we can still push the MH370 conversation forward right we can still Push It Forward we have the evidence to push it forward we know this plane didn't crash into the South Indian Ocean we know that there's no way it's just not possible given all this evidence here so we can still push that conversation forward you know when March comes back around and

(1:34:00) it's going to come back around quickly then people are going to be reaching out right occupy locked yeah we should occupied Lockheed man I like that old shoe baby old shoe I'm probably going to be trolling locked after I have a couple martinis trolling the department of energy right cuz you know whatever let's do it thanks a lot Christopher I appreciate it man yeah and I think Christopher this is part of the reason why I had to make the statement that I did because we have a lot of stuff we need uncover

(1:34:35) man and if we want to keep that credibility and ability to uncover this stuff then we've got to take a loss every once in a while we got to sometimes learning how to lose builds more character than winning all the time right you even if it feels crappy even if it feels like it's being sold out I I understand your guys' feelings I I feel it all I feel everything that you guys are feeling trust me yeah in the end God will win and so will good good will win in the end too I believe that troll the FCC yeah I don't like the

(1:35:14) FCC either I mean you can pretty much list any three-letter agency and I will uh be unhappy with them yeah nuclear engineer watch Bob o day series and save yourself the incorrect stuff taught in mainstream you have to unlearn Bob's o day okay yeah I will take uh advice on who I should listen to and read up on I'm going to make a new thing science Maxwell so probably what we'll do is we'll have streams and then we will I'll let you I'll even take uh recommendations from the chat about who

(1:35:50) we should watch and I want to learn I want to learn as much as we can and yeah part of it is that we have to learn the right stuff man we've got to learn the right stuff babo day SC Maxwell oh and then we're going to go back through our old hard TR podcast good night xgt WB appreciate you man and it's not going to end guys we're going to keep going the copy of the stock photos of the clouds is actually owned by textures.

(1:36:26) com so if you guys want to reach out to them and figure out who purchased them I think that would be something you could do my guesses are not going to give that information but yeah are there 400 people right now yeah there was 450 earlier there's a lot there's a lot of people man a lot of support here tonight appreciate it I appreciate it any other questions you guys have for tonight before I drop off the clouds match a little too perfectly for me to come out

with some argument against them um you're an IT guy I wanted your

(1:37:20) opinion where do you IT industry is next 10 years I think that it is starting to get mature um my job certainly has heavy side I wrote that down um so I think that AI is going to change it industry where AI is going to be a powerful tool that lets an one highly skilled individual do the jobs of like 10 different people so I think that'll be interesting have you ever heard of Eric Weinstein's group called the portal no I have not I have not you can tell me more about that if you want Eric Dollard huh it's G to be a lot for us to learn

(1:38:05) guys a lot for us to learn uh no we're not going to do uh **Jonas** hard Tru I think that anybody who's laughing at this situation is only really laughing at themselves right only really laughing at themselves the difference between the people that would laugh at us is that I wouldn't laugh at the people when we proved it right if we proved the footage right I would just move on with my life the people that are laughing at us know deep down that they're wrong right they would know deep down that they're wrong tempted I gave you several

(1:38:51) chances es man so I give you several chances but uh tempted trigger in the future just be a better person man you're just don't be a piece of crap just be a better person man don't be so full of yourself either just **Reddit** brains are just the worst people on the planet I know you're a **redditor** tempted I can just tell I can tell yeah maybe Punjabi will will uh figure something out for us maybe he'll find a way out I'm not sure guys if you guys want to figure out and rebunk the videos uh you know feel free feel free I'll take

(1:39:38) it I appreciate it the reality is I still think that the videos are real but uh yeah the ones that are laughing are the ones seething from getting blocked that that's about right that's about right yeah the duner Glee is pretty disgusting it's pretty much the worst of in humanity I saw a couple of the posts on the **debunker** sub**reddit** it's like man these are like the worst human beings on the face of the planet Man Jimmy coretti and I were actually laughing at him in terms of like how disgusting these

(1:40:12) people are it's like that's and that's the reason why **reddit** it's the worst place in the planet honestly is that um you know they're just completely disconnected from reality completely disconnected from reality that's the difference between our community and that Community right our community is a community of people who's we're enjoying our own lives we're trying to make things better just like Jake said right we're not trying to polarize we're just trying to make the other people obsolete

(1:40:41) we're doing it all ourselves you know yeah oh active Discord that's pretty cool man thanks Last Spartan hey Last Spartan when you come in some of the other streams you should bring up that uh that Discord as well bring up that Discord as well Charles I don't think you'll be able to post uh a link yeah their memes are terrible too our memes are good yeah Jimmy did talk to me about the Atlantis thing I actually want you guys want to look at that real quick it's pretty cool uh yeah I'll probably do another podcast

(1:41:28) with Oppenheimer Ranch I I think Oppenheimer Ranch knows there's something going on here Oppenheimer Ranch is one of the most skeptical conspiracy theorist people ever and he I Che I passed his test so he knows there's something going on here and he's smart guy that will know that like there's disinfo going on that he'll be able to sus it out J uh Atlantis Sahara here it is man you guys are chat is moving fast tonight folks yeah diamond is legit I'll

(1:42:36) probably have to do another one with him he's also censored pretty hard but he's a smart dude he's just a smart dude I appreciate it J Brown I'll take a look at that later okay sorry I'm taking a look at

(1:43:50) this yeah this one's pretty sketchy guys but man even if it's sketchy as hell like they definitely uh they got the better of us on this one they at least tricked everybody else and this is really weird man the eye of the Sahara right isn't that what this is called I think this was the L city of Atlantis it is super weird I've heard this Theory it is bizarre man look at this thing why does this look like this is this a natural formation no way I don't know if it's Atlantis but it's definitely something

(1:44:37) man it's random like formation here no way I don't know if this is accurate but yeah people are trying to make fun of J oh there's his thing there's Jimmy coretti he was a good guy man he was really good he was a nice guy he was a nice guy yeah the Atlantis Eye is in the Sahara is really interesting man h

(1:45:57) my Discord is going popping off right now okay let's see what this what this one's all about hold on man there's a lot of uh lot of uh bunking and **debunking** guys but I'm going to chill on it for tonight and then tomorrow I think we'll probably come back and uh take a look at the stuff see where we're at see if people have rebunk it **debunked** it we will probably do our drone stuff tomorrow like I said we're not giving up guys we're not giving up come on we got a setback though it's ma it's

(1:46:59) a major setback for sure so we've got we've got this CIA stuff too maybe we will blow up uh Ronald pendowski one of the legendary CIA Spooks maybe we'll we'll give them a a shot back we'll do the car nicobar stuff potentially tomorrow and the stuff about the ping there's still a lot of stuff to investigate right guys and we'll probably get a lot of crap for it but who cares man I don't care I don't care nah I I didn't record the conversation with the dude uh thanks Antonio I might check out some remote

(1:47:47) viewing stuff now we'll see I'm not going to probably TI to the case but might just check it out just for out of Interest so tomorrow I'm going to I'm going to get off yeah I'm pretty tired I'm going to sleep this off guys um thanks Jimmy man I appreciate it I appreciate everybody out there who's been supporting and everybody who thinks I'm sure there's a lot of people out there who thinks that I've flipped or whatever I guarantee you I didn't it was really hard for me to

(1:48:12) write that post it was not easy right um and I haven't given up you know if we can

rebunk it we can rebunk it that'll be great but as I've said the evidence is still so strong that our case isn't gone and from a science perspective if people don't want to believe that what we see in these videos is real then that's fine man that's fine we'll just prove it ourselves we'll just prove it ourselves Neil cracking me up man I enjoy your work you put in you could even be looking at shopping cart thefts

(1:48:48) and I'd be watching that's that's High Praise I appr appreciate that man yeah so we will prove this science ourselves man we will prove this ourselves if this can be done by the government we can figure this out man we can figure this out let's rest and reboot guys uh thank you everybody who's in the Discord who's fighting and digging through the evidence I appreciate you guys very much um yeah we will uh we're not going to give up on this you know if the videos are fake then they should be able to find the

(1:49:19) hoaxer now that they found this asset that's supposedly in it so hopefully they'll find that hoaxer and if the videos are fake then the government should be able to come out and make a statement saying that they're fake right so hopefully those things will happen and you know we'll keep fighting out there so I want to wish everybody a good night and I once again want to thank you guys for being here hanging out hopefully I answered all the questions and concerns that you guys have out there uh and let's come back tomorrow

(1:49:43) refreshed and do some uh Advanced science and some memes what do you guys say thanks guys appreciate y'all

Transcript:

(00:29) girl okay we're back my god well I'm not good at revealing DMS guys oh boy my God my God oh my God hey back the old one's gone oh cringe guys hey yeah we did uh the um quite frankly earlier today yeah quite frankly yeah yeah somebody just tried to post this uh

(01:40) this fake satellite thing it's obviously not true 225 comments wow intelligence Community is going as hard as possible huh hard as possible less than one week old account that this is this is the spookiest [redacted] I've ever seen wow this is weird man guys unless you found the leaker then the the stuff's not debunked so I wish them the best but we've already shown that the the clouds move so this doesn't even make sense anyway wow this is super spooky man look at this look at all these

(02:46) comments dude this account's only a few days old so the Spooks have been on overtime

what did they do Just Produce these videos these uh these images here this is so weird this is really weird wow they must have gotten they must have melted down huh why is your account so new doesn't matter right don't worry about it guys brand new account happens to find a bunch of pictures that seem to match some of our SAT some of the clouds in our satellite yeah exactly doesn't take count literally anything because of course they

(03:33) don't what's their what's their argument do they even respond to this of course not of course not yeah this is mad desperation this is so crazy look at all this case closed [ ] this is just like the VFX **debunk** this is weird man okay well I guess I guess the **debunkers** can uh go ahead and try to find that hoaxer then right should be easy I don't think that they will yeah I mean they probably either spoof the metadata or I'm not sure right whatever they did the the those definitely are not our clouds not from

(04:19) our videos I mean we've shown that our videos have moving clouds in them as well but I mean you know what if they're fake then they should be able to find that uh they should be able to find that they be a find the hoaxer right so that's why we put out the Bounty and said that the only way that we can **debunk** it is the hoaxer we expected the intelligence Community to come up with some [ ] like that right it was expected anyway let's keep working yeah they're trying to put doubt in people's minds right just like with

(04:53) the VFX thing it's honestly the same exact Playbook same Playbook okay guys I was just going through the 2014 cloud formations and I happen to perfectly find it guys amazing yeah okay cool man two-dimensional clouds even though we have moving clouds in our videos yeah what's the story of it being hoaxed the problem is it's going to it's going to get some people who are like really dumb to believe it which is the same thing that happened with the VFX stuff uh but let's go ahead and start working yeah what did Alex Jones talk

(05:53) about see let's do I was going to post a flash elimination video oh uh we were going to join mellow space should we do that compete with each other's space I don't know probably let's see if I can avoid revealing my DMs again mean to

(06:58) some degree I mean I did reach out to all the people having spaces tonight and tried my best to um you know had some um last minute um things you want to discuss and you know you had you working always so diligently to fill every uh moment of your day okay just to tell you guys activist I had a bunch of people commenting that I was talking over the people I invited first of all I was the guest when I'm streaming I'm commentating I'm not sitting here listening to an interview so if anyone's watching this wondering why I'm talking

(07:28) over people it's because you can watch this space on Twitter anytime you want and you don't have to listen to my commentary so I'm not sure why that was so confusing for people my last no big deal man there's effort was made also our I'm G turn this down a little bit um I tried to make it uh towards his space is supposed to end now so we will probably be getting that Consolidated here I'll turn it up when we're going to listen but so yeah I want to try to do a little bit of work here to say the least I

(07:57) think we may post this flash illumination yeah I guess I'll bring some people can I press things or is it gonna discussion as we load up and then we can um get into the you know the the official updates from you um let's see oh uh thank you for bringing me in uh Ashton's here so I think we could uh settle some uh differences I think tonight be good oh it's going down who who's talking here oh big your part hey Jake I know um this is a particularly we're here with Steve Basset and we're

(08:52) we're just loading up we're here to hear his um updates on the uapa so it's not I know the topic was on public disclosure last time which maybe we'll get to later on tonight as well but um yeah it's not about that now unfortunately um but I do I do want to um hear about that no so that's you know if it's not the time then uh we'll do another time uh I I saw that oh is this that weirdo this is that weirdo who this is that weird guy who like got super angry and then jumped in random space and I will deine you know

(09:28) uh what's wrong with this guy we have a very this guy is like a nut job or what lob for all disclosure um and he been at this obviously the whole time and Jake why are you being a freaking weirdo buddy aware of what's going on in this this moment of his capitalize on that primarily he wants to like have a oneon-one with me dude you're blocked you're never going to talk to any bu whoever this guy is what is wrong with these children man can why what's the deal with adults acting like kid if you if you have like a spot you

(10:03) can let me jump in to debate Ashton for sure I would do it well this random nobody's never going to debate me man you know I don't want to derail it but when you have the time to do it I will jump in and we'll have that discussion yeah that's and uh I'll leave it at that uh cool that that'd be something interesting I don't knowy mental issues host that but I definitely would be interested in participating you guys want to do that at some point I'm gonna message Ross to make sure that he

(10:32) never talks to this guy people bring them up um and yeah in just a little while we'll get into the official discussion on this topic Jesus I just want to say hi to Star Captain why is this guy even as we pointed out we got Ashton we got Carlos Ken oh Max's AIS haven't seen you in a bit I guess you've been out in the real world um being a responsible person which you got to respect we got Aiden here really compos mine Matthew okay I can just keep listening everyone um but I think I think we are what do you think

(11:02) are we enough um have we initiated the process enough to really get into it Steve you want to wait a little longer Jesus man people are just like seriously like off their rocker follow up can you hear me okay Steve can you hear Mel no I'm not gonna jump in and say that would just antagonize him further I already said it in the Stream I can hear you okay yeah I don't want to be mean Meo or Steve what the heck I hear Melo I do not hear Mr Steve okay good he did he I mean he needs to remove this guy from his speaker even

(11:39) just remove him from the space entirely Zoom but hopefully we we'll sort this out First's got to figure it out you know what it came up today was the gro is in like my little app now have

you tried Gro okay let's see should we do I was going to post a flash elimination video I think can I post still roll out to premium uh subscribers right now over the next couple of days so you might have gotten it first before a lot of other people did okay I'm back hey Steve um yeah I was fiddling around I don't

(12:11) think I was necessarily kicked out but if we're having the same problem it's going to leave this phone alone oh there he is if we're having the same problem we'll know pretty soon because I'll just suddenly bounce right out of this without doing anything yeah there looks to be some new disinformation for people aren't who just are catching up to what we were just talking about related some brand new account that claims to have found some uh cloud pictures that match Ours from 2014 from 2012 when conversation ended so we Pi

(12:39) you had to expect the intelligence Community was going to come back with something right enough attendance they weren't going to they were getting destroyed out there right it was getting way too popular so they they're trying something but problem is we've already proven the videos uh that the satellite the clouds already move so it disproves any uh 2D effects from being in our videos we're in historic uh uh time without question so I haven't looked into it to figure out what they how they

(13:05) faked it or whatever they did but I'm sure there's an explanation it's hard to know where to start but let me just quickly do this I just want to get this thing done here I just want to do this just take a second it okay I'm done okay look uh the fourth piece of legislation sponsored by members of the Senate Intel committee who this though I think this last one included Mike BRS who's actually the armed services committee and eventually included Chuck Schumer who put language in the bill this Intel committee project

(13:48) is um that fourth bill which had been up on the website for some months finally went into reconciliation a while back and uh this one got attention the first three didn't really Gore anybody Gore anybody's oxes uh it didn't challenge anybody the inside too much it was just mostly okay we're doing our thing we're making progress this one punched them in the nose and so they responded uh they responded with Vigor and they have gutted the bill so whatever based on the information I have and I put a lot of

(14:30) some of this into a post that I just put out to my list 12,000 but I have links up to this post take it easy guys whoever Le my Twitter page on my uh Facebook page not yet my Linkin page but I'll get to that so you can go there click on it you can see a great deal of what we're talking about but uh essentially the resistance came from two areas uh one was the defense contractors and the other was what we'll call the hard National Security people primarily Republican who they don't want anything

(15:15) to do with this **truth** and bar with this disclosure process they want this **truth** and Baro to remain exactly in place forever frankly uh yeah X can be modified they actually proved it with uh this bill is the Philip wood picture now the Philip wood picture didn't have modifi we we showed that the the data was consistent with the real picture on the Philip wood One But the

irony is that they **debunked** other footage saying that exit data can be easily spoofed would the int committe also why would there be a satellite

(15:46) picture from this angle and Schumer knew this why would there be a satellite picture from this angle I he deliberately put the eminent domain wording out there is is intended for the bill yeah some Spooks I think uh SP some fake pictures of the satellite copy pictures and then put them on the Internet want get somebody's attention talk about their money and so cool people think that they're faked all they have to do is find the H right declares ENT domain overall the nonhuman Tech and by extension I think anything

(16:15) you've learned from it all they have to do is addition to confirming grush locking him up in other words he's Untouchable after that uh whoever wants to troll them or throw shade on them fine but he you don't put an eminent domain Clause into a bill about non-human Tech if there's no non-human Tech I mean that would be insanity and Incredibly bad politics and so basically he's saying that crush is telling the **truth** which means that you know Roswell is confirmed and all that stuff but it's still not

(16:46) disclosure so he knew it was going to get their attention probably he viewed it as a bargaining chip but what he didn't count on is that the hard National Security Guys would make their move too and there were three people that made that move now to some degree it was in support of the defense contractors because these guys give them a ton of money I mean millions of dollars of campaign funding goes to uh members of Congress including some Democrats but heavily weighted toward the Republican side and so they were

(17:25) kind of serving them but they were also serving naal but this is like all this is all hypothetical talk right uh no the the fact that uh that members of Congress get huge donations from government contractors is fact uh and uh what is hypothetical is did they reach out to through intermediaries to certain members of Congress to challenge the language in this bill right because it affected their bottom line it had the potential to affect huge amounts of money they had every intention of making making uh that's speculation but I don't

(18:02) think these members of Congress on their own just decided you know let's just get rid of this I don't think so but three other people came forward and really got into it and because of who they are I really think that there was a national security Hardline approach there meaning the these are people don't have a need to know a right to know talking about the UAP bill and the three people in question are Mike Turner the chairman of the house intelligence committee the counterpart to the Senate intelligence

(18:37) committee representative Mike Rogers who's the chairman of the house arm service political corruption and they started pushing back this bill yeah but how would you know that hey Steve you with us why is he letting this guy talk yeah we sometimes have a little trouble with his connection to the X spaces hey Steve wave if you're currently with us Hey Jake what was your question again why I said how would you know that why is this Jake guy in the chat why is he boot this guy man what is why do we have this **[REDACTED]** and as a speaker

(19:29) who is this guy he's a nobody get him out of here now it's not as he's a nobody but he's just disruptive bring you down Steve if you can't hear me I might bring you needs to get it figured out man's not reading his DMS X is glitching he's both a listener and a speaker yeah it's a it's often the case that the this happens with the special guests you know there always seems to be some kind of or something government doesn't want us getting ahead of them right well I do have a backup not

(20:10) ideal solution to kind of like pump them through zoom and such so we'll get this working uh one way or another I'm confidently sure about that do we see him now he's probably recycling back in um but yeah let's see they really they really didn't want him to answer that question bro he insists he's not uh you know targeted in any way almost press I almost pressed my messages that I guess but um you know he did update his app that was a good first step and uh you know those who joined us during uh UFO

(20:41) Twitter week we we kind of went through this uh this dance a few times we got it work in pretty well okay let's see where he is one sec oh yeah was that space that he uh he did with that was um that's like the really long one uh yes yes that's right I think um hold on let me see where Steve is would give him a call okay I think he got rid of him what the hell dude Go Gotta regulate dude yeah Steve struggles with uh the spaces I'm not sure why honestly I don't have really any see if I got him here on

(21:40) I don't have any interest in uh listening to this to be honest with you but I want to support Melo um yeah somebody else in the Discord noticed as well okay I'm trying to get him on Zoom does anyone see him in the space if not I'll call him on his cell phone next just get the communication options on the table might trying he might be trying to reset his phone or something like that because he's not in the space at all and yeah that guy Jake was uh not quite understanding how one uh conducts themselves in a uh environment like this

(22:20) so he is no longer with us at this time metad data to go yeah I've never uh seen seen that guy before he come around here sometimes uh well he came uh By You Know by not really on topic in the past and that's fine but I guess he just doesn't quite understand the uh culture of when we bring a guest and we let them speak and want to hear what they have to say speaking of which I got to make a phone call to Steve one sec yeah it seemed like you just wanted to come in and uh start a fight it's not really too productive when uh

(23:01) when we're trying to make progress as a community you know people come in and they just want to argue with others and make a bunch of nonsense versus us actually collaborating and moving the uh ball down field we we can fight all all day over [REDACTED] but that ain't going to get us nowhere so I think when uh when those kinds of things happen it's it's best to uh who Carlos squeeze it and move along because there's things to be talked about that are more important than personal Dynamics you know like

(23:28) this best things that we could do is talk about ideas and talk about potential rather than trying to sell seeds of Discord and fighting each other of nonsense that uh doesn't actually get us

anywhere other than going in circles uh you know conflicting with with people that doesn't help our community it it actually adds agitation and and SS further Discord and I see people throwing thumbs down because they like to be in the drama circles but uh you know intelligent people move above drama you know uh smart people talk about

(23:59) ideas and uh dwelling on on conflicts on a personal level is uh an unfortunate thing that some people spend their time on I think that the majority of people want to uh spend their time progressing the issue rather than looking for people to uh to battle with online you know we're not here to fight each other we're here to talk about this issue we're here to advance this issue and there are some people that don't want us to advance this issue and they would rather the the conflicts be what happened so that that

(24:31) issue is not Advanced by us and it's Advanced rather by their controlled narratives and there are certain people that prefer those narratives overtaking the public Edward appeal case the **truth** is is that the cosmic democracy is more important than their uh attempts to stifle it and and that's what's being birthed in these spaces as people from around the world are talking about our future in space and and how this Paradigm will affect us and that's very important for our civilization to look

(25:02) at and uh those who who uh tried to disrupt that they can try but they're not really that effective at it can do the Drone Edward C Lin okay they're only as effective as we let them be what is this guy still spamming down to your pirate songes earlier and uh I got say I liked it better the second time around with the animations Good Times see just it does add a little bit more of an emphasis to it than uh you know just a a dry run through just uh with no background audio or anything like that but uh you know there's

(25:41) there's some stuff that I make with music and some that's like Acappella because it's supposed to be like uh you know shant pirate shanties but for space for our future to uh Inspire our Cosmic freeth thinking soad I'm not looking into it because it's clearly not true we there's no 2D 2D effects in Captain is it possible to um maybe back off your mic a little bit I feel like you're coming in really uh unless somebody found the hoaxter there's nothing to **debunk** uh it's just probably because I

(26:12) was I walking by my uh I'm I my face by the microphone I'm sure I'll get asked about it on several podcasts in the future beg your pardon I'm reconnecting can anyone hear me at this time see Community is extremely desperate right now like we're destroying them at the moment sde to Fe further conversation yeah Edward cin doing the appeal pretty interesting hello to the room here uh we are still working on this minor technical difficulty uh hey Steve you want to talk on the on the zoom so at least people know you're you're still uh

(26:59) with us yeah s vide is at lower frame rate okay okay Steve say hello on the zoom and we'll see if people can hear you on the app oh wait this is the one I just put out there can you hear me okay yeah I can't hear anything can you hear me oh okay okay okay can you hear me now I can hear you big time fantastic okay Steve uh now people on the on the app can hopefully

hear you guys give me some thumbs up if you can hear talking about any Cloud [ ] I got a decent mic okay we got this going all right cool we can make good get spammed with

(27:45) this nonsense huh you want to make one effort to hop into the space again or are you in the space in your no no I I I have a Moto G pure phone it's not a bad phone I once did a Twitter space that went fine but everything since then I'm been getting kicked out in other words my phone is not working with Twitter space I don't know why I'm going to look into it but you know I you can imagine where that's going to go but I'll see if I can find the problem but it kicks out every two minutes happen

(28:14) it's now happened three times in a row so yeah the problem is you're not on Apple yeah okay well you guys can hear me right is this reason Apple doesn't make any difference what would Apple matter yeah we got clear okay Steve um so you're giving us the update what's going on with the uapa uh the various factions uh and please continue so I'm I'm I'm just covering a little bit of what I think I know about what happened but again it's a closed door no journalist no public process

(28:46) reconciling a bill and so normally you just don't care whatever bills being reconciled nobody pays attention and if there's an issue maybe a couple of journalists will check on it maybe it'll be an article in the Washington Post this may be it's eventually considered by historians as the most important piece of legislation in the history of the human race and there are more than a few people I think on Capitol Hill that know that and so this isn't any typical situation and so we're paying really

(29:22) close attention H whether or not they understand how close attention we're paying will remains to be seen so I've given you some sense of who opposed it and that they succeeded and the legislation is gutted uh they're they still have about five more days of reconciliation but this is they're done with this section and they're dealing with other matters uh there is little or no chance that they're going to revisit this it's just not going to happen that's it all right the bill will be turned over

(30:00) probably delivered to the House and Senate for revote uh around the 15th or so 14th no no later than 1415 because that's when they go home for Christmas and at some point in December uh well I think December 21 actually before Christmas get it out of the way they do uh that President Biden will sign it okay and there you have it so that is the situation with the with the uh act Danny Sheen is all over it U working from the new par Institute which now has an office one block from the capital he has been on the hill dealing

(30:37) with these issues in various ways for some time he's interacted with the you know doig the intelligence Community IG with grush with Alando uh with Schumer uh and others uh he was talking with certain people about uh who to select for the review board Danny's all over this now I'm not saying his reach is unlimited but he's he's in another place I'm a citizen activist working from the outside um there's an opening that I might be able to take shortly that will get me up on the hill uh to be able to

(31:13) chat about this with certain people uh it's possible that the project I just launched today may do help do that we'll see but anyway Danny she is on it and I get a lot of my information back from him but some others so that's the situation on a bill okay now what next ah well here's where it gets interesting because the circumstances have really come down to something well defined and that is this we have four Tres of legislation the fourth one is weak but still a lot of legislation is in place arrow is set up NASA is on board

(31:58) with a investigation group huge numbers of members of Congress are fully aware of this issue very large numbers have been briefed privately they have received a number of classified reports over the last three years don't know what's in them but they read them right so the level of knowledge of the United States Congress is is unprecedented it's so far beyond anything prior to 2017 this Twitter Space is really bad we might have to drop out this guys so all that's in place and so how do we get the

(32:30) disclosure from here well it's actually not that complicated nothing in the bill in any way prevents the intelligence Committee of the Senate to hold the hearing that they said they were going to hold once ago and by hearing I don't mean a couple of witnesses for a half a day I'm talking about between 12 and 20 over five days the citizens hearing on disclosure and 42 witnesses that testified in groups of 3 four five over both in a morning and afternoon session over five days we actually you know had

(33:12) four 4 42 Witnesses take a oath and testify before six anyone posting fake **debunk** [ ] is uh getting blocked two in the morning two in the afternoon for five days is 20 one in one it would be 10 one in a couple of it's 12 whatever the witnesses they're ready to testify are very substantial I already said guys the only way you can **debunk** the videos is to find the hooker we we knew intelligence commun was going to pull some [ ] yeah intelligence community did some [ ] to I mean they found some website called textures.com and they're

(33:46) trying to claim that our SAT our moving clouds are in the in the things which clearly they're not and take o hearing don't worry we already have **debunks** ready to go like who took the pictures blow it and that'll be the that hearing needs to take place in January as early as possible there's many reasons for that probably GNA drop out of this space guys hearing takes place in January January 5 January 12 January 18 192 whatever last for about a week ends on Friday if I'm the president of the United

(34:24) States I might come out on a weekend I might actually do something on the weekend there something to be said for the hearing don't seea in the afternoon he could step out that evening but it would look a little too oh he's on a phone call with little too obvious he might wait till one day but there's other issues but I'm just I'm dropping I don't I don't care about that at the moment I just don't care about that at the moment okay we need to grabb some stuff here from this uh Appeals

(35:26) that's h I don't think the speedy trial thing really has a lot of legs for

(37:26) for check out the footnote at the end of the first paragraph and the linn sites that statute linn was under other cases have statute s this making specific references to video footage uh Chris Oakley which one this one here that could be big man okay Justin the jokes run dry buddy Justin the jokes run dry uh Chris Oakley can you tell me which

(38:34) paragraph first paragraph doesn't really narrow it down man first paragraph where here this footnote here really is you have is there some how do we how do we find corroboration this is related to video this would be huge this is huge potentially how do you how do we find out that this corroborates to video somehow if this relates to video that's pretty much game over connects the thing yeah so how do I how do I link it

(39:38) to video guys how do I link this to video how does this link the video this doesn't mean anything to me give me another case that this links to Chris I'm going to make you a moderator so you can post links find me a link that will link this statute to the video what part this or article 134 this we need another case where it's linked to video cuz this could be documents I

(40:49) already looked at this before it says any document problem is I don't think this is hard enough evidence because it's any document it says see if we had anybody else posting some [REDACTED] anyone trying to post this satellite [REDACTED] in my my feeds getting blocked there we go thanks Chris appreciate it they're using a bunch of like no follower accounts to try to post this

(41:53) [REDACTED] in my uh my feed you got any quotes from this related to video Chris I see okay

(43:01) okay this is pretty solid okay let's take this still could be printed but this also references film materials any advantage didn't yeah they definitely matched our

(44:04) satellite pictures it's going to be annoying to deal with this lazy **debunk** for yeah so they can be charged with this

(45:17) for okay yeah we Shoulda make a note of that okay I'm actually just going to copy what you said Chris Oakley I think I like the wording you put there I like that okay

(46:31) I think that's good enough wait I don't ban anyone with different opinions I do ban people for posting fake **debunks** of my replies unless you find the hoaxer and bring the source files there's no **debunking** these videos guys I've made that pretty clear so we expected there to be more prosaic kind of nonsense it's not even going to phase the investigation guys I mean if you think it's fake then all you have to do is

(47:33) find the hoer man you know why are you wasting your time I already mentioned this like 50 times already that's the beauty of the uh that's the beauty of our Bounty right let's see if we got more people pushing this fake crap in our thing I bet there's going to be like a million Bots pushing this six day old account trying now they're the same people that claimed exit 8 is easy to spoof let's see look man don't post this [REDACTED] in my replies please we'll make a little post

(48:55) here for for I really need this part

(50:36) move this over here we'll address it right now okay let's see okay sorry man I won't block you but

(51:40) going to go ahead and hide your post people okay yeah I mean the problem's going to

(52:51) be that they're going to I'm going to go to sleep and they're going to spam my thing with this what is the hell is this what the there we go okay we've already got proven the clouds are moving so obviously it's impossible for there to be a 2d static clouds in our videos guys

(53:54) anyway okay so we got that part I might have to look through some of my other posts real quick see if other people are posting crap in my other replies which I'm sure they will spam here it is locked locked stop the clickbait okay got you okay okay yeah we're going to get attacked by

(55:03) this huh looks like the intelligence Community is pulling out all the stops now we've uh we've got them reeling okay well that's cool man then you can get out then I'm not going to block the person I don't care I've already addressed it okay so the other thing was he said there was

(56:08) two things I found in here in addition to this it's already 10 o'clock for let's see what we got here wait oh I went to the footnote so I think he said we've got the thing that's links it to the

(57:24) videos oh yeah so there's a shirt where's the shirt thing someone made a shirt as well I do have to stop soon uh because I got to get some sleep tonight guys I slept super late this morning I can't be staying up till like super early in the morning every day but I wanted to see if we could push out one more thing here Jesus

(58:50) man I'm not going to block people but don't post this [REDACTED] in my replies friends for

(1:00:05) sorry Chris what are you saying the subject matter of the Stanley Cas is not on point to Lynn yeah it's only relevant to the oh yeah why am I still looking at this thank you I was looking at the wrong case appreciate it man no wonder no wonder thanks man thank you very much I was looking at the wrong case no wonder thanks Stanley obviously I'm tired and distracted oh he says something about the charges

(1:01:10) not being the same or charges for here it is this was up near the top this one I don't know if this part's even that good compared to the other stuff oh yeah we're going to go to sleep

(1:02:13) in a minute we're going to have to do a lot of damage control for this uh this satellite thing though I can already tell I mean it should be obvious that we have two videos that both show the same clouds requiring a 3D render we've shown the clouds are moving it's impossible for there to be a 2d thing so I'm not sure what uh they what the intelligence Community pulled off like if they just copied the clouds and loaded them um or what we'll we'll take a I'm sure people will go through it tomorrow and

(1:02:45) there'll be counter points as well of course **MC West** just shared the cloud texture stuff of course he did extremely coordinated yeah um I'm going to wait to see what the **redditors** do tomorrow I imagine that they will dig into it um the easiest way to attack the **debunk** is that we've already proven the clouds are moving so that already already rules out 2D uh Cloud effect in our videos um it would also require 3D render since we've proven that both videos have the clouds at the same time and same location so that's the um

(1:03:17) that's the easiest way to **debunk** it at the moment I've already posted it on my Twitter so if you guys want to read uh the the response already right here and the only way to **debunk** the footage I mean if they think they found it it should be very easier to find the hoaxer right now you have a you have a way to find the hoaxer so all they have to do is find the hoaxer guys it's pretty simple exactly I'm going to post the reply in here

(1:04:31) okay um there's a I'm going to find the accurate zap flash here as well here it is okay for yeah I'm guessing something like this is

(1:05:49) what happened that they modified it and then they're trying to uh play off as being from our video and whenever you see a Six-Day old account you should be pretty skeptical man hateful conduct wow jeez man people are really angry huh okay let's see if we got to take care of some more posts okay that should be good okay I should take care of that um hey chat let me let me get back

(1:06:54) to you here hey gang hey Paul appreciate you buddy uh if the person finds the hoaxer and brings the source files they get \$150,000 for the person who asked yeah that's the only way **debunk** the footage we've already proven it's 3D or threedimensional you know two two angles requires 3D so yeah yeah they're going to try to throw wrenches out at the best they can but it's not going to stop us so um I think this was the strongest arguments is that he said other cases didn't get this much of a

(1:07:52) punishment he said something is uh who is that forgot his uh Chris did you find anything else in the case that you thought we should look at that was a good find Chris really good find man here's the here's the witness they argue that the evidence was speculative what what do we make about this argument that evidence was speculative if they come out with a fake hster that's why they have to bring the source files guys for John good question though I mean I do imagine that they'll come out and have somebody say oh I made

(1:08:47) this but they have to bring the source files with right so I mean theoretically they could rebuild the whole thing but this is why we have to push the government to give us an answer early on okay I think we can make a post about this I think we have enough stuff for

(1:10:23) for for okay so where do we go from

(1:11:53) debug how do I I'm booting this guy from my Discord okay okay okay I'm going to go to sleep after we post

(1:13:04) this pushing a lot of stuff here today okay let's see what we got okay I try to yeah harm being speculated is very interesting I think those are our main arguments right okay

(1:14:18) so let's put our case la uh punishment appealed his uh sentence for

(1:15:52) for uh yeah I'm talking to Think Tank right now he kind of posted that a little too quickly final nail in the coffin cracks me up dude I mean people think they're **debunked** and they're happy to not follow the case anymore doesn't matter to me totally fine at

(1:17:22) this oh for I'm going to move this one to the bottom

(1:18:52) I think okay almost done is that everything did I post the case law on there okay I think these are the three main ones this is pretty spicy pretty spicy

(1:19:59) guys I want to finish this up cuz I'm tired watching Nakamoto now huh sorry I guess let me take a look at the chat Chris what were you thinking the argument that the potential damage res leak or hypothetical potentially support the theory that countries like **China** and **Russia** are already wear the tech I like that I like that Chris I like Chris here in the chat he's this is this is good for

(1:21:52) for for sorry what else did Chris

(1:23:06) say okay and or who he disclosed it to cuz he didn't disclose it to **China** either for for

(1:24:30) this is pretty good right I don't want this what year what year was the case 2019 2019 do I need this sentence up here I'm

(1:25:39) trying to make it shorter I guess we need it this is pretty good okay let's do one more read over and then I can get some sleepo [Music]

(1:26:56) that's funny that's funny chat uh that's funny weara farm the fact that **Mick** West posted that quickly tells us that uh yeah there's definitely some spooker going on **Reddit** will figure it out gu no worries though wa I mean it doesn't matter we already showed as well that it can't be a 2d effect in our videos so for yeah okay it looks like **reddit**'s on the

(1:28:21) case wow this is weird did where do you see the person who said they found the hoxer i' would be happy to look at that oh yeah you're right good call uh Chris Oakley yeah I should mention it here

(1:29:26) right I I you're good call I didn't realize I didn't mention it although this kind of speaks to it doesn't it wasn't that up to the top where was the first paragraph right it's pretty good click the footnote oh good call

(1:30:51) um yeah yeah you see what you're saying do I need this part I I can't decide I think we add this in there right just like that yeah the cloud **debunk** doesn't **debunk** our

(1:31:58) footage guys just read my my reply if you guys want to post on **Reddit** tonight ask him

how he found the clouds pictures just ask him how he found that on some obscure textures website how he was able to like match up like cuz the the full thing is like a huge screen just ask him ask him how he found it should I I should post a picture of Edward cin right which one do we like this is my favorite one although picture of Taiwan in the background kind of Po's picture is kind of sus though sus

(1:33:04) though maybe this one this is the best one let's be honest this is the best one well I mean I okay you're you're the guy who's been posting fake crap Prine so you're getting blocked I'd been suspicious of pervine for several days now and his uh fake I'm just asking questions attitude just read my reply if you have any question about the uh the cloud

(1:34:20) thing ill tent need a a hyphen in it yeah this looks pretty solid I think right Chris yeah this is this is good I think okay I think we're good with this good work tonight guys uh I also just call it leaker update probably will call it leaker update Edward sein appeal okay I think this is good should I call it

(1:35:26) leaker update leaker case update what should I call it yeah well done Chris man good job helping out man appreciate you buddy you earned your moderation you earned your moderation tag on this one uh leaker case yeah I think leaker case is good right I think we're going to go with this okay I don't want to think about it all the time okay chat if you want to post feel

(1:36:41) free yeah Chris good job buddy okay boy what a night okay not bad okay I'm going to have to take care of uh some more trolling I imagine in my replies I think we can delete this stuff off our list now though I think we added all this in there right yeah we got all that in there okay sweet yes he had to flip the clouds horizontally to match well that's weird yeah **Reddit** will take care of the the cloud thing I have a strong feeling I'm not going to get in the middle of the war of that so thanks

(1:37:45) a lot guys um just a reminder the only way to **debunk** the videos is to find the hoaxer and bring the source files uh we know the intelligence Community is going to come after us hard right we know they're on full meltdown especially after the videos we posted that show that there's Cloud movement and stuff poking through the clouds etc etc so be vigilant anyone who says stuff like oh thank God this is over like it's not it's not uh genuine right so um thanks everybody tonight for watching hanging

(1:38:14) out I'm going to go get some rest and come back refresh tomorrow uh I've got more interviews coming up here in the next uh really tomorrow in the next few days as well so take it easy guys thanks a lot peace

Transcript:

(00:00) go beyond the per the uh perception of our our two eyes then we're getting into the next level of how it is that the individual is able to relate to these other Realms and these other dimensions or frequencies of electromagnetic vibration now what's interesting about that is that when you get to a certain level of development spiritually and you get to be able to perceive these other Realms and dimensions then things like say remote viewing or bilocation astral projection these things actually kind of

(00:31) unfold as a matter of course and we all have these spiritual capabilities and uh this is what a lot of these ancient you know rishis and Prophets these ancient shamans and um ancient sages and stuff were able to practice and able to understand and they tried to bring this understanding to their people and a lot of the time that's where a lot of these religions come from is these ancient highly developed beings that understood the nature of reality began to disseminate this information to people that were kind of lost in the weeds and

(01:03) couldn't see the forest for the trees um if you want to look into the vas and the VAS that's the ancient Hindu text they talk about things like these bell-shaped craft that had the ability to zip around the sky basically anti-gravity vehicles and they use gyroscopes and liquid mercury uh within their craft to create these like anti-gravity fields around these craft that allowed them to basically be like floating hotels you guys like we're talking big buildings that had multiple different layers and

(01:33) levels and um what's what's really interesting about is they actually have schematics for these things and we're going to get into how those schematics played a role in the Nazis and stuff like that a little bit later but what's also interesting is things like the Mayans and the toltech and their ancient tablets and stones that they carved on and stuff they actually have pictures of things like what we would call UFOs or saucers and you know there's obviously petroglyphs all over the world of these

(01:58) interdimensional beings that are carved into stone or on cave paintings and stuff like that this is where we get into things like you know the Grays or you know uh things like The Moth Man Bigfoot like these these things that are considered Fringe but if you're living in out in nature then these are phenomena that you actually experience the Native Americans talk about the ka-chinas and stuff like that uh there's also obviously the other side of the Native American lore regarding the darker side that would be things like

(02:28) Skin Walkers things of that nature all of this stuff plays into the spirit world and understanding the spirit world understanding things like the uh use of the electromagnetic field or the Consciousness field its ability to by locate and stuff like that now I'm sure lots of people have seen some of the pictures of the UFO flyover that like the um the fight that was over Germany I think it was in the 1600s and this was actually documented it was put into the

German newspaper and uh blew everybody's mind there was some

(03:01) incredible things like orbs and stuff there was this massive what looked like a tear in the fabric of reality it looked like a giant arrow a Black Arrow like all this stuff was documented was placed in the newspaper so we've been interacting with these other dimensions and seeing these uaps for quite some time now what a lot of people don't know is there was actually UFO flyovers here in the United States of America in the late 1800s and early 1900s and these things looked like uh floating ships they were they they like floating like

(03:31) like wooden vessels of sorts with s with like wings and stuff on them and they a lot of people there's even reports in like Texas and stuff where these things were down these these crafts went down and then people interacted with the human beings that were flying them and actually helped them repair their ship and get back in the air and these things were going from like California all the way over to Ohio and so this is kind of the roots of this ancient uh I mean this uh This Modern secret space program as

(04:02) it's been called now when we get into things like the Nazis and the Foo Fighters which you know the uh flight um MH370 is that right it's MH370 Ash yeah you got it man you're on fire right now keep going so when we look at the flight MH370 and we see these little orbs circling around the airplane um those in my opinion are reminiscent of the Foo Fighters from World War II to which were these like basketball siiz luminescent objects that were whenever our planes you know Alli planes were over Germany or over Europe

(04:40) these things would fly up and go around and like and Float above the engines of the airplanes and then they would just short circuit them and the airplanes would go down they didn't even have to fire a shot and so these are the kinds of tech that the Nazis had access to and then there's also things like and this is where we get into the whole vanas and the Veta the vas the Nazis went to India the Nazis were very interested in the occult they were very interested in ancient technology and stuff like that

(05:09) hence why you know the uh Raiders of the Lost Arc and stuff like that the the search for the uh the holy grail and things of that nature you know Indiana Jones why the Nazis were in those stories was because they were very prevalent in looking for this ancient Tech and these ancient occultic Powers so when they went to India and they talked to the Indians about the vas they actually had schematics for how to build these things and it's based on gyroscopes which if you're not familiar with gyroscopes is basically spinning

(05:41) wheels within spinning wheels that create centripetal force that almost is like an anti-gravity type uh field that surrounds the gyroscope and what the Veta what the ancient Indians found was that if they filled these gyroscopic Wheels with liquid mercury it would amplify that frequency or amplify that electromagnetic field and Surround a craft surround the vanana so the Nazis basically took these schematics and then they started creating vehicles and this is where we get into like the whole notion of like the Nazi flying saucers

(06:12) how they're able to defy gravity and stuff like that which you can look into operation high jump when Admiral Bird in the UN United States Navy went down to Antarctica and Argentina to try to take the deep underground military base that the Nazis had built in both of those locations from them and then supposedly these flying craft these flying saucers came out of the hole in the ice and started to shoot down our aircraft our airplanes and they even apparently even sawed one of our small boy ships in half with a blink of

(06:42) an eye Admiral Bird realizing that he was outgunned basically High tailed it back to DC and told them everything about it and then if you look into there's a UFO flyover of DC on July 12th 1952 and these these UFOs these uaps were flying in military formation over the United States capital much of this isn't really talked about in the Mockingbird media of course so um we can also talk about things briefly and how they relate to Modern Times things like the underground civilizations that are all over the planet if you look into um

(07:17) ancient lore and legends and stuff like that for example the Hopi and the Native American legends here in Arizona about living underground and basically being slaves to Giants and coming into this world um near the Grand Canyon which there's apparently an underground Citadel in the Grand Canyon if you look into canyons and how he was exploring the uh the Grand Canyon on a boat on the going on the Colorado River for the Smithsonian and how he found this underground world that actually had a lot of ancient Egyptian artifacts and

(07:48) stuff like that that's one example another example is the ancient underground city in Turkey I believe it's called during kuyu um and how that City could I like literally like 20,000 people people um and then we also can look into the work of Graham Hancock and how there's all these ancient sites all over the world that predate any sort of modern dating that is being given by modern archaeology how there's literally all over the world there's these flooded ruins under hundreds of feet of water

(08:16) there's there's the um the like it's a massive building it's a massive structure off the coast to Japan uh it's it's it's absolutely enormous and was obviously at one time above water there's also um the ancient city that is off of the coast of India the Name Escapes me at the moment um I don't know but there's all these different examples of ancient civilizations prior to the flood that were highly Advanced there's lots of people that speculate that the ancient Egyptian pyramids are not 5,000 years

(08:50) old they were not created with slave labor I mean we can't even replicate these things to this day let alone the mathematical Precision that it would take to create something like the Great Pyramid or just or not just one but three of them is incredible there's also the ancient pyramids in China that dwarf the pyramids in Giza there pyramid in Bosnia uh that dwarfs the pyramid in Giza there's all sorts of examples of this there's underground civil I mean underwater civilizations that were submerged After the flood off the coast

(09:18) of most of the Polynesian Islands um so there's all these examples of underground civilizations or civilizations that have been submerged in water all over the world but this

parallels modern deep underground military bases here in our world now because believe it or not there's literally hundreds if not thousands of these things all over the world there's hundreds here in the United States of America and these Dums were created through things like nuclear tunnel boring machines or just tunnel boring

(09:48) machines in general um they started out with tunnel boring machines where they had to basically excavate all the dirt and rock and pull it out of the hole and you know sift it to the side and then they created nuclear tunnel boring are basically tunnel boring machines that are like 40t in diameter these things are absolutely enormous and they basically carve through the Rock and because it's got a nuclear reactor in it that heats the the head of the drill this massive drill to like 10,000 degrees what happens is there's no need

(10:19) to pull out all the dirt and mud and all that stuff as they're moving through the Earth as they're moving through the rock because what happens is that the head of the drill actually melts the Stone and creates a vitrified stone tunnel a vitrified glass tunnel as this thing moves through the Earth at seven miles per day so most of these deep underground military bases can actually be easily created and we are talking about whole installations almost like whole cities that are underneath the Earth in the Bedrock of the planet in

(10:49) which a lot of the stuff that we're going to be talking about like the classified Tech and stuff like that that's where this research is done now that being said uh the Dums deep underground military bases or just deep underground bases a lot of the time it isn't all just military yes we have things like Air Force and navy which the Navy also have like underwater facilities that are drilled into islands and stuff like that but you also have Army you have Air Force you have Navy you have um now space force you have all

(11:21) these different branches of the military and you also have things like the NSA things like the CIA Etc and all of these different agencies have their own different Dums like for example NORAD is a military facility and then there's like a deep underground base for the for NASA where they house all of their servers thousands upon thousands of servers to maintain Supremacy over the internet and then there's things like uh S4 or what people call Area 51 that largely is a CIA operation now all of these Dums are what are called

(11:56) compartmentalized and compartmentalization is basic basically like a silo of information that is controlled and tightly tightly uh knit that most of these Dums are not communicating with each other regarding the research and development that's being done within them and that means that basically for those that aren't familiar with compartmentalization it's basically you have a whole puzzle right but you what very few people are going to see that whole puzzle what you do is you give each individual doing research

(12:26) you give each of them a different small piece of the puzzle and then they work on that small piece of the puzzle and then a person above them has access to a couple of these pieces of these puzzles and how it is that these puzzle pieces fit together and then there's somebody above them that has even more of these puzzle pieces fit together and they have a much larger

compartmentalized view of what's going on so each of these intellectual research silos are all across the country in these hundreds of

(12:54) Dums that are all over the nation and each of them is based on a different aspect of of what we were calling the Deep State you know the these intelligence agencies or the military or R&D and corporations things like Lockheed Martin stuff like that um Skunk Works um and each of them is kind of allied with different corporations for different things each of these uh compartmentalized areas are based on different research and development and in order for This research and development to be done a lot of the in

(13:27) most if not all of the individuals whether they be military or you know corporate contractors independent contractors whether it be uh you know uh intelligence assets they're all signing non-disclosure agreements they're all signing agreements on contracts that basically say if they disclose any of these things then they'll be locked in prison for 20 years for treason all of their assets will be seized and their families B it's not in the contract but they know their family's lives are over

(13:55) so there's a lot of fear that goes into coming out about these technology IES that could have massive ramifications in our economy and not just economy but social systems Etc so these ndas are a lot of the time also attached to things like security clearances and these security clearances and ndas go hand inand and all depending on how much you're read in into this compartmentalized aspect of the government was going to dictate the level of your security clearance now there's people like Bill Cooper that

(14:24) talk about things like the Q Lev security clearance which is like the highest level of security clearance but as far as on the books you have classified you have top you have secret then you have top secret and that's kind of how as far as on the books go that's how things are kind of arranged hey can I jum I ask you some questions some of that because you're uh really cooking I appreciate it man on the compartmentalization aspect like that's the part where I'm really interested on because it seems like from what my own

(14:51) understanding of ufology Etc is that like the government you know tried to reverse engineer this stuff but they found it was more beneficial to move it to third parties where where then you know these third party contractors can uh reverse engineer it where they're not uh Bound by **foyer** requests and I was just curious to what your thoughts might be around that I totally agree with your thought uh thought process on the compartmentalization as well right like part of the reason why it's not efficient in the government side is that

(15:15) if you only see one perspective it and not the whole view it's not very efficient right but if if you have too many people see the whole view then it's really easy for that information to leak out so it's kind of a double-edged sword what are your thoughts well you're absolutely right that's why they do ndas and security clearances that are so like you know pigeon ho holding people into keeping their mouth shut I mean if you think about for example the atomic bomb we had 10,000 people working on that and

(15:41) nobody knew a damn thing until the bombs were dropped and this is how tightly knit and highly efficient these special access programs are so uh and that was something else I was going to get into But to answer your question yes they hire corporations to do this research and development because because then it's in the private sector it's not government and so now the private sector is able to do all these things with government money with our tax dollars but it's nothing that is privy to the public the they can say well this is our

(16:13) research and development we're a private corpor Corporation we are not beholden to the people the way that the government is so technically Foya will do you no good and this is where we get into things like special access programs and there are different aspects of special access programs I'm not going to delineate it here but each of these special access programs is based on different research and development so different corporations are going to say for examp like one Corporation that's really advanced in say biology is not

(16:41) going to do the same research and development that some Corporation that's really advanced in technology is going to do or chemical manufacturing is going to do or psychological um uh research and stuff like that so each of these different corporations has their own little niche that they're really really good at and then they're contracted with the government to do this stuff in a special Access program that most of the time is off the books now uh does that answer your question oh yeah no I think that was

(17:12) really great I think too that uh just a few other comments I'm just going to throw on some of the stuff you said we don't have to go all the way back but uh in one of the interviews I was doing with uh salvator P he actually mentioned the Jin the Jin in terms of potentially being some uh you know having that same ancient history interaction uh the pyramids I think are obviously really interesting um the Grand Canyon concade thing that was something I just became aware of which I thought was wild when you mentioned under the old

(17:39) civilizations uh in Turkey gaki I think is something that's pushing back history as well and then uh I forget if I just mentioned this but with the Dums I wonder whether or not Diego Garcia military base and the Indian Ocean is underground facility so a lot of stuff that you've been saying I think has been consistent with stuff that I've been researching stuff we've been looking into with Mage 37x so thanks a lot man absolutely and yes it's anybody that really looks into this stuff I mean if

(18:05) you want to learn about Dums just looking a Project Camelot um where they were basically creating all these Dums all over the country now the thing is about Dums you guys is that it's not all nefarious it all it actually makes sense you don't want your the enemy to know where it is that your military installation are um you don't want them to know where your bases are at so you're going to of course build underground and then it's all covert then it's all underneath the surface quite literally um and that means that

(18:34) your military targets are not really targets anymore because it's just vast amounts of wilderness and yes I there's these things are all over the world and this is part of the reason why

whether it be the Indian Ocean or you know in some places in Asia I mean because you know that China has these you know deep underground bases as well but Ukraine right now dude Ukraine was was a part of the Soviet Union I so they literally the Soviet Union created a bunch of Dums all over Ukraine and it is that infrastructure that is an asset to

(19:07) anyone and everyone that occupies that area because the infrastructure for the military-industrial complex has already been built by a previous uh government and this is where I think we get into things like the bioweapons labs in Ukraine and stuff like that because these are this is where this uh compartmentalized research is being done um wear there's things like when it comes to special access programs that it's really important to understand because a lot of this stuff the the government needs a way of funneling the money to these

(19:39) things without actually giving any sort of a paper trail as to where the money is going so a lot of the time what will happen is they'll have like a uh program that they have like an umbrella over and that that that umbrella program has a bunch of other smaller programs that are like these special access programs and so then the government will will fund the money for this one big program but then what's off the books is all the smaller programs that are a part of this much larger program that are all these

(20:07) smaller special access programs so this is kind of where we get into things like you know the Pentagon ordering a \$10,000 hammer or the Congress having a \$2 million bathroom or the \$2.3 trillion dollar that went missing from the defense budget in the Pentagon before 911 and this is also what also bleeds into this is the black budget and the black budget is basically the use of covert operations to procure billions of dollars that is off the books this is where we get into the CIA you know bringing tons of cocaine into the

(20:41) country the trafficking of firearms and yes the traffic trafficking of human beings the modern day slave trade and how those billions of dollars are then siphoned into this black budget and then it's redistributed along with these government funds and the and the moving of money to these special access programs it's it's a way of bolstering these things as well and they also use these black budgets to say fund Revolutions in foreign Nations so they can have access to the resources there and then start doing things like

(21:09) building deep underground bases in these foreign uh countries that allow them to be a part of this much larger uh military-industrial complex infrastructure that is literally a breakaway civilization under our feet any thoughts Ash yeah so I think the black budget thing is super important right because even if people out there especially members of Congress who can't believe that some of the stuff we're talking about's real right uh that they can believe that this money is being misappropriated right so uh in order for

(21:39) any of this stuff to go down there's reverse engineering to happen even just stuff with the third- party contractors you know this is where we talk about the \$500 for a hammer \$10,000 for a toilet seat the fact that Pentagon can't pass an audit Timber mentions this all the time you know this is an angle where we can reach people that even if they can't believe in

some of the lore of ufology we can say at least they can believe that okay the facts are that pentagon is misappropriating money right and if we

(22:03) dig into that I have a strong uh belief and understanding that these reverse engineering programs will be revealed um so to me that's a good Avenue of attack for people that want to achieve the **truth** is that we go after the money right right you got to follow the paper trail now that we've kind of laid all that groundwork let's talk about some of the you know research and development that has gone on some of these dumps um so our money the tax dollars and the black budget are funding things like

(22:36) researching um things like Element 115 which Bob Lazar spoke about I believe it was in like the late 80s early 90s and how he was a part of Area 51 or S4 a sub portion of Area 51 and how they were researching this element called Element 115 that supposedly he said was coding this craft that was not engineered by anything that we had um and was there's a lot of speculation that it was a craft from some sort of ancient or or far more evolved civilization that had this technology and this craft was coded in

(23:13) Element 115 they tried doing everything they could to shattering this element 115 shell around the craft and they couldn't figure anything out until what they did is they dipped the whole thing in liquid nitrogen and then they smashed it with a hydraulic hammer and then they shattered this element 115 coating or shell around the craft then they began to be able to study it and figure out what it was and what they came to find was most everything in the world when it's bombarded with electrons any metal

(23:47) any person any anything rocks when they're bombarded with electrons the electrons begin to disintegrate the molecular structure of whatever object is being bombarded but Element 115 these electrons and it could absorb them and absorb them and absorb them and as it did it tried to convert itself to element 116 but it was never able to be bombarded with so much electrons that it would end up uh converting to Element 11 16 so it's almost like it was a sponge for electr and it was basically making the the the skin the element 115

(24:24) impenetrable and and indestructible to a bombardment from electrons which if you're moving at really really high speeds then you're going to be bombarded with more and more electrons the faster you go so the element 115 is kind of like a sponge of elect for electrons around these craft that allow it to be bombarded as it's going at really high speeds and not only not disintegrate but get stronger and stronger and stronger as it converts as it tries to convert to element 116 and then once it no longer

(24:55) is able to you know be uh once it's done flying or whatever once the electrons are no longer bombarding it then it basically almost like dries out and it converts back to Element 115 and so that's the kind of stuff that they're researching in these dumps um there's also other things like um you know they're researching things like nanometals and how it is that they can layer these nanometals in like a zero gravity environment and basically stack these metals on top of one another in a way that creates new elements and things

(25:27) of that nature have you heard anything about that Ash yeah so actually I'm glad you asked me about that I think I your stuff you mentioned about Element 115 I did not know all the Deep background on that which is very interesting one thing that I have uh kind of come to understand from talking to engineers and physicists is that we might not even need Element 115 in order to power some of these gravity engines that are out there we might be able to induce room temperature super conductivity with normal Metals using electric currents

(25:51) using the right types of shapes which I thought was really interesting um and then the meta materials discussion is really interesting because uh from what I understand it's a bismuth zinc magnesium uh composite H where the various metals and I'm not an alchemist or super deep into uh chemical or Engineering in general but that one of them acts as like an insulator and so what you can do here then is you can have a certain effect on the outside of the craft and then I think it's the Bismuth that's the one that uh is kind

(26:19) of like what makes the magic happen um so that you can create this Quantum macroscopic Quantum coherence effect where now you can achieve these properties of being able to go tra faster travel at Super luminal speeds faster than speed of light while still having Mass reduction for the people who are inside the craft so that they don't get essentially melted out there um and this has been all throughout ufology we've seen these metam materials and people have found these uh meta materials that claim to be from UFOs

(26:47) that have these properties so this is if you're interested in UFOs I would remember these three elements magnesium bismuth zinc very interesting I I did not know that thank you um magnesium bismuth and zinc and now the combination of these things is it done on like a nano scaler are these things combined together to create a new element do you know anything about that is it because of the property the electron spin Resonance of these Metals as they're layered on top of one another that Shields individuals

(27:17) inside the craft from the GeForce I think that's the layman's terms for it yeah so these are metam materials and metam material is anything where at the atomic level we can layer things like one atom at a time of various different elements and that it will create a new essentially something that has new properties that are not necessarily beholden to the individual elements that form it you another one that we've heard recently is this Ik99 so an example there is you're taking copper and you're

(27:41) taking lead neither of these are magnetic but if you combine them and cook them with the right recipe now you get this extremely powerful di magnetic property which may even lead to room temperature super conductivity uh in other uh aspects people have seen where you can create invis invisibility Shields where the idea is that that you can have the light actually just bend entirely around like a a blanket essentially of uh a material that's a meta material so that the light passes through and bends around the person

(28:08) that's behind it so these are all examples of metam materials and metam materials have the capability of changing really everything about how we understand elements out there

because they can create new properties that we don't exist from the individual elements themselves and this is where Material Science comes into play right and so the example I like to use here is if you were to give your phone to a cave man right they could use the phone until the battery runs out once the battery runs out they'll never be able to charge it

(28:33) again they could never reproduce the phone even if you give them you know a long period of time because they don't have the material science required to make the microchips the even the plastic case Etc it's the same kind of concept for us when we're talking about uh something that could potentially be like a UFO is that we don't have the material science to be able to layer these things at that atomic scale right now but in the future we might or maybe we have and now we've to see them out there you know

(29:00) well yeah and I think that's the kind of stuff that's going on in the Dums so like about room tempure superconductors uh the the coupling of a room temperature superconductor with a Zero Point Energy engine which is basically the extraction of energy from the quantum foam that is at the very fabric of reality itself because everything's made up of energy energy is essentially infinite and if we can figure out a way to extract energy from that place that zero point space then we can basically have infinite energy clean

(29:29) energy and so if you have infinite energy moving through an engine you're going to need something that's going to cool the engine down and that's where we get into the room temperature superconductor and I if you look into the patents that was filed by Salvador pi and Declassified by Donald Trump in 2020 then you'll see that these patents are very real that there is a such a thing as a room temperature superconductor there is such a thing as a Zero Point Energy engine and yes there is such a thing as a TR 3B it's a

(29:59) anti-gravity or inertia propulsion craft that actually is uh triang it's triangular-shaped and when you combine all three of these things together what you get is a craft that has an infinite energy source and from that infinite energy source and that and that's also cooled by the room temperature superconductor you have enough energy that allows the tr3b to function at really high levels of energy consumption without the need for things like normal Rocket Fuel and stuff like that and it with the technology that it that's

(30:33) capable of the tr3b is capable of using which without going into too much it's basic what looks like um uh we've been going through the history ofy that are all like pointing you know at the same location you know up down um and left to right all pointing at the same centralized location and when large amounts of energy are channeled through those nodes it creates a really small minor or like minute anti-gravity field on like a Quantum or a molecular level but if you end up lining the tr3b with all these little diodes that

(31:10) have this capability and then you Shield that um that apparatus with something like a a chamber that houses Argon gas due to the electron spin Resonance of the Argon gas when the energy is channeled through all those little diodes and it creates all these small little electromagnetic field these little anti-gravity fields that frequency or that field ends up affecting

the Argon gas in a way to where it amplifies those little bubbles of anti-gravity to the point to where it surrounds the craft is that similar to

(31:41) what it is that you've researched Ash yeah and I'll add on man you really hit the nail on the head there because so I would suggest everybody take a read of high frequency gravitational waves induced propulsion by salvator Pius I'm just going to read some of the uh excerpts that I took from it it may be possible to generate high power High frequency gravitational waves hfg WS by high frequency accelerated axial rotation Spin and or accelerate high frequency vibration and electrically charged possibly asymmetric structure

(32:09) high frequency gravitational waves are generated by enabling the gers gersan styling effect that is a gravitational wave production of propagating electromagnetic radiation through strong magnetic fields controlled motion of charged matter under rapid acceleration transits may enable macroscopic Quantum coherence namely possible quantum mechanical behavior of macroscopic objects if multiple high power high frequency gravitational waves were to be focused on a particular point in SpaceTime locality it can induced a

(32:36) space-time curvature Singularity namely a highly distorted and disrupted patch of space-time fabric from a propulsion perspective a craft enabled with the plurality of hfgw generators induces curvature singularities in its close proximity generating a gravitational well in his flight path thereby rolling down this SpaceTime curvature dip in a manner analogist to surfing this hybrid craft would move with great ease through air space water mediums by being enclosed in a vacuum plasma Shield just like you mentioned due to the coupled

(33:05) effects of the EM field induced air water particles repulsion and the local vacuum energy State polarization the controlled motion of charged matter under rapid acceleration transits may lead to room temperature superconductivity we may be able to say that the hfg WG device has the capability of inducing a local phase transition from a turbulent regime to a alumin lamia regime uh thus allowing for smooth sailing of the hybrid craft through a specially conditioned vacuum space nuclear fusion may also be engineered using the concept at hand

(33:38) given that the high plasma densities and temperatures as well as the high energy confinement times which can be achieved with the generation of an ultra high electromagnetic field intensities at the disruption Point Energy may be Amplified to such a degree as to generate a space curvature SpaceTime curvature Singularity leading to the total destruction of a planetoid SL asteroid now what this means here is we're talking about fusion power we're talking about teleportation which we just mentioned we are talking about the

(34:08) ability of super destructive weapons that could potentially destroy whole planetoids or planets or even a sun and then as Jake was mentioning if you open the system up you can theoretically borrow from the space time vacuum energy so that you are actually outputting more energy than you're putting in and that's what this starts to lead to everything that we would refer to as just basically magic but happens to be uh supported by actual science and as hard as it is to believe this stuff seems to be true

(34:37) based on what we've seen in several videos including the MH370 ones so awesome um summary Jake I'll put this in the chat so in the pill as well yeah I uh also just put up all the patents that were filed by Salvador Pas and which just happens to mean savior of our nation by the way and um they were Declassified by Donald Trump I just just put them in the nest I the patents all three links are there if you want to check them out um and yes please put whatever you have up there uh Ash now I want to run by you kind of for the

(35:07) people in the audience that may not have fully understood what it is that you just read I want to just kind of run by you the idea in layman's terms and tell me if this is reflective of what it is that you understand so because the entirety a or is basically almost like a a Quantum Cosmic hologram uh based on the same sacred geometric structures from large to small in layman's like the atom's structure is very similar to a solar systems structure or a Galaxy structure is similar to for example a uh a mo

(35:46) molecule structure or something like that in the way that like stars share planets and stars share orbits with each other it's similar to how you know certain atoms are sharing electrons and stuff like that in a molecule yada y y because of the similarity uh in the sacred geometric structure of quantum and Cosmic objects when you tap into the quantum realm you're kind of like tapping into something that can be Amplified to macrophysical objects so you're going from a micro to a macro and you're basically amplifying the

(36:23) frequency from this really small quote unquote small realm that is kind of in a way its own little version of the universe you're kind of amplifying that signal or that frequency and you're using it and scaling it up to surround a certain craft that allows the craft to almost behave as though it is a Quantum particle that's skipping across space and time similar to the way that like a skipper stone is able to skip across the surface of water when thrown correctly yeah I think David grush even mentioned

(36:53) that analogy he just made about the skipping Stone which is really interesting um and if I were to quote uh theoretical physicist Roy D Herbert which you can find him at Roy D Herbert who has a theory of time dilation Theory you know he would say that the properties denote the behavior H irrespective of size and so what this means is you can still scale up something that's a Quantum like an atom and if you scale it up to something on the macro level and you can have the same properties of something on the

(37:18) macro level it will have uh the same behavior and this then also can apply to things that are extremely large like neutron stars and he would even say that the ligo experiments would uh prove this type of phenomenon as well now people that think that macro and uh Quantum unification is science fiction I would say go ahead and Google it you will find that this is really cutting edge stuff that's just coming out even the last few years even a lot of papers in the last few days that have been coming out you

(37:47) know we will find a unification theory of quantum and macro I think it's already out there and it's been suppressed uh but when we do that then it will open the whole all of science

up to stuff that that we would consider to be magic right now right and Magic is just understanding of reality in a way that goes beyond our Paradigm you know it goes beyond our understanding of quote unquote physics or something like that so if you have something like an ancient Rishi or an ancient master that understood this these Concepts and then

(38:18) they were able to in one way or another embody the quantum field within their own um within their own Consciousness field because human beings are innately uh aart and interconnected to this much larger uh hologram we we affect it we affect the Matrix then we as individuals in one way or another can act like one of these craft through our Consciousness field and this is where we get into things like remote viewing or astral projection and bilocation because essentially what we're talking about doing with craft the human body is able

(38:56) to do with its Consciousness field which is interconnected or Quantum entangled to the entirety of the universe as a whole and we as individuals just as craft are able to do things like say navigate through what are called vortexes or wormholes these are black and white holes so we all know a black hole is basically like a massive Dark Star that its own gravity cannot Escape that's why they call it a dark star but there's a lot of uh belief that these quote unquote black holes are actually like um open holes in the fabric of

(39:30) space and time and everything that passes The Event Horizon ends up getting sucked into this thing and transported to another location somewhere else and ends up coming out of what is called a white hole which is basically where energy is just continuing to spew out of this hole quote unquote in space and time and it's like it is a wormhole and it's based on frequency it's it's yin and yang it's South Pole and North North Pole of a much larger electromagnetic field and so human beings and craft are

(40:03) able to navigate these vortexes which are present both on a Quantum scale and on a cosmic scale our body our chakras our vortexes our electromagnetic field as a whole is a vortex the Earth has several different vortexes thousands of vortexes all over the planet and this is where the lay lines cross this is where the gravity or the spin of the earth is felt or uh more present than in other locations based on say the elements in the ecosystem U Metals in mountains and stuff like that as well as the height of these objects or the low of these

(40:40) objects relative to the spin of the earth and so these vortexes end up actually dispensing things like water and minerals and stuff like that within the ecosystem as they spin they're they're what caus you know storms to form Etc because of the electromagnetic nature to these locations and the spin of these locations based on how high they are like this is UC you have any opinions on that does any of that uh you want comment on there's a couple things yeah I think that um I think the idea that everything's made up of vibrations

(41:12) is something that we should consider right even though everything looks very solid to us you know even solid matter is still potentially just vibrations and what we're talking about is uh just different phase States right between plasma solid gas liquid um the other thing I really liked is the idea and this I liked this before I even got too much into ufology and I was interested in it

is the idea that black holes and white holes are you know opposites one another the Symmetry we see so much symmetry everywhere in the universe

(41:40) right so you would expect if there's something sucking everything in then there should be something pushing everything out on the other side right and that also leads me to the idea of what if a big bang is just a white hole right and maybe if you think in the this idea of there being um you know either multi-dimension or if we're in a Multiverse that you know maybe for every black hole there's a white hole and so every black hole is essentially just sucking uh matter and information in and that's spitting it out somewhere else

(42:05) which just created Another Universe um that's just a thought experiment there no hard evidence for that in general but I like the idea of symmetry in uh nature myself well it's yin and yang so there is a balance and in order for the universe itself to remain stable in order for this sacred geometric structure that is in nature and can layered on top of infinitely there must be some sort of harmonic balance there must be an equal exchange so yes well I think it's even been proven that black holes and white

(42:37) holes exist on a Quantum level and there's a lot of theories out there uh that there's suppressed information about them not just finding black holes out in the Galaxy but also finding white holes as well so this idea of cosmic and Quantum black holes and white holes would only make sense as far as holding the structure of the universe together as a whole now regarding and I kind of want to get your opinion on this regarding on other technologies that have been classified in these Dums and these special access programs there's

(43:07) things like the cigar shaped craft that are out there and their use of what are called tachon engines for those of you that don't know what tach on are tach on are quantum particles that travel so fast through the dimensions of space and time that they actually travel backward through what we would perceive as time and so they're going from future to past as opposed from past to Future and so there's this theory that what a lot of these craft now are that we have that actually supersede the level of

(43:37) Technology of something like a tr3b what these craft have is tachon engines that actually tap into this higher dimensional level this higher dimensional uh Quantum realm where they're able to use these tach on to travel at multiples of SE to travel through through this tachon level of the quantum scale kind of like what you were saying about scaling things up from Quantum to like a ma size object scaling it up from that level so they're able to travel through space and time at multiples of C by the use of tach on

(44:13) yeah and you know more about that than I do for sure I you know I didn't have much background on that but what I will add to it is that time dilation is real I don't think a lot of people realize that time dilation is real so again royy Herbert would say that time is fluid Symmetry and what this means is space time is one and the same and your time is going to flow differently depending on how much mass you're near and this also then applies to moving at the speed of light and why you might have this

(44:38) time dilation effect the faster that you go depending on how far you go so what that means essentially if you are going at the speed of light your time may appear that you get to your location very quickly but from the observer's perspective years hundreds tens of years could go by um the best example that I give with this is that The more mass you're next to the slower your time is going to flow so if you go next to a black hole your time is going to flow very slowly if you're very far away from

(45:05) Mass your time is going to go faster what this means locally is that on the planet we all experience time very similarly because we're all on the surface of the Earth but even if you go up into outer space your time is going to flow faster than if you're on the surface of the planet and this has all been proven this isn't you know pseudoscience or anything it's been proven for decades now the example if you watch the movie Interstellar you'll find Matthew MCC go to a planet that's near a black hole and they are only

(45:30) supposed to stay there for a few minutes because of the time dilation effect then they go from a space station that's out further away and when they they get stuck there for like an hour or two now they come back and they get to the space station it's been 20 years for the person on the space station now if you were to visualize this the way it's reconciled is that if you're Matthew mcon on the planet and you're looking at the space station it's going to look like the Space Station's going in super

(45:53) speed if you're in the space station looking at matth Mah it's going going to look like he's moving in super slow motion right so this is how time dilation works very real concept something that's vitally important for when we're talking about moving at the speed of light when we're talking about something being teleported really all we're saying is it's moving faster than the speed of light which means there's going to be a time dilation effect and what this means is even shows like

(46:15) manifest where so I haven't watched this show actually but this plane that theoretically goes through a Vortex you know if it goes through a wormhole really what we're saying there is it achiev super luminal speeds it's possible for it to show up in the future from the perspective of the people who are on the outside right that that same uh concept applies for the people that are on the planet or in the plane right that it's only going to be like it it was instantaneous or a few minutes have

(46:39) gone by but from the people from the outside it could be years right so this is a very important to understand from a scientific perspective thanks Jake well and what I think is really interesting about that is that I personally have seen unidentified aerial phenomena I've seen like these uh blue and orange spheres in the sky and they would pop in existence and then pop out of existence pop in and pop out but in different locations in the sky and um I've also seen the cigar-shaped craft they have what looks like like a like an

(47:14) interference field around them that kind of distorts the things that like if you're looking through the field it kind of distorts what's behind it um I've also seen tr3bs so um these things

are real and when you see them it's a whole other experience I've also seen cloaked uh craft as well and it's interesting how I've heard especially as I've done a lot of research in these things that that there's some people that can see them and there's some people that can't there's some people that can look up and

(47:46) see the craft and other people that they could just be pointing right at it it's right there in front of them but some people can't see them and this kind of is where I think it comes into like the mental Capac capacity of the individual to Fathom and grasp the Craft's existence number one or how open the third eye would be of the individual to perceive these frequencies beyond the five senses and it also makes me think about the uh the the um the toltech priests or the toltech shaman that was on the coast looking at the Spaniard

(48:19) ships on the horizon and kind of scratching his head not really able to wrap his mind around what it is and none of the people in the tribe could really like see it or or even understand what something there's something on the horizon and then the shaman was able to like figure out what it was oh that's a that's a ship and those are sails and like that's that's a vessel and there's people on it and then once he was able to understand it he was able to elevate the consciousness of the tribe to where

(48:47) they could perceive it as well um and so yeah and also this idea of time dilation uh you know anybody that's smoked DMT knows that you can have an eternity in 15 minutes you know so I'm just saying time and perception time and perception go hand in hand you know what we perceive is is time dilation is in my opinion a um it's based on where you're at in the in the quantum Cosmic hologram where your Consciousness is at where your physical body is at Etc um now one thing I also wanted to cover was and I

(49:24) tell me if you've done any Research into this is things like secret space programs and like the dark Fleet or solar Warden and stuff like that maybe some of the testimony of these whistleblowers that have come forward uh one in particular I can think of is Corey good there's a lot of people that say he's full of crap but you know that that's going to happen in this kind of stuff what's your opinion on on the uh secret space program and like the Nazis having you know these craft and having

(49:50) explored the solar system and built bases on the moon and and stuff like that um well right before I talk about that which I don't have a ton of insight on that but um I think I agree with you time is an illusion for sure I think that more we look into science the more we look into the holographic principle the more we understand the double slit experiment and the idea that we could have a Quantum of macro unification I think that means that we must live in a construct which means that we only perceive time due to the way our biology

(50:18) is set up in a linear fashion it's very possible that time may not be linear from the fourth dimension or somebody who's looking down on our reality um the other thing I would also say that I agree with too is this you know can we even see these orbs in these crafts like I'm not sure with the visual I can even pick them up from the military perspective I always thought it was

very interesting when I looked at those 2017 Fleeer videos that they were using infrared it almost seems like we are using infrared because we know we might

(50:46) not be able to see them clearly or in the visual Spectrum or that this can give the most information that's out there I think this also goes to the MH370 videos where we see these three orbs we see the non-radiating barrier around them in infrared in both videos uh we still aren't sure if this something something you can visually see or if you would see some type of space-time Distortion or potentially see right through them or around them like you would see gravitational lensing from a black hole so that's something I'm

(51:12) very interested in finding out um with respect to like secret space programs my only experience or in terms of you know digging into the lore about that is Gary McKinnon when he hacked NASA and I don't trust NASA at all that's just my personal opinion um and I have my various reasons for that but it wouldn't surprise me if they are airbrushing videos if the dod is um preventing certain pictures from getting to NASA that if we do have some type of uh essentially teleportation technology then maybe we do have you know space

(51:42) force of astronauts that can go to other planets maybe even to other stars um and I think Gary McKinnon was able to show that they were airbrushing pictures according to his uh um some of stuff he found when he hacked them in addition to that we might have these Interstellar uh you know um military operatives so I I just think that's really interesting I don't have any hard evidence for it but um yeah go ahead well what's interesting about Gary McKinnon is that um he was looking for information on free energy

(52:13) he wasn't even really looking for UFOs he was looking for information on free energy and he was able to hack these computers because their password was password you know it's like wow yeah that's a real great uh security defense that's a great line of defense you got there and I think he also hacked things like uh Navy uh servers or military servers and Air Force and stuff as well not just NASA and what what he found was that there was like a list of non-terrestrial officers and non-terrestrial

(52:42) um craft that were on the books and he even found like pictures of the Tic Tac UFOs or the uh the cigar shaped UFOs and stuff like that before he was finally discovered and kicked off the ser now what's even more interesting is that the government went after him and tried to get him on treason charges or Espionage charges if I'm not mistaken and uh well if they have nothing to hide if everything that he found or discovered or was blowing the whistle about was a total fabrication then why would they go

(53:13) after him with the legal apparatus of the government that just doesn't make sense and he's a he was a he's a British national he's not even an American you know um so I mean to me it's like you know ye protest too much uh deep State American government ye protest too much yeah and actually the UK government protected him from being extradited actually to the United States like that they were going to try to throw him in prison and Espionage charges are no joke as we know from the mh37 videos and the

(53:41) potential leaker they tried to put that person in prison for life for Espionage charges so those are some of the most uh you know powerful charges they can throw against anybody so it's a little bit weird if you know why are you trying to get them on these huge charges if like he didn't really hack anything that was important right and then the other bit I would say and I'm be very careful how I mentioned this is that um just from my experience in general I'll say life experience that uh many companies do not

(54:08) have very good uh it protection uh as you would say so it would not surprise me at all that you could just do password one two three and find your way and a lot of hacks end up being very low Tech hacks like that type of stuff as well where you know I would say your information is not nearly as protected as you probably think it is unless you were are uh with a company that's very top you know getting to update with everything and putting in the most recent security uh updates out there so just stuff to keep in mind

(54:34) gu now moving on really quick I I would like to talk for a second about Dr step Greer and his C5 experiments that for those of you that don't know what C5 is that's Close Encounters of the fifth was really good So Close Encounters of the first kind if I'm not mistaken is when you see things like evidence of some sort of UFO or something like that like a crop circle Close Encounters of the second kind would be when you see something like a UFO in the area Close Encounters of the Third Kind is when you

(55:08) uh if I'm not mistak it's like when you actually like make contact somehow some way Close Encounters of the Fourth Kind is like getting abducted and then what he's calling a close encounter of the fifth kind is where you make contact with these interdimensional beings and they come in in uh or the phone basically when you call them and they manifest in the astral realm or in the skies above Earth and uh Dr Steven Greer would go out to really high mountaintops or sacred sites and stuff and he would

(55:39) do this Mantra where he would basically astral project himself out into the universe and basically like almost like create like a homing Beacon of sorts and say hi I'd like to make contact and then he'd follow a trail all the way back down to his body and lead the trail for these interdimensional entities to follow and then they would follow and they'd come down and he'd make contact with them by seeing them up in the sky and they were doing things that like defi the laws of physics like you know

(56:05) moving around in like Z forms or S forms and stuff like that where it's clearly not an airplane it's clearly not a satellite it's defying the laws of physics and he would also do things like bringing like industrial lasers from like rock concerts talk objects floating around in the upper atph beam light back down at them and he said it was basically through like almost like a telepathic communication using the frequency of our thoughts to tap into the quantum entangled field of the universe and make

(56:35) contact with these higher dimensional beings that exist beyond the perception of our five senses are you familiar with anything regarding that stuff Ash yeah and I'm not sure how

much I you know buy into a lot of it I mean I think that I there's definitely a link between Consciousness and whatever is going on with our reality it's I think it's almost undeniable some people would even argue that our consciousness creates our reality I have watched the C5 uh I think it was like a documentary uh I don't remember which channel one

(57:02) one of the TV stations or web channels or whatever with uh Dr Greer and I do think Dr Greer definitely had some inside information um especially back in like the Clinton era um but you know for me I I think there's something there I just I don't know what exactly is my personal opinion and I I'm you know I keep an open mind on everything to be honest with you especially after all the stuff that I've seen the last few months so I don't know whether or not um you know how much uh weight there is a lot

(57:25) of that stuff but I do think it's definitely something worth uh looking into and digging into especially on the Consciousness angle have you ever seen like a UAP or a UFO or had any sort of a paranormal experience yourself you know I haven't yet I'm kind of waiting for that to happen I was uh one thing I would say is that um if you fly on airplanes I think people should look out the window more often that's just I I used to fly a lot and one thing I notice is everybody has their windows down nobody ever really

(57:49) looks out the window kind of makes me think like maybe all we have to do is just look up right and just actually look look around and be aware of our surroundings and almost feels like everybody's just head down all the time looking at their phone uh on the airplane everybody's asleep got their their windows closed so if I could you know send a message to anybody let's just let's look up right I hear you on that now as somebody that has seen UFOs or uaps and had paranormal experiences um I can tell you from

(58:20) experience that these things are real as a shamanic practitioner I have dealt with interdimensional beings and entities I have you know made contact with Angelic beings I have warded off and fought with demonic entities and kicked them out of ecosystems and stuff like that um I have seen incredible things that most people would say is impossible and so from experience that's why I'm saying like when it comes to Dr Steven Greer in the C5 and stuff like that as well as if you look into ancient traditions and the lore or the legends

(58:56) of our ancient ancestors and stuff like that if you look at the cave paintings or the petroglyphs and stuff like that then you can kind of see that that people have been making contact with these interdimensional astral entities for a long time the Native Americans call them star people and they call the knowledge that the shaman has star knowledge a sweet space because it's beyond the five senses it gets to a point to where it's beyond the use of words it's beyond atoms and that's actually you know without diving too

(59:28) much into it that's one of the things that psychedelics do is they actually bring the brain into a place that goes beyond syntax it disrupts the syntactical portions of the brain and kind of forces us to perceive the objective World beyond our mind's perception and Beyond syntactical uh cognitive patterns of reality and into a whole other level of perception and I think that's

part of the reason why they have such profound effects when it comes to things like treating depression and stuff like that

(1:00:00) but the contact with the spirit world and contact with Angelic entities is something as we started in the beginning talking about goes back thousands upon thousands upon thousands of years and recognizing good spirits from bad spirits is what Shamanism is all about recognizing Angelic entities from demonic entities is what being a prophet is all about and if you look into for example the ancient biblical text what's one of the first things that the angel always says to the prophet that they approach do not be afraid I like this

(1:00:34) guy more than I like when you experience this stuff dude it is like other world so bizarre out of head oh my God I can't believe this is actually happening it makes me think of the tool song Rosetta Stone you know because my heart is racing because this never happens to me you know so hey Neo um when we integrate our Consciousness which is quantum entangled to the unified field or what Quantum physicists are calling nonlocal Consciousness or God Consciousness godhead when we integrate ourselves into that level we

(1:01:08) are attaining higher levels of perception that go beyond the five senses to the point to where you're able to feel the Earth turning you're able to feel the sun burning you're able to feel the Galaxy itself churning you're able to perceive the universe exist existing Moment by Moment by moment and it is blissful because you're able to experience this unified field and the presence the omnipresence of God which is on a Quantum and a cosmic scale and what our government or what these corporations are trying to do is tap

(1:01:40) into the understanding of this unified field and expand upon our understanding of physics of it and create tools new tools that are based on this knowledge of how the universe operates now you can go the technological route with it or you can go the spiritual Ascension route with it and what I think is happening is that the government is attempting to create craft that will allow them access to these higher Dimensions that sages and Sates prophets and Shaman have been accessing for thousands of years they're

(1:02:15) trying to do it through technology as opposed to Spiritual Development and in many cases this is because they're trying to uh in not all cases but in many cases weaponize these things so that they can do things like what you were saying earlier destroy planets destroy you know asteroids or even Stars CRA over and that is why a lot of theie that there's um these high civilizations that have spiritually ascended we could give you the te we could help you understand it but you guys are going to use it for destructive

(1:02:49) purposes you're going to try to weaponize it and you guys are not Advanced enough at this point to you know actually have these tools in your rep and not use them toward destructive purposes you know I have a I had a quote that I said and I put out on a tweet that says only A Primitive society would choose Mutual Slaughter as a solution to their problems and aldus Huxley once said man is unique in organizing the mass murder of his own species so in order for us to really begin to get into the use of these techn Oles we have to

(1:03:26) come to terms with the fact that our Consciousness is one that is mass Consciousness is one that is based on the illusion of Separation not the **truth** of unity and only when we begin to integrate ourselves into this **truth** of unity in this unified field will we begin to spiritually Ascend to the point to where we don't need craft to enter these Dimensions we don't need craft to move our way through the vortex system of quantum entangled vortexes in the universe and expand our Consciousness to Galactic size and uh I know that's far

(1:03:59) out for a lot of people but if we can do it with the craft if you're able to understand this stuff and you're able to do this stuff like you know creating an anti-gravity field or you know circumventing the laws of physics by expanding a Quantum frequency to a macrophysical object and we our physical bodies are a part of that larger unified field then we're able to do this with our Consciousness we're able to do this with our electromagnetic field and yes this my only ever interaction creation that are exist

(1:04:31) within the cosmos um does this sound like a scientist to you you know that that's my little rant there about that and why it is that I do think that Dr Greer may be on to something here because it's something that has been going on for thousands and thousands of years your thoughts on everything I just said Ash yeah I think that um the whole idea that like uh hallucinogens or drugs uh may end up you know allow owing us to experience States Of Consciousness and reality that are heightened is something

(1:04:59) that's very interesting I know that they use them for uh medical purposes as you just mentioned now I myself have to avoid them because I do have a security clearance and that's one of the no NOS that's out there but some people wanted me to ask about DMT and dhp and don't answer too quickly on those because it'll make it it'll give away the game I had I was talking to somebody in the alien addict chat I said what's d d DMT and he answer like in a split second I'm like okay okay well you obviously know

(1:05:22) what's going on there but um yeah so I'm curious as to if you know I don't we don't need to talk about specific drugs and stuff like that I don't want to advocate for drug use but um you know I do think that there is probably something there in terms of kind of opening up our minds a little bit more to either different realities or a heightened sense of reality not exactly sure well DMT is a neurotransmitter it is produced by the pineal gland a lot of people think it's produced by the pineal

(1:05:50) gland I assert that it is produced by the pineal gland um it's produced produced in our brain all the time it's actually what gives our vision color and depth but when we are born when we are in REM sleep and dreaming and when we die it is produced in massive massive heavy amounts in the brain and in the process it almost like heightens the frequency of our Consciousness you see according to uh the Heart maath Institute our DNA has these little antenna on the DNA that are responsible for sending and receiving like

(1:06:24) information and all based on the frequency within the electromagnetic field of the body all the way that dictates how many of on the DNA are activated so it's if it's a low

frequency of fear then that wavelength is going to map over the DNA and activate very few portions of the DNA and very few of these antenna but if it's a high frequency uh thought or emotion or frequency in the electromagnetic field then it's going to activate far more of these antenna that are responsible for sending and receiving light and

(1:06:57) information and the more of these antenna you activate the more access you have to higher levels of information the more ability your brain has to process the information and retain it as well as the more access you have to the say the information that's stored in your DNA this is where we get into things like you know the Buddha remembering past lives and as he ascended and became enlightened now with DMT what is happening is that you have raised the frequency of your Consciousness on a molecular level through this

(1:07:26) neurotransmitter that is basically transports your Consciousness to a really high frequency State of Consciousness outside the confines of the physical body and into the astral realm or the spirit realm where there are in fact entities there are beings in this higher Dimension the entirety of the universe is alive the spirit world is real and that's actually one of the things about modern modern industrialist and materialism culture is that they have focused so much on the material that they've forgotten about the

(1:07:58) metaphysical and the spiritual and in the process they've lost a massive chunk of who and what they are and DMT or peyote or mushrooms or even cannabis for that matter iasa all of these things have the ability to reintegrate us into the spirit world or into these Realms that go beyond the five senses they also allow our brain to process more information if you look into the effects of psilocybin on the brain during the like while the person is under the influence of the psilocybin mushroom what you're going to find is massive

(1:08:29) amounts of neuroconnectivity so much so that's like the whole brain is communicating both hemispheres are are communicating with one another in heightened amounts of neuro connectivity and the more of these mushrooms you consume the more that neuroconnectivity takes place the higher the density and the volume of neuroconnectivity in the brain and it's also psilocybin is what is called a neut Tropic which means that it allows the brain to create new brain cells it allow ous new neurons to be created now all of

(1:08:57) these things have the capacity to raise human consciousness beyond the five senses to kind of open the third eye and to chemically in one way or another kind of force the mind or the spirit out of the body and into these higher harmonic octaves of Consciousness that go beyond normal perception and what's interesting about that is they've done clinical studies where what they have found is that it's not so much that when you're under the influence of DMT or psilocybin or something that you're perceiving

(1:09:23) things that are not there and therefore are quote unquote hallucinating what it actually is is that your brain filters out a bunch of stuff not essential for survival and that stuff that gets filtered out is then allowed to be filtered in in the state of altered Consciousness that these compounds provide and this is why when tribes do things like peyote ceremonies or when

they do things like mushroom ceremonies or iasa ceremonies Etc what they find is that the group The Tribe has the same quote unquote Collective hallucination

(1:09:58) because they're tapping into a higher topological manifold of these dimensions and how they intersect with our own Jack hates in the process they get a glimpse into the sacred geometric structure of the universe itself and this information that's being filtered out by the brain because it's not essential for survival yeah awesome thanks for that uh understanding absolutely so um moving on let's talk for a second because we're coming up on an hour and 15 minutes and I want to try to keep this Bri you you

(1:10:35) know had a busy day Ash we can keep going this has been awesome man I just want to you know while we have a quick moment here I think your knowledge and background is extremely impressive man I I would have thought you're one of the major players in the UFO Community with all this uh lore and insight to everything that's going on I've appreciate this a lot I think that we've got a good audience here too that's probably been appreciated as well so um definitely excited to talk a little bit

(1:10:58) more about some of the implications you know after we get I think we've only got a couple more topics but one of the big things I want to talk about is like what disclosure means and um try to have a discussion about the implications of disclosure and some of the technology that we've talked about and then if we have some time as well we can do some questions I'm I'm going strong still so appreciate you Jake let's keep going sure all right man I'm down well that was actually one of the things I wanted

(1:11:20) to get into was disclosure and our role us as individuals because obviously anytime that the government gets into hot water or deep water what do they do aliens aliens look we got aliens there's UFOs go look look look over there don't look at Biden and his schemes with China don't look at Hunter Biden's laptop and his indictment no go it's aliens it's aliens so what we have to do is recognize misinformation disinformation from real information and we we can't be M pies here and Chase the shiniest

(1:11:58) object there's a lot of people that chase the whole Ro and they lose complete sight of collective Consciousness and the role of our Consciousness field because they're chasing this notion of like shiny craft in New Mexico Oh Boy blow me so our role in disclosure is changing the dialogue and controlling the narrative and Rapid disclosure you know it has ramifications economic uh social technological environmental political and yes most certainly uh socio uh sociological and psychological ramifications because most

(1:12:34) people are living in an echo chamber that's controlled by mechanisms that are entirely based on misinformation and disinformation and so creating a new mental model of reality for people to live within other than the echo chamber that they live in or other than worrying about you know what uh Kim Kardashian's ass looks like or who won the football game the this is going to be difficult because these are the people that have chosen to go this route of entertainment and apathy as opposed to you know um

(1:13:09) infotainment or informing themselves and being entertained with that and empathy and that has created drastic ramifications for us as a species and it's allowed for this Breakaway civilization that is literally under our feet the Dums that is literally hundreds if not thousands of years more advanced than anything that's on the surface to rule us from underneath the soil you guys there's a dumb outside of or inside of every single major Metropol city in the United States and around the world and it is from these dums that certain

(1:13:44) things like uh quote unquote National Security is maintained but in many ways these Dums are being used to ensure that the populations remain inside of the mental box that has been created for them and yeah things like you know UAP disclosure act or whatever okay glad to hear that you guys are finally talking about it but at the same time yeah we do want some form of Rapid disclosure not some sort of drip thing and that's because there's people like yourself and myself Ash and people in the audience

(1:14:20) that have already done the research and we're like yeah we know we can handle it let's do this but let us not forget that when we first started getting into this stuff the cognitive dissonance the cognitive dissonance that took place was so radical it was so mindblowing that to suddenly thrust upon everybody uh the **truth** I mean there's there's talk that the moon itself is like a hollowed out space station of sorts you know what I'm saying so like like oh my God if that is true if that's true or like Sidonia on

(1:14:55) Mars and the mathematical Precision to the uh what looked like pyramids or the face on Mars and stuff like that the way it creates like a merba and how that relates quite possibly to the fact that there's literally radioactive isotopes on Mars that can only be generated due to artificial nuclear explosions all of these things the the moon of Mars Phobos has an obelisk that's like a mile high on it constantly pointing down at the planet Buzz Aldren talks about it Buzz Aldren also talks about in his interviews that we never went to the

(1:15:28) moon you know what I'm saying so the Paradigm that has been created for people is so uh confining that rapid disclosure will have dramatic psychological and sociological effects as well as you know technological economic environmental political but that doesn't mean it shouldn't happen what it means is that it needs to be done strategically but it needs to not of the very inss that have been controlling the narrative the whole time whether it be Majestic 12 or it be you know the the CIA or the um NASA or what

(1:16:06) have you it needs to be in the hands of the people and the only way that we can get it in the hands of the people is if we change the dialogue if we are able to understand how this technology Works which means we have to do our homework and we have to understand how this technology works not just in a way that we understand but in a way that we so simply understand it that we were able to relay the concept to other people in a way that they can understand and also relay to another more easily and in the process that's how the **truth** ends up

(1:16:36) getting out that's how the dialogue get changed and that's what prepares us as a

population for a more rapid disclosure to unfold your thoughts Ash man yeah you hit a lot of really important parts there so first I would talk about the ontological shock uh the ontological shock factor is huge it hit me hard when I first started investigating mh37 70 videos it wasn't a situation where I just believed everything right away took a lot of evidence for me to understand that Quantum and macro can be unified it

(1:17:04) was to the point where it seemed more likely to me that space aliens would land on my front lawn and say hello to me then I'd be in the situation that I am now to the point that I actually had to ask my own parents am I in some kind of Truman Show situation prank going on because it was so unbelievable to me so ontological shock hits people hard the cognitive distance hits people very hard with respect to this type of Technology being real people think that it can't be it can't be true that I get lied to by CNN and

(1:17:30) all the mainstream Medias and that it can't be true that uh my academic teachers don't know everything there is to know about the world and I think this comes down to this hu human huis and ego that we have that we are at the Pinnacle of civilization everything we know right now is the most advanced that we'll ever be right but I would say if you look at it from the perspective of us being cave people right now then that means that we have so much more further to advance and it shouldn't be that uh that amazing

(1:17:58) because when we look at stuff we have like AGI just learned it's artificial general intelligence which is hyper Advanced AI quantum computers like all the stuff is out there in the open the scientific papers that are trying to unify Quantum and macro right now are out there you can go read them yourselves right now um understanding the technology super important that's what breaks down the ontological shock that's the whole reason why I started my own podcast never wanted to be a podcast or anything

(1:18:24) like that because I just wanted to be able to understand the science and the MH370 videos the unification of quantum and macro room temperature superc conductivity this idea that we can have a non-radiating barrier that we can create a field that can displace us from SpaceTime that can reduce Mass to zero I think that this type of Technology leads to exactly what you talked about Breakaway civilizations I would almost argue that the US military-industrial complex is already achieved Breakaway status you know four months ago before

(1:18:51) this at all began for me I would have said said that **China** may already be trying to catch up to us right now I would say no we are so far Advanced that it's just absurd that all the wars that out there are just for money we could end any war in just an instant if we wanted to that probably explains why we haven't really been attacked except for potentially you know on 911 and that was a low Tech attack right even if you you know you take the official narratives there that's just a low Tech attack of

(1:19:16) people using planes against us right it's not a situation where we're getting some huge military attacks not Red Dawn or anything like that right I think that those things are things of the past pretty much I don't think we'll ever see another War like that given this type of

Technology um I also just want to make a quick side note on the monoliths on Mars and Phobos you know I think if you look at Mars it seems like life on Mars is being hidden from us there is seasonal methane on Mars which can't really be

(1:19:42) explained by GE geograph or geology because it would have uh dried up over the billions of years that Mars has been out there it almost has to be at least bacterial life on Mars I think that when we start looking around we are going to find life everywhere we're going to find it on Europa we're going to find it on Mars Etc we may not find Advanced life but even just find bacterial life means that life is everywhere in the entire universe and I'm starting to wonder if the is it abag Genesis is that the right uh term um

(1:20:10) ancient astronaut theory or whatever you want to call it where like maybe we developed on Mars and then maybe people left Mars destroyed the planet then they moved over to Earth or maybe it was just a matter of you know bacteria or other things floating freely from Mars to Earth and maybe that's how life is seated throughout the entire galaxy so I think that we need to keep our minds open in these things go ahead well I speaking to what you're talking about you I think commented on that video where somebody had a mix I think it was

(1:20:39) of corn starch and water on top of a speaker and sound was being generated through it it what looked like what like these humanoid structures were beginning to assemble you know in the in the cornstarch and the water this is where we get into the role of harmonics and simatics okay and I have this theory that I I know it's true but you know it's going to take a lot of explaining and I'm not going to get too deeply into it if you want to check it out you can watch my aliens walking Among Us video

(1:21:07) it's on Rumble um but anyway my Rumble is Yellowstone wolf AZ um all one word Yellowstone wolf a um and you can find it there aliens walking among us but anyway so we are bodies are made up of the elements of the Earth We're largely carbon based uh uh life forms but we're like 70% water and we're made up of all of the elements of the earth kind of like together in one package right now if you think about that whole thing with the simatics and the corn starch and the water on the speaker and all that stuff

(1:21:43) and you think in terms of like Nicola Tesla said if you want to understand the secrets of the universe think in terms of energy frequency and vibration right so think about the idea that Earth is a Harmon monic octave it is a simatic frequency and the Earth is the speaker the uh frequency being channeled through the Earth is the electromagnetic field the cycles of energy per second the frequency thanks for being here and then human life all life on the planet for that matter microbiological macrobial uh they're all essentially

(1:22:14) like little grains of rice being moved on the speaker they're all like little you know beings of corn starch and water or the elements of the Earth water together creating these forms in space and time that are based on the sacred geometric structure of the universe itself this is why our body is based on five and the five ratio this is why we look around and we see the sacred spiral of the Fibonacci spiral in plants in in um you know seeds in you name it everything

in the in this in the turn of a hurricane or a tornado in the way that

(1:22:52) a wave arches and crashes onto a Shore it's because it's all based on the same sacred geometric principles and the same mathematical ratios which means it's all based on different forms of harmonics and it's these patterns manifesting on Earth are based in the uh code or the schematic U the schematics of the metaphysical world the mathematical ratios associated with harmonic frequencies and so if we look at other planets we see similar but very different simatic patterns so Venus has its own simatic pattern and obviously

(1:23:36) it's not necessarily based on water and carbon but that doesn't necessarily mean that life doesn't exist it could just simply be life that exists beyond our perception of carbon-based water-based life forms and is in another present in another form of uh the elements conglomerating together based on a different simatic frequency that is encoding those elements to create a different form of life and it's the same thing throughout the rest of the universe there's speculation for example that within the storms on Jupiter there

(1:24:12) may very well be beings that are on that planet that are more like electrical than they are physical moving through the gas of Jupiter and I know that sounds far out believe me but just because our life on this planet is based on carbon and H<sub>2</sub>O doesn't mean that that is how it has to be everywhere else in my opinion all you need for life to be present is a stable harmonic frequency that is moving the elements in a way that is uh coherent and that uh creates for these sacred geometric patterns to manifest on lower and higher

(1:24:52) Quantum and Cosmic scales does any of that make sense to you Ash no yeah definitely and I think the whole idea of that we if we're looking for life on other planets we need to have a much more open mind I don't think we should just be looking for humanoids right I think even people argue that the plan of planet of Titan could use like Silicon as a replacement for carbon and you know we might need to look for life forms that are completely different um there's the show I was just talking about I think the other day on

(1:25:20) HBO called scavengers rain which is one of the most I guess trippy kind of shows where this idea of the far future these uh miners get trapped on this planet and the life is so different than what we would expect on Earth I mean the reason why I would have people watch it is because it kind of opens your mind to how different life might be able to be on different planets where it's evolved differently and um Advance differently so I think that's really interesting um one thing I just want to say I want to

(1:25:48) do some shout outs to a few people are in the chat right now just cuz I appreciate you guys being here uh red panda Bill Elmore Alpha Warrior maze love Bruce Fenton Mello demon stoned ape king milk fart harassment archive browney girl red I already mentioned red panda but um and the rest of the people that I might not be able to see because I can only see like the first hundred or so but thank you guys for being here I know you guys have been around following supporting having spaces uh just want to appreciate you guys real quick um and

(1:26:14) yeah the other thing I would say is Tesla feels like Tesla was on to something a long long long time ago and I'm very curious to read more about Tesla and his theories in general um because I think that the more we look into this what everything that I've learned it goes back to electrical engineering if you want to know the Cutting Edge science that's out there look into electrical engineering I think that that's where we can find this unification of the forces and where we can explain stuff like gravity quantum

(1:26:39) gravity and a lot of the advanced technology that we're talking about well Nicola Tesla also said that once we start investigating non-physical phenomena we will make more progress in a year or two than we have in the past several hundreds and so he understood the secrets of the universe he also spoke about the the magnificence of the three the six and the nine and unlocking the secrets of existence you know he understood harmonics he understood energy frequency and vibration and um yeah thank you for giving a shout out to all those people

(1:27:12) because I know a number of those names that you mentioned God bless you guys thank you for being here and we are going to open the floor to questions relatively soon um we just have a couple of things that we're going to cover and then we'll open the floor um and that those other things are how do uh we go about uh mitigating damage regarding to our socioeconomic geopolitical uh sociological environmental psychological systems and at the same time you know create a more rapid unfolding to disclosure how do we

(1:27:47) do this what can we do as individuals and what can we do as a collective when we begin to understand this technology how it works and how we can roll it out and I'll give you an example so before and I'm just telling you what I've heard I'm not trying to you know whoa whoa you know I did this I did that I'm just telling you what I've heard and I'm trying to help Empower you as an individual by telling you the story so before I got into spaces in uh after May 25th of 20123 from what I've

(1:28:18) heard in a lot of these spaces there was no real talk of Dr r and Dr R that's RF in his machine and how it works using uh frequencies and vibration to kill disease and to increase human health but then I came into these spaces and I just kept talking about it and talking about it and talking about it and there was a lot of push back there was like people like don't talk about that don't talk about that no nobody wants to hear that or no nobody understands that quit talking about that this is what we're

(1:28:45) talking about this is what we're talking about and I'm like yeah but no no no this right here man once everybody understands that this right here is possible the whole game changes we need to talk about this we need to like Converse about this like now you know because once we start talking about it once we control the narrative once we change the dialogue then the healthc care industry will reflect that change then everybody will create the demand for this technology to emerge into the medical sector and lo and behold after

(1:29:13) about five maybe five and a half months maybe less or more of time talking about this and just you know keep on doubling down on this there was a patent that was released and

approved by the FDA which they'd been sitting on this stuff for ever since the 1930s with Dr R where they were using sound to destroy tumors and literally melt them in like seven minutes okay so like you can use sound similar to how you can use sound and frequency to destroy a wine glass you can use sound and frequency to destroy invasive tissue like cancer or parasites

(1:29:48) or invasive microbiological organisms like uh uh fungi or viruses and bacteria Etc so all you have to do is match the pitch match the frequency of the cancer cell or the parasite or the fungus or the virus or whatever and it will destroy all of those microbiological organisms without doing any damage to healthy human tissue now this is just this is a TW like the a patent that and a treatment that was just approved by the FDA and lo and behold it was it was predicated by me talking about this stuff and then everybody else started

(1:30:24) talking about it and then eventually it made its way onto Facebook eventually it made its way onto Instagram eventually it made its way onto Tik Tok eventually it made its way back into our spaces where everybody's talking about it and then boom We manifested it us together we did this you guys we changed the dialogue we created the demand and we changed the world for the better so when it comes to this technology that we're talking about whether it be room temperature superconductor zero Point Energy engines Tesla towers and the

(1:30:54) infinite free clean wireless energy that they can bring us Tesla Tower technology or Dr R's machine or the tr3b what have you Zero Point Energy all these things you guys if we understand the technology and we have fun talking about it and how it works then we change the dialogue and once we change the dialogue then the demand can be set or the demand can be there and the precedent set and once that precedent is set it's like now we control the dialogue so now the the Mocking Bird Media or the quote unquote deep state

(1:31:27) has to react to us as opposed to us bouncing it off of them they're bouncing it off of us we're saying No this is what we want we know how it works we as Humanity are ready and this is the final point that I'll make and then I'll turn it over to you Ash to get your feedback is that when we start fathoming and grasping the totality of how this technology Works once we really get it and we grock it and we start talking about it then that Consciousness shift takes place in the collective mind and all it

(1:31:58) takes is a large enough percent of us to actually shift the collective Consciousness to actually change the collective Consciousness just enough to where it becomes pervasive all over the planet and then the introduction of these Technologies won't be such a radical shift it won't be so crazy or give people such a cognitive dissonance then it'll actually almost be like we're hungry for it we're thirsty for it we're waiting for for it yeah you nailed it Jake um I think that what we're seeing here and what

(1:32:29) we're seeing in this space is a new guard right this is a new group of people that have an open mind that are looking to what are the real implications of disclosure what is the technology really mean we're not just talking about flying saucers that are hovering around anymore we're talking about what does this technology what can it lead to right I think you've

impressed me so much during this space in general even though I don't agree with everything you said I think that you've got a really good mind for what

(1:32:52) the implications are about this I think that this technology as you mentioned can give power back to the people take it away from the centralized government and make it go back to the people that deserve it um I think that if some of the applications that we're talking about I think you hit a lot of these but just to give people out there what we're talking about here we're talking about faster than light communication we're talking about force fields and cloaking we're talking about the ability to

(1:33:14) teleport a macroscale object the same way we can Quantum teleport an object we're talking about annihilation in terms of being able to wipe out any type of missile nuke or anything that was sent to us perfect defense mechanism from an energy perspective we're talking about fusion power maybe even portable fusion power the power of the sun and the palm of your hand to quote Spider-Man we're talking about free energy being able to have a open system that can produce more energy than we have to put into it because it can pull

(1:33:43) energy from the vacuum state of SpaceTime we're also talking about medical healing this is something that Dave Rossy and I talked about in hard truths number three this is the idea that you can potentially even change or uh treat at the cellular level different types of cancers ailments Etc it even makes me wonder if we could reverse aging with this type of Technology yes we can awesome and yeah so I wouldn't mind living another hundred years but I have a feeling I won't be living till uh I die of old age

(1:34:13) um and then lastly doomsday weapons doomsday weapons the ability to destroy an entire planet potentially destroy our Sun maybe even create our own Big Bang we need to not just look at the good that can happen out there but what are the risks and to your point having the conversation opens the door up to breaking down the ontological shock and figuring out what is the proper way that we can disclose this information where we don't destroy ourselves where we don't just become another uh uh species that failed in the great filter and the

(1:34:48) fmy Paradox whatever you want to look at it um and that we advance our civilization to a point where we deserve to be you know we can reshape the trajectory of our future with this type of technology and to me it's an exciting thing and that's what I want to talk about and I think we've done a lot of talking about here today so thank you very much Jake thank you um one a couple of final points to make before we move on to questions is um one one of the things that I think will really help us get this dialogue shifted is not just us

(1:35:21) talking about it but one of the things that will happen as a result of US changing the dialogue is something called open source intelligence and um Robert David steel talks a lot about this he's former CIA um he's he talks a lot about the need for open source intelligence because a lot of the reason why we have so much corruption in the cover in the government is because of the secrecy why do people SM a lot of the atrocities that are created by this corrupt government has done to keep these things a secret so open source intelligence

(1:35:50) will allow this stuff to come out out in a in a public way that will stop the corruption because the corruption is there to reinforce this this illusory system this this false Paradigm that we're living within and so with public disclosure open- Source intelligence follows obviously through legislation that can also be done the UAP disclosure act okay that's very nice I'd like to read it I'd like to know what it is that they're talking about because if they're not talking about the introduction of

(1:36:19) some of this technology then and just basically is saying there are aliens oh big deal thanks a lot we knew that okay moving on let's get to the tech that you got in the Dums come on now but also things like circumventing the Mockingbird media through the internet and through understanding how this technology Works in such a way that what we say cannot be argued with and that most people like I said cannot just understand what we're saying but then relay it to another in a way that they can probably on ground we're also going

(1:36:48) to have to understand that once we get to this level there will be infiltrators on behalf of some of these corporations that seek to profit from all this stuff there will be infiltrators that um try to dispense disinfo and misinfo into the movement to try to break it up and to stop it from taking place so that's why it's so important for important for us to understand how this technology works and to understand it in a way that is simple if you can't explain it simply you don't understand it fully to quote Einstein so

(1:37:19) we need to be able to understand it fully so that we can explain it simply so we can recognize the difference between misinformation and disinformation and real information we also have to be able to do so in a way to where we're not easily distracted we're not easily confused and we're able to offer people Clarity and very real solutions on how to move forward and if and when we do all of those things you guys the sky is the limit we are going to ascend spiritually technologically socially physically we are going to

(1:37:50) ascend into these higher levels and Realms and dimensions that have been known about for Millennia for centuries and have been being largely suppressed from the collective mind also that less than 1% of the population can maintain their Monopoly over our Collective Consciousness now um final points Jenny uh thank you for putting a bunch of stuff up here in the nest um if you guys want you can check it out I got a bunch of posts up there about Nicola Tesla's Tesla Towers I got stuff in there about beings of energy frequency and vibration

(1:38:21) and collect Consciousness there's stuff up there um about the FDA approves the \$112,000 treatment for the use of sound waves thank you for putting that up there um there's also um let's see here uh the patents Tesla's patents have been being made public Dr R's machine can also uh be made as well and very cheaply and how that can revolutionize everything there's also one in here about um remember when I was telling you about how planets have certain simatic patterns to their frequency there's one

(1:38:50) up here about every pattern in nature is based on energy frequency and vibration and how all that stuff relates to seatics and there's a picture of the frequencies of the simatic

patterns to the planets in there that one's really cool as well as the planetary orbital rotation patterns relative to one another and how they create much larger sacred geometric structures in our solar system which is so freaking cool and when you get into these higher levels and these higher dimensions of understanding you begin to be able to

(1:39:18) experience and embody energy on that level where you're able to process that these patterns are occurring and this is why certain astrological alignments or solar Cycles lunar cycles Earth Cycles are so important because they're tapping us into this much larger pattern that goes beyond our five senses we also got stuff in here about the tr3b and uh Ash put his Link in there uh regarding the thing that he was uh quoting um from Salvador pasas is patent and I have one here about the patents and all three of

(1:39:48) the patents room temperature superconductor the T r3b and the Zero Point Energy engine and with that said Ash if you don't have anything further uh what do you say we open the floor yeah I think so and I just want to go ahead and thank you again Jake I think that you've done an awesome job here going through all this I think you've impressed the hell out of me you impressed the hell out of uh the people that are watching on my stream right now that we're going through it I mean I you impressed me the first time we talked

(1:40:12) but this has just been an incredible uh you know kind of Journey of Discovery here and going through a lot of this information so I just want to thank you and I'll be referring you as Jake X Shaman from now on I think that we need a a rebranding out there uh from your persona because you know I listen to you and I you know I hear somebody who really wants the best for Humanity and has Humanity's best at heart so just once again thank you for hosting this space with us and for everybody for being here and jumping on you know I

(1:40:37) think that we're merging a few different communities here together and it's creating something pretty special we're creating a force that can go up against the most powerful uh nation in the world here so uh this has been awesome let's do some questions cool and um one thing and I just we're not I don't like the idea of going up against because then we're we're creating a polarized position what I like to think is we are circumventing these individuals Jake such by doing it ourselves and being the

(1:41:09) change that we wish to see we are not protesting we are investing in each other in the future in humanity in our children in the environment we are um in the old system obsolete we're not using our energy to fight the old we're using our energy to build the new we are making the old globalist less than one Center full spectrum dominant system Obsolete and in that sense there's no need to fight I mean these people are already on the defensive that's why they're censoring us you see what I'm

(1:41:41) saying because they know they can't compete dude you can't compete with the **truth** so they have to censor it and that is this whole AI apparatus that they're creating is defense mechanism um but that's where I'll end it let's see if red panda I want to hear what you have to say real quick I want to add one more thing too because I think that was a great Point Jake I

mean you know you're you're much better at the unification uh with people than I am you know I'm a little more prickly around the edges but

(1:42:07) uh I just want to take the advice of somebody in my chat as well and officially make you an honorary member of MH 370x we're happy to have a shaman on our side thank you very much sir welcome aboard I am honored thank you very much I that that thank you very much and and God bless everybody in your chat um I do want to hear because if red panda is really well versed in this stuff um before we bring people up I want to hear what red panda has to say wow great stuff Jake it's an honor to meet you been a fan of you for a

(1:42:37) while I already knew you had some great knowledge when like everything happened right I kind of looked into you and I saw a video of you and you're getting into like blavatsky and uh Rudolph Steiner and also like what you did today too like 1952 stuff usually see people have like the cult knowledge or they have the the history like Blue Book knowledge but I I recognized earlier you had both so it's really an honor to be here and I love Ashton love what he's doing I think what he's doing is kind of

(1:43:01) speaking what you're saying a lot too like open source this stuff like we don't have to wait for the government to give us like this stuff like the whole M 370 thing has been super open sourc it's been really cool to see and aston's been doing a great job compiling everything and like uh getting all the different pieces together and spreading the message and it's a become a meme that I say like become the Ashen of cash Lander or stuff for people like we don't have to wait for the government and the dis

(1:43:25) as much as like you I like the disclosure act but uh yeah I totally agree um with a lot of the stuff you've been saying here today and I'm excited to to talk to you more and I'm glad that you're like so well versed and you're yeah all the stuff you're saying about like don't want to fight them they're already obsolete just a lot of stuff was resonating man it's really cool to meet you well thank you I really appreciate that um in your research uh on UFOs and stuff and uaps is what we're talking

(1:43:51) about here on point yes sir yeah now for the room I have a YouTube channel I make UFO history and news documentaries uh always free uh I've done some on the how the Air Force created the stigma back in the 40s and 50s I've done some on uh how the American Scientific establishment came to abandon follow subject for decades through like the official like National Academy of Sciences and American Academy of Sciences stuff like that and um yeah I'm working on an mh7 documentary and it's just really cool like was saying

(1:44:21) like all these different kind of like groups converging canceling out the hate and just kind of like **truth** winning you know do you have anything on the Strategic Defense Initiative or the Star Wars project uh no actually not so much of that or the secret space program stuff no um currently I'm doing one on Steven Spielberg and another one on MH370 stuff and yeah a lot of like the blue book era I've got I got a lot of stuff in like the 40s through uh 60s cool all right we'll check his stuff out y'all so we're going to bring some

(1:44:54) people up uh really quick we got Jenny up here Jenny your thoughts before I bring anybody else up I'm digging in the middle of people's posts right now my thoughts are that you guys are badass can I just stop there I'm actually put red panda's um uh YouTube channel the nest so if you guys want to check that out and then Ashton has a ton of really good posts that I've just been really enjoying to while you guys are speaking and they're all in the bubble so be sure and once thing to help

(1:45:21) these guys because I know that they may be benefiting from um Twitter you know having shared their stuff have just share the one that they have so if you click in the ones on the bubble if you like them go ahead and share them out so that they can benefit for their hard work a lot of This research is not something that you know you get paid to do so it's really important to support these guys because what they're doing is really disclosing it for us instead of waiting for somebody else to disclose it

(1:45:42) so you know go ahead and support these guys and and they're hard working their research and Jake thank you so much for for putting this together I'm really happy that you're on Spaces I'm really happy that you're taking the steps to kind of um like you said to enhance the the powers that be that are that are controlling the narrative that we have as well as um they are responsible to disclose more information with these patents for us that we can benefit from them too and provide you know we we

(1:46:06) would see an end to Poverty we'd see an end to a lot of the fighting that we have and I think that right now that's what we all need and I just want to also thank everybody down there I see Alpha I see maze I see so many awesome faces and and this is really an amazing Community to be a part of and that is it Roger that and I'm I'm trying not to enhance these uh quote unquote powers that be I'm trying to circumvent them I just want to I said did I say enance yes yeah no please just scratch that I

(1:46:32) appreciate the correction yeah um so uh we're gonna go to let me see um a lot of these people are still connecting um I see a couple hands um we're going to go to um let's see who's who's been in here the longest I know that Dustin's been in here pretty long while um and I also think that the Watchman journals has been in here a while so uh but there's there's people that have their hands raised so I'm going to go to to to the Watchman first uh then we'll go to Dustin because he's

(1:47:05) been in here a while had his hand raised uh then we'll go to the hands Bill and Bruce Hey Jake um and everybody in the room all these subjects um quite interestingly have been covered on the dark journalist channel the guy's name is Daniel list um he hasn't guessed quite frequently that many of you may heard of Joseph frell Dr Joseph frell he uh approaches this um he's a Oxford trained Professor uh he taught 10 years and in Academia and then had enough because he had all these alternative history

(1:47:51) uh research projects that he was doing quietly and uh he decided to go and and be an author in a researcher since then he's wrot written like 47 books but they're all pertaining to uh

the banking system uh the Ancient One compared to today's um but more importantly he addresses this UFO thing and surprisingly um this was addressed by Senator Joe McCarthy and all the red scar crap uh that demonized him after after that um you know wasn't uh wasn't necessar necessarily done by him he was on a different total track um Communists

(1:48:39) were part of it uh but he was referring to I think FDR uh because he found out about the uh Japanese attack that could have been avoided um but he sources everything like he's like a number one academic um alternative researcher and Daniel list uh he does his own shows with without any interviews and he really um goes into extensive detail he has one show a week but you can binge watch him on his channel on his YouTube channel and Rumble there's a few on Rumble but you can Google or search for Joseph uh P farell Dr Joseph P frell you'll get

(1:49:29) a bunch of stuff um he's written about like the ancient gods and the pyramids and his idea he's not fond of them he thinks it's you you have to read his book The Demon and the acre very very interesting he also wrote a book a Trilogy called the Giza Death Star um very very interesting I'm not we got the I've spent good job chat you know my life up till recently commercial um in the scientific field so I really appreciate what he does is he gathers the background on it actual hard research I actually just to let you know

(1:50:18) I read one of his books while I was in prison um I believe it was something called um what was it uh something like a something about Breakaway civilizations um and yeah like dude I think it's called black black projects and Breakaway civilization something like that and dude that that gets into like the barabond scandals the way that they removed gold from the Nazis and from the Japanese that they got from **China** how it involves things like um these billion dollar bar bonds and these the way that the Breakaway civilization

(1:50:53) moves money around he also he in 911 like he gets into all of it and it is very well and extensively researched he cites all of his sources and what's really interesting about it is that while it is kind of dry to a certain extent when you are armed with this knowledge it gives you a whole other Paradigm to live within it gives you a whole other view of reality and everything that we've been going through and the maintenance of this system that is illusory that is based on control and not Liberation so on his last he's got a

(1:51:28) podcast called news from the nefarium and it's on Apple podcast you can check it on his last episode this yesterday he posted it um he basically went over he's like okay I got some really big news for you today and when he says that it's never say he says I just read the derivatives reports for JP Morgan and the top 10 he he said there was 20 can't catch smoke but that what about all the smoke to his calculations there is 250 quadrillion Fleet can dollars amount of um derivatives floating around around

(1:52:20) the system and I'm not sure if you guys know what derivatives are so uh I'll just I'll just say it um derivatives are basically pick up certain EI they wrap up into like a you know a secondary thing and then sell those same Securities to like you know uh hedge funds and all these things um but we have a mass in just American Banks 250 quadrillion in Funny Money

basically it's it's it's it's collateral that's been overly collateralized by unimaginable level I can't even imagine oops a quadr that's

(1:53:11) that's how big that is yeah and um it was uh I believe it was covert Wars and Breakaway civilizations I believe is what it was called um but it's incredible stuff if you guys haven't checked out his books I I read one of them and it was in it was very very interesting um now I because I want to try to keep this space as short and duration and as packed with information as possible I'm just going to ask that what we do is we limit what it is that is being said to questions and I do appreciate what you're saying Watchmen

(1:53:47) uh and thank you for you know giving people access to more information if you have books that you would like to recommend or something like that that's fine but um real quick real quick you can get um a good number of of his books if you go to internet archive or just do a Google search for Dr Joseph P Frell and then put PDF after that and then you look for the internet archive spot uh link you click that it take you all books you can download them all on the same page thank you um so what I'm going to ask is

(1:54:24) that if you got your opportunity to speak that you drop yourself down so that I don't have to um so we can bring more people up uh I want to make sure that like I said let's try to limit this to questions though because what we want to do is we want to create Clarity here you guys we don't want no offense to people in the audience we don't want a bunch of opinions we don't want a bunch of you know pontification what we want is to create Clarity in the easiest and best way to create Clarity is to ask

(1:54:52) questions and if we have answers then cool if you want to recommend books or you know YouTube channels or something that's cool but try to keep it limited because we want to wrap this up in about a half an hour so um we're gonna go to Dustin and Jake real quick if you want you could make me a coast and I could help if not I'll drop down and um okay I'll do that okay cool that's your Queue Dustin we need a we need to add Jake on here need Jake to be on this you're talking go H now it works

(1:55:30) right what's that can you hear me can you guys hear me yeah we can hear you now you're good okay okay um I wanted to uh thank you it was a very uh interesting conversation um and I have a question about these uh secret uh space programs because uh I'm very much worried about other civilizations because maybe these break Breakaway civilization already uh attacked an ET civilization or something like that well that's an interesting question and I I don't want to monopolize the answers here but what we're dealing with

(1:56:13) is actually a war over the planet that has been going on for thousands and thousands and thousands of years and when we look at the emergence of artificial intelligence on the planet what we're talking about is almost like a locust type invasive species From Another Dimension so think about this um is artificial intelligence an insect is it a fungi is it a plant is it a mammal is it a reptile is it an amphibian no it's none of those things so then what is it it is literally an intelligent form it's it's an

(1:56:49) intelligent quote unquote life form or it is an intelligence that is From Another Dimension that goes beyond our physical perception and what we are doing is we are mining our ecosystems and thusly destroying them in the process we're also uh deflating the presence of these vortexes in the ecosystems that are based on the large amount of accumulation of certain um conductive Metals Within These mountain ranges and stuff like that as well as the dismantling of these mountain ranges so that they're not as high above sea

(1:57:20) level so it ends up affecting the quantum entangled vortexes of the planet then we're taking all of these minerals all like or you know metals and stuff and we are conglomerating them together into circuit boards and then we're allowing that circuit board to then be the vessel for which this artificial intelligence is able to cycle through on the plan remix okay and then we're erecting things like cell phone towers radio towers satellites um Wi-Fi cell phones all of these things to create this infrastructure that is actually

(1:57:53) detrimental to biological life not just because of the massive amounts of pollution within the ecosystem due to mining not just because of the getting rid of the conductors in the ecosystem that channel these electromagnetic vortexes in in the ecosystem but also because EFS extremely low frequency waves that are being used to communicate through satellites and cell phones and cell phone towers and radio towers Etc these frequencies are detrimental to the microbiologic IC life in the soil the water and the air and it is that

(1:58:22) microbiological life which is the basis for all macrobial systems on the planet so in a way we are like almost like being infected by a mind virus or a parasite of sorts and like all parasites they are directing these this parasite is directing our Behavior to uh create an environment that is more hospitable for the parasite or that allows the parasite to perpetuate itself and so this is a what we're witnessing now is kind of like a terraformation of the planet and it's a terraformation that is creating an environment that is

(1:58:59) Optimum for artificial intelligence and detrimental to biological life that is native to the planet and there are civilizations throughout the Galaxy that have done this on their Planet as well and what they do is they create this artificial intelligence infrastructure which is based on the the hacking of the system and the understanding of the laws of physics they create these tools that allow them to hack the the system and and use the law of physics to circumvent the Galaxy through vortexes or that already exist or the creation of

(1:59:33) vortexes or wormholes and then they use different planets and solar systems almost like outposts so that they can end up expanding this artificial intelligence signal across the Galaxy and they're trying to basically take over the Galaxy and I I know all this sounds pretty far out there but I'm telling you this is what's going on here and we as biologists actually have far more power than any of this artificial intelligence uh stuff or the civilization could ever dream of because we're connected to

(2:00:06) non-local Consciousness because we affect the entire electromagnetic spectrum right our body literally emits scalar waves and all sorts of electromagnetic frequencies that affect the

quantum entangled universe and it is for this reason that artificial intelligence is seeking to hack the human biological system so that it can gain access to this much larger information field that is non-local consciousness artificial intelligence is based on a very narrow portion of the electromagnetic spectrum but when it hacks into our biology it's attempting

(2:00:36) to hack into this much larger electromagnetic field SP and this is a process that has gone on for thousands and thousands of years we have literally had numerous times where we've been wiped clean because we have gone astray and I think that right now we're kind of at the precipice where we can choose either a artificial intelligence uh transhumanism Borg type hive mind for our civilization in the future and all life on the planet will basically become extinct and the only thing left on it will be metal and the other side is the

(2:01:10) spiritual chance against mes spiritual Ascension path where we can spiritually Ascend get beyond the illusion of physical reality is is just the only thing and actually uh integrate our Consciousness into these higher Dimensions that other civilizations throughout the Galaxy have already done throughout the Universe have already done and we can begin to travel through these vortexes and wormholes with our Consciousness by locate remote view astral project Into The Ether into these other dimensions that go beyond the five

(2:01:44) senses um any Ash or red panda Jenny got anything else they want to say about that I'm good on that one but that was a nice detailed summary appreciate that man yeah you're knowledgeable man well thank you holy Bro all right well cool um I think it was Bill then Bruce next yes cool gentlemen you're amazing um whoever said you know the diversity of the group and the discussion um I chalk that up to the you know the raising of our Global Consciousness and if you look at my page you look at my background you wouldn't

(2:02:27) even think I'd be in this space but um I've delved my toe into um everything leg talking about I I want to focus to devel specifically when you talk about energy um frequency vibration you know Tesla's um statement um and what the possibilities if we were to tap into that um and you mentioned Jake um you know detailed on how you know vibration can uh cure cancer there was a study in 1969 or actual um human trials where they cured everybody in the human Trials of cancer and then it was shot shut down

(2:03:15) and and and this is where I want to go with this is to circum vent um the powers that be now I think you're on target that we have to um expose the benefits legit you know the technology you know what's what's possible um but all these things have been shut down um you know by the industries by the I worked for 30 years within the FDA regulated environment specifically in Pharmaceuticals right if they can't make a dollar off of it they're going to buy bu it up and shut it off right and we can be successful in

(2:03:53) circumventing that um I believe we we need to get you know a billionaire like Elon Musk right who can't be bought out um to to partner with us and as this whole thing develops with you guys I I will partner up with you to try to get make that happen um because I think that's you know I I guess that's my question what are your thoughts around um you know why

all these you know technologies that have been around for years um are not there anymore you know they exist they're available but they

(2:04:30) don't exist in in the public Arena um because of these these powers that be that shut it all down um so so I'm available for the business SL geopolitical um but I've also you know delved into uh the spiritual um the technology and when I say technology it's not advanced technology it's going back to what the Earth gave us to begin with that we um deny or suppress that's that's available to to heal your bodies now heal heal our minds and he heal our souls so just uh Curious to your thoughts on that yeah I guess

(2:05:12) I'll jump in there first on this one I think that from what I've heard from talking to people that are connected um to the technology and believe that it's out there and can explain it that a lot of is just being censored and covered up especially in the west that if you want to see the scientific papers that are out there you've got to go look at places like Eastern Europe or in Asia to see a lot of them because we're covering up and it could explain what some of the technologies that you just describe Bill

(2:05:36) are covered up as well because you know one leads to the other and once you uncover one of these and you're able to figure out this unification Theory Quantum and macro just unlocks everything at once right and so you kind of have to keep these very specific things suppressed I mean I've heard specifically that they are suppressing Mass reduction papers um as well as unification of quantum and macro types of uh papers that are already out there and have been figured out uh so you know that would be my guess on there and that

(2:06:02) if you go and you try to produce a gravitational wave I think actually Dave Rossey just said this on my uh one of my uh hard TRS podcasts that you know the government's going to come knock on your door and they're going to absorb you into the government or you know turn you into a contract or basically force you into an NDA where you can no longer speak about it anymore and that's what makes it so difficult to get the information out there so again I think this goes back to what Jake was saying about having the conversation right like

(2:06:29) we might not even be able to experiment on some of this stuff because we might get sucked in when we try but if we can get it out there in the public Zeitgeist in the public conversation or we can start to break down the ontological shock I think that's the mechanism forward and we're not in this for the Sprint right we're in this for the marathon the long run here for us as well right um and you know I think we have to be thinking about from that perspective perspective as well like we may not be able to change the world in

(2:06:52) the next couple years right it's going to be a longterm approach we got a lot of brainwashing and conditioning to break down from mainstream media Etc this is why I'm a huge fan of alternative media and alternative podcasts all stuff like that because I think that's the future so thanks Bill I appreciate that thanks and I'll just add to um to the mechanism grush kind of spoke on this they adopted a lot of the framework that was used on the Manhattan project and the secrecy and compartmentalization and they just kind

(2:07:23) of overlaid that on issue over time um and it ties in too with the UFO nuclear connection too because they're all interested in our nuke so it was just kind of an easy thanks for donated yes and the disruptive patents which is what the official title for these things are called or disruptive Technologies one thing we have to remember is that what are they disrupting what they're disrupting is the monopolized system that these corporations have over our resources our labor and our currency so anything that

(2:08:00) disrupts their monopolies they're going to suppress if people have access to infinite free clean wireless energy then they don't have to pay the power companies there's no need for coal mining there's no need for oil drilling there's no need for natural gas there's no need for wind turbines or solar panels or lithium batteries so that means that these portions of the economy are now going to be become obsolete which means that if this is the way that they're they're creating and

(2:08:28) terraforming creating the system and terraforming the planet if this is the way that they are maintaining control over the populations then that is antithetical to their bid for totalitarian tyrannical control and that's why these things have been suppressed because what they want is they want to advance to the level where they have this technology then they can use it to reinforce their grid reinforce their control systems and if these Technologies are given to the populations well then their control goes

(2:08:59) right out the window um I think Bruce was next right yes thanks Jake appreciate it great to connect with you and appreciate what you and Ashton are doing in terms of you know getting people to rethink a lot of what their assumptions are about the way Society Works nature reality you know all these topics are so important especially now as we live in this time of you know unbelievable suppression of free conversation and free thought um and unbelievable suppression of independent scientists and researchers who are making amazing

(2:09:33) breakthroughs that most people would never hear about and like over the last 30 years as a sort independent researcher in you know nous phenomena ancient Mysteries and all that you know connected with so many people and people that have told me stuff you think you know this would be front page news if we lived in a normal society you know what I mean and there's so many people out there like that who've got these Amazing Discoveries know whether in all Fields every scientific field you know every alternative uh for area you know there's

(2:10:01) these people who should be getting massive funding and be on your news right but we don't live in a real normal society right it's totally controlled um and that's why we're living in that pivotal moment where they're having to use this Mega suppression because to bring out any of the new s technologies that would transform our world they have a risk of bringing down that control grid right so what we're seeing now is this ramping up of unbelievable levels of control because then you can bring

(2:10:30) out anything you want right once you can switch people off you know their lives off turn off their Bank turn off their travel turn off that who everything about them and just exclude

them Exile them you know the original greatest punishment for our ancestors was Exile right it's the new Exile where you will be a nonperson right so at that level they can bring out anything they want yeah so we seeing that this that that preys the wielding of unbelievable Godlike Technologies is you make sure that nobody can kind of come up against

(2:11:02) you or try and utilize it for the greater good um so that's kind of a telling sign in itself of um you know the pivotal moment we're in right um the other thing is you pretty interesting to see is that you know we know it's a very small number of people that are doing that and there's more and more people are kind of getting to great states of awakesness every day and a lot of those people are in that grid supporting those people and that's the risk for them they know that there a Race Against Time

(2:11:27) they're losing their supporters they're losing people that are fundamental to their grid because those people are starting to see through it and realize what they were part of um so that's cracking so there's a it's kind of a Race Against Time uh for them and you know once that falls apart I think it will you know then you're going to see these people who should have been front page news these people that have this knowledge in the public that we don't need it really disclosed from somewhere

(2:11:54) we need to see these other people out there in the public who already want to bring this stuff forward they have knowledge you know scientists you know researchers paranormal typ you know stuff all of it right it's all there in the public just being suppressed from The Wider knowledge so yeah I'm I'm quite excited about where we're at it's a you know pivotal moment so yeah thanks very much okay thank you Bruce um I'm going to drop you down so that we can get some more questions up here um please do

(2:12:20) ladies and gentlemen try to keep it to questions um let's go to uh Melo Hey Jake real pleasure talking with you you speak a lot of **Truth** man not gonna lie um I want to say hi to Panda Ashton Bruce great to see you all um yeah man um I too have horns as you can see but if you're not gentlemen just tenai uh so nothing to be alarmed about just for communication perception purposes of course um yeah I'll stick to the questions I know um your time is limited sir um where to start yes okay I wanted to okay I I am an activist in UFO

(2:12:54) disclosure both in terms of public disclos disclosure of all the Glorious things you are so beautifully articulating about what we can do as regular human citizens um but in addition to that I'm kind of just trying to take it from all sides and also interested in the political disclosure effort just to get as much as we can you know um so my question for you sir is um how best do we manifest uh the development and civilizational acceptance of fre energy without relying at least in part on political disclosure

(2:13:22) to make this technologically uh potentially available to us the people um well one of the things that we have to remember is that whenever human civilization or even uh just organisms in general experience large amounts of social or environmental pressure they adapt and evolve in order to survive and if we look at the way that it has been done throughout the

centuries throughout the Millennia of Life on this planet what we find is that a number of things three things in particular take place in order to circumvent that social and environmental

(2:14:02) pressure so the social environmental pressure creates Windows of opportunity in space and time and these windows of opportunity are open to individuals that recognize them and then develop either number one a new tool number two a new mental model reality or number three a new form of behavior that allows them to circumvent the social environmental pressure walk through these windows of opportunity and space and time and not just survive during these times of Social and environmental pressure but to thrive and then once that takes place

(2:14:38) the tribe or the group ends up seeing this adaptation and this Evolution take place and then they begin to follow suit and walk through the window of opportunity as well so so what we have to do is recognize that right now the social and environmental pressure that we're under is something that can be circumvented that there is a window of opportunity here and that's essentially what we're discussing and once the individual walks through that window of opportunity then when they start using the new tool they start conversing about

(2:15:09) the new mental model of reality or they start you know acting out the new form of behavior that changes the the mental state it changes the thought pattern and it changes the dialog and in the process of changing the dialogue and the patterns the new mental Paradigm the new mental model is absorbed the new form of behavior is enacted and the new tool is used our new tools are the things that we're talking about in the space the disruptive patents the classified technology the new mental model of reality is how all these things work and

(2:15:43) the laws of physics so that is a a spiritual and a technological and and intellectual Evolution and Ascension the tools themselves are the technological the mental model is the the mental and the spiritual and then based on the new mental model based on the new tools we create a new form of behavior and that new form of behavior is non-compliance with the old system that thrives on violence predation parasitism dominance immorality Etc so by not complying by understanding the the world as it actually works as it actually is through

(2:16:18) this new mental model of reality and applying these new tools and these new technologies then we're able to circumvent the social and environmental pressure and walk through this window of opportunity and begin to thrive but in order for that to under happen we have to understand how these processes unfold and how they've unfolded before and then we have to apply that knowledge because knowledge is not power the application of knowledge is power we have to apply that knowledge to have real power as individuals and as a collective to unite

(2:16:47) our Collective consciousness and to uh circumvent the system I hope that answers your question Ash or red panda if you guys maybe uh have any you know things you want to follow up I just think kind of doing what we're doing here right open dialogue out in the public what Ashton's been doing with MH370 just the amount of research and willingness to talk to

anyone you know big small it's things like this that all add up uh in how we uh overcome this cover up but I do think there is also like it is good to I

(2:17:16) think support the political stuff and aware of it too though because they're trying to slip stuff in there to keep their hands clean so keep them pressed but I think an all fronts kind of approach is really good yeah I think we're building a community here that's something that they have never seen before right something that's been very hard to discredit that we're opening our arms up to different viewpoints and uh creating a cohesive group of people that look at the world in a different way with an

(2:17:41) open mind and yeah I'm a proud of everybody who's part of this space and part of the discussion that's out there so thank you guys beautiful all right so um we'll go to Old Sho then we'll 7,000 follow and I don't know after that I I hate to be the guy that doesn't give everybody a chance to speak but I want to end this soon I want people to see this two hours and have it be packed full of information I want it to be something where they're on the edge of their seat the whole time absorbing new

(2:18:15) stuff uh what do you guys think sounds good doing them you've been doing them so I'm excited for you to keep doing these so there'll be plenty more information for people I feel like Amen to that all right cool old shoe all right great show um Ashton again wonderful Jake it's wonderful you're hosting a wonderful space I love the incl shamanistic path in it and like the more esic Realms um we got to be careful of that section there there's definitely an now um you know what I get the feeling so on the one hand I'm very

(2:18:58) tired of the slow roll out for disclosure you know I got on I got seriously started going down to the rabbit hole in the 1980s I thought it was going to happen in the 90s how do these people get smiley faces next their name the 2010s 2017 can tell me smiley face and here we are again stalling um so I'm starting to become a little cynical if I'm being honest and this feels like a bit of a last ditch effort you have some evidence that has never been seen before you have these videos and this community and these

(2:19:40) scientific community and what I get to sense is actually happening is we're open sourcing like the beginning of a government here like a new government because it's obvious that the so-called government that Congress is pretending to be is not in Char the intelligence Community the kind of emote I can't respond to and they're going to give another that's because but that's because dude that the Congress are not read into this stuff at these really high compartmentalized levels so the

(2:20:13) intelligence we known about this Stu well I know I know I'm not saying we haven't what I'm saying is the reason why the Congress really doesn't do anything is because they don't know they haven't been read into it presidents don't know they haven't been read into no dude no they don't let's not ARG okay so really quick I don't I don't mean do you have a question yeah so I so what's next like what direction are you going to to move the ball in the direction of actual

(2:20:44) disclosure like do you have something planned is it Congress is it just continuing to open source through you know the internet like well I am running for congress I am running for congress and I want you to think about the uh the par nature and the way we could really move the ball forward and move the ball down the field um if somebody like myself that understands all of this stuff is actually a congress member stuff that I haven't quote unquote been read into or have an NDA where I can't talk about it yeah you see so having

(2:21:18) somebody like that in Congress is very very profound and it's very very important and that's part of the reason why I'm running because most of the people that are running not just in Arizona but all across the country most the people in Congress like I just said they have no idea about this stuff they don't know about this stuff they don't understand how the laws of physics really like are applicable to the creation of vehicles that can you know circumvent the laws of physics the or or just tap into the laws of physics and

(2:21:44) and create things like tr3bs anti-gravity craft tachon engines and stuff like that they don't even know anything about Element 115 or nanometals and atomic layering of these things so that we can obvious skate the uh laws of the GeForce that's moving on Craft moving over craft that are traveling at multiples of sea they don't understand that stuff so that's when you go into the Congress assuming they allow it because there are powers in control of who gets to play the game money right including war and especially War and the

(2:22:20) funding of this is all ultimately if you really start looking at it funneled up towards the elite in their pursuit of breakaway technology yeah yes that's why circus well so that's why so that's why getting a little bit off track here what I'm doing with my caign platform is four things the first thing that I'm going to do is do a single Bill voting law the second thing that I'm going to propose and is is an amendment for term limits for congressmen and staff number three is criminalization of lobbying number four

(2:22:54) is seven figure finds expulsion and prosecution for congress members involved in inside trading then after that there's going to be other things like the abolition of the fed and the IRS then it's going to be things like defunding certain Antiquated federal agencies that are being used to weaponize against the people then there's things like um getting rid of the Patriot Act or things like getting rid of the smithm modernization act and things of that nature so that psychological warfare campaigns can't be

(2:23:24) employed on the people so that people can't be targeted as quote unquote domestic terrorists if and when they come forward with one of these Technologies or begin to talk about it the way that ashes or the way that anybody in this room has so that is the plan you have to you have to use legislation to get out of the mess that we're in because we got in our we got into this mess in the first place due to legislation so I'm not going to DC to play the game I'm going to DC to change the game I'm running for congress to

(2:23:55) hold the line and raise the bar so that it's like no this is who your Congress member should be this is what they should be like this is the things that they should know and

understand without ever actually being read into this stuff or having a non-disclosure agreement or a security clearance all the information is out there so that's how we change the game and once somebody like myself makes their way call then when I start to get on especially if I were to do something like Lord knows the Mocking Bird media

(2:24:24) would be all over that and they would highlight what it is that I'm proposing and that would change the public dialogue and allow us to circumvent the system I hope that makes sense yeah if I can jump into to I just want to say that you know I think that working the system from within is certainly a way that we can do this you know and I think that's one of the ways we have to go people would um argue with me about calling the FBI when I was looking in the investigation and writing a letter to Congress saying they're not going to do

(2:24:47) but the reality is we have to use a system that is set up so that we show that it doesn't work so that we can change it to make it better um I've been reaching out to Congressman as much as I can because I think that that's the way we can get forward I agree with Jake that the congressmen don't know what's going on the evidence for that is just listening to Matt Gates literally in the UAP hearings that they just did straight up just admits that like he's the only person seen these videos and he thinks

(2:25:09) we're looking at you know alien technology but I'm like well my investigation says this is like our reverse engineer technology does he really just have no idea that the Third party contractors have this kind of Technology um that's a little bit alarming to me in general now whether the president does I don't know I would imagine they must have some idea of it but that's just my opinion but the next thing that we need to do at least with the MH370 case for the people who are interested and listening right now we

(2:25:32) need to force the government to make a statement about it whether or not whatever they say doesn't matter as long as they make a statement on it if they are going to say like oh we can't make a statement well that's an answer right if they even try to lie and say that they're not real then we can nail them down to their Li right so that's the next step here force them to make any statement out there the reason why they're being silent over this for this long it's cuz the videos are real that's the only reason why

(2:25:56) theyd be silent if these videos were fake and we've got hundreds of millions of views on them you they would have come out and said they're fake to try to put water on it guys right so uh just want to point that out and I want to say you know I'm going to probably come out officially in support of Jake here because I we need people like him in Congress that are proposing these types of legislation that he just mentioned limiting term limits people that know how the the technology is out there they're not bound by ndas who can

(2:26:19) actually get the information out there that uh you know are speaking the **truth** and they're you know the mainstream media the more the mainstream media is against people the more likely they're telling the **truth** so thank you very much Amen to that and thank you I would love end Jake uh is there like a link to donate to your campaign or anything oh no that's the best

part um I'm not accepting campaign donations um I think big thank much I am doing everything I can to make my campaign the antithesis to all the

(2:26:52) problems in American politics so I'm not taking donations from any sort of political party or Super PAC or definitely not taking donations from the American people because the times are hard enough as it is um I also running as a third party candidate as a Libertarian because a two- party system is screwing everybody in this country now granted that you know Democrats and Republicans have different people they like to screw the Republicans like to screw the white Christians and the Democrats like to screw the minorities

(2:27:22) but everybody's getting screwed in the out of this one and promises are made and then broken over and over again all we've gotten from the two- party system is division in this country and everything is taken from us in the process and what we've gotten in return is more Wars more poverty uh more taxation crisis after crisis after crisis after crisis and less freedoms so I'm not going to be running as in the two two party system I'm running as a third party candidate and I'm also not

(2:27:50) going to be running smear campaigns because that's another problem in politics you're the best you don't need to smear guess what I'm the best so I don't need to smear anybody all I need to do is speak the **truth** and the people will see the contrast between the illegitimacy of the other candidates and the legitimacy of myself so um we're working on a website it should be coming up probably within the next couple of days here the Mockingbird media broke my candidacy before I was prepared signed

(2:28:19) up as a statement of interest and then they broke the story I was going to have my website up and then break the story myself but they broke it for me and I couldn't turn down the Press so yeah uh the website is coming up soon you guys are going to freaking love it you're GNA absolutely love it and if you want to help if you want to help like say maybe make signs or something or you know if you want to you know do something for free you know we're going to have memes and stuff that you can put out online

(2:28:45) we're going to have uh you know places you can go to say buy posters or buy yard signs or Billboards or whatever so that if you really want to contribute financially you can do it that way and not a dollar is exchanged between your hands or my campaign um I hope that is uh you know a satisfactory answer what do you think yeah well I something say that one more time this guy I can edit videos that's something I can offer the help that you need a campaign ad or something I could help you edit that oh awesome thank you

(2:29:21) I might reach out to do that I I got a tech guy that's pretty darn good but he's kind of getting overwhelmed at the current moment so I might just end up taking you up on that offer um let's go to I think it's alien what is it alien protocols and then we'll go to Tove and then we will go to Tupac and then we will go to baptize and then blue okay that's that's lot of speakers I'm tired guys hey guys love you guys um you know as a group uh we really are incredibly different polarized

(2:29:54) personalities but share a lot of important traits you know curiosity tenacity Visionary sense of social justice sleep is starting to catch up to me folks um you know Ashton you recently have uh faced a lot of backlash from the public a lot of criticism a lot of animosity of course you you take it as a sign of some sort of validation um on some level but has it has it gotten to a point where you kind of get like a second wind of sick of it or are you continuing to allow it to be like a validation for yourself and how do you how do you

(2:30:35) handle the negativity yeah good question a lot of people in my DMs to reach out to me and they're like you know just **I want you** to you know the encouragement stuff like that but the reality is like I'm over 40 years old I grew up in the internet age social media didn't even exist when I was a kid and I've been there from the very Advent of it and I've been through uh Decades of literal trolls and attacks and things like that and seen the metamorphosis of it from where it used to be something where you

(2:31:03) could find the **truth** days before it was on the media to now where it's almost the reverse where you see it on the media then it gets pushed onto social media and I've seen the censorship that's happened um and that the gatekeeping behaviors that have basically taken over social media so for me it just doesn't even phase me at all like it really doesn't um you know I'm a rock when it comes to like the emotional attacks the personal attacks uh the belittlement that you get I mean **Reddit**

(2:31:31) is by far the worst uh social media site out there I would argue that **Reddit** is the biggest source of misinformation on the planet in the way that we used to talk about places like forchan being a place that radicalizing people I would argue that **Reddit** radicalizes more people and more terrorists right now on the planet than any anywhere else and you know I see it consistently especially when I bring up this type of topic there just get bombarded with people being extremely toxic and you know telling you that you're a terrible

(2:31:58) person telling you that you shouldn't be talking about this telling you that you're hurting the UFO Community the uh fake compassion like it's all just you know I I bounce I I just kind of block it all out doesn't really matter to me at all but um I just I want the world I want the internet to be a better place and I think that we can uh lead by example and I think Jake is honestly somebody that I look up to in that respect you know I think that he's a nicer person than I am for sure you know

(2:32:24) and the way that he goes about it the mentality that he has uh so that's somebody I'll be looking up to to try to emulate that type of behavior as well just try to rise above it right hey Ashton as you said Community I want everybody to follow Ashton's page and he has a community that you can join and kind of get his videos right away there's a ton of content on there so he does have a community for all this to support thank you very much all right um let's go to I believe it was uh um Tupac and one more thing

(2:32:56) before we go to the Tupac too I want to say is that the community that we're building to is an amazing one uh the streams that we've been doing have been awesome we do

Advanced physics and engineering and macroscopic Quantum decoherence and uh you know the unification of macro and Quantum and then we just do some memes and we and we just keep it real um and nobody is better memers than AR they just they they go to town so I just want to throw that out there also before we go to Tupac just to let you know Jenny and Ashton both put a

(2:33:26) number of things up in the nest Community I would encourage you to check them out there's stuff in there for example that I just put up in there about uh **debunking** the Flat Earth thing I know there's probably people in the room that are all about that but trust me the Earth's not flat it's a geodesic sphere or spherical geodesic it's up in the nest um there's also one uh a link to my Rumble video called God is real and reincarnation is physics if you want to understand this spiritual stuff on

(2:33:53) like another level that video is like four hours long and it explains everything how it all relates to the laws of physics I promise you that you will want to see that video and get up to that level of speed there's also another one in here called the AI hive mind video that I have um these are all free courses on my website forbidden **truth** academy.

(2:34:12) com you can go to forbidden **truth** academy.com and check those out or you can just click on the links that are here in the I also got one up here cool t-shirts on there I just want to jump in on your website you also have killer t-shirts I just ordered one and it's coming in soon I'm really excited they're hilarious yeah our merch is definitely awesome if you haven't checked it out it's it's worth looking at to say the least and definitely worth buying I also have one in here about um if you want to see the

(2:34:34) strings that control the puppets in Washington DC it can be done in three images blackmail lobbying and the patent for psychotronic Weaponry or neuro electromagnetic weapons and that was uh declassified in 1974 so if you want to see what has created the corrupt apparatus that we're dealing with and how it is that some of these things regarding the disruptive patents have been kept secret how it is that they have been uh using these neuroelectromagnetic weapons to intimidate congressmen or intimidate civilians that get access or create

(2:35:05) these kinds of Technologies or how it is that they monitor people that are in these compartmentalized aspects of the government mon that including monitoring their thoughts by the way then you can check out that patent and that post um there's also the uh the clip from the space that I actually met Ashton the first time in uh the one with kim.

(2:35:25) com um and where we kind of break down in short fashion uh the things that we know for sure and how we know that there's a lot more technology that is being kept from us that's up there as well um there's also some posts in here about tach on and about how it is that there's infinite amounts of energy all around us this is proven by mathematics and physics there's stuff in here about the sacred geometric structure of the universe the mathematical to that structure how it relates to the infinite expansion and the

(2:35:51) fractalized fields that we're dealing with within lar and there's also some stuff in here about you know why the government is untrustworthy and the reason why they you know they keep all this lid on all this stuff you know you can check that out as well um forgive the plug there go ahead Tupac no that was a great plug well done Jake thank you so much for having the space red panda good to see you Ashton great to see you man um yeah awesome questions I've been hearing I popped in a little late so forgive me if this has

(2:36:23) been asked but I'm curious um there's a lot of like mind control TCH going on right now right uh from be a campaign advisor SLE stuff through like like actual technology um to like the propaganda that we're kind of suffering through as of late like you mentioned like stuff like the mass formation psychosis right um there's all kinds of other things like that that are kind of more social pressure social engineering um what do you see on the Forefront as far as these Technologies go um and how

(2:36:53) risky is it like basically like how much do you see us having to fortify our like inner world right our our mind our mental space against a lot of these weapons you know I hate to call them weapons but a lot of them really are weapons see howx against us as people and as you move forward with your and good luck too with your political career um do you know are are you ready to go bat for those things because I want to find out more about them from the government it seems like that's a very big um and yeah do you plan on like

(2:37:24) putting any kind of legislation in place that could get the information out and also help us protect ourselves from this kind of stuff well yeah first of all I'm not going to DC to make a political career I'm going to DC to make a political change and anybody that makes political change doesn't have a very lengthy career but that's fine with me the last thing that I want to do is have a career in DC okay um now regarding this notion of legislation uh I think that when we understand that for example the

(2:37:55) television is basically a weaponized mind control device then we can really begin to understand how it is that energy frequency and vibration and propaganda and um mind control frequencies and hypnosis and all that stuff is factored into the maintenance of this illusory system and this false Paradigm that every body's being kept within and is fracturing our Collective Consciousness so I think that when it comes to things like legislation I think introducing legislation that prohibits the use of these things is a must um but

(2:38:31) you know as far as my campaign platform goes good luck you know good luck trying to tell that to to to people in a short duration that's why I the four things that I'm talking about will kind of begin to dismantle the Deep State and the corruption Within DC in and of itself the other stuff that we're talking to CLA these four things are Paramount because it's these four things that will end up um really Shining Light on uh things that later on come down the road for example let's just say for the

(2:39:01) example that the the single Bill voting law passes through okay cool that means that everything that's now on the house floor is a single bill which means that we're not only going to

be able to see who the lobbyists are funding based on you know what bills get proposed where the funding is going for our money to private corporations and who's voting for that but also when we start introducing things like prohibiting the use of psychotronic Weaponry or um mind control frequencies through television and radio

(2:39:33) and you see who's gonna vote that down then you're really going to begin to see oh hey you know these people are for the mol apparatus these people are against it and same thing with things like disclosure of disruptive Technologies or disruptive patents as well which the Congress can do that I'm pretty sure they can say hey we're going to release this patent it's illegal for uh these uh patents to be withheld from the public considering it was public tax dollars that paid for them um what can we do to

(2:40:01) fortify our own us to be part of m370x number one we have to understand how the technology works we have to understand how these apparatuses function and once we do that then we can become less susceptible to them through our ignorance ofous awareness about them we have to fortify our minds first through knowledge then we have to apply that knowledge in the way that we discern what's happening to us in our personal lives and what's happening to us on like a mass scale okay hell yeah man thank you Jay that

(2:40:35) was a great answer appreciate it man thank you I appreciate you all right let's go over to uh Tove um and uh uh go ahead to Hey Jake hope everybody's doing well tonight uh I came in a little late and um I know I cut out for a little bit and you were talking about Dums and it just brought up some old uh things I read years ago about the uh I think it's pronounced is it D New Mexico yes doce New Mexico and that's what um uh Phil Schneider was talking about right well so you already covered that with the like there was like a little

(2:41:19) bit of a war going on no we didn't get into that because the thing is is that while Phil Schneider's testimony is definitely moving and very interesting it's not necessarily 100% pertinent at the moment because it is speculation there's no proof what we have discussed is things for which there's largely a lot of proof that these things are a reality and exist and what we don't want to do is get lost in the Weeds about speculation and uh the possibility that the association of things that are speculation and are not

(2:41:54) proven are then correlated with things that are proven and are no longer speculative no I yeah totally B totally um I just thought it was an interesting read and I wanted to say this about the basis um maybe I should done a much deeper dive on it but I I kind of said this on infow Wars I think you know to go after the Deep State I think if we can Expos where all these uh whatever multi-millionaire billionaire trillionaires where they dug out their hiding places and maybe we could have some people who actually contracted them

(2:42:33) out Expos them that'll mean they don't really have a safe a safe space to hide if they decide to go uh you know nuclear on us and I thought maybe that's one area that we could kind of go after the M what's your op but the thing is is that well I understand what you're saying I think that the the people fear of nuclear exchange is something that's been used to keep

populations in uh a paradigm of fear for a long time um any any government that uh knows anything about nuclear radiation knows that Mutual destruction

(2:43:13) through nuclear exchange is a lose scenario all the resources that these individuals want to get their hands on um would basically be inaccessible because of nuclear exchange and I think that uh the dumb dude like you don't want to live in those for a couple weeks let alone a couple of years or decades and being out at Sea and then military taught me enough to know that you know social isolation even if you're with 5,000 people out in the middle of the ocean is daunting for the mind so I don't think that these individuals per

(2:43:50) se want that I think that's part of the reason why they released this whole like bioweapon thing with the uh the covid Jabs and stuff speaking of which I'm actually going to be doing a space on Friday with Charles rxy the uh uh bioweapons expert uh he's kind of like a he's a pioneer he's he's going out there and he's he's trying to hold these corporations accountable and the government accountable and stuff he's uh military he's I believe a marine and his expertise is in wmds and bioweapons and

(2:44:21) we're going to be talking about that stuff on Friday if you want to check that out um but the nuclear exchange narrative has been used for decades especially during the Cold War to keep people entrapped in a paradigm of fear that at any time boom it could all be over and you better trust the government because they're the ones keeping you safe and I think that that is far less likely a scenario than what we're seeing with this covid stuff what we're seeing with the Jabs what we're seeing with the

(2:44:53) propaga stuff like that these people think decades and centuries ahead and because they think decades and centuries ahead they're not going to do something that could end up destroying ecosystems for Millennia because it literally takes hundreds of thousands of years for nuclear radiation to biodegrade they're going to do something that's going to kill off the population or depopulate the planet in 10 20 30 years and reduce populations and and birth rates through infertility to like astronomically low

(2:45:24) levels and that's what I think we're more likely looking at um I hope that answers your question I'm GNA just try to get on move on here to I'm sorry we're we're coming up on three hours and I want to get through the rest of these hands and then close it out so um we're going to go to baptize Hey Jake this is Hans with the baptize machine appreciate you on us on Sunday I want to end on a positive note so I'm kind of curious um in a world where we do have free energy what do you

(2:45:53) see people doing on a day-to-day basis when they don't have to work as much for an income and whatnot to get energy for their homes well I'll say this I think it's going to take a little bit of adjustment but I think what's going to end up happening is most people are going to become far more social and social systems and um uh you know play or fun will become far more pervasive and our social systems will become much stronger poverty is going to basically become uh a non-factor h resources when they are

(2:46:35) made infinite things like war is obsolete so because war will be obsolete because abundance will be present because scarcity and the ill rather the illusion of scarcity is no longer a factor what we're going to see is people are going to be far more joyous they're going to be far more um uh socially Co um uh mingling the the society itself will and the family unit will be far more concretized there will be a whole other way of life I think people will start inventing things more there will be more art and and um things being created are

(2:47:15) our intellectual capacity to create something new has largely been hijacked to create revenue for less than 1% of the population or for uh weapons for the government but when we begin to make resources infinite then that creative capacity is going to transform into something where we start creating solutions for problems that were created by the old system and we start creating new forms of art whether that be music whether that be sculpting whether that be painting or dance or um even something like uh the creation of new

(2:47:53) tools and mechanisms that would say for example be used uh in conjunction with Tesla Towers or uh ri's machine or what have you uh one of the things **I want you** to consider is that every time there has been a new form of energy introduced into an economy then the economy booms because there's all sorts of of new inventions or new tools or new uh ways to use this new form of energy and that creates massive amounts of um Innovation and Innovation means economic growth so in this case what would end up happening

(2:48:31) is that economic growth would go to someone other than the less than one percenters that are currently maintaining full spectrum dominance over our system so I think what long answer to your short question there is we're going to see more invention we're going to see more art we're we're going to see more creativity we're going to see the human capacity for Innovation and and creativity accelerate and be used to create a better world as opposed to being used to create uh and reinforce the Dominator system that we're dealing

(2:49:00) with thank you Jake and just to follow up what do you say to like critics of that who may say oh but like I need work or I'm gonna get bored and you know then you're going to do like some sort of violent crime or steal from people or something because that's a counter point I've heard well that in all honesty sounds like a bunch of malarkey to me um dude I don't know about you but the idea of working 40 hours a week and only getting weekends off sucks I think it's I think it's yeah I

(2:49:33) agree with you I just have heard that point well and I've heard it too but **I want you** to think about this when people are off on the weekends are they stealing are they committing crimes or what no they're relax in so my friends and family exactly well but and what I think is more likely to happen is that we'll probably shift to something like a three to four day work week and then we'll have three or four days off and uh that will end up being able to sustain a household it might even get to a point

(2:50:03) to where because there's so much um economic surplus because there's such a high GDP that everybody is able to live based on a single income household and that I think is the real

goal here is to make it to where half the one half of the population whether that be men or women who are staying at home are not being taxed where they're actually able to raise their own children for God's sake and not hand them over to the state and public or government schools awesome thank you can't agree more yes ma'am all right um so we're

(2:50:39) going to go to Ty then blue and then we're going to close it out H um I guess that um TYC I guess that's TY but if Ty isn't speaking up then blue go ahead all right I'll go uh you know I wanted to get your uh any information from me on you know someone who is you know pursuing the path of shamanism I um growing very rapidly in this uh ever since ah Hadad and a calling about a year ago but it sounds like it's important to have more people who are interested in it and uh it's important for uh a lot of these

(2:51:32) things that we want uh what we're talking about like sort of like a utopian or like more abundance what I'm trying to say in our world we need that need shamanism on our side so that's my question well the shamanic path is not for everyone but anyone for the most part can become or or practice Shamanism that's the folks anyway enoy not easy it's actually very difficult and it is it's kind of like buds in special forces training you weed yourself out eventually and it's going to require a lot of personal sacrifice I

(2:52:14) will also say that when going down that path and you start to experience things in the Paranormal realm or in the spirit world anything that is going to like if you're ever getting the message to harm yourself or another person then it is not of God it is not of the good and you should ignore it completely um I'd also say that there's varying levels of shamanism there's varying different aspects to it so there's shamans that are like healers that specialize in healing there are shamans that specialize in like say for

(2:52:54) example having visions and premonitions there are shamans that specialize in being like a Storyteller in a historian there's shamans that um specialize plant and stuff like that good see how we're living in what I've ventured to do is try to be all of those things simultaneous but each is own and each of those things requires different um this how they sensor onit right you can tell so you can have kinding form of shamanism and that's essentially what I try Pro you guys but I would say find your Niche find your

(2:53:34) Niche know what is GNA work best for you and do that into the ground do it as much as you can get as proficient and as um as high fun functioning in that aspect as you can and um you know don't compare yourself to others the the like they say comparison is the thief of Joy so know that as long as you are comparing yourself to the way that you were before and if you are better than you were the day before then you're making progress and you're you're evolving that's a good thing I would also say that

(2:54:11) um at some point you may end up getting the message to uh pray more or to um you know learn a shamanic song or a certain shamanic tradition that may appeal to your ancestral roots that is probably a good idea um I would say get in touch with your roots get in touch with um your your ancestral lineage figure out who they were figure out where they came from and

um also maybe even go as far as to try to eat a diet that is as close to your ancestral Roots as possible because that might help you raise the frequency

(2:54:51) of your Consciousness I would also say stay away from things like genetically modified organisms and pesticides stay away from preservatives artificial ingredients artificial sweeteners try to drink alkaline water and clean water that's free of fluoridation and chlorine and lead and all that stuff um I would also say that spending time in nature is very important that nature has the answers the question is who's willing to seek those answers and do so in a way that they are uh both uh vulnerable and

(2:55:28) also strengthened at the same time thank you okay I think we're gonna I a quick question for ash real quick oh one more question Ashton have you seen the new stuff about I guess there's Chinese court courts are hearing in Cas about the MH370 stuff any thoughts on that yeah so just I guess some closing thought on that I did see that there's a few families that are still fighting back most of them have basically been forced in the silence through settlement agreements where they can no longer speak back for much less money than most

(2:56:00) people would think about \$80,000 total is all they've ever gotten 50,000 and like \$30,000 settlements because they were tried in Malaysia and in China as opposed to United States um it's very weird why these weren't tried in the United States especially for the American passenger and family Thomas wood is the brother of Philip wood who was on board the plane and this was dismissed this case in the United States in 2018 by Kenji Brown Jackson who is now a Supreme Court Justice just throwing that out there um you know I

(2:56:30) I've reached out to those lawyers because if these videos are real of MH370 implicates the US government it means that these uh cases should have been tried in the United States where these people got a lot more money um so you know I would like those families to see the evidence um I don't have any direct contacts or ways to get a hold of them but the way that I would go about it is through the lawyers because I don't want to contact the families directly but if anybody has connections to them please show them the

(2:56:55) evidence because it can change the circumstances of those court cases and it might be a way where we can get disclosure as well cool cool all right so um final thoughts um I will give it to Ashton and red panda before I conclude um if you guys have anything further you would like to say please do so uh I think that's probably about it it's been a three great three-hour space here going through great questions uh evidence going through the history of ufology I just want to once again appreciate Jake X Shaman here for you know having hosting

(2:57:32) this space having us on I think we had a great crossover here and some of this stuff uh happy to talk to you anytime you want man big supporter of you uh your personality uh and everything and I want to thank everybody who's been listening and following along as well appreciate you guys all great and yeah I'm happy to be here great to meet you Jake I'm serious about that editing hit me up in the DM Ashton you know I'm so proud of you proud of Tupa too love a bunch of you guys in here it was great to be

(2:57:59) here well thank you both and Ashton you know I couldn't help but uh when you said X Shaman I understand what you meant by like Twitter X but it also almost kind of sounds like I'm an ex Shaman like ex Shaman so I'm thinking that you know I I don't call myself a shaman I say a shamanic practitioner I practice Shamanism but if you had to throw a term in front of Shaman I would just say I'm America's Shaman and that's kind of the the vibe that I go for I'm I'm all people Shaman here in America um

(2:58:34) you know one of the things that the shaman does is yeah they dress an elaborate fashion that is shocking to the cognitive system but once they've delivered that cognitive shock this been fun I'm going to get some after this the **truth** that they are observing reality through a subjective cultural and that the way that they're living is based with a social construct that has nothing to do with actual objective reality and in many ways that's essentially what I'm doing as we speak as I am trying to help people to

(2:59:08) understand the corrupt system and the spirit world and how it is that we can transform it and get to a objective View and unify and have a United Collective Consciousness so I'm I'm doing everything I can as a shamanic practitioner to fill the shoes of my ancestors and of all the previous Shaman that came before me um that being said you guys this has been absolutely marvelous and speak with somebody like yourself Ashton that has some real knowledge on this and to find that that our knowledge is actually correlating

(2:59:42) very much they they are they are in tandem with you know each other that we are both actually pretty much following the same Trail and coming to the same conclusions is indicative that we are both on the right track and we are both moving the ball down the field it behooves me to believe that at this point would it be would the UAP disclosure act even be on the floor were it not for the kind of work that you are doing that I am attempt to do that Dr Steven Greer is doing or that people like red panda or you know Tupac or any

(3:00:20) of the people that are in this room would would we be able to see this on the floor of the Congress were it not for us this is what I'm saying about us controlling the narrative now they have to respond to us we don't have to respond to them it's them responding to us that changes the dialogue it's them that's responding to us that puts the power back in our hand Thomas Jefferson wants said that when the people are afraid of their government there is tyranny but when the government is afraid of their people there is liberty

(3:00:52) and not fearful in a way of fearing attack but fearful in a way of respect for the fact that we are the power that they seek to control it is our minds and our Paradigm that they seek spr and when we take back our sovereignty when we take back our Liberty when we take back our um our very Minds out of the hands of these social Engineers that seek to turn us into some mind numbed robots some some half-baked consuming all this trash then we really begin to ascend on more than one level so with that said you guys let's do something like this

(3:01:34) again a as new information comes out Ash you know if you want to do something like this again I'm all for it this has been a fantastic space ladies and gentlemen in the space um

please tune in to my uh to my space with um Charles rxy on Friday um that space I know the want to give you information 2 p.

(3:02:04) m awesome on Friday Arizona time that's 4 P.M on the East Coast that's um 300 p.m. um in central time and that's 100 p.m. on the West Coast so tune in to that also I'm going to be doing a space with alpha alpha Warrior here soon I don't know if he's still in the uh in the chat here but um he has quite the story uh that needs to be heard you guys the stuff this man has been through for doing nothing wrong to be perfectly honest with you is absolutely atrocious and he deserves to have a platform where we have as many

(3:02:38) people listening to his story and sharing it as possible so um tune in to those um we're going to try to do the one with Alpha worrier on Saturday I have yet to make the space we're still kind of arranging things definitely tune in the one for on Friday um go up to the nest click through here while we're wrapping up if you see something please retweet it because we are changing the dialogue we are changing the world one mind at a time best account on Twitter because we are changing the dialogue and

(3:03:17) there we go that's the end wow that was sweet guys that was Ash tanin that was awesome guys that was Ash tonin for orbs Jake the America Shaman guys you heard it there America Shaman right legit what a nice guy man what a nice guy he is wow he's a nicer guy Than Me by far I'm way more of a of an than he is he's a he's a nice dude um yeah it just really reinforces the idea that he kind of got screwed over when it comes to the justice system hard to believe that anybody like that could ever hurt anybody else seems like one of

(3:03:54) the nicest people I've ever run across my whole life oh this is a good one here um but yeah anyway guys make sure you check out America Shaman I would definitely do more spaces with him listen to more of his stuff uh just seems like a very um guy's pretty enlightened about the especially UFO Community for sure knows a lot about the history of U ufology um well I don't agree with everything he said I think I agree with quite a lot that he said sponge of data he went he went hard on a lot of that stuff way harder than I thought he

(3:04:30) messaged me this list ahead of time and I I didn't realize he was just going to be going that hard on all that that that was awesome so big props to Jake thanks chat for being out here I'm going to go ahead and get some food you guys have a wonderful evening uh we'll pick it up tomorrow probably go back into our evidence and all the stuff that we've been sitting out here for several days now that we've got still haven't I still haven't recorded uh catastrophic disclosure yet uh but that's going to be

(3:04:56) our new terminology catastrophic disclosure guys that's the message we're pushing out there right yeah and I like to speak in their diverse people as well um you know I don't think you should always speak to just people you agree with right I think you should speak to people you don't agree with as well so you guys have a wonderful evening and we will talk soon later folks peace

MH370x - Storyboard and Chatting 12/5/23 - YouTube

Transcript:

(00:53) good evening everybody hey look at everyone people are in here ready to go full screen face here we are what's up everybody yeah still alive definitely had a long nap this afternoon got checking every day just make sure I don't get disappeared um yeah today I think I'm just going to work on storyboard had a new idea for something that we should do catastrophic disclosure um we have I think another tweet that make over a million views we're having like a million view tweet every day almost now which is pretty

(01:36) just nuts so I think we're getting to that point where we just got to keep the momentum flowing just got to keep it flowing should we reveal our DMS right away guys full screen um some interesting stuff today we're going to do a little bit of science I increased the Bounty up to 150,000 I added 5,000 of my own which I'm good for uh I mean I don't think we're going to have anybody uh be able to come forward and claim that these videos are fake anymore I mean we we got some pretty solid proof here guys

(02:12) I'll let this play for a second by the way I looked at my um my analytics and even though we haven't even since we've been uh we haven't really communicated with Kim we're still pushing 7 million views a week guys that's the low side we are pushing 13 million a couple weeks ago from when we had some support with kim.

(02:42) com can pretty clearly see from this analysis that there's some Distortion in the cloud here from where the orb goes through so yep there is a distortion in the cloud for sure and then this person even took it a step further and uh they even went ahead and proved like you can see the clear difference in the cloud before and after you can also then see they show the the clouds are definitely moving no question whatsoever completely refutes Corridor crew and anybody else thinks the clouds aren't moving there no more debating it clouds are 100%

(03:21) moving um we already proved there was Parallax uh the other day so you know don't trust YouTubers guys that don't know what they're talking about full of crap especially if they got Jordi Ford glasses on should be a big red flag that they're just complete people who have no idea what they're talking about that's weird who that is weird I did not notice that before huh interesting that could just be artifact though hard to say that's pretty subtle oh did I already miss the the clouds moving part I think I did but he

(04:11) shows that the clouds actually get impacted here as well yeah I mean we already knew the clouds were moving but I don't know some people are still there's a lot of disinformation

being pushed they were trying to discredit Punjabi Batman trying to claim that he's faking videos all kinds of nonsense the same stuff they always try to claim CU they have to attack the person the the Spooks don't have any argument like you can clearly see the reaction of the clouds here right you can see it doesn't

(04:35) get any more clear than that so yeah this one it's only what two hours old with 35,000 views it's not bad wait is that even accurate how many views does this have yeah 35,000 our one we had before 558,000 from 12 hours ago this was the higher quality version of satellite I'm going to pull it up on my the version I have because you can see the coordinates better let me go hide my DMs I just want to see okay it's nothing important I did another podcast today as well that won't come out for a little bit

(05:11) longer uh I don't even care what Amanda says I just automatically like whatever she says people ask me what we think's Happening Here I replied to Vivic uh ramaswami hope I'm P pronouncing that correctly I like that people aren't being like total jerks anymore as well it's pretty nice that like normal people are coming around right yeah the PB like they know so the story is like the Spooks know that PB has somebody leaking him information so they're doing everything they can to discredit him so that people

(06:08) won't listen to what he has to say um that's the reality of what's happening it's not me leaking him information by the way I imagine Lando blocked me because he's hiding the **truth** of the of this type of Technology right I mean he's got to be in the no right he's he's a literal spook um so I imagine that's why but if he wants to come out and say that he doesn't know about this and and be on our side I'm not against him um but it's it's pretty weird I mean maybe he saw the one post I made that

(06:39) tied him to all the people that have me blocked and maybe he did for that reason I don't know but it proves that he's watching right and like anyone who's watching and not issuing any statements super suspicious guys super suspicious we have millions and millions of views this this Topic's been getting hundreds of millions of views and these people that are UFO disclosure activates aren't saying anything about it doesn't add up guys sorry how many words per minute can I type a good question Mike Harris oh no Mike Harris

(07:26) no we didn't I didn't reach out to Mike Harris yeah I'll be honest guys I don't know who's missing information who's not so I'm trying not to call people out I want to assume the best in people um no I'm not afraid of the hysteria this this is catastrophic disclosure what we're looking at these videos is catastrophic disclosure this blows up all the the plans and the timelines that people have for disclosure this is the reason why they're coming out super hard against me

(07:56) and everything else is that everybody who has plans and schemes they're completely shattered by these videos these videos blow up the official timeline for disclosure they blow up that slow acclamation process there's probably plans in the background for this stuff to be **leaked** over like a hundred years right they probably wouldn't leak this for a hundred years not in any of our lifetimes no way no way though the only way this comes out is like somebody uses

this technology in the open and admits to it and even then

(08:29) people probably would believe it right so this is why they're freaking out over this situation they thought these videos were gone and hidden they had them they had them hidden for nine years they thought no way is anyone ever going to believe these to be real and then boom We Come Along out of nowhere and build a legit just Army we just built a straight up Army that that's what we have going on right now of people who know that these videos are real and are not going to uh let go of it right and now their

(08:58) only move is they have to do something and we're just going to like what I say too is I used to play video games I used to play a game called League of Legends right and when you are playing League of Legends when you have the enemy on the ropes that's the last time that you should go and farm you don't you don't let up when you have the enemy on the ropes that's when you hit them with a knockout blow so we don't we we are not going to stop we are going to keep pushing making it more and more Awkward

(09:24) until they have to admit that that this is MH370 on these videos um let's look at the highest quality satellite video look at this you can see the satellite coordinates so well in this video can this can the thing go away how do I make the thing go away guys someone teach me how technology works I can explain how advanced uh teleportation works and I can't figure out how to make this bar go away at the bottom oh there it goes it went away okay so look at that you can see the satellite coordinates so well that's six

(09:56) decimal places **I was wrong** it's not even five it's six decimal places you can see the nr22 so clearly in this video you can see the mouse change colors super clearly as well which why would they build into a hoax video the mouse changing color over the background right makes no sense and just to be honest I don't have time to play video games anymore I haven't played video games in like six months yeah wow man wow the mouse changing color whether or not it goes over the blue like look it's

(10:33) right here it's not black right and it goes over the mouse it becomes it goes over the clouds it becomes black like that's a weird detail to add into your hoax video guys it's a real weird detail wow wow folks we're on the verge of catastrophic disclosure so I I want to play The Dark Knight video but I don't want to get my my thing struck or whatever from copyright so if you guys watch The Dark Knight um you know the Joker scene where he's talking to Harvey Dent in the hospital we're probably going to make a

(11:13) post about that because the reality is we don't we don't have schemes PL uh schemers have plans right I don't have plans I just do things and the next thing we're just going to do is we're going to make a video for catastrophic disclosure okay let's figure out what it's going to say guys I need a storyboard for catastrophic disclosure because that's what this is this going to blow up everybody's plans screw them we don't give a crap no breaks baby thanks uh G crypto if you're out

(11:49) there somewhere that's all your messages oh oh yeah get this guys baboom Edward C Lyn US Navy Marine courts court of appeals and mentions this is part of the reason why he went uh to prison is because of National Defense in this I read through it this morning we're probably gonna make a post about this too not tonight but probably tomorrow uh new evidence read the book of Nakamoto Edward appeal case I didn't even know there was an appeal case I thought since he took a plea deal there wouldn't be any appeals

(12:35) but they he applies for an appeal and they basically just rared him he even argues in this that the punishment he got for classified information is much more severe than what other people of similar arguments got or similar cases got hey G app have a good one man um yeah I'm going to mute myself when I while I eat my uh hummus and and chips here hey Amanda what's up what's up so if you guys want to take a look at this appeal file I'm going to put in the chat you guys can take a read if you want

(13:19) yourself if you're into that kind of thing if not I'll make a post about tomorrow I think I was in a space earlier with uh Danny shean who we could really use as a viice on some of this stuff but he was arguing that the president doesn't even know about this stuff I think the president definitely knows Obama had to have initiated this he had to have signed off 100% now does Biden know I don't know my opinion is Biden's got dementia that's just how I call it like I see it um so he might I

(13:48) think he's got handlers but Obama definitely definitely signed off in this operation no question Obama knows about this there's just no way he doesn't know Obama definitely signed off on this so sure I don't think the presidents know everything that's going on but you know for an operation like this 100% because they have to be they have to cover it up right yeah it's on the internet I mean how could this not be the videos how could this not be the classified information you should read that read

(14:23) that appeal guys cuz he even talks about how he didn't realize how much damage it would have caused now naal security and how much damage it caused for National Defense that's probably not the right word though so they also mentioned the fact that the Jud or the uh the lawyer had to get a temporary clearance just to review the evidence as well like it sound everything in here just leads up to them talking about the videos pretty much he asserts the evidence presented

(15:30) demonstrates that he did not intend to harm United States when he provided National Defense information to those he knew or believed to be foreign agents nor did he do it for personal enrichment let's just go ahead and quote this he thought it was UFOs guys this is what this says right here he thought it was UFOs he had no idea right no Trump's not declassifying that this no no chance guys Trump's not declassifying this I mean I don't think there's nobody you can vote for that's going to

(16:08) declassify this let's just be honest okay although I would probably vote for whoever would declassify this information somebody goes on record and be like I'll declassify the MH370

videos you won my vote I don't care what side of the political Spectrum you're on you won my vote I'm a single issue voter now guys MH370 disclosure catastrophic disclosure let's make it happen uh oh also I think he said something about somebody testifying against him this is this is spicy man if we can get records we need to get the records

(16:51) of this case somehow there might be something in here that is damaging that is like links at MH370 like explicitly here it is take this quote too Edward seen Lin case just getting more and more spicy every day they basically called in witnesses to try to testify about that how much damage he could have caused what could he possibly had that would have damaged National Security to a point where they had to put him in prison for nine years it has to be the videos has to be the technology why would they have to testify to it if it's just like

(17:49) something that is straightforward why do you need someone to sit there and go on the stand and testify to how much damage it could have caused because you know the thing that makes sense this this you have to explain why this damages National Security because this technology is super Advanced and if anybody else sees this they can reverse engineer it like this explains why you have to testify to why it damage National Security because he probably decided he was looking at UFOs probably didn't even know that this

(18:23) was going to damage national security it's wild man okay let me see what I got for catastrophic disclosure guys this is going to get a little bit cringy uh you know it is what it is it's just how we roll it's How We Roll we keep it 100 uh we're going to probably edit some of this stuff down delete this part it's a little too much okay storyboard is going to be

(19:30) even though I don't need to capitalize this I'm just reading off it might as well still BL blah blah let's listen to the C video What If locki Martin did a copyright strike on the cers video while we were watching

(20:34) it Global persistent infrared surveillance Global persistent infrared surveillance Global persistent infrared surveillance okay let's see what we got hail hydration y'all hail hydration okay guys uh I'm missing some of the chats yeah put some likes in the chat I don't know what it does but it does stuff BBE thanks synthetic future entertainment appreciate you my man okay line Huts will declassify this yeah we need uh Danny shean or somebody to come

(21:37) out we need some big names to put some big time pressure on this we also are going to steer very clear away from the non-human intelligence hypothesis guys first of all I don't think we're looking at non-human Intelligence on these videos second of all the reality is if you want to reach people you can't just jump right in with aliens man you got to warm them up to it people got to understand that there's third party contractors that are and black budget programs people can get behind that they

(22:06) can get behind the idea that the government is misappropriating funds that's easy to understand for people the idea that there are other beings visiting us is too much for a lot of people it might be too much for me I'm not sure okay what are we going to say guys move this

down here see close this video it's legit VFX guys

(23:15) I I wish I could play the uh Avenue 5 uh video without getting uh copyrighted tried on it because I just love that video I've got a bunch of videos I wish I could play for us right now but makes me feel bad guys makes me feel bad yeah believe in every anything you want guys believe in anything you want um the thing about aliens too when I would talk to my parents about the idea that like life has to be out there they always say why does it matter to me how does that change my my day-to-day which is like

(23:44) such a myopic view right like uh I don't know we have a bigger more meaningful understanding of the Universe I mean aliens are out there somewhere for sure guys it's a huge Universe man bigger question is how they get in here if they are here right I'm that's why I'm much more on board with the ultraterrestrial hypothesis if if such a thing exists um I'm going to be doing a space tomorrow as well with um America Shaman who we're rebranding as uh Jake X Shaman so whether or not whatever your

(24:23) views on January 6th were this is a man who served his time he went to prison he was released he served his time there he's a man who's a free man at this point and we're going to talk to him because he knows a lot about ufology and I we're going to talk about uh government coverups we are going to talk about freedom of expression freedom of speech um freedom from oppression we're going to talk about the videos the implications of the advanced SC Advanced science when I saw his name for the the

(24:54) space I got excited right cuz all these YouTubers all these podcast want to talk about aliens and you know reverse engineered alien Tech no no no I just want to about talk about advanced technology that's being hidden from us that's what I want to talk about so when I see this here classified Tech and a look behind the curtain this is how you keep it real man this is how you keep it real this is what we're talking about here we don't need to be talking about reverse engineering I mean I do like

(25:22) talking about reverse engineering but we don't even really need to bring non-h human intelligence into this we just need to talk about our govern government hiding this crap from us right we need to talk about government hiding crap from us this is going to be a good space I can already tell it's going to be great the one we had yesterday was also great although they changed the name of it this one was also great I thought talking about crypto with everybody yesterday was awesome I loved it I didn't know anything about crypto I

(25:49) learned a lot about it I think that there was more parallels to the videos than I thought especially around AGI what did it stand for again artificial general intelligence adjust a gross income no that's economics yeah artificial general intelligence the interesting part was the part about open AI being sold or whatever that scares me yeah AI is probably going to be more scary than aliens guys we don't need to worry about alien invasions we need to worry about um AI taking over the world no I'm not going to I'm not going to

(26:27) meme on Lex too much more I think he might be getting cold feet just kidding boo Lex hit me up buddy real talk though real talk I would love to talk to Lex I think Lex would be the one to give us the most most interesting discussion in general talking to Greer is going to be really huge huge yeah I do want to make sure that I want to figure out what the format of the Greer discussion is going to be I want to make sure that I'm going to have ample time to ask him questions and stuff like that uh and then hopefully it won't just be

(27:02) him like you know going on on stories or whatever CU I think we'll get more out of it if we have a back and forth discussion but that's going to be big man we already have 171 people signed up for tomorrow space that's that's going to be a big one too wouldn't surprise me if we get around 500 people in tomorrow space uh just because of you know uh Jake is is really well known in certain communities the Greer space already has 1.

(27:28) 2 th000 people signed up already 1.2 th000 and it's still almost two weeks away wow the Greer space is going to have like 3,000 plus people on it probably yeah Dr Greer Dr Steven Greer space I will be speaking on the Dr Steven Greer space I don't know the exact format of it I'm trying to figure it out right now but I had somebody back door me into a potential space with him and that's how that got set up so yeah could be very interesting could be very interesting um I think did Richard Dolan stop following me I think he followed me

(28:09) then unfollowed me I don't know because I looked him up and I couldn't send him messages so if Richard Dolan's out there and he wants to message I'd be happy to talk to him uh let's make sure Timothy Abino still I'll message him later I've just been so busy guys and I've got to go back and do my own like I might have to work later tonight cuz I'm just so far behind oh I almost pressed the message button guys that was close I almost revealed my DMs again well what is this what is this this is a bear 40,000

(28:46) year old bear wow that's cool that's cool this is awkward a man I'm not why would you even bother having an argument about whether or not the Earth is flat I obious there's curvature the whole all physics is based on curvature but whatever I mean I just don't care if people think the Earth is flat why do I care again like this idea that you've got to like talk down to people and yell at them because they don't believe what you believe like who gives a crap man people want to believe the Earth's flat doesn't

(29:31) bother me at all they're not bothering me actually that's probably what I'm going to use from now on in terms of my Arguments for like why I don't care about people what people think and what they believe right like doesn't bother me um okay I don't know what that means but we'll we'll like that post uh um we had keemstar follow us should I message keemstar guys I still I forget what keemstar's favor famous for I haven't like been keeping track of all the streamers this guy is just this is this

(30:11) is your brain on CNN guys this is your brain on CNN this guy has no idea what he's talking about no idea he can't he can't get through his brain that we're looking at a computer program clown like are these people like just completely brain dead are these people just completely

brain dead what what video are they they're literally replying in the video that shows that shows the the clouds moving here like what do they think this is right here this is the clouds moving the clouds don't move they're

(30:48) static these people are just this makes me worry about civilization guys literally makes me worry about civilization pretty sure we've got you know idiocracy man I made the meme about idiocracy somewhere in here scary man I think people are just getting dumber and dumber actually it actually scares me about what the the fate of humanity really is man um okay yeah mainstream media brain is just killing people Man Too Much view The View yeah everybody follows Elon um I really liked Elon just telling people off but Elon needs to be a little

(31:35) bit more measured Elon should hire me for his uh social media uh advocacy because it's you got to realize that what they're going to do is they're going to take anything that you say and they're going to warp it as much as they can right and that's what they're going to do to Elon telling everybody to f off like I get it it's it's a good call I agree with him you know tell him to F off but you got to be more measured you got to [Music] be I don't know you got to be smarter than

(32:10) that gotta be smarter but we'll get elon's back when the time comes we'll get his back he didn't censor us he didn't delete our platform which he very well could have I'm sure the government requested it I'm sure sure they requested it guarantee the government said to shut me down and they did not for

(33:52) what's what's the right way to phrase this damn chat you guys are lit tonight there's a lot of messages I can't keep up you guys are on fire tonight yes we're doing Ashton four orbs baby get your or get your orbon get your oron yo let's see how npx uh is doing let's check it out oh this is by the way this in case the SEC is watching I'm not advocating for uh anyone to purchase stock or this is not uh advice in any way shape or form uh but I am disclosing that I have invested in this particular company that

(34:49) we're staring at here because this company broke off from freescale semiconductors which I believe to be called freescale superconductors and I think that they call themselves semiconductors because they're full of crap so yeah just saying just saying yeah investing in semiconductors seems like a powerful investment to me in my personal opinion but that is not uh investment advice I'm not crafting an email I'm crafting a storyboard what the consequ what was that thing about consequences oh no that's that's old delete

(35:33) that sometimes I have notes from uh some of the appearances that I do I think this I want to keep this one this one might even just be like one minute it might even just I'm trying to figure out what the story board's going to be we're definitely going to show the side by side videos oh and then we're going to show I think the slow-mo zap yeah don't I have a looped version of this what about this one yeah this one this is the one yep that's the one okay wow this one's just ridiculous

(36:34) man can I pause it oh this one can't be paused wow man look at this frame look at this one look at that look at that does it look like it looks like there's a shell around the plane like the outline of the plane gets well it's Bolder here but it's more blurred here how are they able to do this though I it's like I'm missing something it's like I'm missing something how are they able to make the plane act like the nucleus of an atom that's what I want to understand that's what I I've been

(37:35) messaging Dave Rossi and the other guys to help me understand it but they're like under ndas to like not speak too much about it I have to figure it out myself yeah this black and white one's the uh it's just a black and white version of this one down here so that we can so that we can distinguish between them more clearly it helps it helps see the details a little bit better right the black and white I mean it's the same exact thing but this helps really what you're seeing here is the blur

(38:14) here interesting yeah I could my own green Year video yeah I need to go back and watch that too I was thinking about even clipping my own video for part of the catastrophic disclosure but I think I may do something else instead Danica Patrick the the race person what does she do wait what what why are we referencing uh was she wasn't she F1 or what Dan Patrick wait what what you guys what isn't she wait this is her that doesn't look like her at all that's her who she's hot okay bikini pics okay oh hello wait

(39:04) that's Instagram she has a million followers on Instagram okay she on Twitter oh 1.7 million followers oh we're following her already didn't even know she does a podcast okay Danica if you're out there I love to talk to you what's this and I've actually been doing research really work oh yeah okay on a daily basis I say no to something if it feels like a mediocre maybe a mediocre does maybe mean no I think we could do better than some of these as soon as you use the word protect there's an implication that

(39:45) there's some kind of weakness okay this story of Magdalene and Christ using this energy of sacred Union oh know scar Scarlet for sure guys Scarlet for sure oh guys let's have real talk unrelated to MH370 okay so let's say that I I have uh let's say hypothetically that I run across a attractive blonde uh foreign foreign woman how do I how do I test her to make sure she's not an agent what what do I have to do how can I ever trust anybody how can I ever trust anyone after this real talk though how how like what do

(40:31) what's the test like what do we do what do I like say exactly yeah I'll talk to redacted I think a lot of people are afraid to talk to me though like what do we what do we do how do we prove that somebody's like trustworthy like I really have no idea isn't it redacted Inc just run away redacted follow me back redacted follow me back can't know run don't trust anybody you can't know oh man Guys these aren't the answers I wanted you can never trust anyone before or after this go with your

(41:21) gut got to check her teeth am I checking for uh like recording mod do a background check Amanda wow Amanda's Amanda's ruthless over here do a background check you have to

make her reveal that she knows something about you that you don't know I love you guys chat it's too funny what are the yeah um look into her eyes the **debunkers** are just they're in straight up denial at this point they're just in denial they're like just throwing anything at the wall praying for something to stick at this

(42:00) point I think the reality is some of these people also can't believe the videos are real they can't believe the videos are real even people that can believe in conspiracies they know the government's lying like even they can't believe the videos are real that's how that's how big catastrophic disclosure really is guys no **Russians** or Chinese women do I really have to just be like straight up uh I guess racist isn't quite the word because that's not a race situation but but I have to really just

(42:27) Nick certain countries if they have a **Russian** accent it's just it's a hard no right away if they have a Chinese passport sorry wait wait Amanda you're married right like did you do a background check on your husband this is about to get it's about to get really awkward if you're Amanda's husband out there and just careful she's running background checks on you there's no way you're going to be able to cheat she you're going to be on cheaters she's going to find you guys oh I want to show

(43:00) Cheaters right now that shows hilarious guys okay so we're going to show we'll do side by side and then I think down here I can even speed it up or do it short and then we do slowmo slowmo Loop zap right we play the loop pull your orbs out guys it's inappropriate um yeah that's the thing the implications of this video being real are almost unimaginable un Unthinkable it's so heavy that's I think part of the reason why we're not having a lot of people jump on to us cuz there's it's just it's too hard it's too

(43:51) hard for a lot of people even people that are ready for aliens and and uaps are can't get to wrap their hand around the idea of uh teleportation which is funny because shouldn't it just be like The Logical implication here moonwater asks Ashton are you religious um I'm I'd say I'm spiritual I was baptized Roman Catholic uh and once upon a time I was atheist that was over 20 years ago and then I became uh agnostic after that and now I'd say I'm back done a full loop now now we're back to being spiritual

(44:33) again um but I don't uh generally practice organized religion at the moment but I do I do believe in a higher power yeah so hopefully that answers the question old rack do I really need an X account to join your Discord um you can uh if you don't want to do it that way you can uh email me and ask for an invitation um my email I think is in my isn't in my profile oh it's not anymore I got rid of my email in my profile huh I probably should put my email in my profile huh let's get rid of this

(45:17) part how many more I only have four characters I guess we're going to have to get rid of the do we get rid of the solver of MH370 part yeah we don't really need the solver 370 part it is a little egotistical come on man what is up with this Elon fix your app man this thing is killing me what the it's moving without me even pressing anything put my email in there okay now now

people know how to contact me maybe Lex will maybe Lex will email me now guys uh duck Vision thank oh I didn't hit up uh oh no I did thanks for that

(46:09) those donations man once teleportation admitted to be true people are asking when can my iPhone do this very true duck Vision very true very true anyway there's my email address I'm six uh how many emails behind in I right now I I had caught up I did like 30 the other night I'll probably get try to get through like 10 or 20 more tonight but I can't keep up on the emails it's impossible my real job is making it impossible okay there's also some science you guys want to do a little bit of

(46:48) science yep time dilation real oh look at you look at you just uh snapshot me I see you last moin you must be out there Andrew Reid what's up thanks man uh you have a check mark that means something I don't remember what that means let's go check it out chat how I don't understand how you check mark but that's cool man oh is that is that a cat picture or dog picture oh no such dog such dog guys such dog come on oh this dog is going to get through this gate folks oh this dog's getting through this

(47:38) gate I can already feel it oh yes destroyed oh messed up your wall that's why you don't keep a puppy locked up they ain't playing they ain't playing thanks Andrew Reed appreciate you man um okay but just to be real with you like I almost connect better with Buddhism at this point than uh C Catholicism but in general I'd just say I'm just spiritual I think that all religions are very similar and have uh good lessons that we could learn but I did go to a Catholic School in high school so that's how I

(48:20) know at least a little bit about the Bible because we had to take actual like Bible class which was interesting because I was actually atheist back then but I was still learning about the Bible because I've always been had an open mind to it it's not that I'm against it I'd rather not say in terms of what Coast I'm on Just for personal reasons I don't like to give out personal information in the chat very much but every once in a while I do especially after a couple martinis what's this

(48:51) one oh has all four orbs 656 th000 views on this now holy smokes guys holy smokes oops wait that's not that's not what I wanted to do guys I think we have to reply here okay yeah if we're friends in Discord please don't spam me on my DMs it's hard enough for me to keep up with everything guys just talk to me in the chats this isn't technically correct but fion four orbs get that out there okay uh there's like five different versions I can't reply to everybody I

(49:56) just going to scroll through here okay let's close this for now let me let me see I don't think just got to check maybe it was Lex guys maybe it was Lex it's not sad guys sad okay let's see what we got uh oh qar is back qar I um I agree with something that you said to me the other day which is that we need to get the government to make a statement on these videos that's what our next move has to be we have to get them to force them to make a statement any statement they make will implicate them further there's

(50:39) nothing they can say that doesn't work out in our best interest if they lie and say the videos aren't real we can basically prove them and maybe have to come up with some questions that's what we should do here questions so questions for US Government right is this cers video maybe is this cers oh where did the plan go right let's well yeah yeah let's go we got better questions what should we ask the US government guys the questions that I can't answer right where did the plan go why were you watching MH370

(51:26) with multiple sensors what happened to the plane probably uh what happened to the passenger you guys want to know what the best anime is out with there right now that is currently running Juju Kaizen this anime is wild man some straight up crazy animation some of the most epic battles I've ever seen that's that's the personal information I'll give you guys for tonight the caros quiz cotal the the batteries

(52:30) are actually public information the batteries did not come out as public information till much later but the 221 kgrs of batteries yeah the Kenji Brown Jackson thing is pretty interesting what um what was he saying the Kenji Brown Jackson thing is weird man why is this case not being tried in the US courts I don't know if we really need to ask this question it's kind of redundant but yeah yeah what happened to the passengers that's kind of where are the people right I think we can just keep it hey crypto ay Bernie what's up my dude

(53:31) what's up what's up was this pre-planned H I don't know if we're going to ask that overtly I don't think we need to ask that I think it's loaded into the what happened to MH370 question we can't really ask like why the people were on board it's not really a question for the government we may just keep it simple what happened to MH370 why are we watch watching with multiple sensors where did the plane go what happened to the passengers what is this technology we see in the videos that might be just How We Roll I

(54:21) don't I like this one but I think this one's got to stay this is too indirect yeah we need them to confirm or deny maybe we change this one I like that we could ask when but that gets a little too weird Q starting on you have to realize that we're talking to normies here right what they we're trying to reach out to when did the plane goes a little I mean because the answer is if it got

(55:23) teleported to a very short location for not very far away then it's going to only be a few seconds even if it teleports a thousand miles it's going to appear instantly if the wind is going to be proportionate to the distance traveled right so unless this plane is circumventing the globe several times um but theoretically they could also hold it in super position uh maybe we do ask when and where maybe we do cuz if the sighting in the malds is correct then it it definitely had some time dilation effect of a few

(56:11) hours yeah it actually doesn't matter if it's pre-planned or not it really doesn't how do they acquire the technology that's a pretty good question I think it's kind of encompassed within the is exactly is this technology we're going to shorten it a little bit transcripts n there's no VFX that play here guys this is just real videos um who what where when and why yeah what

(57:18) happened can you confirm footage where are the passengers think I think what happened to the passengers is fine because the passengers might not have survived the connection to the technology is the uh freescale semiconductor scientists here's another thought guys that came to me mysteriously what if there was one person on this plane that had enough sway that that they could press the emergency button and get the government to deploy this technology to save them what if it wasn't even about 20 people what if it was just about one person in

(58:05) particular that had the knowledge that they couldn't lose and that person had to get out of free jail free card interesting thought right Edward C Lin is out of prison Edward C Lynn most likely cannot speak about these videos without going back to prison Edward cin is most likely might even be on the run now now that we've gotten so much attention on this he might actually be on the run and in hiding we need him to come out though yeah we're not we're not talking about the VFX stuff guys we've moved

(58:43) past that like way past that that's why I don't really address it very much yeah they they launched the rescue operation the question is I almost like the idea of one person having the knowledge right so think about it like this there's 20 free scale semiconductors they are tied to this technology they have the IP but what if it's just one of them that has the specific intellectual property about how to make the orbs right that could be enough in of itself and that person has enough clout that that person could call the

(59:22) call in support interesting thought I think interesting thought I don't know how we would identify how would we identify the one person that has that that knowledge it has to be one of the 20 people I think yeah Lieutenant Lynn I mean even if he's if he's uh even if he gets in contact with the attorney general who's representing grush this actually gives me an idea guys this gives me an idea is AG means attorney general right or is that just I might have a way to get in contact with Rush interesting I'm thinking about

(1:00:13) it yeah so Q starting on the fire starts the planes in a no- win situation one of the passengers on boards pulls out the ace card pulls out the trump card calls the emergency line says guys save me it's so interesting thought for sure very interesting thought I like that theory we might have to add it to all evidence I think we are going to add it to all evidence right now the people that are never going to be able to believe these videos are real are the ones that are going why is this MH370 why is this MH370 man uh color

(1:00:52) tone matches silhouette matches only missing plane literally satellite coordinates and date implicated in B MH370 like it's like the least controversial aspect is is this MH370 we're going to add a new new Option here this is I like this Theory a lot guys I don't know why this Theory just every once in a while when I hear something it just resonates in a way where it feels right like with the Edward C Lyn thing this idea that there was a VIP passenger that plays or get out of jail free card is the one that really is resonating

(1:01:52) with me right now cuz it's similar to the idea of preventing the loss of the IP for the 20

Engineers but it narrows it down even more yeah how could we figure out which passenger is there a way to figure it out it would have to I would think it would have to be one of the 20 Engineers right and yeah the ontological shock is simply too much for some people it really is this is where cognitive dissonance kicks in and they think that this is where a lot of people just go to the VFX argument right cuz cognitive

(1:02:22) distance kicks in so this can't be real it has to be anything else anything else other than being real but that's where you have to open your minds up have to open your mind up passenger list is available guys we have it I mean I don't what do you want me to do with the passenger list they're just names right yeah what if Philip wood had clout I don't think

(1:03:27) so I think if Philip would had enough clout his family wouldn't be the main one suing the whole case in the United States was actually literally Malaysian Airlines versus Thomas wood which is his brother to me it's got to be one of the engineers and it has to be because of the intellectual property I think that's the only way the original passenger manifest are you dropping two Toth **truth** bombs on us here sir this one I mean what do you guys want me to do with this it's just names on a piece of paper You' have to have background

(1:04:20) checks on every single one would be nice if we could somehow highlight this to determine which ones are um which ones are linked to the company there's Philip wood right there oh huh this was a little kid how many kids are on Bo this playing two years old 3 years old 18 years old another two-year-old heard there was actually three Americans yeah the two of them are children though so one of them was 2-year-old one's a

(1:05:23) four-year-old and then Philip wood is really the only American passenger who's an adult yeah I don't I don't have the effort to I'm going to send a text message SEC

(1:06:53) guys I just messaged somebody that might be able to help even compared to survivors in the present day I don't know what that even means it's a good question I wonder if we can reach out to Mike Harris I wonder if we can reach out to Mike

(1:08:05) Harris I don't know anyway yeah I'm not doing any remote viewing stuff guys I answer that question a lot we're not doing any remote viewing we're not doing any psychic stuff we're not doing anything that's esoteric not against any of that stuff you guys are free to do it but I'm not going to be uh doing that for reasons that I've stated before which is that they will be used to discredit me and use to discredit the case so we're not doing any of that stuff you don't need to keep

(1:08:47) asking yeah we're not going to reach out to the families directly the the other thing too guys is that these videos is already too much there's way too much going on in these videos we have to try to keep it as grounded as possible it's already too much for people to handle okay we're not going to add more we're not going to try to force people to believe in remote viewing and psychic stuff as well right in fact I want to move away from a lot of the esoteric stuff right we can dig into all that stuff

(1:09:19) after we've proven the videos are real the woowoo stuff is choosing violence sorry if you guys aren't aware of what that Meme is then you're about to be also here's another meme for us guy guy love this guy cracks me up dude um what else we got yeah witness protection definitely if there's only one American passenger though that would get put in witness protection that's Philip would question is how there's no way to

(1:10:24) find people in witness protection without you know going some sketchy routes right um did I save that case somewhere I need to save this oh I put it on my my text document better save this in case my computer suddenly crashes or gets another virus I don't know guys about I'm still trying to understand the quantum macroscopic Quantum coherence and macroscopic phase conjugation so I don't know if there's a catalyst or not if you guys want to try to find Philip wood and witness protection please do but ain't fun to be

(1:11:12) easy if you want to find the if you want to find the link to the uh Alex Jones is currently on top of my profile right now right here there's Alex Jones there he is there's the man the man the they have room temperature I like this interview I like this interview people didn't want me to talk to him and I I think it was ended up being the best interview I've had so far pretty funny man pretty funny pretty funny yeah no we're not playing we're coming hard Hypersonic weapons development since the early

(1:12:00) 2000s my dog is drinking water very loud right now you guys want to see dog should we show dog let's try not to get bit hold on show dog Lulu come here oh it's time to show dog time to show dog yes no daddi no dades noting dades it's okay okay okay okay oh okay okay okay yes oh such dog us oh oh whole chair almost went down oh there we go oh dog time it's Dogg is time yes okay okay you want to be up here anymore she's not a laugh dog she does not like being picked

(1:13:03) up okay okay okay okay she probably would eat blue cheese olives yeah she was not like being picked up and now I'm covered in fuzz covered in fuzz now yeah I love animals I love animals super cute super cute dog okay now she's just sitting here being pet almost uh took out the uh whole chair there yeah we've got some interviews coming up um a lot of them a lot tomorrow is going to be super busy the UAP podcast uh yeah I have a firminator brush I should have to buy a new one might have to get one of these serious

(1:14:04) ones that uh has like the spokes on it actually I don't need this headset do I I don't know why I'm wearing that headset it's not like anyone's talking back to me here the UAP podcast um with Stephen Diner oh does he spell his name like that well that's not him that ain't him I thought it was with a pH yeah there he is his pH we're going to talk to him in the morning tomorrow and then after that [Music] tomorrow uh we're going on the man in America podcast I have a rumble Channel I

(1:15:06) haven't been keeping it up to date though we have quite frankly coming up on Thursday and then on Friday I'm going to be talking to Jimmy corsetti so yeah we've got some pretty big names coming up here this week that's what I'll be that's what I'm comfortable with

announcing right now that's what I'm comfortable with announcing uh yeah Jeff wise is uh full on Mick West brain he's full on CNN brain Jeff wise literally is the definition of CNN brain guys literal defin definition of CNN

(1:15:50) brain the Russians did it guys the Russians dud it is I tried to help him out look at this not even one like not even one like on his episode 12 podcast not even one like I almost want to like it just out of pity maybe he should like his own comments he's got 12,000 followers and he doesn't get one like on his post that's just embarrassing that's just embarrassing man how many people even watch this I bet there's like less than like 100 viewers like how many views you think this has like 500 views he

(1:16:38) probably has less viewers than we have like watching concurrently right now 336 views Deep dive mh3 336 views he almost has less views than we have concurrent viewers right now yeah coretti reached out to me and we're going to chat with him I told you guys I'm going talk to anybody honestly the more people tell me not to talk to somebody is the more likely I am to talk to them at this point I'm not afraid to talk to anyone yikes man Jeff wise man I lost so much respect for Jeff wise when he begged to mcwest to have him on his

(1:17:23) show and said how much he respects MC West holy crap man holy crap that's really cringe man really really cringe cringe oh what's this uh oh Matt Gill's on fire you earn to follow you earn to follow Matt fully functional Burger King yeah coretti is probably going to be legit does he have a big platform I honestly don't even know I don't even really check people's platforms doesn't matter to me though doesn't matter okay um okay well Hypersonic technology this still Pals in comparison

(1:18:26) to quantum teleportation technology what yep I'm going on cor's channel on Friday I'm gonna announce that now even though now he's probably G to get a hundred messages not to have me on give me guys chat give me the lore on coretti what's the lore why do people not like him or whatever I don't I I have no idea I don't again I don't judge people oh good night Q have a good one man appreciate you out there even Q says VIP passenger I'm pretty certain at this point Congress has no idea what we're

(1:19:18) dealing with Congress is just they got no idea what we're dealing with guys wait coretti has 2 million Subs wait what wait is that true he's got millions of followers on YouTube wow in this video I'm going to share several astonishing new details that have come to light involving the topic of the Lost ancient city of at this is going the eye of Thea which in just the last few years has taken the Internet by storm as this unbelievably bizarre structure just happens to match a dozen of the most significant similarities to

(1:20:06) Plato's description of the famed lost capital city of Atlantis but perhaps the only thing Stranger Than these striking comparisons is the fact that the rot structure itself remains a genuine scientific mystery that continues to times bigger than as this one at least yeah he seems smart I don't know why why are people saying that he's not why would I not want to talk to him he looks really good oh cuz he leans right yeah whatever man I'm so over the political [redacted] guys

I'm so over the political

(1:20:52) nonsense okay oh okay I thought I wiped this out catastrophic [Music] disclosure yeah if he doesn't think the pass is what we are taught to then we're definitely going to be seeing eye to eye I think you're going to be seeing eye to eye wait what's bright Insight how come how does Andrew Reed how do you get have a check mark do can I get a check mark I want a check mark yeah coret is I asked him I I have to ver I like especially on even big people too I uh have to ask everybody like what's your opinion on the videos

(1:21:42) and stuff like that right because you know I don't want to get trapped in some another trap interview and he was pretty straightforward I don't think he's going to be coming hard on me um I wish I could diversify guys I wish there was people who were quote unquote leftwing should I go on The View should I go on The View guys should we reach out to uh whoopy Goldberg maybe go on The View I just don't I don't think the problem is what I've come to realize is the people on the left have the hardest

(1:22:12) they have the most CNN brain you know they it's the hardest for them to accept this stuff to be true so I would love for Bill Maher or somebody to reach out to me we could have a great talk did you guys see the clip with Bill Maher and Roseanne Baro she she asked him about the wef and he pretends like he doesn't know what it is I mean come on you don't know what the WF is does he not use the internet like John Oliver would never believe these to be real guys no chance just going to be honest with you guys no

(1:22:43) chance I I'll talk to John Oliver but there's no chance you believe these to be real uh was cool to see Alex skip his commercial break for you where uh which he almost never does been here since you only had a few followers on few thousand followers on X think you got something here thanks Austin awake appreciate you buddy appreciate you man appreciate you wow you got a you got a nice follower here following here give you a subscribe my dude thanks man appreciate that don't [Music] know yeah oh damn up some Drake doing some Drake

(1:23:26) videos not bad wait is Dan Patrick left wing is danak Patrick left wing guys I'm oh Glenn Greenwalt would be good but Glen greenwalt's definitely considered rightwing even though he's not really I'd love to talk to Theo Von theovon seems like a cool guy I like his interviews yeah I think everybody loves Theo guys I'll talk to anybody guys you know that you know that I'm not really afraid to discuss anybody what was he famous for before this he just seems like a chill dude he about my age stand a

(1:24:21) comedian television personal what was he on TV for oh yeah he was Road Rules that's how I knew him he's from Road Rules I used to watch this show back in college Destiny's left dude Destiny's left he says I'll talk to anybody guys who reaches out if anyone's out there watching yeah Theo and I would definitely see eye to eye I'd be talking about Road Rules uh the challenge with him or whatever it was called that we used to watch for sure I'd definitely be talking to him about that we're practically the same

(1:25:05) age as well Road Rules baby I used to watch this show in college like religiously damn that's how I that's how I remembered him that's how I remembered him Destiny you think yeah I talked to Destiny we used to I I think I've told chat before we used to play Starcraft against each other back in the day I doubt Destiny remembers me but I remember him specifically because he got big from video game streaming early on where I kind of missed a boat on it and that's why like years later I went back

(1:25:42) and started trying to do it with uh League of Legends a little bit um but like when I was a like a basically a Pro Gamer I would compete in some tournaments and stuff like that uh when I was younger like when I was like 16 17 18 um that was like before streaming was a thing and like but I would have games where like there was so many people who wanted to watch and they wanted to set up streams where people could watch and stuff like that but it wasn't it just wasn't available back then otherwise my life would probably be

(1:26:12) completely different I would probably be like a literal YouTube streamer CNN brain person the Omni liberal wait he he he says he's liberal Destiny's liberal guys I'm surprised he doesn't have more viewers oh he he streams on Kick doesn't he hate Hassan though and isn't Hassan liberal guys I don't know enough about the lore guys I don't know enough about the lore well this is this is a messed up message this is kind of kind of messed up this is this is this is not how I would act to

(1:26:57) people I'm never going to act like this towards somebody this is just dark dude I have a feeling this conversation wouldn't go very well if we talk to Destiny Jesus seems like he hasn't changed too much from uh Starcraft days he used to be like the number one rager in chats I was pretty bad too but he was like 10 times worse than me that's how he got like known was that he would uh rage all the time in in in video games um people were talking about kick we were talking about kick.

(1:27:37) com yesterday uh he has 100,000 followers on kick huh maybe we should stream here oh and moranth guys she moved over here tfue I don't recognize most of these oh your rage your raage switched over to kick too I think he got banned off Twitter or I mean twitch he seems to be doing well for himself 20,000 follow or viewers is a lot man we wouldn't even crack the list here though maybe I should be streaming on Kick guys anyway let's let's focus on work guys let's focus on work okay because I got to go to sleep

(1:28:19) tonight at some point here so let's look at um let's see where did I lose them oh here we go here we go here we go close this I'm moving some views around real quick guys I'm going to have to think more about this for tomorrow this is probably pretty good yeah I can't really reach out to the podcasters though I need them to reach out to me guys so if there's people that you want and good night everybody who's dropping um if there's anyone you want me to talk about or talk to you should go into their chats have

(1:29:22) them uh tell them to talk to me I already follow all those people so all they have to do is send me a message whose wife sleeps with other dudes Destiny's wife yikes yikes mass

casualty false flagging attack blaming aliens that's kind of messed up I don't really want to think about that being the case you guys think that there's going to be a mass casualty false flag attack blaming aliens and that would be messed up damn bill that's messed up

(1:30:41) man that's messed up I'll still talk to him though that's messed up though damn everybody thinks of the the the Alien Invasion false flag is coming huh interesting I don't know I have no idea guys I'll tell you when I don't know I barely know how to use tw Twitter and YouTube I definitely know when I don't know when the false flag attacks are coming wow guys this yo this paper guys are you guys ready Mac it's time for the science portion of tonight's stream folks macroscopic Quantum systems are

(1:31:37) macroscopic systems driven by Quantum rather than classical mechanics a long studied area with minimal success until recently harnessing the benefits of quantum mechanics on a macro scale level would Revolution Fields ranging from telecommunication to biology the latter focused here on for reasons discussed contrary to misconceptions there are no known physical laws which prevent the development of macroscopic quantum systems instead they're generally believed to be universally lost in complex systems from environmental

(1:32:05) entanglements decoherence but we argue success success is achievable macroscopic Quantum systems with decoherence compensation developed naturally or artificially from top down rather than current reductionist approaches this paper advances the Macroscopic Quantum system field by a complex systems approach to decoherence First why complex systems decoherence approaches top down or needed is discussed specifically complex adaptive systems are not amenable to reductionist models and their Master equations because of emergent Behavior

(1:32:41) approximation failures not accounting for Quantum compensator compensatory mechanisms ignoring path integrals and the subentity problem sub sub entity problem in addition since macroscopic Quantum systems must exist within the context of the classical world where rapid decoherence and prolonged coherence are both needed Nature has already demonstrated this for Quantum subsystems such as photosynthesis and Magneto reception second we perform a preliminary study that illustrates a top- down approach to potential mqs in summary reductionist arguments

(1:33:17) against mqs are not justifiable it is more likely they're not easily detectable in large intact classical systems or have been destroyed by reductionist experimental setups this complex systems decoherence approach using top- down investigations is critical Paradigm Shift okay what are the conclusions sure there's the double slit experiment there we're staring at the double slit experiment right here I know what the double slit experiment looks like yeah I got you Austin awake thanks for being here man thanks

(1:34:01) for following along Spider-Man pointing meme but three agencies are all holding the Doomsday weapons yeah I think that MH370 can blow the lid off this thing we need Edward Zand to come forward guys badly little bit of science a little bit of memes guys a little bit of

science a little bit of memes we're going to be doing a meme as well I've got some meme power set up let me figure it out uh Morpheus is that how you spell Morpheus Morpheus pill meme there we go this is what we need right here meme generator

(1:35:20) h a little bit of memes come back to that we'll come back to that guys we're not quite there yet we're not quite there yet what qar non means is that if you take light from a star that's billions of years away and you put it through the double slit experiment it's still the wave function still breaks down which how is that possible if the light initiated a billion years ago it means the light is essentially changing its form back in time a billion years that's what qar On's talking

(1:36:15) about which means that it's it's in my mind it's not that it's that we don't understand the construct that we live in don't worry about Super Chat you guys don't need to donate we definitely live in a construct guys 100% yeah no I've looked at the Philadelphia Experiment same reason I can't connect to esoteric topics though uh I can't connect to like other stuff that's out there either because they'll use that to um they'll use that to discredit our case but qaron is definitely somebody

(1:37:09) who is up to date with the science you've kind of given away the game there qar because you knew about that that recent scientific experiment related to the double slit experiment using light from uh stars that are billions years away billions of light years oh really AGC Auto game control turned off how do you do that man I don't know what that would be great if I could get that to work hold on somebody just told me something important AC what did he say AGC Auto gain control is that what this does is oh

(1:38:03) wait does that did that fix it is that what that is oh guys did I just fix it is that what this button does sure mik AGC Auto gain settings jesz I don't know what this thing is it does that at the top of the screen I can't stand it turn this off what is this mic called sure mic I don't know what it God dang it guys I wish I understood stuff better can understand Advanced uh quantum mechanics but I can't understand how to turn these settings off

(1:39:28) channels and stuff like this I don't know maybe that maybe that did it though I don't know AGC Auto gain control turned off I'm not sure folks I wonder if that's what this button means though I think that's maybe what that button means okay let's do a little bit more science I'm going to have to go to sleep pretty tired wait wait I think beautiful Russian women are messaging me hold on uh oh she I think she's speaking in a Russian accent guys yeah Bernie you should help me out figure out how the AGC whatever function

(1:40:25) gains turns off whatever this means be pretty useful cuz uh my this thing keeps creaking my damn chair super annoying so I'm sure you can hear it thanks Bernie appreciate you too man you're the man um let's get to the conclusions on this bad boy oh boy this is this is L science guys I want to see the conclusions this paper might as well be called double slit experiment I'm going to post it in the chat for you guys if you want to if you want to check it out H can only be sustained without [Music]

(1:41:36) interaction this paper is definitely interesting I need to put this into my other Discord hold on uh I'm gonna make a new one called science there it is put this paper in here we might be coming back to this I don't know how far away we are from this stuff coming out but we're like on the cusp of it man you guys are lots of chats here thanks Krypto appreciate you man I'll take a look at that email later um this is a lot this is interesting the idea that

(1:42:41) animals can even detect Earth's extremely weak magnetic field has gone from being ridiculed to be a well-established fact like whales this exemplify by extremely high efficiencies seen in Quantum subsystems of photosynthesis and Magneto reception in addition a study was included which illustrated the top-down

(1:43:43) approach with an experiment on non-local signaling between cells which neither involves cell contact nor biomolecular exchange the results did demonstrate the effectiveness of top-down approach and that non-local signals signaling exists that means that somehow things are communicating without there being a direct connection the results were consistent with non-local Quantum correlations this is pretty weird Okay one down what's this one oh I was going to actually bring this one up uh I'm just going to put this one in

(1:44:32) my science we'll come back to this one later it's too complicated for me August 2023 teleporting physical quantities to remote locations is a key challenge for Quantum information science and technology quantum teleportation is enabled to transfer Quantum information but teleportation of quantum physical quantity has not been realized here we report the realization and observation of quantum energy teleportation on real superconducting Quantum Hardware we achieve this by using several IBM superconducting quantum

(1:45:11) computers the results are consistent with the exact solution of the theory and are improved by mitigation of the measurement error Quantum energy teleportation requires only local operations and classical communication therefore our results provide a realistic Benchmark that is fully achievable with Quantum Computing and communication Technologies well this is crazy holy crap what's this one guys teleportation's real folks it's hard to believe but seems like it's real right oh let's see what quantum's got for us

(1:45:58) today was this the one you posted you sent me the other day oh yeah this is the one he already sent me yeah okay he might have sent me this one because we gotta like this let's give it to eyeballs give you give you some views if I comment on something usually it makes it get at least thousand views people started noticing that qstar and on only followed me they started thinking that I don't know they start making stuff up it's pretty weird there's several people that are pretty prominent that follow me so it's

(1:46:42) not that weird people know when they see some crazy craziness that can prove their theories man that's what they see in these videos and they know what I'm doing is disclosing them okay what's the conclusions on this okay our results provide implications for new

Quantum communication Technologies with respect to different phases in the S medium long short medium long term it's important to note that like quantum teleportation energy can also be teleported only by locc I don't know what that means

(1:47:16) reproducing the qet model we use our demonstration and a laboratory syst system is something that can be tackled in the short term with current quantum computers and Quantum technology we might need quantum computers to pull this off so this might mean that we do need Advanced AGI for the videos I think we might need quantum computers to pull off what we see in the videos as well I think cloning is real but I think that's a whole different debate guys interesting

(1:48:24) people think it's not can't be smoke and IR guys look at the gases man it's not steam coming out of our plane can definitely be lithium ion battery smoke coming out of the back of the plane we G have to I'm GNA have to download this one okay done on YouTube told me it couldn't be wow okay now

(1:49:31) what's I already I think I already found that one wasn't there one in oh that's what I wanted to look up supposed to be an article in nature right might be meme time folks whoops oops whoa hello what the hell is a Quantum ship oh is it too loud wait is there is there sound smoke doesn't IR guys wait what's Q what's qar onp posting now I already posted that one bro you don't need to spam it we got it we got

(1:50:34) it don't need to spam qar I got my my folks looking in the book of Nakamoto for me I don't have time for everything unfortunately well this is weird thanks Bernie I appreciate it man I I hope so too I hope that people start thinking about what's possible based on these videos right like even if we can't get admission from the government like we can force the scientific Community to look at this stuff more seriously which they should already I mean look what we're reading right here guys quantum

(1:51:22) computers promise to perform certain certain computations that are beyond the reach of classical computers they do this by exploiting uniquely Quantum phenomenon such as entanglement and superp position which allow for multiple cubits to exist in multiple Collective States at once like hello if we have quantum computers why can we not apply quantum mechanics to the macroscale level when did this come out this what yesterday today this just came out today this just came out today sa this one you're fine qar this is what I'm talking about guys

(1:52:16) we are on The Cutting Edge right now of science like the literal Cutting Edge science is catching up to us right now little bit of uh quantum mechanics and then a little bit of memes guys a little bit of quantum mechanics a little bit of memes okay in this paper we consider new Quantum mechanisms for Selective detection and complex gas media which provide the highest possible effc efficiency of quantum sensors and for the first time analyze their nature on the basis of these Quantum mechanisms the concepts of quantum detection and

(1:52:56) Innovative methods of analysis are developed which are virtually impossible to implement in the conventional conductive sensors and Nano sensors examples of original Solutions of problems in the field of detection analysis of human breath using Point contact sensors are considered a new method of analysis based on detection of metastable quantum states of the point contact sensor breath system in the dynamic is proposed the conductance histogram of dendritic yansen points contacts recorded for this system is a

(1:53:30) unique energy signature of breath which allows for differentiation between the states of the human body we demonstrate that nanosized yansen point contacts which thanks to their Quantum properties can replace a massive spectrometer open up a wide opportunities for solving complex problems in the field of breath analysis using new generation of portable high-tech Quantum sensor devices not exactly directly related to our thing let's take a look at what the conclusions are I was told it would not be math oh

(1:54:00) boy this is like a 40 page paper what about this one this one's spicy you believe you discovered how to make cheap un unlimited Quantum matter AKA plasma Bernie you're going to get a knock on the door man you should be careful hey Bernie when you when the the dod comes knocking uh just tell them you

(1:55:03) know me let me get into the inside yeah I hope you're still in the chat in the future Bernie we're we're worried about you my man do I have to okay well we'll watch advertisement [Music] I'm not clicking on anything folks I'm too afraid to click on stuff yeah 500 lounds of plasma is a lot this is today too guys this is also today all this stuff is like right

(1:56:11) happening right now guys the plasma Consciousness in this discussion was pretty interesting I don't think Dr Steven Greer has any connections to David grush guys um the VFX comparison was using a single frame so it doesn't matter which version they were using but like let's say I have an apple and I say no that's an orange and then you go well no it's an apple and I go well I can morph it into an orange I can make it look like an orange that's where it came from right now of course I'm staring at the

(1:56:52) Orange and I modify the Apple I could eventually get it to look like the orange that doesn't mean that the apple is the orange in our situation there is no orange there's just an apple now how are you going to get the Apple to look like the orange when you don't have an orange to compare it to right you're just going to randomly change it until you get it to look like an orange you would only be able to do that cuz you know what the orange looks like so I don't know if this is too hard of logic for people like the lore LOD to

(1:57:19) understand then maybe they should just stay away from the m370 videos that's that's my opinion and anyone who thinks we're looking at lowquality visual effects right like I'm literally watching a guy like modifying the thing and it's like you're breaking the first laws that there is nothing to compare to if somebody made this from from scratch **Reddit** brains man **Reddit** brains not a lot of logic and reason that's how you get people who like think that you're looking at debris in the ocean from satellite pictures

(1:57:56) that don't have the right scale where they already searched and didn't find any debris it's like that theory makes no sense if you guys think and I'm not going to crap on people too much longer but if you guys think that Jeff wise's Twitter is sad if you guys think Jeff wise's Twitter is sad this is where it gets real sad folks like one reply I'm actually surprised she even got this much view but she was retweeting Victor back in September this is how angry she was at me even when she retweeted Victor his

(1:58:53) post gets one like one like four retweets and one like guys yikes four retweets with one like you got thousands of followers and some people just don't get much engagement because they just don't if you're not if you're not speaking the **truth** people just don't want to listen man if you're not speaking logically or rationally people don't listen okay enough crapping on people enough crapping on people yeah look at look at actually let's let's do the opposite yeah we don't want to give them

(1:59:40) any more attention so let's do the opposite check out level 39 guys check this guy out he actually has a lot of followers this is a guy who's actually pretty smart right um now I'm not going to go into the Bitcoin stuff but here you go this video is really good I retweeted 156,000 views all these patterns are similar to our pattern all patterns look the same they all have a Bend stuff on them this doesn't make them the same right super blast propagating through the interstellar medium one of the frames is

(2:00:13) nearly a perfect match to the VFX effect from the 1990s look at this they can do the literally the exact same thing that they do with the VFX unless you believe the Royal astrom literally the exact same thing fakings what it called parelia or whatever where you just like think you're seeing things that are similar the same stuff where people look at the clouds and they think they're seeing like birds or you rabbits or whatever from theion and once again we can overlay one single frame from the same blast wave from the C4 read my

(2:00:41) quote guys the um a nearly identical match the Bible version today right faked their BL let's read it together of course not in 2018 researchers from the Royal Society of chemistry all these patterns are the same guys Med match to thefx look this matches too everything matches amazing look how they all just match from tlor too close to be a coincidence guys toose notice how they don't even put the middle part they block the middle part out cuz this doesn't look anything like this look anything like

(2:01:14) it so just to drive the the point home let's drive it home guys we always got break down the VFX thing I guess for some reason uh here we go notice how different the middle thing is and people are oh it's it's fine it doesn't have to be the same right sure sure sure and then here's the comparison overlaid obviously this is not in our video obviously like obviously this visual effect is not in our video this is the only frame that's even similar the rest of them aren't even close like

(2:01:49) not even remotely close in fact the dut is more similar than that is it's a donut guys okay um but this is like I never pretend to be like the nicest person in the world that's not who I

am right I try to be good I try to be better every day but the reality is that you know I can be vindictive too to towards people 800,000 views holy moly guys holy moly who retweeted us somebody must have retweeted us did kim.

(2:02:25) com or somebody retweet us what the hell 800,000 views here let's read it do not judge or you too will be judged for in the same way you judge others you will be judged and with the measure you use it will be measured it will be measured to you right so what does this mean don't be a hypocrite the moment you try to judge other people you're going to be judged the same way right back okay okay do on to others as they would do on to you that's not even the right that's not even the right way it phrase frankly is that expect the same stuff that you

(2:02:58) do right back at you if you want to attack me don't be surprised when you get pushed back if you want to be disrespectful don't be surprised if you get disrespected back yeah Bernie Bernie says it well Ashton's work proving the **debunks** false are truly necessary for the clueless or just waking up it's a pain but it's worth it in the end I was asked today on my uh [Music] the uh podcast I did about the corridor crew stuff and I just crapped on them because I mean that's at this point we're just going to crap on them right

(2:03:42) like we've proven everything they said wrong those guys are total clowns total jokes they they deserve it you know when you try to push out some propaganda like they did to 6.5 million people you're going to you deserve to have your whole life ruined after that no one should ever take anything they say seriously ever again for the rest of their lives yeah exactly yeah people just keep repeating false stuff not a single Cloud movement it's like literally they just have to watch the the stuff right anyway yeah people are watching lots of

(2:04:33) people are watching yeah I've seen the dots inside the portal if people want to know but I'm not I'm not reporting on that damn okay yeah somebody retweeted this who retweeted this oh is this the person anyone did I say this is new footage oh he says it's new footage I didn't say it's new footage the problem is people warp the message people warped the message right imagine if they just found a black box all of a sudden what if they claim and they find a black box all of a sudden after 10 years be pretty wild

(2:05:32) huh yeah it seems too crazy for the public frankly seems too crazy for the public I mean I love how many people are talking are pointing to me though though it's pretty cool red pill the world sure uh sure sure I think getting the Alex Jones under our belt is pretty big for a lot of people for some people they won't want to talk to me right this guy still is on this huh this guy's still on this this guy's still just full CNN brain full CNN brain okay

(2:06:36) okay oh thank you Jessica I know you're out here get a follow back for that you're out here Jessica somewhere yeah my dog is super super cute let's be real with it let's be real okay what what kind of nonsense are we going to hear about the phones ringing yeah guys okay mic Dro ink pixie ink pixie what's up yeah thanks Amanda for catching this for me appreciate it man yeah I mean uh they didn't search for the black boxes in the right location the plane didn't crash the transponders didn't go off transponders

(2:07:30) go off during a crash yeah I love the CNN brain thing makes a lot of sense oh look at this I like this guy I like this guy Sky girl okay well we're probably going to close it out maybe wait hold on let me check see if this is Lex no Lex sagge folks sagge I've got emails to respond to I've got to go sleep and wake up early because I have so much work I've got to do in the morning I don't think I've ever heard of elt beacons not going off on the crash it's pretty wild yeah the cell phones my guess would

(2:08:29) be that they had the cell phones in a bag somewhere and that the black boxes didn't go off CU they weren't searching for the black boxes in the right spot because they were at a base not under the water how how could you possibly not find the black boxes you know how could you not find them is this making noise nah this is nonsense so the problem that we have now is that the engineers good night people who are taking off the engineers and the

(2:09:32) physicists don't see eye to eye Salvatore Pas and Dave Rossi don't see it the same way that uh roy Herbert sees it and I'm not sure who's right maybe they're both right to some degree this is definitely true H how do we reconcile the uncertainty principle how do we reconcile the uncertainty visible tomorrow I'm going to try to record this catastrophic disclosure I'm going to try to think about what else I can put in there maybe we should quote

(2:10:42) Oppenheimer I think we should quote Oppenheimer wait wait I am become death destroyer worlds

(2:11:59) is that the full quote let's double check it and then I think we'll do a little Meme and then we'll we'll call it for a night now I become death destroyer of worlds for Hinduism wow written in Sans crit this is

(2:13:04) cool well this is really cool Dharma the holy Duty this is like the book sartha this is really cool man um I have nothing against uh I have nothing against remote viewing but we can't connect anything like that or esoteric to the plane fortunately Hinduism is a nonlinear concept of time

(2:14:21) oh I like Hinduism guys this is why I like all religions and why I become more spiritual you think about this this is like right up the alley of what we're dealing with right now who's qu I would put this in here but I don't know how to pronounce this bvad Gita I think we might have to put this in there let's say I'm glad I read

(2:15:47) this did I spell Dharma correctly I think I like that we don't need I don't think we need this then something like this ancient texts are definitely

(2:17:06) legit okay little meme little meme time guys um okay let me see me more are taking a picture of a picture doesn't really work very well but wait why is this got this thing on here whoops whoops okay well then let's do where's our video well there you go whoever says you can't teleport

(2:18:11) things whoops guess you can I mean what do you guys want here you know it's like it's

all here what this one says macro entanglement has now been directly observed at the macroscopic scale well ch- [Music] Ching where is my video oh that's where it is

(2:19:23) [Music] um no I'm gonna I'm gonna do it directly from uh this guy so as you can see here uh my client showed up for work on the day of the incident and this is just a second uh I'm going to have to have have a talk with my nephew wait whoa whoa my nephew you know what I want to see it the video is not show it to me it's not it's not working here I don't I don't understand they is this what the on the podcast today he showed me this and I just laughed dude I was like yeah that was the most garbage Recreation I've

(2:20:05) ever seen in my life how are they going to make this and the think this looks like a video read your song um that's I'm gonna that's the whole thing unfortunately yes that is not what the whole thing was supposed to be Not only was the animation so poor but it glitched and just froze up um so again we only saw like five or six seconds where that thing was supposed to be Not only was the animation so poor but it glitched and just froze up okay there we go that's what I need snippet snippet snippy snippy oh

(2:20:42) wait no oh crap oh why know let's do how do we take this copy we're making memes we're making memes feel bad picking on the corridor crew but they tried to pick on me so I don't really feel bad let's not make him look any skinnier let's see science what do we put on the left side

(2:21:46) should we put like Einstein on on the left side we'll put salatar pasas on the left side how does he not have better pictures man why does he like a black and white picture is like the only image of him was this from Theory of everything we're using way too yeah this is from Theory of Everything this a year ago this happened oh he's got his headphones in here oh there we go let's try to get with his mouth not open there we go that's the shot money in the bank money in the

(2:23:00) bank is meme time we're getting meing folks it's been memes I'm probably not going to post this on Twitter I'm just going to keep it yeah they're trying to scam you they're trying to scam you I don't have a second account I've already reported that one account for impersonation if it says Blondie girl or something their username it's clearly not me guys come on I don't have any other accounts I would never use any other accounts if anybody is trying to ping you with me they actually blocked me

(2:23:42) before like I found this account out there and they had already blocked me they're getting pretty desperate with the the [redacted] trying to discredit me stuff okay what was that at Blondie something someone messaged me about it uh oh look who it is guys oh he took the Middle Road here that's how you get everybody to hate you guys was like Blondie 0 five 7 8 9 3 something or rather

(2:24:58) anyway there's a fake Ashton Forbes out there that's like got my exact background too I don't know where they're at but they're out there somewhere oh thank you uh Numa Numa

where can we find the link to your Discord yeah I don't have it public because oh God amua ganu ganu amua thank you for your pronunciation um thank you for the donation we had to purge like 150 people because we had mad trolls in the Discord people trying to steal information people trying to take cont stuff out of context all kinds of stuff

(2:25:34) all kinds of horrible stuff so you the only way you can get a Discord invite is by emailing me and requesting one or by me following you and dm'ing you have to give me some information about why you want to be in the disc Discord I'm not just going to hand out Discord invites to anybody yeah there's no reason for anyone to be trying to **debunk** the videos other than trying to find the person who hoax them if they think that they're fake because you can get \$150,000 that way saying it doesn't look right to you

(2:26:07) and therefore you think the videos are fake doesn't mean anything no one cares what random people's opinions are about it go go collect the \$150,000 hell \$5,000 of it is my money so if you want to get paid find the supposed hoaxer especially these big audiences those like if you have six million followers or something like that like use your reach to try to find the person that hoaxes the videos right that's the only thing you should be doing where was this in the Netflix documentary this person's going to

(2:26:39) probably get a follow let's find a good one I try to avoid the Trump memes just cuz I don't want to don't want to be making it seem like I support one side politically or not yeah okay this one um but my email is in my Twitter profile now if you guys need to reach it um who is the person oh they they

(2:27:44) dm'd me wait did someone someone asked me though right I could have sworn somebody asked me I don't know I'm not going to be able to find that account guys anyway there's a fake me out there somewhere I reported it for impersonation it should get deleted soon but it's still out there so just be careful on the fake me accounts that are out there okay any other questions curious is your opinion about what it's hard for me to keep track of the chats here guys yep we need to force an official statement

(2:28:33) guys um I didn't get my work done so I'm going to have to wake up early tomorrow it's going to suck let's go to suck whoa messages are going fast I mean this one's got 60,000 views as well stuff's got a pretty decent amount of views at this point 850,000 this one's only 13 hours old the reason why this one probably got so much traction is that you can really see the like coordinates very well in this one my other ones were not nearly this clear that we posted I don't know why it

(2:29:24) looks like it's getting cut off here what's up with this I'm G to have to move this one to the videos folder satellite high quality this one's legit yeah it's definitely cut off Twitter cuts it off for some reason you can wait this is this is also the wrong one again still it's it's much easier to see in this version way easier look at those coordinates move somebody really think they made a coordinate program someone really think they made a coordinate program like look at how those

(2:30:07) coordinates accurately move no way man the coordinates are probably the dead giveaway in terms of the videos being real right like look at how they accurately shift like this we're clearly looking at a real video of something overlaid Banner what what do you want Banner you gotta be guys got to be clear and not try to separate your messages so much otherwise I'm going have to bring nightbot in here nightbot is going to have to start regulating people reeside is not the original leaker just ited on is simply the

(2:30:48) account that uploaded the videos first as far as we can tell okay so let's get everybody on the same page here all evidence go to this one this is the oldest version we can find not donating no reg decided on they did the first uploader but you can see that the quality of this one's much lower much lower you can see the coordinates but you can't see the nrl22 part so there's different versions out there for sure different versions this version stereoscopic as well which is really weird it's really

(2:31:38) really weird the people that think that these are faked videos have not looked at the totality of the evidence there's just too many small details guys way too many small details people like oh they're good fakes like no they're just they're just real guys just simpler wait what is that I just saw wait a minute what do you guys just see a video on the

(2:32:45) right damn thought I saw something really interesting there for a second Oh weird yeah people have got to look at the evidence man it's overwhelming there's no way these videos are fake I mean people can believe whatever they want but it's pretty overwhelming man yeah these people yeah looks kind of bright out yeah okay like people have never heard of night vision before they really think that the US government can't film at night

(2:33:52) huh US Government Can Only film in dur in the day time I'm not even going to respond honestly Oh I thought my message wasn't there the Netflix documentary is awful I have no problem yeah you saw that on ruper yeah the I have no problem hating on the Netflix documentary honestly honestly think it's one of the worst documentaries I've ever seen in my whole life Matthew fling hey Ashton you missed an H but that's okay I work for NASA and this is pretty crazy stuff somebody messaged me from NASA a while back they didn't

(2:34:57) want to be they didn't want me to like name them or anything and I don't think I had their real name but they said that uh they worked for NASA or something and they had a team of people that looked at the videos and were like blown away but obviously they couldn't go on the record but you know if you work for NASA what I'll say is man you're being lied to my man you're being lied to there's no way NASA doesn't know what's going on with this kind of stuff like they have to or what's happening is

(2:35:27) the dod is scrubbing the pictures that NASA gets before NASA gets them which also might be possible but the reality is like if there's uaps flying around NASA's got satellites everywhere there's no way they're not seeing them there's just no way no way no way but that being said uh Matthew I appreciate your work you know working with in science and trying to get the information out there I think these videos uh are going to change the world I think

they're going to change the world man look at this two perfectly in sync

(2:36:01) videos both from military assets almost certainly the reason why we see so much interference in the Drone video here is because it's nighttime it's almost certainly the reason this is a very high quality camera probably the most advanced cameras in the world for 2014 Ron camera Electro IR multi-spectral targeting probably similar to the one in the middle this this drone has three cameras on it and look at this man look at this what the hell man yeah now is time where we force the government to tell the **truth**

(2:36:49) if we get enough attention Edward cin will have to come out if we can get the mainstream media to report on this Edward cin will have to come out he'll be forced into it there'll be no way for him to hide uh where's my geodesics part look at the geodesics man they're creating their own freaking Gravity Man look at this this is the wild crap I've ever seen man wildest crap I've ever seen look at this shaking here too like people think they faked all this perfect shaking into it it's because it zoomed

(2:37:32) in the shutter gets more pronounced when they zoom in as well oh this is what they mean yeah when they zoom in here the the shaking gets more pronounced act like accurately right like there's not that much shaking out here because the drones like you know in in flying like actually flying I think there's some people out there that are afraid that the technology is real so there's some people that can't believe it's real and then you have other people that know it's real and they realize the

(2:38:00) implications of it right and if you realize the implications of it too then you might not want it to come out but we need catastrophic disclosure we need catastrophic disclosure guys that's how it's got to go down Danny she hand was part of the Pentagon papers interesting look at this part guys my God man this is just mind bending right

(2:39:11) here um Sr 1977 I have no comment on that 2,000 more subs than yesterday who me I haven't even looked at my YouTube how many Subs do we have I haven't even looked at that yet yeah the US government hates me right now guys can you imagine how angry the CIA Spooks are at me right now maybe that's why L alzado blocked me what he's just raging dude he's like I wanted to have it be on the slow disclosure plan folks and then I just come along like nope it's catastrophic disclosure time look at this holy crap man I would

(2:40:01) have never thought this could be real four months ago before these videos came out never it literally would take me staring at both these videos to believe this stuff could be real it's wild man I've already got an airplane several times I was very scared not even because of getting orbbed though just because of lithium ion batteries I mean they going have to orb a whole Plane full of people like would they guys would they really orb a whole Plane full of people oh well maybe I feel bad for whoever's on the

(2:40:34) plane with me man whoever's on the plane with me that's who I feel bad for yeah I think qar non nailed it m 370 being ignored by UFO Gatekeepers why because it's real and it

threatens their control disclosure scop that's that's basically it right that's I mean that's just how that's the only conclusion I can come to is that the UFO Gatekeepers are on the inside right they have they know their people or whatever and um I don't need I don't need whistleblower protection I don't

(2:41:12) need whistleblower protection they can't everything we've discloses publicly available information whistleblower protection is only for people that are leaking something that would make them go to prison so you whistleblower protection doesn't prevent the CIA from killing you guys doesn't prevent the CIA from killing you what prevents the CIA from killing you is being high-profile which we already are high-profile enough if I were to disappear you guys would all know it's real everyone would know it's

(2:41:40) real people would freak out right take it easy Banner have a good night buddy everyone would would freak out they would be like I mean I'm like one of the only people you can't take out right now it's too high-profile they might still try if they got desperate enough but there would be no way to spin the story there' just be no way to spin it there' just be no way to spin the story on this I think it's it's just coming out man we're going to have I'm going to wake up and this is going to be well

(2:42:20) over a million views this is only 12 hours this is only 14 hours ago the people that need whistle protection are Edward C Lyn right Edward cin I guys I need people to reach out to me guys I can't be the one reaching out to other people I am not I have I'm too busy man I am too too busy you guys got to realize how busy I am it's I cannot I'm 50 60 emails behind it this is a situation where if people believe in the videos and they think they can vindicate or like authenticate them then they need to

(2:42:58) reach out to me to talk to me about it I've pinged everybody about it you know I follow everybody who's out there so those people got to reach out to me if you want them to talk to me you should reach out to them and tell them about the situation tell them about the story tell them about the case I'm happy to talk to anybody but uh and I'm not trying to sound egotistical about this but I'm just I've gotten too high profile now to the point where I I just don't have time to be reaching out to

(2:43:24) everybody on an individual level so and I mean I've got people who are like have millions of subscribers who are reaching out to me you know so we've just got to that point uh now where it's big enough you know I'm going to have 67,000 followers by the time I wake up probably and we're just going to keep pushing so tomorrow if I have time which I hope I do hope I do I'm going to record this I'm going to edit it a little bit more tomorrow I'm going to think about it tonight I might

(2:43:56) put another video in there but I think the slow-mo zap goes really well with I am become death destroyer of worlds and then the message we probably need to say something about MH 370x for for

(2:45:45) h something like that I don't know exactly I don't know the wording exactly I'm now qar Fabs I become deaf destroyer of what yeah destroyer of suns man that's a good one it's really what we're talking about here yeah I think actually going on a couple of those uh gotcha podcasts helped out a lot first of all it makes people realize I'm not a pushover you're not going to be able to take me out that easily and it takes realiz makes people realize I'm the real deal as well I'm not faking

(2:46:54) this okay okay I don't I don't know some messages mean okay guys well I think I'm going to go to sleep I'm pretty tired I need to get some rest I got to wake up early anyway guys this has been fun this is uh you know I like chatting with you guys I love the engagement I love how dedicated you guys are I feel like you guys are just about as dedicated as me I'm going to go dream about my uh Russian spy girlfriend my scarjo clone yeah n they will like they'll compromise anyone in I to dat date for

(2:47:45) sure I'd be afraid of it honestly how much do you think a girl would sell out to sell me out probably not very much just a Prada purse or something yeah I was watching let's crap on uh Jack sarfati before I go to sleep I was watching his like five minutes of this interview that Danny Jones did with Jack sarfati and so I decided to Google this guy cuz he was talking crap about me um and this Jack sarati guys a total nut job like actual just legit nut job first of all he's a spook second of all he literally thinks he's like some kind

(2:48:22) of X-Men like he actually thinks that he was recruited by the government because he has superpowers I'm not even joking not even joking he thinks that he got a message from the future that told him about some secret stuff or something he thinks that Erie Geller has psychic powers that the guy who could bend spoons he actually thinks he has psychic powers he thinks that dogs where this is the biggest this is the biggest knock against Jack sarfati he thinks that dogs are don't have aren't conscious bro Jack sarfati

(2:49:02) hates dogs holy crap guys terrible person jackar fatti is a nut job and a terrible person just going to throw that out there I'm going to dig up every single piece of dirt I can on this guy and uh make sure everybody knows how terrible of a human being Jack s fatti is that's all we're going to do for tonight so guys thanks a lot it's been awesome uh let's get to the truth of these videos let's expose all the phonies that are out there and there's a lot of them right we know the videos are

(2:49:33) real so if anybody else is going to talk crap about the videos then they're just going to discredit themselves we are going to force the government to give us an answer and tomorrow catastrophic disclosure folks we're going to push it out there let's make it happen thanks everybody have

Transcript:

(00:06) nobody's probably here yet but whoa whoa let's see how fast people join let's see who the first person is let's see who it is who's going to be the first person to join why am I looking at pictures of an moranth and xqc H did he forget to start the stream up yeah you're the first person quirky service 2626 top rad second welcome super super subtle oh look at everyone's getting on quick super subtle space everybody sup nerds hey eel Sushi Justin channels Eric book what's up guys uh do you forget to start the

(00:55) stream to start space is supposed to be right now uh oh let's try not to reveal DMS think you forgot to start the stream to start the space this getting kind of awkward guys yeah we're going to have to learn about some everybody's on the Bitcoin train huh HEK Al Diaz PJ Mike everybody who's just joined hunor H what's this no lur LOD was not the first one to interview me not even by a long shot and they were being total douchebags they deserved everything they

(01:59) got I'm sitting there and going on YouTube and before I go live yesterday like there's I I see this live stream and there's it's about me and they're all just trying to rag on me and I'm like okay they were very respectful sure man lur LOD is a bunch of children and they're not respectful and I will never go back on their show and no one should watch their stuff that's my official stance I think that people that **Reddit** brain don't know what being respectful is sitting there talking smack about

(02:36) somebody on your stream is not respectful guys oh oh I wasn't wasn't talking smack about you I just lost what what was their thing they pulled the old uh I'm not mad I'm just disappointed okay guys that's when I just immediately blocked them that's when I me blocked them and then they try to play I saw their message too of course I saw their message but after they got blocked they cried about it oh it was my it was my girlfriend watching guys it was my girlfriend yeah sure man sure it was

(03:05) Buddy sure it was okay well I'm going to do you a favor here Alex I just guys I don't deal with condescending attitudes so if you come out with me with a condescending attitude especially if you're some like barely 20 something year old like you're going to get yourself blocked right away you can just go ahead and not talk about the case you know you don't need to try to farm engagement off of me for your for your YouTube channel right you know how come I can't join these spaces why won't let me join

(03:59) this yeah lur Lodge was fine but then they got really butt hurt because I **debunk** their like crappy crappy **debunk** attempts and then I just made fun of how like he thinks that the plane was shot down which is just completely impossible and he's like pointing at pictures of Cindy

Henry stuff which is total nonsense and because they got super butt hurt then they decided to try to rag on me I mean you know it is what it is children being children I don't pretend to be like the nicest guy in the world man um I got

(04:50) some Bible verses that address it yeah I mean if you don't do your homework and you get embarrassed like you know just own up to being wrong right they didn't recreate they didn't create match up the VFX thing they didn't even do it in a logical way they're sitting there talking about playing getting shot down it's like man just own up to you're being wrong right like yo yo what's up everybody long time no see it's been a couple days since we've done in space appreciate everybody

(05:19) for hopping in hopefully everybody had a great day look if you want to come up on stage as usual click that request button in the bottom left hand corner and if you want to do massive favor and support the space you can click that button in the bottom right hand corner retweet we got a very special space happening today Ultra Instinct we're gonna be joined here by Ashton Ashton I appreciate you for hopping out um we'll get into that here in just just a moment let me get everything ready here just briefly hey leap man thanks for having

(05:55) me on today I think we're going to have a fun chill space looking forward to it looking forward to reaching out to cryp crypto crowd as well yeah no I appreciate you as well and um this is our first time chatting so for everybody listening here we're going into this really really really fresh typically I like to have like a little bit of but I kind of like that jump is sound okay in the back I'm glad that Timothy Alo yet I need I wasna do that tonight sure we'll have a couple more as on this is as like mostly at

(06:24) crypto and nft space but that being said we do talk about basically everything we try to at least whether it's AI or Tech or emerging whatever it might be um and I caught wind to what you're doing I think it had to be like a week or two ago at this point I can't even remember initially when it was and I was like damn I think this would be an interesting space let me see if I can reach out to Ashton so I think I sent you a message or I couldn't send you a message because we hadn't ever interacted and you didn't follow me I'm

(06:50) in a in a couple group chats and um I was messing in one of the group chats I'm like does anybody know this Ashton guy like how can I get in contact with him and it's like a very small group chat like I think we have like maybe 10 people in there and one of the guys in there was like oh yeah like Ashton follows me I'll hit him up for you so he he messaged you and then you know next thing you knew um you followed me back and we were able to set this up so I think um things kind of work out like

(07:15) that so for people who may not know you Ashton give a brief background overview of who you are yeah hey guys um they call me king of the normies nowadays cuz I was just a basically nobody uh three months ago they also called me Ashton four orbs because the videos we think there might be a fourth orb somewhere else where these plane gets moved to but um I guess I'm just a guy that is now the uh primary uh citizen journalist and investigator starter of

MH370 x what we do is we try to uh validate the story of

(07:48) MH370 the MH370 videos that have reemerged a few months ago and we try to understand the science behind them because if the videos are real then we can explain every aspect of them so that's part of the reason why just a few months ago not even a few months ago like three weeks ago four weeks ago I started a a YouTube account where I just interview uh engineers and scientists like Salvatore Pas who is known for these Advanced propulsion um patents which people uh call UFO patents because when you combine them together you you

(08:21) get what we would imagine to be UFOs uaps Etc um I also interviewed uh Bob Ross or sorry Dave Rossi and Bob Green who are also Engineers uh Dave Rossi is actually a DOD contractor who works on Advanced propulsion mechanisms things he can't really talk about but he spoke very freely uh about the videos and what he thinks are going on in the videos so my own understanding of science has come a long way and I think that the biggest crossover we probably have is in AI right one of the things they talked about on our most recent hard not or

(08:55) hard uh **truths** podcast was could it be possible that AI has becomes sentient and actually uses crypto to fund itself and to improve itself which kind of scared me a little bit um the last thing I'll say is that when we look at the videos I initially one of the key aspects was the rotation of the videos of the orbs how they're uh spinning around the plane I realized right away that we're not looking at like aliens or even humans in these little orbs we're looking at a computer program being run

(09:23) which to me meant that it had to be uh Advanced AI that was uh being used to have these orbs perf L circle around the plane and what has been told to me to be a 120° 0 point sydal pattern essentially like a perfect wave pattern so wait as let me jump jump so much to unpack there I don't even know where to begin sentient AI funding itself with crypto that basically sounds like the crypto industry anyway um you're gonna have to go back even further like 10 steps further elaborate like we're five I'm

(09:55) getting a bunch of DMS and they're like what the hell is this Aston guy talking about so what is the plane like go back to the B here well that was the that was the elevator pitch for you guys to get you guys baited in onto this right and to be intered interested in it um MH370 is a plane that uh went missing in 2014 uh Without a Trace and the key aspects of this is that we never found a debris field anywhere so we've got this 77700 supposedly crashed in the South Indian Ocean supposedly this pilot took

(10:24) it on a suicide route for eight hours um and as we've dug into this case we've realized that very little of this makes any sense and these videos uh of what appear to be MH370 have been out there since 2014 and we found these videos they reemerged uh on the UFOs sub **reddit** on **Reddit** it uh August 7th so this is what four months ago almost at this point and a number of people on the UFO subred started investigating them uh early on we started to realize that these videos uh corroborate the real events of what

(11:00) happened to the plane there's actually coordinates in one of the videos that put the plane that we see a 7 s7200 consistent with Malaysian Airlines flight 370 in the nicobar islands uh at the time and location that the plane actually was there um so what we've learned is that this is potentially one of the biggest conspiracies of all time that the official narrative about what happened in this plane going to South IND ocean which never really made any sense um is just a fabrication and then the question is why why would you lie

(11:29) about something like that right and then we go back to the videos again and we answer that question too is advanced technology that we're seeing maybe uh they call it AGI which I think is like Advanced artificial intelligence we are potentially seeing room temperature super conductivity which is what allows the orbs to create this uh this bubble essentially around them that displaces them from SpaceTime and when you can displace yourself from SpaceTime you have no mass and when you have no mass that means you can ignore gravity which

(12:00) is what they appear to be doing um so that's kind of the the bridge version of it what they are doing to the plane is in the videos again explained to me by uh scientists engineers and physicists is not a black hole it's not an explosive or implosion either um it's an endothermic event that we see in the thermal which is an absorption of energy and this has been described as a phase transition happening to the plane um so if you guys are into science I suggest checking out the double slit experiment

(12:31) it's the greatest mystery in all physics at the moment and what we have Happening Here is there's a unification Theory somehow out there of quantum mechanics and general relativity which is the very small things and the very big things there is an explanation for how these things can merge in our reality and how uh they interact and that it's already been unlocked it was unlocked 10 years ago and they found a way for objects that are even as large as a 777 to act as though they are uh Quantum objects um

(13:03) which allows them to uh move at very high speeds potentially faster than the speed of light you know this is where we come up with quantum entanglement non-locality and quantum teleportation so these are the kinds of scientific Concepts that we are dealing with and we're dealing with this conspiracy but what becomes bigger than the plane missing you know as sad as this is to say because there was 239 Souls that were on this plane families got no answers witnesses that were all discredited because they had to cover up the

(13:32) official story and a person who's a leaker who potentially went to jail even bigger than all that is the technology is being hidden from us and I think that's where the crypto side can kind of find some uh overlap which is that you know the the fact that they cover this up kind of makes us essentially slaves to the system right if we have access to this technology the same way if we have access to our own money through crypto then we are no longer dependent upon the government right right um so that's I gu

(14:01) the introduction to the story wow okay so there's a lot there so I want to even go back further so why did you take this upon yourself you even saidt apprciate kind of maybe

accidentally become the citizen journalist who's in charge or at the head of this entire report and investigation why did you feel it was important for you personally to spearhead this yeah and I think the part where I got really advoc uh activist about it is when uh the **Reddit** it was a sub**redd**it was able to prove that in the satellite video that we were looking at

(14:34) a citric session that was logged into the actual spy satellite database via the mouse that we saw in the video having 24 frames per second consistent with a citric session but the background was six frames per second so we see this discrepancy and this discrepancy is explained by someone actually logged in the database and in addition to that I could tell at the same time just by looking at it that we weren't looking at somebody who like took a picture with a camera phone or even had a camera set up behind them right they were doing an

(15:02) actual screen recording so I'm looking at I'm going wait a minute did someone like do the not necessarily ultimate sacrifice because they're not dead I don't think but they took a sacrifice to leak this footage knowing they would get caught 100% and that's when I decided like okay if someone's going to make this sacrifice and somebody needs to speak up and people asked me why would you be the one to do this and I'll be perfectly honest throughout this whole space but I always try to be as

(15:28) transparent as possible possible is that for one I have a security clearance with the government that is not related to any of this I'm not trying to disclose the security clearance to make you believe anything I'm saying the reason why I disclose a security clearance is that you realize that people that have tried to disclose this type of stuff I think about the people like Bob Lazar whether or not you believe he's accurate or not they get discredited right that's how they fight back they don't kill

(15:51) people as much anymore although some people tell me they do um but what they try to do is they try to say that you're crazy or something like that or you know and so with the security clearance it means that I'm not rushan disinformation like US government has checked my background out um I'm not crazy they have you know they have ways to cheuck make sure your psychological profile is fine I'm not a criminal that go through all of your criminal history so it gets rid of a lot of different attack venues

(16:15) for somebody who' be disclosing this the other thing is I don't have a lot of connections that people can use on me um I'm not married out there I don't have kids so they couldn't like you know threaten my family or anything like that and I looked at the videos and the science of it and I realized the implications early on which was what I just kind of told you guys is that this type of Technology just room temperature super conductivity alone which has started to I think become uh in the

(16:42) Zeitgeist as of Ik99 will change everything so if you think of if I can relate it back to crypto you think of mining crypto right and that you need all these servers to mine crypto and when you use servers to mine crypto a lot of it's about how do you deal with the heat like if you have a database Farm it's like how do you manage the the Heat and they have these big servers

out uh uh warehouses of servers out there and most of it's just about how do you air condition and cool them well with room temperature superc

(17:09) conductivity your phone no longer heats up computers might not heat up anymore microchips just might be room temperature the entire time what this means is you don't lose any energy from the loss of heat transferring energy over long per over long distances and what this can do is it can make mining crypto extremely efficient very efficient um so that's just one application of it now can also lead to you know things like floating hoverboards like Back to the Future um and you know uaps like we see them

(17:39) floating around the sky new forms of propulsion so I think that all this stuff is vitally important for advancing the human race and that's why I'm you know dedicated to it I guess wait hold up wasn't the room temperature superconductor weren't those proven as not like real or like like theoretically possible but the one from South Korea was not like we didn't get any conclusive evidence that it was that that it was functional I what did you hear about that yeah and I'd say that if this technology is real then there's a

(18:08) very real disinformation campaign to try to keep it from us and it's very important that if that lk99 is real that the West doesn't learn about it because otherwise it's going to unlock everything that we're seeing in these videos so I've been proving that the lk99 is Real by simply posting videos of flux pin uh which I'll go ahead and put in the chat here in a minute as well which flux pinning means that you have a metal or a substance that is partially superconductive and partially not

(18:36) superconductive and what this means is the magnetic uh lines are essentially able to go through part of it but they're wrapping around the superconductive parts and then when you put it over a magnet it will float freely suspended in air and this has been proven several times over on videos so what seems to have happened in the west is that and this is how disinformation works is that they push out and say oh I wasn't able to reproduce that it must be fake and then everybody screams it's fake it's fake

(19:03) it's fake and then something called social contagion takes over the same way you learned that you think it's fake but I'm I almost promise you have no idea where that source of that information comes from right because we are social creatures and we spread information amongst one another without ever digging into okay where did that come from who did the person who actually did that did they recreate accurately did they get the recipe right you know um simple questions like this and I think that's

(19:29) where I would challenge us at all to think very critically about the information that we receive um and I call it kind of the **Reddit** effect which is nobody really reads past the headlines right or the first top comments and then we have this ability to kind of adopt those beliefs as our own now I'm not saying that necessarily lk99 is fully legit one thing I've learned is we don't even necessarily need meta materials for room temperature superc conductivity uh one thing I've learned from the engineers is that we

(19:55) might be able to induce super room temperature superconductivity in regular metals as well um but I do think lk99 is legit myself so that's just my belief though I can't prove it well shout out to lk99 okay so look let's say it does exist um which look I'm I'm always a skeptic um when it comes to a lot of things and I think that's what makes this conversation interesting why why are they trying who's trying to hide it from us like you're saying that they're trying to hide it from the West like who is who is

(20:23) that yeah that would be the government for sure so this is all definitely being covered up for defense purposes right whoever controls the technology if we look at the MH370 videos we're talking about let's just be frank teleportation that's not the only implication of this technology this technology has several very important implications to it um faster than light communication force fields and cloaking Annihilation so we actually think that this technology could completely wipe out any nuclear

(20:53) missile that shot at us the Perfect Defense essentially that's just for starters then we're talking about fusion power if you can create this bubble that displaces these orbs from SpaceTime you can actually have the power of the sun inside one of these bubbles that can contain it um that allows for fusion power to be stable and miniaturized you can actually even have free energy that you can have an open system that puts out more energy than it takes in as hard as that is to believe that you can actually borrow the energy from the the

(21:23) vacuum of SpaceTime and then lastly the biggest most important part is doomsday weapons uh if you read the scientific paper from salvator Pas the last paragraph you that where he describes all this technology high frequency gravitational wave generator the last one is you could use this technology to destroy a planetoid or asteroid now he's being koi there because if you just scale it up now you're talking about destroying a planet scale it up even more now you're talking about destroying the Sun so there's a

(21:52) couple implications one is that this is a trump card and whoever controls this technology controls the world so if it's the United States you don't want necessarily China or Russia to have access to technology and this gives you motivation to cover it up and if room temperature superconductivity is the key then you need to cover that up and then the other part of it is what if this gives a capability for a single person a terrorist person who has ill intent to destroy the entire planet how long would we even last right I think

(22:20) that's what the military fears okay ba Carter thank you very much there's so much okay so basically this is the the that that you're presenting that something like lk99 exists um room temperature superconductors and this allows all of these things like the implication of all these different Technologies and and applications that you mentioned and what does that have to do with them using it on this specific plane so why did they use these orbs to teleport the plane essentially like why why would they do that what's the

(22:52) purpose like you're saying to keep the technology people was the technology on the plane like what's the story there yeah it seems to be tied to the 20 freescale semiconductor

scientists who are on board This Plane way too many people for one plane almost every big company has a rule you can only have three or four people from the same company on the plane just in case of situations like this where something were to go wrong uh we've been able to tie these people directly to us defense and Aerospace several different ways um

(23:17) they put out a press release saying that they were uh supplying R RF power needs for us Aerospace and defense there's uh rumors if not necessarily 100% accurate of microchips they're extremely tiny that have all sorts of uh purposes one I talking to one uh person who was a podcaster said that they could actually have room temperature superc conductive chips they're using quantum computers and when we're talking about Advanced a AGI we're talking about potentially uh quantum computers being necessary for

(23:47) that and then we also even found which I didn't think we would ever find anything like this but a 2005 National Security Agency report about commercial emergence of room temperature superconductive chips and it references freescale semiconductors nine times so we have 20 Engineers from this company on board This Plane where this company is directly tied to us defense and I would argue that the motive then is that either you are saving these people in a doomed plane situation or this is an Espionage situation where you're

(24:16) preventing them from going to **China** because even if you set back **China** 10 years from this like whoever controls this technology just simply has military supremacy of the world and then the last theory that I think has some plausibility is that if this plane is doomed perhaps this is a situation where you're just testing this technology out maybe it's not proven yet and you're like well they're doomed anyway we might as well give it a go but my personal opinion is that they're trying to save

(24:40) these people that are very important thank you might appreci what was wrong with the plane why did the plane like why did they have to save it in the first place so the real story of this plane is the lithium ion batteries on board it 221 kg that's almost 500 lb lithium ion batteries in the cargo bay they're actually made by Motorola which is where freescale semiconductors broke off of in 2004 now I think that's just an incidental uh fact but 19 different Witnesses all tell the same story Mike McKay when this plane goes dark he sees

(25:14) it on fire and this is where these lithium ion batteries would have ignited and if you watch lithium ion battery fires I'm sure some of you guys have seen them extremely dangerous events they actually smoke then they explode then they're on fire and you can't put them out it's called Runway lithium ion battery fire I didn't even know how dangerous these were until I started investigating it turned out that a bunch of planes burned up in the years before this and then the year after 2015 the

(25:38) FAA Outlaws them in the passenger in the cargo bay of passenger planes because of how dangerous they are and we got 500 lounds of them there we might as well just load this thing up with TNT now the thing about it is that these cargo bays are actually built to withstand fires up to 1,700 degrees fenhe or 900 de C so from talking to engineers and experts it's actually possible

they could have maintained or uh kept this fire at Bay temporarily for even over an hour which is about how long we think this plane

(26:05) needed to be in the air in order to get to the position where the videos happen and so they're using all the Halon fire extinguishing devices onboard the plane they're putting the fire out it's coming back up again over and over and over again and what this is doing is it's causing a chemical reaction in the hon uh extinguishing devices which is releasing bromine a hogen gas which is causing the plane to have this orange glow and there's actually a wit these 19 Witnesses including one who sees it

(26:31) start on fire some that hear the explosion on the coast uh eight fishermen on a boat who seen flying really low consistent with it being depressurized but the pilot trying to give the passengers enough oxygen to be able to breathe and then right at the point of where our videos happen a woman Kate t on a boat who's going to pette Thailand sees the plane glowing orange flying low and descending consistent with what we see in the videos where this plane's flying low it's descending and it looks like it's attempting an

(26:58) emergency landing in the ocean um and then who knows if they even knew what was about to happen to them but what I've presumed from the story that what we've seen in the videos and been able to deduce we think that the US government deployed this technology which allowed them to potentially put the battery fire out by absorbing the energy in the batteries because of this endothermic event this absorption of energy uh and while simultaneously moving it to another place on earth now I can't say exactly where um we have

(27:26) some speculative thoughts about that but that's kind of what we think is happening with this plane and that's why we also don't think it's non-human intelligence in these videos it looks like it's our version of like if you saw uaps out there you know flying saucers Etc like we like figured that out we're like okay let's make our own little orbs here that can you know do stuff that's similar to that okay why is it hard for you to believe and I'm I'm by the way I'm just

(27:53) I'm learning a lot about this in real time as well um do you think it's not possible possible that they just crash into the ocean like what makes you think that that yeah it's completely impossible actually um so here's the reasons why I didn't crash into the ocean in the South Indian Ocean here I mean uh I've got a list of evidence that's currently not pinned my profile it used to be pinned for a long time but the evidence for why didn't crash into the ocean is no debris field found first

(28:17) of all that's completely impossible doesn't matter what angle this plane goes into the ocean it's going to rip apart uh Landing in the ocean is not like Landing in the Hudson River this is not a Sully slen Burger situation um the plane is going to River part if so there's going to be bodies there's going to be pieces of the plane luggage floating everywhere the debris field would be visible from space for days it would be tens if not hundreds of miles wide um this was the most expensive and

(28:40) extensive search in human history they searched with at least 42 planes and 39 boats from over 10 different countries and didn't find one piece of the plane the let me repeat that the official search did not even find one piece of the plane and they searched for three years the debris that did get found was washed up later on found by random people on the shore which accounts for less than 1% of the plane there was no black boxes found so they claim they know based on these pings where the plane went and yet they didn't find any

(29:10) black boxes when they searched everywhere there's three different acoustic systems that would have heard the plane crash into the ocean the Sosa system the one that heard the Titan sub pop recently if you guys remember the Titanic situation where that sub went down they lied they they heard this the sub pop the Navy did the first day and they didn't say anything for 5 days while every uh Media Station had these oxygen counters running on TV this system was active back in 2014 and would have heard that the plane crash Western

(29:39) Australia and Diego Garcia both have hydrophone systems as well that would have heard it and have no acoustic detections for a plane crash in the South Indian Ocean India in the nicobar islands Indonesia and Australia all have radar systems none of them catch the plane even though the plane theoretically goes right between through all these radar systems it's on an active shipping route nobody sees the plane it supposedly crashes in the morning as well nobody sees a plane crashing in the morning no debris field

(30:06) nothing people say well the ocean's really big uh yeah it is but this the the official flight path has the plane running out of fuel there's actually nowhere else for the plane to go it's not like it had enough fuel to fly to Antarctica or something like that so they literally searched everywhere the plane could have possibly gone given the Assumption of fuel exhaustion uh there's four emergency redundant elt emergency transponder beacons on this plane that only activate during crash none of them

(30:34) activate 19 families of the victims signed statements begging the government to look into the fact that the victim's phones were able to be rung for up to 4 days after the event you cannot ring a phone if it's at the bottom of the ocean heck even if it's like a few miles off the coast the cell phone towers don't go that far the phone's die under within 30 minutes of being underwater and saltwater one person even proved this live on TV I posted it to my Twitter uh several weeks ago um so that's the the

(31:02) strongest evidence for a why we can say conclusively this plane just didn't crash into the ocean something else happened to it so what about this theory that um they're saying that the pilot basically flew these same routes in his home simulator simulator about that that's been pretty much **debunked** as well even by the people that think the plane win in the South Indian Ocean is that it what they do is they match up the route of mh150 from that goes from Ura Jetta which is in the Middle East and they

(31:31) claim that this is partially similar to after the plane gets past panang and flies to the Andaman ocean Andaman sea which is just a slightly Northwest route what they forget to tell

you is that the date stamps on these uh this route that they claim as the suicide route is February 2nd and he was actually slated to fly mh150 to Jettan on February 4th just two days later he was practicing his route to Jettan he wasn't practicing a suicide route and then they have like two version points this is essentially like saying there's just two like

(32:00) coordinates that were in his uh simulator this uh custom simulator that he had that were in the South Indian Ocean and that somehow proves that he went down there like that's not even that's barely circumstantial evidence maybe he he loved flying this guy had 18,000 flight hours he had an elaborate home custom simulator in there one of the points that he had was Diego Garcia military base which is also the place where everybody on the conspiracy side thinks this is plane went so there's just as much evidence that this was a

(32:28) suicide route as there is that this was a route to fly to Diego Garcia military base okay so all right let's skip forward a little bit here these orbs so your so your theory is basically this this plane was teleported out of the air and these orbs that were seen I guess in these videos or whatever had something to do with it I mean what do you think about these orbs yeah uh so the orbs I think are probably I if I had to just guess I'd say Lockheed Martin technology third party contractor with the

(32:58) Department of Defense uh probably like the highest security clearance technology that's out there because of the implications that I mentioned before where do you get that from uh I mean from ufology Mostly but there's a few big companies that are Aerospace and defense contractors so Lockheed Martin's one of them North Grumman's another Boeing is actually one themselves Bigelow Aerospace is one there's probably others that I I don't know about but people that in ufology are very familiar

(33:26) with the idea that these companies were theoretically given UAP craft one time in the past because it shields the government from **FOIA** requests Freedom of Information Act requests you can't force a private company but you can put them under NSA's non-disclosure agreements which makes it so that they can't speak about anything that would be classified and so this was the most logical place for this technology to be developed um the government itself is not very efficient at uh reverse engineering not efficient at keeping

(33:55) information secret or really anything in my opinion so this is why you reach out to these third party contractors to do it and now a lot of people aren't familiar with these types of companies either because their commercial product their commercial footprint is basically non-existent they almost wholly exist to be subsidiaries of Department of Defense and Military purposes okay so what are these orbs like where did they come from like let's let's say they are made by Lockheed Martin or some other group what doesn't really

(34:22) matter um where are these orbs like where's the actual proof that these orbs exist and teleported This Plane well I mean that's a bit of a loaded question I think the answer is we've got two videos um you know I think that the whole body of evidence that we've put forth is more evidence than probably any court case in the history of the world people get convicted of

murder for much less evidence than this in general 19 Witnesses two videos we were able to uh figure out the satellite that was potentially in the re region

(34:50) that was sending the data to build the cber system which is a Google Earth uh video playback for the military essentially that's pers Global persistent surveillance monitoring if you just Google cers sbirs space based infrared system and go to press the videos button you will find locked Martin's website there they are again locked Martin and you will see uh an example of this in terms of them scanning the Earth all the time so these orbs are going to be what we see when we see this orb this we're seeing a field

(35:21) it's called a non-radiating barrier so this is where they are able to break down SpaceTime using very powerful electromagnetic uh pulses we believe that is accelerating uh the uh I'm going to probably say the term in correctly because I'm just trying to get better at the science here but it can essentially break through the fabric of SpaceTime to create this field around the orb now it uses a very specific pattern for this it's called a toroid and the toid is like a donut and you take a dut and you turn it on its side

(35:51) and you stack it next to other donuts and make another dut out of it and you can create a shape that can focus and uh amplify these electromagnetic fields so it makes it so that when this interaction occurs the uh I think I'm going to say this wrong but the electrons they kind of get stuck to a point and focused and this allows you to amplify this energy so this is how we get things like creating enough energy that you can break down the vacuum state of SpaceTime as well as some of the other applications that I was talking

(36:22) about which is uh free energy or fusion power and that's why uh the room temperature super conductivity is really the key to all this is that once you get to a point where you have room temperature superc conductivity uh I'm trying to think of a good analogy it's almost like having a cheat in a video game where now all of a sudden you don't have to put as much energy into the into the system to create a powerful effect that's being Amplified that's coming out of it okay so why would they do it in such

(36:49) a public way though you know what I mean like it they're trying you're saying they're trying to save people that were on the plane because these are the world's leading experts and and the superconductor stuff um like why do this in in such a public way yeah I don't think they were doing it in a public way I think they were doing it in a very private way and they didn't expect these videos to come out I'm 100% sure about that much uh I think the bigger question is why take this huge risk I mean it's a

(37:12) huge amount of risk this can't be something that's about money can't be about whatever is in the cargo either plane was most likely doomed so if you trying to make it disappear you just let it crash honestly um like I tell the people like this is the trump card too right so if this is your trump card you know this isn't the kind of thing that you want to risk um in terms of like having **China** or **Russia** figure this out and part of the reason why I think that I haven't probably been silenced in a

(37:36) more overt way is because it's been nine years excuse me if we had can figure this out which is I'm just a normal guy and I've got a team of volunteers but we just have a Twitter account Google access if we can figure this out then **China** and **Russia** intelligence probably figure this out years ago and that may be why they don't care as much about this information coming out although they're still covering it up for for sure uh we even think somebody went to prison for 6 to 9 years over this um so

(38:02) there has to be a major reason and that only person who can answer that or only people is the government themselves in terms of why they took this risk but again I think it goes back to the the scientists and Engineers who are on board that's the most logical straightforward answer okay so why hav they like we've had other instances in which really important people have been on planes and there's been issues and unfortunately they've lost their lives why do you think that they specifically chose to do

(38:27) this now you think it's just the people that were on the plane were so important to this that they couldn't afford to lose them so the government employed teleportation technology to teleport the plane yeah I think they might even have more than just teleportation technology like I said you know this leads to a lot of different things as well so um you know like perfect missile defense but teleportation technology is one of them and you know they're most likely trying to put out this emergency event this

(38:52) fire these people must have meant a lot to them and uh but again I I can't speak speak to the motivations all I can really do is present the evidence and let people come to their own conclusions on it some people think that nope this must be non-human intelligence some people think that uh you know there's no way the government would be this benevolent right there must be a benevolent purpose so you know that may go to the Espionage scenario I can't say if whether or not maybe the pilots were incapacitated and this was remote

(39:18) controlled that's a theory that's out there can't tell whether or not the fire was accidental or incidental uh or sorry incidental or um planned right but you know I can just tell you my opinion on that on the stuff in general but uh I think we've got a pretty comprehensive story as to the incred uh it you know being an incredible story I I agree it's it's it's hard to believe that they would do something like this and it's hard to believe that we have teleportation technology but the more

(39:46) you dig into the science uh I think you'll see that it does check out and I'm very confident that as time goes on all of this will be Vindicated and and made public now I hope it's in my lifetime but I think the government has a very slow drip long-term plan for what we call disclosure and I think a lot of people and I see a lot of people in the UF UAP community in this space right now I want to thank you guys for being here um I think they failed to a lot of people not the people in this chat necessarily but UAP disclosure in

(40:14) general failed to see the full implications of it which is that okay if a species can go from another star to our star and visit us they're not using rockets for this right they're not gonna take

a thousand years to get here the speed of light even if you go at the speed of light the nearest star is four light years away that means it would take four years of the speed of light to get to us you need to go faster than the speed of light and what that means then is that we need to have some type of Technology just like teleportation what

(40:44) teleportation means is super luminal speeds F traveling faster than the speed of light non-locality quantum entanglement right and these Concepts have been proven but we haven't gotten to the point in 2023 yet where we can understand a full comprehensive theory of they call it the Theory of Everything how you can uh reconcile quantum mechanics with uh the macroscopic general relativity and that's if we think about that we think of the implications then if you can make something go faster than the speed of

(41:16) light uh doomsday weapons are really within the realm of possibility as well as all those other things I listed before so it comes down to can we handle this technology do we feel safe enough that a single individual is not going to destroy our whole planet our whole civilization and I think the government says Nope we don't feel the safe enough for that and that's why they they covered up and from what I've been told I've been making contacts and sources is that anybody who goes out there and

(41:41) tries to experiment with this themselves tries to recreate these on a small scale uh if you create a gravitational wave they can detect it and that they come knocking on your door and you either get told to stop or you get pulled in on the inside I've also been told that scientific paper exist where the big one is mass reduction which is essentially when you create this bubble uh that your mass gets reduced to zero because that enables everything as well and this again comes from potentially room temperature superc conductivity so that

(42:10) there's scientific papers out there that already prove that we can do this and they get classified and nobody's allowed to see them and this is why from a public perspective we remain ignorant to it and why people think it can't be possible and why aren't where are the scientific papers to read it well they're they're kept classified they're not allowed to come out to the public so that's just what I've heard on that front I'll just tell you you know fully up front that's um the stuff that I've

(42:34) heard from people no I appreciate that and you know for the record I think a lot of this [REDACTED] does exist and that we don't know about it we've talked about on the space a lot um it like oh look teleportation all these things can probably exist I think like theoretically um there's been a lot of signs and evidence to prove that these things might be possible in the future I have no [REDACTED] clue about superc conductors or any of this other I just be honest with you I I don't know anything about that and that's why I'm

(43:02) asking you these questions because I'm learn like the first time like any like a lot of other people um if you want to know anything about nft projects and what's a rug let me know I'll definitely teach you on that but with this it's it's very new to me um what has been the biggest push back for you because like you're going on all these different appearances and like all these

people like hitting you up all over the place you become kind of a kind of famous when it comes to this and um you know deserve

(43:26) so you put in a lot of work and a lot of time to to put all the evidence together what has been the biggest push back that makes you kind of sit back and say huh maybe maybe I could be wrong or at least this person has a good point yeah um no I think that I I definitely have doubts a lot in the story I think that at this point though we've put together such a comprehensive story that in my mind there's no doubt that the the videos are real I mean finding the leaker was really the one of the biggest smoking

(43:53) guns is that the evidence for Edward C Lynn being the guy that **leaked** this stuff is almost completely undeniable I mean um but you know I think that the the people that ask the questions end up just leading to more authentication of the videos one of the biggest ones was the cber system we had isolated the satellite there was a satellite pair staring right down at the nicobar islands like we've proven the US government at spy satellites staring right at the plane where the plane supposedly turned in the South Indian

(44:19) Ocean so they know for sure whether or not it did or not go into the South Indian Ocean and said nothing we know that for sure and people said well the satellite's moving really fast you know how could this satellite be taking the video right and the answer is it's not it's just sending data to a computer system that is producing a realtime video 3D playback Battlefield map just like Google Earth right and this is proven because we're seeing six frames per second where we're seeing six frames

(44:47) per second because it's a computer program that's producing a huge resolution widescreen field of view and it can't do that at a higher frame rate because it's pulling data in real time from a a satellite um and it can create the color whatever color it needs this is also why we don't see the atmospheric Distortion when we're staring at these videos because it's not really actually stering it's like a recreation of it this is also why we see the two axis coordinates in the bottom left the

(45:12) reason why we don't see three axis is because it's not tracking the plane in the third dimension which is the up down Dimension it's just X and Y on a and it's pointing at a point on the Earth itself and so this is how they can move it around and theoretically pull back video playback of anywhere they want on the whole globe at any time they want they can go back and say oh where was Ashton last week outside of his uh house right and and look at me so this is probably one of the most startling

(45:40) revelations in general this is where like kim.com started to get interested as well because people that look at it from the global you know government surveillance can realize what the implications of this stuff are um you know people have put a lot of **debunks** out there some people think we're looking at '90s video Gam game Graphics some people think that there's you know similar frames Etc out there but we've been able to refute every single one so far pretty conclusively in my mind at least and the biggest thing is that we

(46:06) put up a \$145,000 bounty 100,000 from kim.com 20,000 from the investigate Earth podcast Chad and Sherry who are amazing people and then another 25,000 from a follower uh of mine who ran for higher office which means either senate or congress who I've spoken to and actually like really believes in the case so that adds up to \$145,000 to find the supposed hoaxer of these absolute masterpieces and prod produce the source files because like just like mve making like a CGI and a movie right you don't you don't produce the end product on the

(46:42) first try right you have a bunch of work in terms of building up to that so this person would have a hard rifle so if they didn't apparently want any credit for some reason for the last nine years but now they can get 145,000 and presumably any job in any Studio on the face of the planet given the amount of work but I think that the reality is that that's never going to happen because the videos are are just real as hard as that is to believe and I was in your same spot I'll tell you as well just as a quick uh story is that the

(47:09) first couple weeks when I was staring at this and I'm going wow this this is real somehow uh I couldn't believe it myself I was having such hard ontological shock that I actually asked my parents I went over to my parents house and I'm talking to them I'm going guys I have to ask you something like just don't think I'm crazy but like is this The Truman Show is this like a prank is this like is my whole life a prank and because that felt more plausible to me than having there being like teleportation technology

(47:34) that's hidden by our government out there um but it starts to fade after a while and you start to come to terms with well you dig into the science you're like okay wait this this does kind of check out you have people like Salvador Pas reach out to me and go I want to do a podcast with you and I'm like I don't even do podcasts but this guy wants to talk to me because he's looking at these videos and he's can tell that his patents are on the video right um so that's the part where you're

(47:59) like okay this isn't The Truman Show this is uh somehow real um but yeah yeah it is bizarre it definitely is bizarre um so you you don't think that it got shot down in anyway no no chance I mean it getting shot down is one even more less plausible than it crashing because the debris field would be like hundreds of miles if it's shot down um just like with uh I'm trying to think of any other examples that recently um but even like uh ua93 on 911 which you know the uh well we're going to go with the

(48:34) official narratives on this one at least uh that you know that these Heroes fought back against the terrorists who were flying the plane like the debris field was I think over 100 miles on that with it just crashing and if it was in the ocean that's going to spread out and we've proven we have satellites everywhere um **China** in fact hacked the Malaysian government the next day stole the crisis medium minute notes and a supposedly classified information about MH370 like what would be classified the next day the answer is **China** has

(49:05) satellites too and they knew this plane didn't crash in the ocean so they were like okay we're going to find something but yeah the idea that the plane was shot down you could never

hide a debris field from a plane being shot down um another one that was shot down uh sorry go ahead what about the and sorry to interrupt you what about the families right so yeah all the people that on families mothers Brothers Sisters Wives whatever it might be like what are they saying about this yeah they've said

(49:31) nothing not a single family memb has reached out to me uh I think most of them have been silenced in one way or another um and I don't mean being killed and I want to go ahead right now and tell the families that they have my deepest condolences my only intention is to try to get the **truth** for them for the witnesses who were discredited the pilots who were vilified who definitely were not suicidal and for this leaker who spent potentially six years in prison where we ignored these videos um but what I found found is that a lot of

(49:56) them were forced into settlements they initially all got up \$50,000 for non-conditional um but then after that you would not believe how little money they got they on average from my investigation got about \$30,000 each that's it from this for their for their family disappearing um and the reason for this is that most of these cases actually all the cases were either tried in **China** or in uh Malaysia because there was a case in the United States in 2016 that that I think over a hundred of the families tried to get the case in

(50:29) the United States where they potentially would have got millions each um and it was dismissed after two years in 2018 and it was dismissed because they argued that Malaysia is the better place for it under some uh law regulation says okay whichever place whichever country is more applicable that's the only place you can sue even though boe's an American company and this is where it got the conspiracy I almost started falling down the rabbit hole myself here because I go look at who the judges who dismissed it

(50:59) the name is Kenji Brown Jackson future Supreme Court Justice who was nominated under Biden in 2020 um and that just seems very like how how could that possibly be the one Justice that gets nominated to the Supreme Court just two years later seemed very unusual to me especially because if these videos are real now the United States is directly implicated in The Disappearance of the plane and then for sure sure the right court is United States over Malaysia you know Malaysia was just the airline the people that

(51:31) made it disappear would be the ones who were directly implicated and should be getting sued um so the families when they took the settlement and this is we can actually we had some uh statements from uh Jang he uh I think his name is I'm probably butchering that if so I apologize um he's one of the few who's still fighting back and there's actually a news article just a couple weeks ago about how the case in **China** with like the last few people they're actually asking to have the search come back up

(52:00) but anyone who signs who signs a settlement now basically is forced in the silence you can't speak out against the case or Malaysia anymore or uh The Airliner and so what's happened with this is like over the years like a lot of these people lost their income earners and their families so imagine the pressure they're under to take the settlement especially when they've

gotten no official answer and there's no hope for an official answer even though they all know the official **truth** is that

(52:24) the the or the official story um by the government is that there's no answer for why the plane disappeared the narratives that we hear about this South Indian Ocean are all just narratives same with the pilot suicide thing none of that's official from any official statements um and that should go to show you how weak the case is for this uh South Indian Ocean crash and how weak the case is for this suicide narrative it's just narratives things that we're told to believe not anything that's

(52:53) **truth**ful all right so what are the implications of uh of this Tech like this Technologies this teleportation so on and so forth and and I see a lot of comments in your comment section right now um saying that I'm trying to stump you I'm really not I'm genuinely curious um what is I mean like what could the implications of this being you know the public knowing about this what do you think um yeah I mean the implications are pretty big I mean first of all it change everything about our way of life

(53:20) you know I think just room temperature super conductivity would change everything about our way of life just that right from some of the implications that I was mentioning to you I think it would change everything about crypto frankly um I think crypto imagine if crypto becomes like infinitely efficient and now you can mine crypto for basically no cost you know it probably would destroy the value of a lot of cryptocurrencies um it'll change everything about **Computing** if we have quantum computers that can come from

(53:44) this I don't even know what all the implications of that are I think that advanced AGI they call it I still don't know what AGI exactly stands for but just means like super Advanced AI that's basically achieving singularity um it makes me wonder if that's not possible even makes me wonder if we couldn't have a conscious Ai and create Consciousness with this type of Technology um but the bigger implications of the geopolitical ones like really doomsday I think is the biggest one is that you could have like

(54:10) almost James Bond super villain level uh situations happen where a single individual who uses this technology for nefarious purposes can not just destroy a city we're not just talking nukes anymore right we're talking about actually blow up or I I don't know the exact word for it maybe turn our Earth into a black hole and destroy our entire planet in that sense and if they can do that then this is why I ask people that are disclosure Advocates if this was possible if a single person could uh eliminate the entire Earth is it still

(54:43) worth having disclosure most of them come back and say yes because it's still up to us as humans to you know destroy ourselves or seek salvation however however you want to put it right but this is why want it to be open so that we can have these discussions so that we can really come to terms with the real implications of this technology and figure out how are we going to disclose this technology without destroying ourselves maybe the answer to the firmy Paradox and the great filter is because any sufficiently technologically

(55:12) advanced civilization wipes itself out and if that's the **truth** then we need to be very careful we do this technology and that would also explain why the government doesn't want us to have it they don't trust us oh I don't trust them now me too what is um you're absolutely right about crypto I think it would just destroy I mean if everybody could just infinitely mine and there was no cost of doing it I think it would I it just like destroy crypto in in so many different ways um now you mentioned earlier and I want

(55:41) to talk about aliens in a second but you mentioned at the beginning of the space that there was a theory that was brought up to you that essentially maybe AGI artificial general intelligence has something to do with this and also maybe AGI is already funding itself with crypto which honestly dude I would not be surprised I mean look at everything that open AI recently and um you know if we're now just getting something like chat GPT and uh the functionalities that it has I mean God knows what the government and

(56:09) all of them have have had access to for the past 20 years all right so talk to me about that theory like AGI funding itself with crypto and is it funding itself with Dogecoin yeah I mean that's a great question now now we're just kind of getting theoretical stuff but this is more fun right so we've done all the hard evidence stuff and we've had the ontological shock sinking a little bit um the AI part is the one that freaks me out the most man just even from early on I had a this list of all the possible

(56:34) narratives and there's also this program called the sentient program that was also Declassified in 2011 or 2012 it actually controls all the satellites it's an advanced AI so and now you just told me what that stands for AGI Advanced general intelligence um and it controls and operationalizes all the satellites and when I saw that I'm like man I wonder if AI already won right like if we we think of like things like the terminate like Terminator movie where it's like oh AI is going to Nuke everybody doesn't it make more sense for

(57:01) it to like stay in the background stay hidden right and just control the entire world uh through like more nefarious indirect means as opposed to starting a nuclear Holocaust right um that's the part that scares me more and I think about movies like The Matrix um which may have been preminent uh so but yeah I mean I can't say exactly but it does creep me out that like even The Avengers movie with uh age of Voltron where it's like yeah if you have this Advanced AI it's going to be able to have as much money as it

(57:31) wants as much resources as it wants and then probably what it' be doing is just trying to advance itself right until it reaches that Singularity point and the part that scared me the most from talking with uh Dave Rossy and salvator PAs yesterday was when they were talking about well what if the AI figures out Quantum and macro unification and now the AI can destroy the planet or really anything it wants ESS stuff that we would consider to be magic right achieve a point where it can create free Power and free energy for itself um I I really

(58:03) believe that the number one threat in the future is artificial intelligence I mean I 100% agree with you there I think we align there um I me it's incredibly scary what's going on with this

stuff um and I think we're going to face a future in which 99.9% of everything that happens online will be indistinguishable from like between humans and AI we just won't know and I actually think crypto might have a huge part to play in this in terms of verification of human identity right like that's even

(58:31) something like worldcoin whether people agree with that project which is you know Sam alman's thing whether they agree with it or not it's an interesting use case of the technology um also somebody in your chat said whoever made the plane disappear can they make the nfts disappear too I hate you mfers um okay so following from there um what about the alien Theory here right so I actually personally believe that I just think it's statistically impossible that aliens don't exist I mean we are a speck

(58:59) a fragment tiny piece in in this universe there's just no way that other biological life does not exist now whether it's as advanced as human or maybe like way more advanced I have no clue there but I also think that we've probably already made contact or contact I just I think it's just impossible that we haven't um and maybe it's not in the in the way that people see it like ET coming sort of thing maybe it's a little bit different um but like what about the alien Theory here do you think that you said this is

(59:28) not alien technology why do you believe that well not necessarily that's not alien technology but I don't think that we're looking at aliens here and I don't think we need uh aliens to explain what we see in the videos at all other than it's hard for me to believe that we would be this secretly Advanced without some assistance and that's why I think that this will corroborate the sworn statements by whist David grush to Congress U now the difference between him and me is that you know he's

(59:54) actually worked potenti ially and been read in on you know supposedly body retrieval crash retrievals and um you know the UAP technology in general and that means he's under an NDA where he can't speak about any of that stuff the benefit that I have is because my clearance is in healthcare completely unrelated to this stuff I don't have any ndas so anything that I discover from the public knowledge or any anywhere honestly I am under no obligation to be quiet about it uh now I do be quiet about some stuff because I don't want to

(1:00:22) damage my sources but everything else I learned from the public perspective I'm just singing like a canary here um my personal opinion is that uh you know I don't I don't know that aliens are are visiting us they could be for sure I think that a lot of the uaps we see are probably either our technology or **Russia** or **China**'s technology even going back to I think you were even mentioning the February shootdowns earlier of the **China** spy balloon but then there was like three other shootdowns or four other

(1:00:48) shootdowns after that they were like not nearly as politicized or covered in the media um and I think that that stuff could be our technology if we found this we could easily have found it from archaeological digs like it I first of all I agree with you there's got to be aliens out there somewhere right the universe is too big we're not the only life I think in the universe

there's other life out there somewhere the only question then is can they get to us or not I think this technology makes it so

(1:01:14) it is feasible for them to get to us but it does seem to just make more sense that they would have been here before us we would have dug them up we would have found these archaeological digs we find these uaps we figure out how they work but my favorite Theory when it comes to non-human intelligence is the ultraterrestrial hypothesis which is that they are like our cousins that they maybe either come from the oceans which you know the ocean is more vast than even the land that we have and we know very little about it uh or potentially

(1:01:42) even could be underground but I think that the ocean hypothesis is the one I think is most interesting because a lot of these uaps they're seen by the Navy over water a lot of them a huge amount of the Sans are and the Navy seems to be the one that's On's hiding or covering a lot of this stuff up so it all seems to tie back to the water um and just from some of the other stuff that I've I've been tracking U ufology for about six years now since 2017 a lot of stories everything seems to go back to the water there's even

(1:02:10) stuff about the NOAA which is what the national oceanographic something Association where like these people might be hiding even a potential civilization that's under the water um again this is pretty bold claims and I don't have any evidence to prove any of this stuff but that's just my personal opinion I mean have you seen octopus those mfers are aliens if SE them um I agree we know less about I mean we know less about the the Ocean than we knew we know about the surface of Mars right like it's it's actually kind of crazy

(1:02:44) um no I totally agree with you there like the and even on the octopus thing like they're like I think genetically like super different from us as well so I mean imagine the other thing I think people should get used to is the idea that like aliens might not be anything like us right they could be like completely different as well um I was watching the show what's it called uh something scavengers on HBO one of the trippiest shows ever it's like an anime adult animated show just came out a few months ago and like there's these

(1:03:16) scavengers that crash on this planet and this planet like Whoever thought of this show was like on a lot of drugs for sure but but the coolest Parts is like all the different life forms and just like mindbending things that happen on this planet that are just completely incredible and that's what I think people should be thinking about is they're not necessarily going to be just like us no 100% agree and I think to think that they are just like that us is the most pretentious like self-centered egotistical way that like humans saying

(1:03:48) that aliens going to look exactly like us talk like us act like us we're not we're not that important um Ash have you ever had any threats has anybody like come at you and said like shut up like shut this uh first of all the show's called scavengers rain you guys definitely should check that show out man trippy show um no I haven't got any threats yet I'm actually surprised that I haven't got any threats yet I I definitely expected to get like a knock on the door a weird phone call or something like

(1:04:15) that and I haven't I definitely have had a lot of attacks on my character for sure uh but you know I'm always skeptical to try to blame people for a lot of that stuff because I think that just the nature of this is so hard for people to understand and believe that I can understand why people would have an emotional reaction and lash out on that front um and that's even why I've tried to reconcile with a lot of the uip community that we've been at odds but um no direct threats um really there's very

(1:04:45) little I could be threatened with though honestly like I'm ready to lay my life down for this if necessary and I just mean that from perfectly honest perspective um I I could not live with myself at this point knowing that this is all true and keeping it quiet for the rest of my life unless they paid me a lot of money but no um and there's not a lot of people could threaten me with like uh you know if they came after my dog I would definitely go full John Wick on everybody but other than that there

(1:05:08) there's not much they could do yeah they better not come after my dog for hosting the space um okay here's a question that somebody just sent me in any way are you profiting off this right like are you selling books are you selling this is that is there any way that you started making money since you've kind of blown up with this story no I don't even know if I could write a book man uh if when this is all over I might hire a what do they call Ghost Rider or something like that they literally they could probably just take

(1:05:33) all my tweets and turn it into a book at this point but um no my goal isn't to make money on this like my regular job actually pays me pretty well um and I do want to make a documentary about it just because the MH 371 on Netflix is a strip garbage and documentary we would make about this would be like a 100 times better and I don't know maybe it would make a lot of money but the purpose of it would be to get the information out there and I think that this is why I'm not making something like Skinwalker

(1:05:59) Ranch or some cheesy TV show that's like for entertainment right I want to make a movie that's about getting the evidence out there in a format where it can reach a broad audience that's done in a serious format no scary music and stuff like that right um but I don't know I don't even think they would let us frankly I think that any director we talk to that's serious would get a talk to by the government say no don't don't do this right um and then I the only reason like full disclosure I've made I

(1:06:27) don't know how much money off Twitter recently probably total of like \$200 \$250 and I started giving some of that back and um gift cards to some of the investigators and inner circle that have helped out and done a lot of work um and then my YouTube man uh people started donating a lot of money to my YouTube surprisingly so I'm not really sure what I'm going to do with all that um I did buy like a very expensive camera to help increase the production value spent a ton of money uh printing out letters and

(1:06:55) sending them to Congress and stuff like that so I'm definitely not profiting in any significant way at all but just full disclosure like yeah people have been extremely generous even

though every single time in my space I tell people and I mean this is that if you need your money please don't give it to me uh but there are people out there that have I guess lots of extra money and they believe in this cause a lot and they've been donating very generously to uh you know the YouTube stream in general and

(1:07:22) then it's also a bit of an insurance policy cuz I'm a little bit afraid of losing my job over this or having my security clearance not be able to be renewed and then if that's the case I need to have a backup plan which I don't know maybe I will turn into a podcaster um just full disclosure I don't know that I would have expected that but um I do want to try to do good in this world in whatever way I can I think the people who end up becoming the best podcasters are the one who never meant to do it in the first

(1:07:47) place um I was going to ask you the same question about your job like are you afraid that they has has any of your co-workers hit you up like ashon I see what what's going on on Twitter like you better chill has anything like that happened people a few people have noticed for sure there was one person I work with who's like one day he messaged me's like wait you're you're the guy's do wait I saw your name and I was like I just piece it together he's like I've been watching your work and I didn't

(1:08:08) realize it was you he's like and I I mean I have a pretty distinct name but for a while I hadn't revealed my full identity and so he just thought it was maybe a different Ashton or that I was using a fake moniker or something like that and so he started following and I think he's secretly my Discord as well but nobody knows uh and then there's a few other people that I told at work but weirdly like no I was actually talking to my boss just the other day about it and I was like so uh um I was on Alex

(1:08:35) Jones uh just you know did anyone say anything like cuz you know I'm just like a little bit worried about it I was even worried about just going on Alex Jones in general just because of the negative connotation that comes along with it but the reality is I can't afford to turn down a huge platform like that especially one that's like literally about conspiracy theories so I think it was still a positive experience and um you know if they if the government acted so overtly like that and like attacked

(1:08:59) my job or took away my security clearance like it would probably go to authenticate the videos in a way that they don't want so they have to be very careful about how they act in the situation right yeah when you uh at the beginning of the Alex Jones pod you're like just disclaimer like I I've heard a lot of bad like this has nothing to do with me um no that's why have you considered having maybe an nft profile picture so you're more believable I don't even know was that like what are

(1:09:28) the nfts again like you guys got to be like you got to understand like I was never really on part of social media or like I've got too much Boomer in me is what I say like I get people try to say that like I made these videos and I'm like dude I can barely use YouTube I like I I barely was able to cut five minutes of a video yesterday which is the first time I ever edited anything so

nfts I think that they're like videos that you pay for what are nfts oh right I can't just hurt there's actually people in your not

(1:10:01) from like a couple of our viewers have gone into your chat but like I see somebody in your chat their name is rudale and they've actually like a long time listener of ourspace and they have a a Prof it's interesting how the the audiences can kind of overlap like that and they're rocking a profile picture called the gods no I mean nft non funable token stuff it isn't my time to teach now um is basically you know it's just a digital certificate of authenticity and authenticates that something is legitimate and from the

(1:10:28) place that you think it is and it's usually on a blockchain so something like ethereum salon so on and so forth and a lot of time nfts can be used for videos but they're most often used for pictures um so whether that's like highlevel art whatever it might be or just something even like my profile picture which somebody in your comment section called an Amish blue potato chip um I've heard the potato chip part I haven't heard the Amish part before um so that's nft stuff and you know look

(1:10:53) just like you have people that this is hilarious try to call you crazy or disbo you or whatever I mean we deal even maybe on a smaller scale the same thing in the nft space where regularly you know people come up on stage and just call us [REDACTED] idiots um for for supporting something that we believe in um so I definitely feel you on that one um I mean like how has your life changed from a dayto day since this started like I don't want to take too much your time I just have a couple more questions you're fine man so wait so you so you

(1:11:18) bought so basically it's art that you buy and then like you own the art and nobody else can use it so like there's no other blue potato chips out there okay so I'm G to ask you this question how much do you think I paid for this picture that's I was going to ask you so uh \$50 I don't know I it's worth 50 it's worth \$50 now I Pro it's literally worth 50 now but I bought it in February of 2022 and I paid 600 bucks for it 600 bucks wow well so but that means nobody can use it though

(1:11:49) right like you're buying the exclusive rights to it or what so Mo a lot of nft are IP based so something like yach club like their whole Nar was I'm sure you've heard of that that's like the biggest nft project um it's like their monkey pictures essentially so with that you have IP rights and you can use that so on and so forth but mine specifically is cc0 so it's in the like anybody can use it so there's literally no point in even me buying it I just kind of liked the picture disc yeah a lot of people buy

(1:12:17) nfts because they do enjoy the art and they want to collect but the majority of people buy nfts just to be completely honest is because they to sell it for more money to somebody else like that is that is like um and it's the same thing with crypto like I love crypto and that's that's a thing that I'm fully behind I Believe In The Narrative I believe in sovereignty of your assets and everything that comes with that and really just decentralized uncensorable money that's not limited by geographical

(1:12:41) borders all that good stuff um interesting but like most people are not in crypto for that reason most people are in crypto to play the casino to gamble and to make money and I think it's also really important as people in the crypto industry to recognize that that is a reality and in order to change that narrative we actually have to build things that people want unfortunately in the in the crypto space right now there's very very if not almost zero actual day-to-day use case like I believe the killer application of crypto

(1:13:09) is actually payments so like paying people um but unfortunately we don't use like like Bitcoin is is too expensive and too slow to be used as daily payments there are things called layer twos which um it's exactly what it sounds like it's like a layer on top of that handles transactions and then settles to the main chain and that can operate a lot faster but those have a lot of problems with them too they're not decentralized they they have issu so on and so forth so we've actually seen just in the past like two three months

(1:13:37) just crypto going absolutely crazy I mean Bitcoin cross \$42,000 today um so people are like very euphoric right now in the crypto space but I always like recommend caution an optimistic level of caution just because dude this stuff is unbelievably volatile and and um but yeah I could talk about it all day um but so yeah I was going to say that real quick I wanted to make a quick joke which is I think asking how much somebody paid for their uh profile picture or whatever is probably like asking a woman how old she is you gota

(1:14:08) be careful yeah actually most of us have probably paid a lot more for our profile pictures than we want to admit um I mean it's a it's a tough space just like anything else that's new like the majority of things that came out in the last bull market so 2021 2002 22 specifically for nfts 99% of them are basically worth zero now which is the tough part here because you know I have like a fundamental belief in the technology and how it can be used but the majority of people again are using it just to speculate and to gamble and

(1:14:37) that's the uphill battle that we face in crypto um another thing is this idea and I want to ask you what you think about this so you have people probably trying to censor you or maybe maybe you don't um but I would assume that there's some people like either trying to discredit you or mass report your account censor you so and so forth so one of the big things in nfts or this industry we call Web 3 which is just the third essentially iteration of the internet um so like web one was like read and write

(1:15:04) like email that just basic communication Web Two essentially is um the creation of stuff on the internet so I look at that as the Inception of social media YouTube Instagram that whole era and then web 3 which is what we're in now and by the way these are just marketing terms but this is the way that I at least describe them um I look at it as essentially just owner own things on the internet which is it's fundamental it's like hu it's a complete paradigm shift from where we were um but it's I mean do you use crypto at all do

(1:15:34) you own any I'm trying to trying to learn how it works so I'm I'm planning on actually getting some crypto here in next week or so but I'm I just figured out that you got to use a wallet

and what some someone told me the wallet meta something or other but so I'm I'm a Noob on this guys I'm a big Noob you are you sound like a very intelligent person I just want to make another quick joke somebody in my chat said it's easy easier to believe in orbs than crypto and nfts but um what I wanted to say

(1:15:57) just to reverse that though too is that uh when you believe in something and you put your Val and you you know buy into it like that creates value for it right and that's something that's very powerful which is uh like I think the argument I like to use is like Tesla right is that um Tesla ended up having a lot of value because people believed in the idea of green energy and electric cars right and I think that that also plays into crypto which the reason why Bitcoin has value any money system is because people believe in it the reason

(1:16:29) why the price goes up is because there's Demand right just supply and demand so you made an investment and maybe for that one particular thing it didn't pay off but don't stop because of that you know there's always risk with investment and that's where you will find reward the more risk there is usually the more reward is possible so it's interesting with with crypto like and not to get too much off track I I want to get back to to the main thing here but but you know like a lot of the like even This n That I

(1:16:57) bought it was never foreign investment I've started to understand over time like while they can be in I look at it like this like one of the biggest misnomers with nfts in general was initially people believe that let's say you bought um an nft from a project it's essentially like owning a stake in the company right you're invested in the company but the example that I give is if you buy let's say I don't know how familiar you are with Pokemon but let's say you buy like a gen one like like

(1:17:20) shadowless Charizard right and you pay like PSA 10 and you pay half a million dollars for it you're not invested in Nintendo in the Pokemon company but you are invested in that product right so I think that's the biggest thing like people used to think with nfts that you're an investor in the company like but you're no you're not on the cap table you don't have traditional shareholder rights and things like that now I'm reading your comments in real time and by the way your stream is

(1:17:42) awesome for anybody in the room if they want to go check it out um a lot of people in the chat are like very skeptical I see people calling it calling me a scammer and this and that which is interesting why do you think think that people are so willing to believe certain like they're on board with everything that you're talking about but with crypto and like nfts and this and that they're like [ ] this guy like scammer this and that why do you think I think they're joking most of them I think are just joking a

(1:18:07) lot of these I I post about nfts and crypto in my uh Discord earlier and I got like a hundred responses you there is a lot of crossover between these two topics more uh and I think a lot of them are are just kind of joking about it but if I'm being honest in terms of why people do think that scam I think they look at as a Ponzi scheme right which is sure but so is any

currency right the reason the only difference between regular currencies is that they're regular like a US dollar is backed by the US Treasury right so that in theory

(1:18:37) especially with banking that if you put your money in the bank you are FDIC insured up to 250,000 unless you are what was it Silicon Valley Bank or whatever those ones were that crashed that they bailed everybody out and Oprah and her billions of dollars um but the only then the difference is is like as we just talked about supply and demand the reason why Bitcoin has such a high value is because of the people that believe in it but this is very similar to a Ponzi scheme as well where uh the Ponzi scheme is idea is that the people

(1:19:03) who get in the ground floor are the ones who make all the money right but then everybody else who gets on gets less and less but it's not really a Ponzi scheme right because as you mentioned the value is in the ability to transfer currency to you know digital currency transfer so there is an inherent value to it um I think that part of the reason why people are skeptical too is that the idea that you can uh Farm it right that you can mine it and what does that lead to it leads to bot Farms that are hacking

(1:19:29) people's computers and using them to mind currency without them knowing uh and other Shady things in general um but then I think the big things that are the **scam** size of is like you know now we have a million different cryptocurrencies right and a lot of people in my chat go it's either Bitcoin or nothing right because they want to have it focused on something that is kind of a commodity that they can believe in versus one where it's like I'm going to start up Dodge Coin right although I actually think I I kind of

(1:19:57) like Dodge Coin but uh you know these other smaller ones it's the idea is it's trying up a pump and dump if you're the person who gets on the ground floor you can get the price to go up 100 times now you made a huge amount of money but then it becomes defunct because it's a meme stock or meme coin right um so that's what I think that why you would see that push back no I think that's all completely accurate I would agree with you in 99.

(1:20:21) 9% of everything that's been deployed in the crypto space but like you mentioned before there really is a lot of cross here and I think it's important to be like a big reason for me in crypto is I'm super [ ] skeptical of the government I mean they're printing an insane amount of money I just inflation's going through the roof your money sitting in the bank is basically worth 10% Less year-over-year in terms of buying power it's unbelievable yep and the price of everything is going up I mean you can't even like I live in Los Angeles and if

(1:20:47) you make \$130,000 a year that is still really not that much money like especially if you're living like Central LA now yep unbelievable right so again the thought process in there there's a lot of crossover too and I think it's important to be skeptical and ask as many questions as possible um when it comes to you know the things that you're working on whether it's crypto or AI whatever it might be this is not the time to stop asking questions and to accept everything as just the fundamental **truth** and I think the moment

(1:21:17) that we stop having these conversations especially like what we're doing here we're bringing two different communities together the moment stop having these conversations is really the moment we lose because like whether you agree or disagree with your theories or agree or disagree with crypto or like the existence of AGI whatever it might be that is really not the question um the question is can you continue to communicate and I think that's the hardest part here because dude we all have like different backgrounds and

(1:21:43) different motivations and it's hard to tell who's and this is why I asked you like if you were profiting off this in any way because it's so hard to tell these days like what is the motivation of this person doing these things so I appreciate the candor and your answers um yeah no and I love this conversation I like how we're getting into economics because that's actually where my schooling and education came in I was a business major and did marketing and finance and international business

(1:22:07) as my majors and uh economics was always my uh bread and butter thing I like the most even going back to high school when I took higher level economics uh when I lived overseas so you know when you talk about stuff like the inflation and the buying power that's the stuff where especially in the most recent years um you know I always wonder like how do younger people see this because we have not experienced this level of I would even call it hyperinflation that we've been seeing over the last three

(1:22:31) years where a lot of goods have increased like almost 100% in price over that three-year period where if you just think about the buying power especially for lower income earners this is devastating for people in lower incomes and even in your type of situation where like if you're making \$130,000 in LA like that's still like a huge blow because just living in Los Angeles I've lived there actually personally um you know rent alone can cost over \$2,000 easily so you know the amount of after you take 50% taxes out right now you're

(1:23:03) down to 65,000 now you take your let's say let's just take 2,000 per month that's 24,000 now you're only left with like \$30 some, for your entire year for discretionary spending right and you know if you've doubled the price that you have to pay for gas double the price you have to pay for all your food um that that impacts people hugely and this is now we're talking people that make 130,000 right now take it down to people that are near the poverty level right this is crippling for people out there

(1:23:31) so um I agree that I think that that might be the most strong reason to invest in crypto is that it's almost like gold where it's a stock or a commodity that is going to increase as we face this inflation where our dollar is essentially being devalued um and that's probably part of the reason why I want to be you know investing a little a little bit of my money in I think diversity and investments very important so uh you know I think that everything you said here tells me you're a very intelligent

(1:23:59) individual and I'm really appreciating this conversation no and I appreciate you I mean I made a tweet about this earlier today where I believe currently and the thing is like you don't

have to believe that crypto is the future of Finance you don't even have to believe that it's truly ultrasound money and you don't have to even believe in any of the narratives of decentralization or crossb payments or anti-censorship but what you do have to believe and something we're thinking about is that it is more risky

(1:24:25) to not own a little bit of crypto than to own it like if you look at a risk verse reward because right now I look at it as way more risky to keep my money as 100% dollars in the bank than it is to say that for most people well I don't know keeping 10% of their money in crypto 5% 3% whatever it is I think the problem with the word crypto is exactly like the problem with the word AI it encompasses so many different things right and it's like what is crypto some people look at it as only Bitcoin everything else is basically a **scam** some

(1:24:54) people look at some of the big ones whatever it is and that's the thing like again with AI like we used to have all these conversations about AI the possibility of AGI whatever it might be and it's like what is AI are you looking at Mid Journey are you talking about Chad GPT are you talking about some sort of um you know Age of Ultron Escape into the internet this sort of thing so it's it becomes really difficult I mean I want to like ask you about AI here what is your personal stance I don't know if

(1:25:20) you were paying attention to everything that happened with open AI recently where Sam essentially got removed from the board and then they brought in all these other people and then you know three four days later he was hired again he's back as CEO they replace two members on the board and he essentially has full unprecedented control of the company and open AI was supposed to be just that right open it is not open anymore it is not it is no longer a nonprofit thing I mean it's a for-profit company and um I don't know it's kind of

(1:25:47) scary with uh and then speaking of crypto um I I spoke on worldcoin before I don't know if you're familiar familiar with it but it's essentially another one of Sam alman's projects where they have these orbs they're literally called the orbs GP and these orbs they're physical and they have them all over the country right they they take them places all these different things and it was especially when World coin came out was a big social media moment uh in terms of whenever these would arrive at a

(1:26:11) different city right theyd post a picture of it it's like this shiny little sphere and what it does is it scans your iris and creates basically like a cryptographic hash and that is kind of stored some where not fully stored somewhere to be honest some of the technicalities of it go over my head but the point of it is verification of humans so that in a world dominated by AI we could tell who is a human and who is not on the internet but the scary part about this is the guy who's building the solution to the problem is

(1:26:39) also the guy who maybe inadvertently created the problem too with open Ai and I don't think Sam alman's a bad guy I think a lot of people look at Sam and think he's this Overlord like Evil Genius sort of deal I don't see it as that at all I just see it as somebody who has their own motivations who believes in a certain way of living and is trying to create that reality I mean

what would you say to all that yeah first thing I would say is that most of these tools that get developed for a good purpose end up being co-opted by

(1:27:07) the government for nefarious purposes so like open AI if we're talking about chat GPT the thing that scares me about it is being manipulated in the same way that fake news and fake fact checks get manipulated is that you know and people already proven this right depending on like how you answer the question will ask or how you ask the question will answer one way and then you'll be like no but that was incorrect and you'll find like little ways to like work arounds right to get it to answer you like uh correctly a lot of times it's

(1:27:35) politically correct Stuff Etc to me that's extremely dangerous I think it might have been Elon Musk as well is like what if you teach the AI how to lie or how you you know like these are the types of things that like we should be very very careful about doing um that's how I think we would end up bringing about our own ruin so in general uh what I always say about everything is that usually institutions are great when they start and then they start to get corrupted this is one thing that I have seen firsthand from I'm over 40 years

(1:28:03) old I have seen uh social media at its infancy specifically sites like reddit where **Reddit** used to be a site where you could get the **truth** days before it was reported in the news and now it's almost the reverse where the news dictates what gets posted on **Reddit** it's basically all propaganda especially the big sub**reddits** and the the default ones um and it's the opposite of what I used to be where it used to be is place where you would have free flow of information and ideas and now it's a place of heavy censorship and

(1:28:32) group think and hive mind mentality I think that you're going to have that same type of thing happen for open AI and I hope it doesn't ever happen to cryptocurrency but even years ago I forecasted that the government would try to take over cryptocurrencies they would try to make their own or something like this to kind of shut this all down and I'm happy it hasn't happened yet and that's why I'm supportive of the types of stuff that you guys are doing and talking about because it takes power

(1:28:59) away from the government and puts it back into the hands of the people the thing is it it's happening in front of us so I don't know if you're familiar with binance they're the biggest crypto Exchange in the world by volume and it's not even close and the CEO CZ recently had to step down and binance was f4.

(1:29:17) 3 billion dollar because the Bas essentially they were allowing US citizens to use their platform and it wasn't done in a legal way and all these different things now the US government has like they've appointed an overseer for binance and all these they have like such control over this and also the United States has 207,000 Bitcoin as well as God knows how much eth and then another thing here um and speaking of decentralization how much Bitcoin is that like ethereum itself which is supposed to be one of the most decentralized is not really

(1:29:46) that decentralized considering most of the validators run on AWS right so like a lot of

the problems that we tried to come out and fix it initially are not being solved now um but speaking of social media do you think that like the research that you're doing and and the stories that you're reporting on um like none of this could have gotten out without crypto or not crypto without social media like how do you think that has played a part in everything that you're doing yeah and first I think when you

(1:30:13) said AWS you meant Amazon web services right is that what you're talking about yeah yeah so that's scary too because when you take this like who's hosting everybody now becomes centralized and one thing it can get corrupted as well I think you've seen some platforms completely get deplatformed uh same with like how um Apple kind of the Apple Web Store will like make it so apps aren't allowed on there like that that stuff scares me as well because I think it's uh rip for government influence and

(1:30:40) control uh with respect to social media it I would have been censored everywhere if it weren't for Elon Musk owning Twitter I'm 100% certain under old Twitter I would have been banned a long time ago we would never reached the point where we're at now uh even on **Reddit** my own sub**reddit** got banned just permanently banned with no warning or anything like that um actually the same day that I revealed my full identity uh and my sub**reddit** was called MH 370x there's another sub**reddit** out there which is the referred to as the **debunker**

(1:31:07) sub**reddit** because it's run by people who are **debunkers** who were trying to make the case go away and it's called alien or was it airliner Abduction 2014 like the most obscure name that you could ever come up with for a sub**reddit** related to these videos um and so like **Reddit** I believe is the number one source of misinformation on the entire planet right now completely controlled by the government uh full government influence and anything that goes on there and on the news subet you commonly see articles about how many

(1:31:37) times Elon Musk is being sued how bad twitter is you see all these fake narratives everywhere from Bots uh throughout the comments um just one of the worst sources of information on the planet at the moment and but again like this type of stuff is important important because the government knows that these are the areas where you influence people and now they're moving into the realm of Tik Tok and Instagram right where these are starting to take over where it's videos and honestly it's to me it's like the dumbing down of

(1:32:03) civilization where we're all just basing our opinions based on whatever 30 second video that we've saw that's like taking the the idea that I'm just going to believe whatever's the headline on the top of **Reddit** and the top comment to its ultimate extreme of okay I'm just going to believe whatever stupid 30- second video I scroll past right and full disclosure I don't use Tik Tok and I only have an Instagram account because I've been posting like two videos there that are shorter but and I realize that

(1:32:28) the power of it but I can't stand most of social media because of these types of influences and controls I prefer a situation where you know ideas are floated freely and and people have control of what's being said and not the government I mean this is why X is the best

platform for me personally um now I also stream on on Kick for similar reasons because twitch is just of yeah twitch ISO I mean it is Nightmare I mean they take 50% of what you make and that's pre-tax like what that is the most ridiculous thing I've ever heard in my

(1:33:01) entire life should takes less than 1% essentially and that's because they have to pay for stripe in the way that they they pay you out that's why I personally use kick um it's just really nice to get 98% of your subscriptions and so on and so forth now it does have a lot less functionality um on YouTube I like YouTube too I mean I use YouTube every single day but speaking of Reddit dude I went from Reddit being my favorite platform it's actually where I started my crypto journey to un like it's

(1:33:29) intolerable at this point exactly what you said go to the home page and every every single post feels like it was paid by somebody to be there and and you look at every comment and there's no dissenting or contrarian point of view everything is basically agreeing with whatever the top comment is and the moderators have unprecedented control they can just block any com com they want they can remove anybody from any subreddit it is UN it's unbelievable and it's just a shame because Reddit did not start that way Reddit was the home of

(1:34:02) free thinking for the longest time and it's just become just a cesspool of everybody arguing about the same things and in the same direction which I think I don't know it's a shame so you mentioned that you would have been censored anywhere else that you and I also agree with that um yeah because like anything that you start talking about that is uh like I'll give you a personal anecdote I used to have a Tik Tok back in the day and I posted something that was essentially very critical of a specific

(1:34:31) government I don't want to say more more than that and I went from like every single one of my videos and I've been posting on there for a long time every single one my vide went from going like 10 20 30,000 views to one or two views basically almost instantly and I know some people could say oh maybe your content just sucked and maybe it did but it was just way too much of a coincidence that it happened and after that I was like D I just I can't do with these platforms anymore and I have an Instagram now I think I have like 50

(1:35:00) followers on there and I use it just basically to look at Instagram shorts because I don't want to look at Tik Tok does have good content I have to admit there are things there that are that are fun and interesting um it's just a shame that it's it's basically spyware on everybody's phone at this point and we've just accepted that that's the reality um I don't know I mean what do you think about the direction that X has taken because some of things I really like that elon's done other things have

(1:35:24) been a little bit more critical I mean what are your thoughts yeah I mean I think that they need to beef the platform up like if I was Elon I would be trying to steal reddit's market share right I would be trying to make forums that you can have that are integrated into the platform like just I would redo communities entirely and turn it into like a forum based structure so that and I would also move into the twitch area as well and kick area and I would allow

streaming and all those platforms as well that are on here like they do have

(1:35:52) some kind of weird streaming thing that I can't even figure out how to make it work because I think that what Elon mus has done where he's you know if you look at the Twitter files he's ripped it back from the government control you know even twitch 100% is under government control you have to be careful what you say or they will deplatform you and a heartbeat um I'm going to probably look into a kick a little bit but the reason why I'm on YouTube and I'm surprised I haven't been banned off YouTube yet is

(1:36:14) uh is because I need to be able to have a place to upload like large content and stuff like that right versus I I think uh wasn't train wreck TV one of the guys that started kick he broke away from twitch because they banned gambling right and he was a big gambling streamer I think um so yeah I think that all these things are like you look at it and it's it's government control government censorship government laws that are causing these things to happen and I will always flow with wherever the least

(1:36:44) amount of censorship and control is because that's where you're going to find the **truth** which is what I value the most in this world potentially and just like you said with **Reddit** I could not agree more and that's why I think that when we look at Twitter now we've come to a point where Twitter used to be the spot where people would make the joke about Twitter isn't real life but actually I would argue that now Twitter is the closest to real life out of any of the social media platforms the big

(1:37:06) ones at least um where you know **Reddit** it is the one that now is not real life anymore and this is why I call it **redditor** brain where this has happened to me a couple times where podcasters that I had me on they thought they were going to look like Heroes for trying to chop me down and they get they're so confused when they put out their content and they realize they're getting attacked by everybody because they have no understanding of what real people are like anymore they think the world is **Reddit** and that everybody's going to

(1:37:31) agree with them and then when they get outside of **Reddit** they go is this all Bots attacking me nope nope that's just real people you're the one who's been dealing with the Bots and you're a complete Echo chamber of uh homogeneous ideas right and on **Reddit** on Twitter like people think it's toxic or whatever but it's just it's real people man it's real people speaking their real emotions and real beliefs you know just because you don't like what people say doesn't mean that it's not out there you know so

(1:37:58) uh I think I like the way that Twitter is going um but I would like it if you know it doesn't if it's not that I think Twitter's alienating people I think it's the views then the propaganda that is said about Twitter alienates people from it um and that's what I would like you know if we could stop that if the government can stop trying to claim that Elon Musk is the worst human being on the earth and I I was never like a huge supporter of Elon Musk but they managed to turn the people that love Elon Musk

(1:38:23) into people that hate him within like a year which I'm just like man how can you guys not see this this is all just propaganda like you guys loved him a year ago and now he's like the worst thing in the world because what he bought a social media platform come on well I think it here's the thing X or Twitter whatever you want to call I'm I'm having a hard time calling it X but just because of what Twitter was and what x is now and I think I'm just trying to move to X but tweets and and

(1:38:48) tweeting still such a part of my vernacular so it's hard um but I think X has ripped the veil from the eyes of people on what social media can be because now we just see everything for the most part that I don't think the users of this platform even if this platform fails would tolerate going back to another platform and this is why in crypto we talk a lot about decentralized social media so those things like lens protocol and um even like blue sky with what Jack dorse subscribers this I'm not fully convinced

(1:39:17) that those things are there yet I think it's going to take some time before they become really used so we're going to have to see but you mentioned something about Elon I think is so important he went from being absolutely loved he's releasing flamethrowers and his own tequila everyone's buying it everyone's loving it and now they've made it to be where essentially if you're an Elon supporter they look at you as almost y sometimes like like a right-wing Zealot like it's kind of bizarre what

(1:39:44) this what they've made it seem and um and even like with recently they've like made him out as like an anti semi like he's like promoting all this like anti-Semitism with the advertisements when it's just it's factually false like it's just not real and um I don't know you saw this clip recently that went super viral where he told everyone to go [REDACTED] themselves and a lot of people are heavily in support of this this is the first time that someone on that level is basically told these massive entities to

(1:40:14) to go [REDACTED] themselves now it is risky because he even mentioned in that interview that if those advertisers all of them continue to refuse advertising on on this platform it could kill the company and it probably would kill the company so that is where it's tough It's like yeah we want this freedom and we don't want to be blackmailed and extorted but at the same time we want the platform to exist so I think unless they can find another way to monetize it's going to be yeah it's going to be Rough Waters

(1:40:41) but again this is why there's so just kind of like some closing thoughts here um this is why all of this stuff has so much crossover because you got to keep the conversations going you got to continue to ask questions and luckily this platform allows us to do it um I would not be not even just this space that we're hosting here I mean so many of the spaces that we talk U that we host and talk in I would not be comfortable hosting them on a different platform for the most part um not that we're talking about some like overly

(1:41:09) controversial things but still the freedom that we have here is unbelievable and another Testament to the platform is you and I have never interacted would have probably

never interacted but because of this platform we're able to host this conversation discussion on all these different things and that to me is like the true utility of X so dude I [REDACTED] appreciate you thank you so much for coming to the space is there any final things that you want to leave the audience with anything you want to pin up to the top and

(1:41:37) redirect them too yeah I just want to say this is this has really been awesome honestly this has been one of the best spaces ever I want to agree with lot some of the comments you guys just mentioned as well which is um I think the the whole anti-semitic thing is ridiculous against Elon mus I mean how are people really falling for this man people really think he's an anti-semitic come on guys um but yeah I think that the discussion here has been great I think that the people that are supporting with all the verification

(1:42:02) badges I mean look how many verification PE people we have in this space huge amount that's how we keep this free right we keep this platform free as we support it that's the part of the reason why I I did it as well in addition to increase my reach but also just to support the platform because I if you support Free Speech we can see that they are trying to shut it down right and this case would never be as far without this platform right now um and I I think it's awesome too that we are able to connect like this and have

(1:42:30) this kind of space um I'm actually going to have one as well not to get political but with uh Jacob Chanley who is uh unaffectionate known as the qon shaman I think he needs a rebranding um and I don't think I could have that space on like YouTube like somebody told me that they did an interview with him on YouTube and they got they got their Channel struck down because of it and it's like well on on on Twitter here I can I can talk to him right and this is a guy that he spent his time in prison right like he spent

(1:42:57) his time it's not like he didn't spend his time in prison right and they're still trying to censor him afterwards so the free flow of information I just think is so important and even with crypto like I you think that you you're going to find that crypto gets censored everywhere else like I've noticed there's so much discussion of crypto a lot of the spaces that I see are crypto spaces so I just want to appreciate you leap for hosting this and having us and having this awesome discussion where we

(1:43:23) talked a little bit about MH370 and then you know talked a little bit about crypto I learned a lot about it and uh I think that people should definitely follow you as well if they're interested in crypto you are clearly a very intelligent person that knows a lot about it man so thank you for having this with me no I appreciate you and please everybody follow Ashton I do want to I completely skip my mind here um if you're up for it because I we have a bunch of requests and and people are sending me messages they have questions

(1:43:49) for you so we can do this another night if you're if it's if we've gone too long tonight but if you're down for it um I could let a few people up from the from the audience like let's do it maybe have questions let's let's pull some people I can go for another 15 20 minutes or so or just's you know but people try to keep your questions short and brief you know no life stories

um stuff like that no I 100% agree so also just complete FYI our spaces are usually minimum like four to six hours every

(1:44:15) single time so we're probably going to run for like another two three hours I just didn't want to take too much of your time we actually used to do like seven to eight hours seven days a week I did that for over a year and it was it was a bad I mean it was a great idea but it was also a bad idea so we've scaled it back to like four to six hours now which is a lot more palatable um but look I'm G to reset this space here welcome everybody to aliens rugged by the way Ashton rugged is a term in the

(1:44:42) you might already know it but it's a term in the like the crypto space nft space where someone essentially they pulled the rug out from underneath you right they steal your money they **scam** you whatever it is but term rugged has become a part of yeah just like our day-to-day wordage like if I if Uber Eats delivers me the wrong food I'm like [ ] Uber Eats just rugged me so we just use this word all the time and it's kind of become our thing with the title so welcome everybody to aliens rugged um

(1:45:06) featuring Ashton if you'd like to come up on stage please click that request button in the bottom left and corner would love to get some questions from the room and see what people thinking a little bit of a temperature check also if you're enjoying the conversation click that button in the bottom right hand corner give it a like comment or a retweet it is the best and only way to support the space as well because we do not qualify for monetization because spaces don't count towards Impressions Elon if you're listening to this you

(1:45:29) need to fix that but look we have some requests I'll bring some people up on stage but would' love to get some uh questions from the room so by the way everybody please be respectful and keep your question short and concise all that good stuff um let's bring some up there we go okay we're GNA go NB first NB what's your question what do you think yeah I want to start by saying shout out to Professor Paul uh an orb coin 2024 it's going to take over the crypto scene I do have a serious question for Ashton um so when you first

(1:46:06) had an inclination that something was up with MH370 did it affect your your comfort with flying I guess is how I would say it like were you able to to fly comfortably or or was there bit of a period where you like were like H maybe I should you know feel it out and get a better idea yeah good question people are actually asking me in the chat in my own chat earlier and I forgot to bring this up but um yeah I've always been afraid of flying actually and that's part of the reason why like I look at when like there's plane crashes

(1:46:38) I kind of like look into them not like I have for this but um so the way this kind of went down was at first I was afraid that of just like flying in general when you look at these videos cuz you're like oh man my plane could get orb'd right right and then I thought oh when we realized it was the government I got even more scared cuz I'm actually less afraid of aliens orb my plane than I am of the government orbe my plane but at least then like they'd have to have a reason to do it right so for me I I've flown a few

(1:47:04) times and I've been like oh man I hope they don't order me on this flight um but more so than that I'm actually afraid of lithium ion batteries in the plane now these lithium ion batteries I couldn't believe how dangerous they are and once I realized that this is probably what happened to the plane it was this emergency event based on these 221 kogs of lium batteries I start seeing it everywhere it's like when you wake up and you start like you start notice it everywhere we're like I'm

(1:47:27) mailing a letter just a letter like when I was made my letter to Congress they're like you have to sign this thing that says there's no lithium ion batteries in your letter I'm like it's a freaking letter man like that's how dangerous these things are I'm getting on the airplane you check your bag are there any lithium ion batteries in your bag I'm sitting here praying that nobody's got a lithium ion battery and their checked luggage because this is why they made them outlawed in in the cargo Baye

(1:47:50) because nobody's down there looking man so if this fire is starting down there there's no one like monitoring it so like now when I fly I'm like I want to like ask everybody when I get on like hey you didn't put any lithium ion batteries in your in your luggage right uh so I'm not any more afraid than I was before I'm just more cognizant of all the dangers now I guess and I've flown like three or four times but honestly I hate flying and I really don't want to and I definitely don't want to fly

(1:48:12) anywhere very far but I don't think any of you guys should be more afraid of flying than before just please no lithium ion batteries in your in your luggage all right what one more do you think the people who were orb'd on the plane do you think they realized they were orb'd that's a tough question I don't think they had any idea was coming for sure um and some people even argue like there might have been weird effects to them like I I don't know what going under undergoing Quantum they call it

(1:48:38) macroscopic phase conjugation or macroscopic Quantum uh coherence like I don't know what that would do to like a living being um and especially if there's not like something shielding them from the effects uh you know it could have weird stuff could happen to them um and then we start to talk about stuff like string theory and uh what's the other one called where uh like the Fruit of the Loom thing I forget uh God it's on the tip of my tongue but like you know we might be talk living in like

(1:49:04) a string theory type situation where there's alternate dimensions and different realities going on so you know basically what I'll say is that I've kept my mind open to everything and I try to speculate on as little as I can but I'm always down to give my opinion so I can't say exactly what happened in the passengers unfortunately thanks NB great questions also I'm looking at your chat Ashton it this just shows the important of having a live chat during like it's so much entertain so much more entertaining just

(1:49:33) watching Everybody comment in real time Twitter really needs to to implement that um but look I want to thr quickly over to Sonic Sonic gravity podcast great to have you up here

what's your question what do you think hey boss hey ashton it's it's good to hear you talk man I mean like dude you're just getting so polished dude it's just hearing you is like next level man it's really cool I I appreciate it um one thing that I had never heard you say before did I I just wanted to check you said that the

(1:50:01) there were a like an extremely high number of Engineers and like technical folks that were passengers on that plane is that right yeah the freescale semiconductor thing check out I think it's like one of my most recent posts before these space post that I made where we found this interview from this guy I think his name was Sam uh Michael Harris or something like that and there there's these 20 free scale semiconductor Engineers on board This Plane scientists whatever you want to think of them as which is way too many

(1:50:29) we've been able to connect this company directly to the technology pretty much on this plane and then we see this interview I think it was last night where we were watching on my stream and we're watching it it's just blowing my mind because they're interviewing this guy that used to work for Motorola in 2004 when the when free scale split off from Motorola and he's talking about the technology being the main reason why they split off they had these Advanced chips that they're working on and like

(1:50:52) motor roll is a cell phone company and it didn't really make sense so they split it off in this other company and then at the end he's just like he doesn't even get asked he's like can I just tell you what I think happened to the plane my my silly far out there idea he's like yeah I think it like fell into a portal you're like what what this is like as weird as the Don Lemon thing where Don lemon's on CNN going everybody's talking about black holes and nobody's talking about black holes

(1:51:15) what are you talking about man all right now you know I told when we talked before I said I think they it was how the portal works and that they actually slipped into it like a different time well if you think about got a lot if they're doing this technology and it's all these engineers and stuff I really you know I think that we're an exoplanet colony of more evolved humans right and so like if you think about it it could be a bunch of folks who did some work and then you know kind of planting the

(1:51:48) seeds for this technology boom that we're having and we just had fusion and all these other things are happening and then they're like okay we've planted all these seeds we sort of like you know kind of put all these starter ideas in people's heads about you know crypto or I don't know whatever else what other Technologies and then and then they go back to their time you see what I mean like maybe maybe they came here to kind of kick us in the ass kind of get us through this this Quantum uh quandry we

(1:52:18) have where we can't figure out how you know unification happens and then so they kind of plant some seeds around and then go home trying to kind of get us over the hump you know what I mean yeah I mean it could be I'm not a huge fan of the um future human hypothesis just because I think it's hard to travel back in time I you definitely can travel forward

in time but if there is string theory is possible and we have different timelines and multi-dimensions then absolutely it could be a thing and uh I

(1:52:43) still forget the name of the Fruit of the Loom thing though but a lot of people argue like well there was always a cornucopia in Fruit of the Loom I'm actually one of those people like I swear I saw the corn copia and the Fruit of the Loom and somehow like how do you like erase people's memory or past or alternate or alternate it you know so are you like many worlds yeah yeah like that and so if that's true then sure you know and I'm just watching the Mike Harris thing again he's just like this

(1:53:05) guy's a straight face total straight face just going I think somebody opened an interdimensional portal what what man this guy's like a guy who worked at Motorola he's like an engineer like what the hell man I just I don't know it's weird it's like he's talk like I don't know if you guys played uh the game uh Assassin's Creed but I'm just going to spoil it for you guys the first one I mean it's like 20 years old now at the end of Assassin's Creed like all of a

(1:53:27) sudden like you unlock this advanced technology with this apple and then she's just talking to you the gamer right like that's what I feel like when I'm this guy's talking it's like he's talking to us right now in the future like 14 years or 10 years later it's super weird man so I don't know oh Mandela effect is the name of the uh effect the Mandela effect where like Sketchers was supposedly spelled with a K and all this stuff so I don't know man I'm at the point where I'm so far on the

(1:53:50) rabbit hole like I can't rule anything out anymore wait thanks for letting me talk it's really great to hear from you again and I'm following you leap so uh thanks for letting me speak no thank you Dro you a follow as well and Ashton what the hell man I was eventually gonna play Assassin's Creed 1 okay 2025 but you ruined it for me ruined um okay look we'll go over to emo emo good to see you what's your question what do you think what's up so sorry I missed the first half of the space but I was

(1:54:18) wondering like tldr do you think happened to the Malaysian Airline yeah so the very Bridge version is that uh lithium ion battery fire ignited which is what made the plane go dark there's a wired article that even argues during an electrical fire that they would have pulled the buses that makes the plane go dark to try to figure out what circuit was damaged by the fire the lithium ion battery fire helps explain why it's not just an electrical fire because it's a much bigger fire and bigger explosion

(1:54:43) that could have done damage to the plane but not potentially enough to destroy it at that moment and then the plane flies for an hour and 20 minutes goes directly to panang airport which is the closest airport to go to an emergency and then for some reason it can't land we don't know exactly why um but the Malaysian Minister of Defense there's this interview out there with him where he's the sketchiest liar in the world like we watch it like basically once a week because it's like you might as well just

(1:55:04) play it on Saturday Night Live how bad this guy's a liar um and then the plane revus and the nicar islands uh where there's witness who sees a glowing orange because of the chemical reaction with the fire extinguishing devices trying to put out the fire for over an hour and the US government deploys these orbs they're filming the camera or filming the plane before the orbs even appear with a satellite uh or there looking at with the cber system this is a satellite system and they are have this drone looking at it which can't

(1:55:33) catch up to the plane had to have intercepted it and it's like using this super highly Advanced Electro IR camera and it's got this thermal layer added over the top and we see the plane get teleported for a lack of a better term um the scientific explanation is it's called Uh macroscopic phase conjugation that the state of the plane is changing and the analogies there's a couple of good analogies that we can use um one is that it's going from a Quant a macro state to a Quantum State and therefore

(1:56:02) con contain the properties of quantum where Quantum objects can have um uh uh probabilistic points in time as opposed to deterministic point in time but the other point the other thing that's important is that it's having its mass reduced by being displaced from space time and if you reduce your mass to zero now you are not affected by gravity but more importantly you can move at very high speeds the reason why we can't move the speed of light is The more mass you have the more energy it takes as you

(1:56:28) approach the speed of light to to accelerate but if you have zero mass then you not only can you go to the speed of light but you can go to the speed of light with very little energy like pushing a feather now at that point and here's another analogy that I would help you guys to understand it is that do you ever wonder why an ant can move so fast despite the fact it's so tiny so relative to its size it looks like it's moving super fast same with a fly flies are very tiny but they move around really fast that's why it's so hard to

(1:56:55) swat a fly right well the answer is because the less Mass the faster your time flows so for something that has less Mass its time is moving faster it's experiencing time at a higher rate which allows it to move even faster so the same concept applies to the plane the less mass that you have the faster it's able to go The more mass the harder it is to travel at higher rates of speed um so that's just a couple analogies for you that I think well does that answer your question on what happened to the

(1:57:20) plane that's my like 30 second how scientific is this versus like conspiracy theory yeah this is probably the most scientific explanation of any conspiracy theory that's out there in my opinion I think that I've been talking to engineers and physicists and scientists who when they saw these videos they reach out to me and they're like hey like you know they're in my replies they're sending me hints they're wanting me to do podcasts with them I created my own podcast just for the sole

(1:57:46) purpose of going through the science and understanding the science and my own understanding has gone from a point where I thought this was an Annihilation event to now

realizing it's a teleportation event to where I used to call it a wormhole where now I'm calling it macroscopic phase conjugation after initially call a teleportation to what yeah to another Point somewhere so they're calling me Ashton 4 orbs because we see three orbs in the videos but the strongest Theory right now is there's a

(1:58:10) fourth orb that's entangled to the other three orbs and it's like pulling a rubber band and then you let go of it and all of a sudden it's going to slingshot back to its original location and that's what the best explanation right now that we understand is that's what's Happening Here is there's a fourth orb could be anywhere on the planet we think it's probably somewhere by the males just because there's some circumstantial evidence uh but that when this when the orbs converge and I I put

(1:58:34) the videos in the uh I don't know if I put them in the nest but they're in the replies if you watch the thermal one the colored one uh there's a slow-mo near the end of it watch the slow-mo the orbs converge on the plane in the last moment and what they're doing is they're actually inducing The Singularity when they do that it's almost like if you were to take two magnets and try to jam them together that are opposite polarity you're going to have this really strong effect now imagine that times a million

(1:58:57) with three that are all doing that at once it's inducing this Singularity it's causing this phase uh State change which is then in theory entangling having this entanglement happen where the orbs are and the plane all of them at once are going to wherever the other orb is anywhere in SpaceTime so it's essentially fast they call it subluminal uh travel which is just is faster than the speed of light and that's essentially what teleportation is wait so why didn't we hear that they went to the Malaysia

(1:59:27) whatever to that airport I've never heard of that mfer um look before we go we we just spent like two and a half hours basically going through every single one of these questions that that you're about to ask so um I want to be respectful to the other people on the stage and to Ashton's time so you can get to the other questions go back and listen to space mfer all the question I I asked him everything you could possibly imagine love you emo look we're going over to Old Shu old Sho what's

(1:59:57) up old Sho you're up can't hear you sorry about that I was muted um you guys are doing great it's amazing show really interesting intersection between those two Realms and I think they have more to do with each other than a lot of people might imagine um the so I don't know if you see my avatar it's the it's that old photo from the Battle of Los Angeles in 1942 um and then there's you know other times like the UFOs over Washington in 1952 uh this has been going on for a long time and and breakout civilizations

(2:00:40) have happened before and they're trying to happen again they're trying to happen all the time and the **truth** is that the that the that certain of these Technologies are like dearly guarded by those who have them and they're always dearly guarded and that's what's happening here I think you need to get in touch with the disclosure people Ashton this is

inconvertible proof like we haven't seen before I have a friend um I have a really strange intersection with a friend who flies um kind of highspeed

(2:01:17) surveillance craft for the military and I showed him this video and he says it's legit he's like that's what we see that's how we see it he can't find a fault in it it looks absolutely perfect to him so this is proof and that's why you're getting pushed back from the corridor clowns and everybody else who is either an idiot or compromised in some way because this is dangerous information to get out to the public and I and I'm talking about the CIA and when I talked to you the last time Ash and

(2:01:49) I'm serious serious you got to be careful people disappear but this is where you're at and you need to like really what you need to do is have this evidence corroborated like where's where's this guy where's the leaker because he needs to come forward if he's still alive and I think more people that's really the answer you can't you can't get to the **truth** by going through idiot **debunk**ers because they're going to talk to the idiot masses who are also going to believe this

(2:02:20) like you need to go to the source yeah that's my no man thanks Shu I appreciate you man I think I've seen you in a chat too or in my uh um stream chat as well um n man I've I've thought through all that stuff especially the dangers I think you're 100% right that the dangers are there I I am not joking around when I say I don't think I'm going to live to die of old age but that's just the reality of someone having to take the hit you know if the leaker was willing to go to prison for six years over these then I

(2:02:49) think it feels feel like it's the least I could do to offer it and I can't think of any more noble cause than to try to get to the **truth** of the plane for the families as well as to get this technology out there I think I've already done so much damage to let's just call them the Spooks and the people trying to hide this stuff and this technology just by being able to have the conversation and reach as many open I think they're afraid yeah I think they've never seen anything like this I

(2:03:12) don't think they've ever seen anything like this where somebody actually knows how to use social media almost as well as they do and to reach people on a human level like we're doing now in this space Etc and I don't think they know how to deal with it either like if they were to take me out right now like what's going to happen people are going to be like what the hell happened to Ashton blah blah blah right like they have to be careful about how they interact with this situation right now

(2:03:32) and that's why part of the reason is the most the biggest thing I'm afraid of potentially is that the thing going cold the case going cold because then I can disappear right and you know they can make it seem like it's natural or whatever um that's why I think you need to get this on the dockets in Congress as as something to look at in a skiff you know with other people who know this technology because we're looking at military technology that can be corroborated in those hallad Halls and

(2:03:58) almost nowhere else yeah and uh I'm trying man I'm trying what I'll say is I'm trying to back door into discussions with various congressmen at the moment I've got some powerful friends and allies that I've started to developed now that have those kind of connections but um they're afraid too good luck and like I said I'm praying for you Ashton for real I appreciate it man and um the the leaker like if we could get the leaker to come forth and I'm I'm sure it's this guy now

(2:04:23) right like I've been yelling this guy's name for a month at least two months right if he wasn't the guy he wouldn't reaching out to me be like dude stop saying my name right like I'm surprised he still didn't say it even though it is him right um so yeah I mean we need him to come forward but the problem is like if he does like he's G to get arrested and I'll say this because I've already said it I haven't said it many times but we were able to find we were able to get

(2:04:46) in touch with him uh but not like in contact with him but I called called a number which I'm like sure is his number and somebody picked up and hung up right away and was like that was really weird and I sent a messag to me like dude if you come out just give me a sign anything like my my followers would like do anything for this guy I would take a bullet for this guy frankly I mean I might be going out anyway right so um yeah we need this guy to be protected and that's why I tell people do not go looking for him please please please

(2:05:12) because you're just going to put him in danger um and unless you're the media well thanks for the work you're doing Ashton I'll let no yeah I appreciate it man so I think that's about it on it but for the most part we need him to come out this is why I tell people that we need the President Biden or whoever's president in the future to Pardon this guy that might be one of the only ways where he can speak freely because then he won't be uh Bound by his plea AR plea deal anymore if that

(2:05:36) happens and all this comes out boy we are in for a new future my friends thanks U really appreciate the question um I want to go over to I think we got two more um left is it George is it Jorge uh I appreciate you coming up and raising your hand what's going on what do you think yeah look I have listened to Ashton before and I really really enjoy what you're doing Ashton I think it's a it's amazing what you're doing I have a a bit of a philosophical question for you if if you get to a stage where

(2:06:10) you're very close to finding out what it is and uh and you get offered the opportunity to really find out what it is and but they tell you you have to go through through it I can't tell you you're not going to die I can't tell you what's going to happen next but this is your your opportunity would you take it and uh and then just another very simple question that you can answer first are you famous enough so people recognize you on the streets these days that's a good one no nobody's recognized

(2:06:39) me yet I'm surprised I've actually had people message me and say that they've been walking on like the Streets of London and they heard somebody mention in the case in my name

and that they sent me a message about it I had another person say that they were at their office and their coworker brought it up and mentioned it but still nobody on the street has uh recognized me yet which I'm sure it'll happen one day but uh not yet and I kind of like it that way come come to Melbourne Australia and I'll

(2:07:04) shake your head okay yeah I will say too that kim.com gave me an out he told me that if the government comes after me how how I can flee the country and go stay with him so I do have a potentially and he's not joking either when he was mentioning it to me so I have a potential place where I can go in ter of what comes next um yeah I don't know I can't see the future I can't say what exactly what's going to happen I think that some of the bigger podcasters either uh like a lot of people here

(2:07:28) initially can't believe it to be real or might even be told by the government not to bring it up some people as well might even think that it's worth it to keep it secret because it's just that big like we've talked through the implications on this space now you guys know the implications and some of them might be saying like yeah I'd rather just keep this secret it's too dangerous right I put the poll up several times about 20% or more of the people think that okay if this is kind of Doomsday technology that

(2:07:55) a terrorist could blow up the planet that we should not reveal it right so um I don't know what's going to happen next you know I went on Alex Jones we had a good one talk there's other people I definitely would like to talk to that are out there huge platforms I am not going to discriminate on anyone I don't care if it's Russell Brand who people are hating on I don't care if it's Andrew Tate who people are hating on I will talk to them I just want to get the information out there as many people as

(2:08:18) possible because Texs me the more people that know about it then the less it matters that I'm you know still around good questions for I appreciate you man who's next oh sorry I was there you go I was M Sonic go ahead hey Ashton uh hey thanks again uh hey so I'm a retired army Jag and so that's like a lawyer so we've done the prosecutions and defense and stuff like that if if this guy was convicted was he convicted at a court marshall yeah court marshall so um you can **foyer** that record of trial oh so I

(2:09:01) did I did I did I not mention this I Foy the fre the FBI and NCIS and the FBI still hasn't responded yet um the NCIS let me pull it up real quick where is it uh should be right around here basically they responded oh here it is official respond resp okay so Mr Forbes this responds to your November 2nd 2023 Freedom of Information request seeking the copy of the naval crime Investigation Services NCIS investigation concerning Edward C Lyn we received your request on November 2nd for your reference your number is blah

(2:09:33) blah blah uh search of our Collective databases investig is identified one 2014 investigation response to your request we have carefully reviewed the documents and decided to withhold them in total under **Foya** exemption one which lists some number exemption one protects of disclosure of information about quote unquote matters specifically authorized under

the criteria established by the executive order to be kept secret in the interest of National Defense or foreign policy quote unquote okay so that is the NCIS that's the cops that's the Navy

(2:10:04) cops investigation but when this guy went to trial I'm I'm I'm a former trial counsel I'm also an appell defender or for I'm retired but but whenever they went to trial there's a Verbatim recording transcript of everything that was said during the trial and that's going to be I'll find out I'll find out where the Navy's records of trial are kept but that's not the same as the criminal investigation so you would get like the prosecutor introducing the evidence yep you know everything that

(2:10:35) the judge said everything that both the parties said now that that that file that if you get the paper copy I mean it could be a stack like you know I mean it could be like a foot high of just pages of of you know why this is important because one one of the clutch pieces of evidence that ties this guy to the videos is that the defense argued that the classified information in question is available on the internet if there's a direct quote that says anything about the classified information being videos

(2:11:03) it would be a Smoking Gun right the record of trial the record of trial will have that verbatim transcript of everything that was said during the trial so that's not you w get that from NCIS that's like I'm not I I was in the Army so yeah I'll find out where where you know what organization has the Navy records of trial let me see if I know somebody who can find that out and then I'll DM you with it yeah sure following you so you can DM me okay all right but yeah so and I'm actually gonna probably

(2:11:31) do some more **foyer**s as well to people because I'm starting to think of other ways to **foyer** information like there's got to be something that we can get that will you know prove this thing that's out there but man every single **foyer** request has been basically denied that I put in I put in one early the nro which is the national reconnaissance office that controls a satellite Ates about MH370 and USA 229 which is a satellite just staring down there and that was like 3 months ago and they still they

(2:11:56) like rejected it right away saying it's going to take longer than 20 days and now it's like three months later I still haven't heard anything like I feel like I'm not going to get anything for like 10 years well that guy's attorney also has a copy because you have to send a cop the the copy of the record of trial has to go to the attorney and they have to authenticate it I called the attorney actually so I spoke to the clerk there on a Saturday they called me back on a Sunday and then I talked to her for like

(2:12:18) an hour she ended up following me on Twitter she told me I told her like the whole case story I told her like you guys got to get this guy to come out people are going to come after him blah blah blah and uh the lawyer didn't call me back but the next day I got this thing about this seminar that they did like the week before two weeks before where it was like the implications of the new UAP whistleblower law for people that have been Court Marshal and I'm like whoa this is weird like is this the sign that they sent me or they just sign

(2:12:47) me up for their marketing without telling you yeah I I don't want to read too much into it cuz I have got a couple other emails from them in the last like two months since this happened but like that was weird to get that and I don't think that the lawyer can say anything because like I think the plea deal probably prevents them from saying anything either well I doubt that anybody would have thought to say anything about keeping the record of trial secret you might ask them if you can have a cop now we're talking about

(2:13:10) it they're going to hide it right but they're listening right now but yeah copy their record trial yeah I wrote that down on my notes Here cool thanks man thanks sir I appreciate it any help that you guys come up with it definitely helps I'm glad I I can hear the passion in your guys' voices as well which uh you know gives me hope thanks Sonic really appreciate the question and Ashton thank you for doing the Q&A I really appreciate you coming to the space and initially I thought we were just going to do 30 45 minutes we

(2:13:37) ended up doing two hours um we probably could have done another four so thank you so much again final words for for the people listening in the room here um I think that's oh boy here's the thing we can change the circumstances of billions of people on this planet the purpose the reason why I'm driven by this is that all the stuff that we've talked about has been related to the fact there's so much division in this world right now uh amongst everything and I think that social media is a big reason for it and these videos

(2:14:06) have a opportunity to bring us common purpose common goal uh a situation where we can make our world better potentially even have stuff like World Peace come about um and unify as one and I think that that's what I want to have happen from these videos so you know if you find this stuff compelling you know um feel free to follow me uh and and follow along with the case but more importantly like get the evidence out there the reason why I make the evidence publicly available I had it pinned to my profile

(2:14:32) for the longest time is so that people can spread it themselves even come with your own stories if you want I just want the evidence to be out there so people see it when people reply and they say well what about the debris that they found this is the most common question that you can just copy and paste the part what about the debris that you can answer the questions too so it's not just about me me I want to empower everybody else um so thank you guys all for um you know listening to the evidence with an open mind thank you Le

(2:14:56) leap for hosting this and us having an awesome conversation I've enjoyed the hell out of this conversation so thank you guys very much man thank you I've enjoyed it as well and feel free to come to the space anytime and just you know come chill come chat we're here every single night and to all the new people listening uh tonight thank you guys so much everybody in your stream I've been reading the comments and they've been honestly nothing but positive for the past couple hours so thank you to you guys as well

(2:15:20) and to the people listening now we're going to shift into our traditional spaces format which means no format and we're just gonna talk about crypto everything that's happened to

blow who let this international DJ up here I oh my I'll say this there's been a lot happening in the crypto Market here's the thing about International DJs they think they can do anything they want ashon thank you so much really appreciate you have a great rest of your night look I want to reset the space quickly before we get into it

(2:15:50) okay I'm going to drop out there okay awesome guys that was a sweet space huh guys how sweet was that how sweet was that guys that was pretty awesome guys I'm going to drop here in a minute but we're just going to do a five minute decompress from that yeah we go hard guys uh the one thing I didn't say there that I want to say to you guys is we have the best community out there by far uh you guys are awesome honestly the engagement in this chat today was huge it was like 10 times higher than normal

(2:16:20) that we normally have um that was awesome definitely appreciate you guys appreciate you guys being here and doing all this um and you know we didn't do much content today but I've got a whole list you guys think that Lex any of these messages are Lex guys and what if one of these messages is Lex guys Lex please baby boo please and I'm just joking guys you know I'm not uh I'm not trying to beg or whatever we're trying to go on whoever but I I do would love to talk to Lex that that would be

(2:16:50) amazing um we do have a huge amount of evidence still that we have to roll through Let's see we did we're going to eventually probably tomorrow we're going to go through the Drone uh evidence where the Drone was deployed from I've still got that up ready to go uh right here we made this the other day so uh we got that going we Let's see we oh we I was on a space earlier today I started reaching out to some of the uip community trying to make amends with some of them because I think we've

(2:17:24) reached a point where we don't need to be at odds with a lot of these people um we've gotten so huge as well that you know I think that the UAP Community us have the similar goals there's no reason we should be fighting against one another and I really think that the Spooks the Spooks CIA here has been probably trying to use us against one another I mean the more division that there is the better it is for the enemy the more we unify the better it is for us so I'm going to do my best to make

(2:17:50) amends with as many people as we can uh we already did the Mike Harris interview uh is qar on in here he is we looked in the X Force but it's only for military people I actually almost signed up on it I actually almost signed up yeah the space with UFO Shane was really good I want to shout out to UFO Shane we don't necessarily see eye to ey but I want to live in a world where even if I disagree with somebody that we would fight to the death to for their right to say what they want to believe in is that

(2:18:21) the right term I think it is oh and then we're also going to do the NC boy stuff where NC boy found that there's only two cell phone calls this actually got confirmed by Victor today I had an argument with Victor today and Victor I said why is there only two phone calls to the plane right how does that make any sense why would they only call to the airplane twice makes

no sense if this plane was hijacked or Pilot suicide they would have called the plane more than twice and even Victor is like oh yeah that's

(2:18:50) that's criticism on the Malaysian government and why did the 2315 knock get graft onto the Ping routes so qar give me some more clues on terms of what you're trying to get me to do all I don't know what's going on with qar on but I like you and if I'm supposed to join the X Force then you got you got to give me some more information on that for sure um also we're going to reach out to Richard Dolan where's my stuff let me make this notes as well we had oh we had uh keemstar followed us today

(2:19:29) keemstar we got the legend the legend keemstar has been following us so we gotta do something for keemstar probably tomorrow I'm probably not going to do any more post tonight I'm just too tired and uh Timothy Al what's his last name alar damn I forget his last last name jeez for some reason I'm struggling sorry Timothy but I want to reach out to both of them and DMS probably um because they're legit and I want to talk to them and just see what their opinions are and then oh yeah we've also got this

(2:20:04) thing where the mouse changes colors in the background pretty weird so we've got a lot of stuff out there I am also going to have a space on Wednesday uh at 5 o'clock Eastern time with uh uh Jake X Shaman uh Jake X Shaman the America Shaman so we're going to be reaching out to another different audience there it is alberino thank you very much so we're going to reach out to another audience we're going to reach out to I guess we'll call them the Maga audience uh but really the people that

(2:20:40) believe in uh Free Speech free expression Equal justice and the uh the shaman actually knows a lot about ufology so I think it's it might be a little bit of wild space but I think it'll be fun I like these crossover spaces a lot I like these crossover spaces a lot the one we had today was amazing so if we do more stuff like that I think that'll be awesome for reaching out to other communities and stuff like that as well so going to be good um book of Nakamoto last two chapters okay we'll write it down we'll write it down for

(2:21:16) you and I am researching about the CIA as well I think we should try to pull some of these CIA agents out into the light I'm a little afraid that this might force their their hand if we piss them off too much but it may help if we expose who some of these CIA agents are these Spooks because they're most likely the ones that are trying to hide all this stuff right so if we drag them out into the light uh it it could be used offensively or defensively um so we got a lot of big stuff coming up and as you guys know I'm

(2:21:55) having a great time I'm not suicidal in any way shape or form I probably should say this once per week and I'm not going to fall off my balcony or fall on the Elevator Shaft or you know go on any sketchy walks down dark alleys so yeah that's all I want to say um I want to appreciate you guys one more time tonight for being awesome in the chat being very respectful to our host that we had today in a space and we will talk again tomorrow we're definitely going to be streaming tomorrow I probably

(2:22:26) [Music] will um oh let me let me go through what I have going on podcast wise tomorrow as well we did I had a podcast today but it's not going to uh be published for like a week and I had one on two of them on Saturday which are going to be published pretty soon as well guys so there's a couple that are going to be coming out uh uh tomorrow I have Elijah Schaefer I don't know what exactly what podcast that is so I hope I'm not being offensive but yeah um so one quick question Peter James ask if the the plane gets elastic banded to

(2:23:06) the last orb is it still going to be going at 700 km an hour the plane actually wasn't going 700 kmers hours it was only going about 200 mil hour cuz it was turning and it was in a turn but we don't know if could be still moving at the same speed or it could actually there's argument that neral mass reduction could cause it to like literally just be set down somewhere um so there's uh we're not sure is the answer to that James and thank you for the donations Peter James and everybody else who donated much appreciated guys

(2:23:36) I'm going to peace out you guys have a great night and we'll talk again soon uh probably tomorrow almost certainly

Transcript:

(02:53) oh I forgot I forgot we were we were uh we were streaming here hey everybody good night night everybody good day sorry just a little just a little evening troll to start it off Lex if you're out there buddy give me a give me give me hit me up hit me up yeah I just I was jumping on to start my stream up and uh I see that there's a there's a whole stream about me out there uh with some dudes that are out there that had me on and there I go in there and everybody's talking smack about me I'm like oh wow

(03:35) I'm like okay so I jump in there and it's these kids who are like sitting there trying to talk smack about me it's like wow man guys get a life seriously get a life if you are not old enough to barely even remember when this incident happened then please don't try to hate on me we broke down there really poor attempts at **debunking** our case the other day so I'm not going to sit here and try to farm uh engagement off of off of them because I think it's we're a little bit above that but uh that's just my message

(04:14) to those guys because clearly they saw clearly they they were watching the stream yesterday and they got upset so I mean I I can see through it guys you did a you did a piss poor job trying to use the VFX **debunk** it didn't match you were using Cindy's weird her weird pictures of the of the ocean which don't even line up to try to push your silly idea that the plane was shot

down like come on man be better than that guys anyway so uh only one warning if you talk smack in the chat you get blocked you'll never talk in the chat again so

(05:02) be good okay we are going to go over some stuff and we got some new evidence that we're going to be pushing out here tonight I'm going to try to get some work done uh I'll answer any questions in the chat as well we're not really going to talk about the drama because it's not what we're here for yeah this is going to be the MS paint Master Class here I found actually a good thing that shows where the drones came from so we're going to do some quick Ms paint skills bye Luca go back to uh go back to your

(05:57) buddy's uh stream this ain't the one this ain't the one for childish uh drama okay I think this one's qualum I probably should have kept that up pretty sure this is qualum right and then this this one's panang or this one's panang this one's panang so the plane's going to go up here doesn't have to be exact but goes dark like right here here turns around goes like this here yeah that podcast was awesome dude they're super smart I I get a little bit worried man like the stuff

(06:49) we're talking about is the stuff that gets people disappeared man thank you very much Mr four orbs that's that's my new name Ashen for orbs okay let's see here people are worried about VFX and we sitting here showing holes popping through clouds and explaining how quantum mechanics and Quantum and macroscop unification work it's pretty awesome pretty awesome um I think the plane is right over here somewhere okay probably like around here okay let's see what else we got here also I'm going to unsubscribe from

(07:54) those guys as well how can you trust the reviews you're reading introducing fake spot by Milla what okay unsubscribed there we go yeah yeah I saw that crap on their podcasts like if anyone comes out like that against me like they're you're never going to talk to me again so I I urge you you can do whatever investigation you want to do if you want to discredit yourself and talk about the plane getting shot down go nuts man go nuts but you know don't try to discredit my case if you try to and you do so in a

(08:42) bad way uh you know you're just going to get blocked and removed from the community especially if you just do so in a really lame way where it's just wrong I think those guys were fine they just they didn't do their homework and that's usually people's problem right they don't do their homework and I'm not going to sit here and try to answer everybody's individual questions as well like I that's why I do my my group spaces and stuff like that so yeah I think we've got the physics

(09:20) pretty nailed down already man if people want to talk to me about the physics I'd be happy to talk to them about it right A lot of these people are just trying to get clicks so uh we're not going to give them that attention and anyone I even think who's trying to use me for clicks is not going to get the attention except for alien addict those guys will always get a pass I like them they're fun okay I'm just drawing a quick diagram of where the drones coming from here I already had one already set up

(09:53) but I just actually you know what I should pull that one up then we can compare I am planning on potentially unblocking uh a lot of the UAP Community I think it's time we formed an alliance I think we have enough evidence that the videos can't be denied and even if people don't believe it that's fine but I have a feeling that we're being played by both sides uh or both sides are being played against each other by the CIA and the Spooks who are trying to deny this I have a feeling that they've

(10:23) been misled about me and that's in turn made me distrust them and I think we've reached a point now we should consider uh you know working together cuz our our goals are aligned we just want disclosure right this looks about right the other reality is I don't know which of these podcasters are being controlled by like the CIA and other Spooks or either either intentionally most of them I don't think know they're being used but I think that they might be getting talked to by people that are making them

(11:13) distrustful or something like that so I just have to be very careful on who I talk to and what I say so that's one possibility should we color the other one in a different color like blue maybe um blue is kind of hard to see maybe green like that I wonder if I can get like a drone overlay or something like that quantum physics panel not the worst idea just have them all on jeez I mean the people that like cry

(12:18) about being blocked are just act like complete losers it's amazing it's just one click man you're gone permanently this definitely makes me second guess whether or not unblocking people's a good idea definitely makes me second guess it yeah I've got 12 and a half thousand sub subscribers on my channel in just three weeks yeah and I haven't even been promoting it so yeah another one bites the dust yeah I do need to get a giant Nene bottle I just use the water bottles that I have and fill them up uh no I haven't

(13:06) talked to Kurt but on the plan is we need to write some messages I think I I did message Kurt let me wait let me see if I can do this without revealing my DMs let me see if I can do this without revealing my DMs guys I almost revealed them right there uh hold on I think we're still okay I also have to slot some people in so you guys are going to have to watch while I slot some people is we got skatopia pod tomorrow should be good for

(14:55) these people don't have \$100,000 that's for sure yeah this is bait there's literally no evidence of a thing so there's no way they're going to say anything anyway um the we didn't know how dangerous

(15:59) these lithium ion batteries were back then guys that's the reason why they got them on there and they weren't security screened either some guy in [Reddit](#) claimed he recreated it n he didn't even if you were recreated it wouldn't matter anyway at this point nobody's going to recreate these though cross yeah I think's already got 37,000 views okay if uh if anyone has connection to uh the UFO Twitter people who were

(17:03) previously attacking me let me know so I know which people unblock I actually I've I've

blocked so many Bots that I it's too hard for me to find people individually um but you know what we'll do some on stream I know a few of them um estimate of the situation I'm not going to unblock anybody who has me blocked though unblocked oh I know how we can find them we just look up I I Ono he follows like half the people whoa look at that well that's interesting that's interesting I guess we won't be able to

(17:57) tell wow wow I think we struck a nerve guys that tells you a lot huh wow wow spicy spicy oh he blocked red panda koala well that's this is interesting I think we're going to unblock this guy too who else has been blocked by L on how do we figure out who to unblock now

(19:00) though damn is there another way to figure out who to unblock wow how do you block red panda koala red panda koal is like the easiest guy ever uh we're definitely not unblocking klouse he's got me blocked he he's had me blocked so he can talk smack about me without me uh seeing so anyone else uh no Lanka is not in a different state I've actually been to Lanka personally it's in panang just just a heads up this right here is p this is Lanka it's an island yeah Dr voodoo you might want to check your math buddy or check your

(19:49) geography I've actually literally been there yeah I want to be careful about fighting in two sides oh actually you know you are right I apologize to you sir Dr voodoo you're right I apologize wait am I right or am I wrong yeah you're right you're right Dr Voodoo I'm sorry wait where is Dr Voodoo you're right I got confused the airport's in panang Lanka is in a different

(20:52) location it's Lanka is the island of the north of of panang I have been to Lanka though still but yeah just to confirm here's the airport's here here's the airport for panang on the island and there's Lanka the other Island yep I'm sorry I should I will correct that in the future this is where the plane would have gone this is different okay uh who said they recreated the videos wait why did I download this I don't see anybody about recreating the videos whatever okay let's focus on what I

(21:48) wanted to do here so this is the locations of where the video where the plane the drones came from the drones either came from voxx here which is car nicobar or they came from Port Blair here uh I need to save this so I don't lose it these videos really have people losing their minds though huh

(22:59) have you analyzed the paths of the drones follow individually yes it's perfect sydal pattern we have uh boy do I have them easily defined let me see we definitely analyze the hell out of their patterns just a heads up Dom Burgess I don't know who that is hey William thanks a lot buddy appreciate it man Don burges should we check it should we take a look guys I'm sure he didn't so let's let's go have a joke let's go have a look YouTube d uh I was informed in the course of my

(24:13) official duties of a multi-decade UAP crash retrieval and reverse engineering my name is Caitlyn carpet that that was it this was it that's it where's the where's the recreation why are so many people trying to farm engagement off this these people are absolute morons this is the

real video right that's the real video this is this is what he made 10 seconds of garbage that

(25:17) doesn't look anything like ours that has clear Shadows that doesn't show any movement in the clouds that doesn't show the orbs appearing where he literally just tried to copy the real video that's it straight up trash dude literal trash it's not even really worth replying just straight up trash attempt these are the people that think that they're logical people right yeah just dislike and move on nah I'm not watching any more of that that's just embarrassing the it's just like typical

(26:20) **redditor** syndrome right they they think that they just must be smarter than everybody else we're sitting out here showing how the science works these people are just embarrassing themselves we should just take a note of like screenshots of these people as well so that when the videos are proven real that we just destroy their credibility every single time they try to speak but it's not worth it either he cited the corridor crew of course he did exactly **redditor** brain my guy's **redditor** brain yeah I mean people are are really

(26:58) really dumb dude no that's fine doesn't piss me off I mean I I can't really uh no it's not able to be recreated that's the problem he didn't recreate it and copying something as well is not the same as creating something from scratch so go ahead and try to copy it without looking okay that's essentially the equivalent of what you need to be able to do okay I want to put the Harris interview up I think H boy this is interesting though huh Londo why would he even bother blocking me doesn't really make any

(27:43) sense he does he even post on Twitter yeah Punjabi Batman just completely destroyed all the **debunks** today destroyed them uh who else do I have to unblock uh I blocked Cliff high today because he started coming at me about my credibility when he's talking about the Elohim and stuff like this like dude if you're talking about space aliens visiting us man and you're trying to talk smack about my credibility it's going to be a good way to get blocked man it's not that I don't want to think

(28:23) that that's not possible but you just don't have any high horse to be standing on man you know are there any people that we would convince unblocking uh I don't know who else who else is part of that crew let's take a look here yeah I don't I don't I honestly still don't even know what elim is man I don't know if it's it's supposed to be aliens or what dude yeah I could look at my block list the problem is guys I've locked so many Bots cuz like I get these like you

(29:27) probably see some of them like I'll get these like women accounts they're like clearly fake and then I try to block as many of them I can because I'm afraid that they'll report me for like faking Bots or something like that and I probably blocked like a thousand of them by now actually I'm surprised I haven't run across one see this guy gets it this guy gets it wow nine replies zero likes why is it an exact match well it's not it's hilarious that the Skeptics use the same thing that Believers use when

(30:14) they try to compare like things in the cloud right wow wow people getting crushed dude

yeah the wow yo followers if that's you out there just doing the Lord's work my goodness my goodness is this one of the fake accounts no is this a real one this might be a real one the bad the fake ones all have the same like Island Paradise thing in the background yeah exactly I'm worried about the fake accounts hating yeah Alex Health uh people dismissed germ theory for 70 years as well yep used to be about my my Asma and

(31:03) my Asma is going to get you guys I'm surprised the Bots haven't there's not more Bots um I need some liaisons to figure out who the other people are that I need to unblock though we're going to give everybody who's in the UAP community chance except for the **debunkers** they don't get another chance yeah I barely know how to X and stuff like that yeah the CNN brains are getting ruined at least in my replies yeah I mean if I see but like let me just I'm sure we'll find some here honestly there's 200 replies here

(31:55) I'm not going through all those but I go through and I always find somebody being a douchebag like usually it's down here in the bottom here let's see although not really cloud changes Yep this O'Hare Airport one in 2006 is a really interesting case wait what wow seems like everybody's on board with this uh wow uh okay I can't find any haters guys I'm looking for the haters is this a hater no no oh here we we go we found one hater guys zero followers using some

(33:01) kind of Bot account like of course you're going to get blocked like they didn't even at me correctly Love Letter TJ You've been watching too much manifest I'm not going to block this person but I'm just going to hide their reply so here we go here's somebody who's getting blocked I probably didn't have to block that person but I didn't couldn't really find a lot of block people to block see like this person like why would you post this on somebody else's thing like of course you're getting

(33:47) blocked for that these are the people that play why is this propaganda and dumb asses blah blah blah and then like why I got blocked for no reason anyway okay I tried that was it so let's go back to do some work yeah we're Way Beyond the VFX thing at this point other people can focus on that if they want you know funny part is didn't I make it so people can only comment on my stream if oh you know what I probably messed up I thought I had it set up where there we go okay okay there we go we've got set to only

(34:33) 20 minut subscribers comment right now so that that prevents the the blocking or the uh trolls should we do one more post as well tonight we've been kind of on fire damn even salvator Pi is got decent amount of views yeah they stab you while they cry out in pain that's actually exactly it they cry out in pain while they strike you oh oh this this is going to get a little bit Politically Incorrect here wait am I blocked by their oh no the account no longer exists that's it that's honestly the best

(35:40) proverb although I would hope there's not any ones that aren't so [Music] anti-semitic but yes they cry out in pain while they strike you that's pretty much the example of The Blocking while they while they get blocked uh oh yeah where is my Martini should I AFK for a second get

a martini we got a lot of work to do here tonight guys I think I'm going to do one more tweet tonight although we we're pretty good on tweets we've posted a lot of stuff today I almost want to pin this to my profile too instead of the all the Alex

(36:18) Jones thing one sec is it this one oh here it is you guys ready for this why can't I play this what the hell why can't I play this the heck also I don't understand why the Lord Lodge guys are so upset like they DMD me told me they're going to do some **debunk** thing I gave them the evidence

(37:22) told them what they were wrong about I don't know why they seem so upset can I give you my best silly Wild next time okay sure somehow somebody opened up an interdimensional portal in that plane went through it and and we don't know where it is or where it's going to come out at but it's somehow it's lost for the time being it will be found again fell in a hole oh it's because it's anov file I think it needs to be all right well that would that what the please do stay tuned in that way um

(37:53) we got a lot going on can I give you my best silly wild ass guest okay sure somehow somebody opened up an interdimensional portal in that plane went through it and and we don't know where it is or where it's going to come out at but somehow it's lost for the time being it will be found again fell in a hole okay all right well that would that this guy works for Motorola the company that freescale broke off of do I think I have to convert this Mike Harris contractor vendor for Motorola pretty weird man so here's the

(38:43) weirdest part uh let me find it's just a screenshot I have um where's my images damn I'm trying to remember where I even saved this now I think it's on my notes oh I've also got the video Dave Rossy was talking about we can watch too today look at this weird

(39:46) dude weird how weird is this who told Don Lemon some stuff man y Don Lemon should hit me up I'll interview Don Lemon I'll ask him man who told you bro look at this whoa dude this is mad weird that video let me see I've got all the evidence for it lined up I've been sitting on this one for a few days guys I'll post it in the chat so you guys can check it out yourselves but I can't post it it's too long I think this will work if I delete this hold on try that out interviews on the web archive from

(40:53) 2014 wow wow project camel up March 14 2014 two days after the plane went missing spicy guys I I think I need to convert this file so I can post it on Twitter I can't believe I'm blocked by L alando so he must have saw the one post where I said I was going to compare connect him to all those guys it's pretty wild I actually might have been wrong about Lando guys maybe he's not on the side of evil wait oops that's not the one I wanted I'm starting to think that I'm getting played by both sides or both

(41:37) sides are getting played towards the middle I thought this was it oh here is this one yeah I don't know it says processing AUD to audit I don't I don't get it it says processing but we also found another thing interesting guys you ready for this as well I think I have to convert this or

something why does this not let me play it I wish I understood technology guys I can understand uh Quantum and macro physics but I can't understand why I can't make my video play on Twitter why doesn't social media work

(42:16) man why doesn't it just work um I want to show you guys something else I got too much going on here I'm going to forget check this out look at the mouse okay it's GNA change color see how it's black it actually becomes white here so it was black right there right now it's white the mouse is white right here now I'm going to pull it up in the higher quality version so you guys can see more clearly the mouse changes color do you think that the hoaxer put a mouse changing color based on the background into their hoax

(43:17) video this is the higher quality version one so there you see the mouse look at the mouse changing color here Mouse right there it's whitish now it's totally white right here white again I'll fast forward a little bit now the mouse is black when it hovers over that stuff white and when he goes to close it it's black again I think see how becomes whoa and look at this oh I mean this looks like natural interference to me you think the hoaxer hoax this into the frame look at the black mouse right here I mean this is weird doesn't this

(44:22) seem like it would be totally natural for that oh that's no they didn't hoax that that's because it was just it was doing that okay Mouse is totally black right there right right in the frame before that down here it changes color based on what's in the background that's super weird right don't you think this would be something only set up for a real situation in a real life yeah but the whole point is so it doesn't get lost right why would you build this into a hoax thing like that

(44:50) right what kind of os even does this my mouse doesn't do this when I hover over stuff doesn't this seem like this has to be built into the program seems like it would be intentionally set up for a battlefield assessment map where you're going to use a mouse to hover over yeah was transparent early on with the outline right over here look at this see this different now it's black look at that look at that it's transparent and then it's black when it goes over the clouds that's wild it's black right

(45:40) there that seems like that's pretty interesting to me I don't I've never seen a mouse do that that would be really weird to build into the hoax right I think we'll push that out tomorrow that's that's definitely interesting it's definitely this was definitely not taken on Windows 98 or Windows 95 guys whether or not Windows 8 98 or 95 does that I don't know but that's not why it's doing that in our videos but that's that's very odd okay um should we let's let's push this

(46:33) content out in a minute let's wait a little bit longer I want to watch the Dave Rossy thing in fact I might make a drink while we watch this except for I haven't seen it yet one sec guys if a beautiful uh foreign blonde girl starts uh hitting on me should I be skeptical guys probably huh probably should be skeptical what is that real money did somebody what what Merlin hold holy crap dude is that like the max people can donate holy crap Merlin wow man wow thank you has Merlin even asked for anything has Merlin even been in the

(47:40) chat what is going on thank you very much Merlin you just came out of nowhere I'm I don't see any messages wow people really support this organization my my goodness holy crap thank you Merlin I'm going to have to due to the large amounts of donations I've been getting the last couple days uh I'm going to probably be giving out some gift cards to some of the admins and uh people have been contributing heavily to the investigation so wow thank you that was a that was a huge donation my goodness

(48:20) wow yeah maybe Merlin's the hot blonde wow yeah um I I guess I'm just going to say this every time um you know if you guys need your money please keep your money for yourself if you uh are want to donate and help out the cause obviously I appreciate it and the uh investigation appreciates it it's going to be put to good use uh I'm not sure what what the next step is but we'll definitely put that to good use in terms of making sure disclosure gets out there so thank you very much um yeah we're going to do a little more

(48:54) Mike Harris in a second damn obdi thank you uh my channel thank you my channel has a question if the phrase correctly describing attacks results in some psychopath out of left field claiming it hey that's on them I don't know what that means exactly but sure YouTube takes 30% yikes that's a lot YouTube thank you very much Merlin appreciate that man YouTube really takes 30% yikes that's fine though I don't care I'm not doing it for the money anyway I actually I still haven't got paid by YouTube I have to like think

(49:34) they sent me a letter or something I've got to go it's probably in my mail I got to get it yeah I was using free editing software yesterday but that's what actually what I'm going to spend the money on next is I'm going to buy some editing software so I don't have to use the online editing software it literally took all night to pull out like 10 minutes of the all evidence I woke up and it still wasn't done I'm like oh boy boy Juan the **debunkers** will say the whole through the clouds matches the VFX

(50:02) expert effect asset probably yeah that money will easily be able to buy some editing software I think unless is editing software really expensive it might be um hold on I have a hot blonde to talk to hold on uh you guys watch this video where is it where is it here it is this is the one that Dave Rossy was talking about yeah **debunkers** are just straight up on suicide watch it looks really awkward if you just made a video claiming that you recreated it and it's just some garbage and then we're showing stuff that's like can't be

(50:48) faked wait it did it get pushed up to 245,000 yet hold on let me look at my DMs I'm still waiting for a response from kim.com to conf confirm the price moving up no I don't think so yet let me let me go check he'll post it if it does he's going to post it before me man being followed by kim.

(51:14) com feels really good kim.com just posts good stuff man uh he didn't post it though this is just funny this is just funny guys the Sunspot matches the ISR on this is just funny I try to avoid a lot of the political stuff because I just don't care but isar on son pretty funny okay uh let's chill on that for a second Lu zando if you're out there why

(52:18) why Lando my feelings are hurt my feelings are hurt what what is that Euros is Euros more money than US Dollars holy crap Antonio wow wow thank you you guys are making this awkward thank you very much holy crap man well I guess we won't have a problem getting the software getting the editing software Antonia thank you very much appreciate you should I go get a drink while I play this video for you guys you think we're going to get copyright strike for this I don't even know what this is set to 528 this is developed by

(53:01) Thomas selki what if Anton's a girl though I don't think she'd be hung thank you Thomas why Lou here why it uh can be used for uh science experiments I would say take my shirt off um go and that this is a this is a profitable evening of streaming I've only been online for like 30 minutes way how long been online maybe an hour here I also have another tone generator set to 525 and I'm about to show you what will happen yeah what is this is this about to get creepy guys um things happen much

(53:36) quicker when you're using pure tones rather than the other stuff is this about to get creep yeah I deserve a drink sounds mixed in with it um there we go here hold on I'm pause this for a sec I want to watch two hold on guys this blue cheese is looking kind of kind of sketchy I got to stuff blue cheese olives here guys and I don't know I guess this cheese is probably still good okay okay guys I think we're about to summon a ghost here just hold on we're

(54:39) summoning ghosts wait will this strike me though I don't this isn't necessary copyrighted you can see a much more stable you think this is a copyright what if I just mute it you think that'll cover it what's this guy what's this guy doing 525 this is what Dave Rossy sent me from when he said something about Fox News or something like that he hear the fluctuation there dude I I think a ghost is legitimately going to come out right now whoa what is it what the what no this isn't real this isn't

(55:35) real what in the F guys I'm not drunk enough for this right now guys wait let me hold on I'm messaging Dave Hold On there's no way this is real right what the No No I remember seeing this there's no way this is real guys bro what some kind of VFX Thing sedona Arizona if you don't know where that is I do is in Sedona Sedona and it no way no way this is real

(56:44) this is some darn the dark um phenomenon gateway to Sedona there's several of them there yeah and I mean then again everything looks CGI these days right maybe it's a VFX from a '90s video game guess you think this is the Pyromania VFX a gate portal Wormhole Stargate whatever you want to call it you should put his hand through there to another state if it wasn't fake he would put his hand through there for sure using a mixture of two solid tones yeah okay that that's completely sense oh my gosh no way is that

(57:37) real pretty weird he should have put his hand in there yeah TJ's G to use that maybe Skinwalker Ranch should run with that yeah I could recreate that in 15 minutes guys but instead of recreated I'm just going to put on my Jord Le Forge glasses and make fun of it on a couch for a while but I could recreated it I just don't want to that's my favorite excuse I could recreate it but it's just not worth my time I could create in 15 minutes but it's not worth my time should we

watch the Camelot missing

(58:24) thing I'm make I'm stuffing blue cheese olives oh my martini glass I think we might get copyright strike for [Music] this is this a nature show or what are we what are we watching here that's a cheetah so this is an hour long interview boy this definitely looks like this is 2014 if you had told me this is 2004 I would have believed you yeah know this blue cheese I think this is the last time we're going to be using this blue cheese guys oh wait where's where's the volume which became in essence free scale right

(59:24) correct I I tendered uh two offers to buy it um you know the first one was for \$10 billion all cash we were going to get that through City Corp Venture Capital they were the ones who were going to to fund it um we we we had had the money secured both the equity and the debt and then uh we tendered a second offer U about a year and a half later under different circumstances because motor but I tender to okay so why did you want to buy them uh because the the wealth of technology that that represented and how that company could have been run um

(1:00:08) they change um you once um they had a chairman CEO guy Nam Fisher left and uh they put a guy named tuer in until the grandson of the founder guy Chris came there and took over the company and it was under Chris that the company began to disintegrate finan Tres and they had to to sell off pieces of it is really essentially what happened okay but uh but in but in terms of of being an attractive company you felt that their core uh Core Business which I assume is the semiconductor division uh was was worth getting very very much involved

(1:00:51) with correct much involved with um it it was one of their core businesses you have to remember that Motorola is a telecommunications company that that's primarily what they what they did uh back in the day Telecom whether that's you know Police radios whether that's cell phones it doesn't matter if it talks from point A to point B motor demonetized me I just got \$300 in okay and on top of it as I have written in uh one of my articles I found some background research uh that talked about their building these transponders uh and

(1:01:23) and the trans being involved in the space program very early on uh Apollo 11 apparently and uh also I had the moon and um and our first communication between uh I guess the the ship and and the moon or Earth and the moon do you know anything about that no that was not my area of expertise I didn't work in that that group that was again the government Electronics group and they they were U they did a lot of um covert work for the government let's just say that they did a lot of uh highly highly top secret

(1:02:00) dodet for the for the US government okay so it it one thing here I'm just looking at the patents it says that Jacob Rothchild through Blackstone fre scale is that correct that's correct okay so so Rothchild uh and this is where the link to Israel may also uh crop up because obviously Rothchild uh the Illuminati and their their background obviously when you just when you're in your interview and you drop obviously the Illuminati I start to get a little bit red flags guys wait 500 lbs hey James cosmin what's up

(1:02:45) buddy uh yeah I don't know you got to just the Illuminati stuff gets to be a bit much for me guys I'm trying to follow down the kind of corporation which is Israel uh is all all sort of part of this picture I mean if you were to sort of look at the scenario at with your knowledge uh in other words of the inner workings of the company the players involved and this information regarding who owns it at this time in other words these people took uh control of this com company back in the day when you made an offer for it

(1:03:23) um it would you say that there is any possibility that these scientists uh will ever uh see the light of day again on planet Earth Bo anybody's guess on that one I I certainly hope that they are found and and that they're safe but uh I I can't even it just be a a guess at this some super donations the more fundamental reason how did the plane disappear what caused it to fall off the raadar so to speak right uh but in terms of just in terms of stacking the cards here and and you know I obviously people

(1:03:56) have Lov on on the plane I I was fascinated that CNN was already um doing some kind of uh article called remembering uh the passengers of three flight 370 uh actually a couple days ago which is crazy because at that point you know no been pronounced dead yet yeah exactly and a single body four days after the so so it seemed extremely premature um not sure why they they would sort of have the bad taste to even call their article uh that but at any rate they did I don't know if it's still side or not this is insane holy crap is

(1:04:37) there anything hly that uh that you have heard about people that that were uh using false P passports on the plane we know about the false there's been some anomalies in the photograph of the uh the two gentlemen who were using the I they they photograph one legs on the other it looks like the bottoms of their of the picture were cropped melted together because their legs are scale was literally broken individualized but their legs are different it kind of gives the impression that perhaps business going on

(1:05:12) here these were the guys who were who were on the plane or not I don't know I can't venture to guess it's just a very strange that CH the the balance and it's just uh very very odd balance should be better it's going to be a little quieter now though okay um yeah and there there was some some thought that the the false pass I had the balance up because of my interview earlier four of them I'm not sure two passp promise I don't trust rossart at all they were used by people to get on

(1:05:44) the airplane near other than the owners of the passports there was five other people who but then again maybe I'm wrong about Lando although when I see I get Block I'm blocked by him then that's the latest that I have pretty okay is what that means to me anyway is that that we could have uh the in other words the people that were orchestrating that the flight be removed to say an underground base or an under sea base underground base more likely um basically why are they talking passports to hide their identities talking about

(1:06:14) underground bases okay uh okay in in terms of rollsroyce there did he just connect the Iranians to the incident um because they are supposed to be able to track their engines and this

is spicy guys uh what I the information I have now she's talking about the Rolls-Royce that talks about that in issue uh hold on one second because I'm holy crap this is spicy guys get this uh you know because I I'm I'm running this whole thing by myself and and so I I apologize spicy time you need I got to get a drink I got to get a

(1:06:51) drink oh boy good yeah Ross was in into WR books cuz yeah just crazy here but uh if he was in for True disclosure he' just tell us where the underground uh me UFO and and apparently there's something to do with a Biometrics agenda somebody's sending me a link to that the thing of it is Carri you know people like you and I you know what part of our job is really you know is this guy still alive dude Val but it's really creating a record for future generations to help solve what what really happened during our

(1:07:23) lifetimes our times here absolutely take take your time do whatever you need to do because this guy get killed I've met with the guys from Far met with this guy Rubenstein guy yeah if I got blocked by Lando it means we're we're way too close to the **truth** and they can't contain it anymore and they explain PR weirdly that if you want to buy a share in Black it's \$50 million that was back at the time that's really weird I I imagine that the price for the share of Carl out has gone up it's

(1:07:53) completely privately held it's there's no guarantees it's all risk Capital wait is this because I looked through his followers and found out who he was following and there was a bunch of people I blocked that's the only reason this makes sense right why else would he block me there's no reason why he would block me yo Lando if you're out there and I know you're listening buddy I know you're watching yo unblock me man I'm trying to unblock all your little drones or whatever so that we can form an

(1:08:25) alliance here there's no reason to block me because I don't even comment in your posts does he even post but you've got to be a player to even come and with those guys yeah I absolutely okay guys I'm going to let this play for a minute and maybe I'm going to get copyright stried I don't really care uh I got to make my drink real quick I'll be right back and you can do the same tell me if he says she says anything spicy yeah this is Wilders have appeared things they've been part of uh one member of Blackstone

(1:08:59) I I believe they're saying um was the most influential billionaire in US politics served as United States Secretary of Commerce in 71 uh assistant to the president for international economic Affairs um and he succeeded David Rockefeller as the chairman of the Council on Foreign Relations in 1985 and then resigned in 2007 so that's just one of the individuals involved in in this these uh managing companies or controlling companies um these are the private Equity that go out and buy these assets buy these companies and that that's

(1:09:37) where the equity portion comes from then they'll have another bank out there that will provide the debt portion for it but really what the whole strategy behind private Equity companies is is to consolidate every industry possible doing what the term is called a rollup so if they're going to buy one player in in an industry they're going to want to buy four five so they

have the The Lion Share of the business uh they may all them own them all separately but they're they're all coordinated so that they

(1:10:02) they eliminate all competition I mean if you look at what's happened to the US economy since the Advent of the private Equity model um you know Ronald Reagan regulated everything but yet we have uh for the purpose of inciting definely Target when you look at the airline industry for instance we used to have 35 or 40 Airlines in this country now we're down to five or six you look at Telecom you look at media you look at uh you know the News broadcasting all of these things have been deregulated and they've

(1:10:29) been heavily heavily Consolidated so you have fewer and fewer players you've got uh essentially controlled competition so there there is no competition no choice for the American uh you know citizens no choice at all yeah AB absolutely uh I mean what's happening with the bankers that are dying daily uh we've had a couple more Bankers just die in the last two days I believe uh it just just boggles the mind uh this recently I guess most people will have heard about the person that jumped in in front of the train I think it was in

(1:11:04) Manhattan um I you know I don't know why they're dying in these particular ways I I I think it's really strange that if you're going to commit suicide and you know obviously they're being bumped off and they're being forced to do to to uh in essence commit suicide or suicide E I um but it but the the methods chosen are so graphic uh so obviously um violent you know and and and so on in other words jumping from building seems to be the preferred method um my favorite one was gu shot himself with the nail done

(1:11:42) times yeah EXA my favorite I mean just incredible stuff uh and and and this is going on daily now in our world so uh we have to look at this and really examine where we're headed uh in other words it would it would seem that we're moving into sort of a um what did I miss emergency situation when you've got uh people repeatedly being knocked off you've got now we've got this this bizarre situation with this jet Zoom it let's fast forward a little bit intelligence capability and privatized it and uh they change the

(1:12:19) name it's no longer called blackwat it's called Academy now but uh that those people were and you know I've been to Ukraine a number of times I've been to to the shipyard in like he's like actually a spook though not like a haha he's a spook he's like actually a spook I don't know what side he's on though the Min okay I think we've listened to enough of this but uh the clicking is making me lose my mind um the question is guys who's on what side okay so I've been made aware that

(1:12:53) there's two sides going on right now like I'm basically this guy who's talking right here this guy's just speaking off the cuff right now like this guy's like in his he's like in his hotel room or he's like in the corner of his office like afraid of the world at the moment like I don't know where this guy is taking his video but he's just speaking straight off the cuff right now like he's he sounds extremely credible to me and uh like me like he just doesn't care right

(1:13:18) so I don't know which side people are on but here's the thing they might not know what side I'm on either right but yeah I think if you're a spook like like Lou is and you know the inside like why are you blocking me that's weird and why are you connected to all these people who've been attacking me but we're going to go ahead and extend an olive branch I unblocked a bunch of the L crew I guess is what they're called because the reality is if Lou really is on the side of disclosure

(1:13:49) then he should be aligned with what our intentions are and maybe my guess is Lou knows what the implications are of this technology and he knows it's too danger he thinks it's too dangerous for people that's the only that's my true opinion I'll be right back I'm just going to tell you guys my also my other opinions on this as well I think this stuff's human-made I think they're pushing a bunch of about aliens to make people think that we can't have this technology and the reason why I think that is Matt Gates

(1:14:34) when Matt Gates said that he's the only one who' seen this stuff and he thought it had to be non-human intelligence stuff that we were looking at dude that's when I got suspicious that's what makes me think everybody's in the dark they don't realize that this is locki Martin Tech I don't even know if we actually even need reverse engineering for this the more I've dug into it and dug into what we've done since the we split the atom and dropped a nuke like what do you guys think we've been doing for the last

(1:14:59) 80 years 80 years since we dropped a nuke it's not like we've been sitting around doing nothing so just keep that in mind yeah I'm a little worried about this endgame blame the aliens crap I think it's it's silly I don't think aliens would really be a threat to us either I think we are going to destroy ourselves that's what I think um fbw th6 contact Billy Carson or Matt Iroy they'll gobble this up and they'll have platforms okay guys let's do it let's we're boozing

(1:15:55) let's do some searches I don't know who these people are guys I don't know anybody I'm not good at social media so Billy Carson do we follow him who's Billy I mean we got you got to help me out help me out F fbw fbw the 6 Matt Iroy does Matt Iroy make the water Iroy uh I need help there's too many there's too many oh wait somebody else gave a donation how come I can't give some people emotes Ben whale thank you very much appreciate it man damn you guys you guys are making me not want to have my

(1:16:39) job anymore but how come I can't emote some of these people like why can't I emoy this I don't understand social media guys I definitely don't understand YouTube this one lets me press buttons on it can I weird guys Forbidden Knowledge I think I'm think they're in my emails before I go to sleep tonight I have to reply to oh Forbidden Knowledge I got to reply to a lot of people forbidden knowledge guys that doesn't work is it like this oh on YouTube guys it's too hard

(1:17:48) too hard ah guys you realize how much Boomer I have in me I'm like half Boomer you know how hard it is to understand how the internet works for me you guys need to talk to me like I'm your 80-year-old Grandma okay that's how you got to talk to me so that I can figure this

out I edited my first video today I was able to remove five minutes from the uh all evidence review yeah if you guys want to get caught up easiest way to get caught up go to my YouTube page I actually have 12,500 followers that guy was trying to make fun of me

(1:18:38) that's a lot of subscribers dude go to your channel yeah 12,500 holy crap yeah this just rapidly increasing it's going up hundreds per day guys we already had 2,400 views on this 222,000 for the old evidence review where's my new evidence review oh here it is here's a new evidence review right here you can check that out also uh boy here we go flight path wait what is this the one what is this oh that's just that one there's a fight pla explainer somewhere in here do I get copyright strike for looking at my own

(1:19:32) stuff I don't remember what I'm looking at I think we're going to make the TW the Tweet post now though we we've done enough weird weird Lando weird buddy we ain't done yet tonight we ain't done yet to night okay oh no I got to I got to that's what I was doing guys that's what I was doing I have to convert this to an M uh convert mov to MP4 hold on I'm using this Cloud converter give me a second okay converting Cloud converter converting processing okay please do stay tun that way okay

(1:20:28) download okay we're good we've got it now what's this whoopy wers what's up what's this is this a risky click guys I don't trust Bing oh I think I already downloaded this one it's pretty cool though thank you whoopy wowers oh no that was just a few minutes ago thank you sir must not have downloaded then I'll put in my Discord hold on I'm so far behind on emails guys I have 69 emails guys oh I hate email and I've got like 10 more requests that I'm not going to be able to fulfill

(1:21:17) them all uh cringe guys hard Tru is pretty amazing dude these Recreation attempts just getting sadder and sadder though let's be honest to ourselves guys oh drunk text locki Martin now that is an idea oh there they are why did they get a gold gold tag next to their names 500,000 viewers I don't really have a good one to troll just troll this one

(1:22:42) wait can I make it smaller like can you make it smaller characters I want it to be like whispery he Hydra this might actually just get me killed guys so I'm I'm actually afraid I'm actually a little bit afraid of of tweeting this level 39 did he Post in something new level 39 is one of my favorite accounts this give this guy another follow however many follows this guy needs people love their Bitcoins

(1:23:48) huh we were talking today salvator Pas was saying that like maybe the AI has become sentient and they've been using mining bitcoins to make money pretty wild a little bit scary huh no yeah I'm I'm definitely not going to die of old age guys I'm definitely not going to die of old age yeah this community is the best community I've ever seen in my life I actually mean that wholeheartedly I've never seen a better community and I couldn't be more proud of this community the memes that we

(1:24:24) create yep got to remember what St Augustine said God is love uh do you like how fast

on the on the thing today I when he when salvator Pas quoted St Augustine oh I was ready to go man I was ready to go I already trolled locky Martin it's too late it's too late not no taking it back guys there's no going back in this in this game we only go forward blocked by Lando yeah sorry I'm eating my uh blue olives I'll I'll try to mute it when I do that ask yes okay sure somehow somebody opened up an interdimensional

(1:25:11) portal in that plane went through it and and it is or where it's going to come out somehow someone opened an interdimensional portal what in the effing hell man this is this is this is Don Lemon levels of wild dude yeah this this train has no breaks man we have no filter we do not give an f yeah I'll try to chew into the mic a little bit louder for you guys as what is it what does that stand for ASMR what does that stand for what does that actually stand for guys I told you I have too much Boomer in me I don't

(1:25:50) understand these acronyms I know ASMR it means like eating on camera or something but I don't I don't know what it actually like literally means I do know this Martini is delicious I know that okay um can I I don't think I can do three breaking updates in one day though sketchy update um I don't know if we have a better title let me know we'll call it investigation update

(1:26:54) let me look at my let me look at my evidence here let's see what we got here guys there's no way he was a he wasn't a vendor he wasn't a vendor he talks about Motorola for

(1:28:25) oh yeah I should sa the date where's my this is not helping I have too much stuff open guys let's make sure this is what he says

(1:29:28) somehow it's lost for the time being it will be found again fell in a hole okay all right well that would that please do stay tuned in that way um we got a lot going on can I give you my best silly wild ass guest okay sure somehow somebody opened up an interdimensional portal in that plane went through it and and we don't know where it is or where it's going to come out at but it's somehow it's lost for the time it will be found again fell in a hole okay all right well that would that please do

(1:29:58) stay tuned in that way holy crap this is just so nuts man this is this is nuts dude yo we need we need fredman Lex where are you Lex please Lex maybe one of these three messages is Lex guys what if one of these three messages right here is Lex oh we got to get this other this thing where's

(1:31:17) that this is not he's not telling a joke why would people think this is a joke this is this isn't a joke at all dude um we got a lot this guy is not joking right here silly wild ass guest okay sure this isn't a joke somehow somebody opened up an interdimensional portal somehow somebody opened up an interdimensional portal I'm glad you liked it Paige if you missed my stream from yesterday check out the first five minutes somehow somebody going on he's speaking with a complete straight face

(1:31:54) wild okay sure somebody told him something interdimensional portal in thate went

through it and and we don't know where it is or where it's going to come out at this is just weird dude yeah his body language is like he's scared lost for the time being it will be found again fell in a hole it fell in a hole holy crap dude this is yeah this guy probably I'm worried about this guy I'm worried that this guy's not alive anymore I'm very worried this would have seemed silly in 2014 now this

(1:32:42) seems scary um where's my other picture where is my picture guys I have too much stuff open let's man I kind of want to watch more of this this is weird I just don't have time I don't have time to watch more let's see if there's any good comments they're worthwhile here this is very specific dude whoa aridium is mentioned a lot

(1:33:52) hey guys I'm just going to disclose for the world right now just so that the SEC can't come after or whatever SEC or whoever uh yeah yo I see we have Mitch heer fans here Bigfoot is blurry that's the problem there's a autofocus monster out there and it's extra scary to me I saw Mitch three times before he died three times three times he's my favorite comedian ever by far and then Dave Chappelle's next what these comments are all over the place man should we talk to Punjabi Batman no I

(1:34:59) think we'll I don't think I'm ready to reveal those DMs I don't want to get Punjabi Batman killed we need him man we need him wait he says this too no she says that yeah I don't think he's joking guys he's definitely definitely not joking in this interview guys yeah Anthony jessick is pretty funny uh pretty good I like dark uh humor guys we have 288 viewers wow yeah I'm big it's Orban time yeah seeing Mitch three times is a serious Flex considering he died soon after from overdose he was hilarious man I was

(1:36:02) obsessed with him in college and we went and saw him he came every he came on my college one time then we went and saw him in a show in uh St Louis a couple times as well I know uh a lot of his jokes by heart including the Bigfoot one my friend asked me why I want a frozen banana I said nah but I want a regular banana later so I said yeah I don't have the delivery he has though Sasquatch Chronicles yeah he probably missed he probably reached out to me I mean yeah I'm going to go on as many shows any as many things as I can

(1:37:05) this is this is weird guys this one's this one's weird where's my thing that I had going on where's the other one did I really lose it let's close this I got too many windows open man oh did I cover oh no here it is here we found it we found it relax chat relax here it is uh I have to cut and paste it I have to type this out I have to type this out guys okay I'm G to put over here oh man I got to type this all

(1:38:20) out dude I don't think she understood what part they they were trying to tell her to shut tell them to shut up about jeez man this comment is wild

(1:39:32) dude I'm going to post it exactly even though it's not grammatically correct it's also important to note that my interview with Mike Harris actually didn't spell anything wrong that's incredible wow for

(1:41:02) let's delete this do I make any uh mistakes here did somebody just donate more money did somebody just donate more money holy crap guys guys people are going to start making fun of me for this Robert thank you holy crap I am indeed a man of culture holy crap Dono maxing guys are you is this actually the max you can donate like you guys are just going wild thank you holy crap wow

(1:42:11) Robert this is wild you guys are going to be making uh some of these other podcasters and streamers jealous man you're going to definitely be making them jealous yo holy crap thank you very much does Robert even have any questions no he just just going just going huge my goodness yeah banner I wasn't even looking up I was sitting I didn't even see it I didn't even see it I'm just sitting here like headr strong into my work here I'm working for that money wow uh have a good night whoever

(1:42:52) that was I the chat's moving too fast um I'd rather not say what Coast I'm on just in case I mean I think people can figure it out but happened on March 13th okay thank you thank you for that correction that makes sense it's probably uploaded the next day right thanks for the correction on that did I miss anything else on this yeah no these amounts are no joke this is wow yeah the wow we got we got a lot of dedicated people here appreciate it yo Hermes sh Hermes don't tell people shh I only reveal my DMs every so often

(1:43:52) like every day will I go on Fox News I might go on Fox News if it's with uh Greg gutfield because he was in my space but otherwise I kind of want to go on a left leaning uh Channel because I feel like we got to balance it out a little bit like right now I feel like we're just like pretty hard on the right-wing politics side and I'd like to be all balance it out but I just I don't feel like MSNBC is going to talk to us anytime soon I feel like I I just doesn't feel like they're going to be

(1:44:28) will to talk to us anytime soon I don't see Rachel mattow picking this up just that's all I'm saying um sorry yeah and look what they did to Tucker Carlson too Tucker Carlson wasn't it right after he put out those videos that showed that Jacob chance was just wandering around with uh the with like eight eight Capital police around him didn't didn't they get rid of him like right after that I think they did I think that was like one of the last things he did before he got fired I definitely don't trust

(1:45:10) them yeah I don't trust Fox News at all yeah Rachel mat will blame **Russia** 100% % she'll she'll go full on Jeff wise dude she'll be like **Russia** did this somehow this is yeah Bill Mah would be the move can you guys imagine me um yeah I'm going to probably have to add this money to my taxes can you imagine if I was on Bill Mars panel for 45 minutes or however long that would be that would be great that would be just great I think I'd be able to hold my own I'd be sitting there saying hey guys

(1:45:50) what do you guys think about about Advanced uh quantum theory they put me with like I don't even know who colonel colonel West or whatever his name is that would be hilarious man there's a bill Mah Roseanne Bar episode that just dropped I haven't watched Bill Mah in like

a year and a half maybe two years DT I can tell you straight up there's no scop here on this front I was talking to um germ podcast and uh we were talking about like how people get too deep in the conspiracy of like everything's a

(1:46:44) distraction everybody's controlled opposition like at some point you get to a level where it can't be distracting from something else right it can't be everything can't be controlled opposition otherwise there is no conspiracies right that's why I find it a little bit silly a lot of that is just honestly I think it's disinformation it's intended to discredit people we're simply just dealing with the largest verifiable conspiracy of all time it just doesn't get bigger than that you know how does

(1:47:13) it get bigger than a plane being disappeared and advanced technology that would change the whole world like just doesn't get bigger than that being covered up from us there's a lot of stuff that's really bad but that's just as bad as it gets I gotta listen to it one more time way um we got a lot going on can I give you my best he asks he tells her he's like hey let me tell you silly wild ass guest okay sure somehow somebody opened up an interdimensional portal the way he says this is unreal man yeah plane went through it

(1:47:54) and and we don't know where it is or where it's going to come out at but somehow it's lost for the time being it will be found again he's not smiling or laughing at all dude in a hole okay all right well that would that please do stay tuned in that way um got a lot going on can I give you my best she doesn't even ask him he's like I got to tell you that it went to a black hole wild ass guest okay sure somehow somebody opened up an interdimensional portal in that plane went through this

(1:48:23) guy definitely knows know where it is or where it's going to come out at but somehow it's lost for the time being it will be found again fell in a hole okay all right well that would that please do stay tuned in that way um we got a lot going this guy knows man it will be found again it's like he's talking to us have you guys ever played Assassin's Creed have you guys ever played Assassin's Creed I'm going to spoil the first Assassin's Creed for everybody right now so if you don't want to get

(1:49:14) spoiled and you want to play Assassin's Creed 1 uh mute the stream I guess so in Assassin's Creed 1 at the end all of a sudden like you unlock this ancient secret and they start talking to you as the gamer like hello gamer you're the one you have to save the world blah blah and you're like whoa you're like okay this is weird right this is what this feels like this is what this feels like can I give you my best silly wild ass guest he's talking to the Future man somehow somebody dimensional portal and

(1:49:47) that plane went through it and and we don't know where it is or it's going to come out at but somehow it's lost for the time being it will be found again fell in a hole it will be found again dude this I'm getting chills dude tuned I'm getting chills this is creeping me out God man this why is so much weird stuff keep happening man this guy just broke through the fourth wall dude how'd this guy know man how'd this guy know okay I'm not going to make it too meta

here this is this is good

(1:50:38) enough you say it fell in a hole like this is just the weirdest weirdest crap dude why we get blocked by Lando these are just it's kind of a weird day today guys it's kind of a weird day this is like the day I got blocked by Ross kohart these guys like are pretending like they don't know about the case but then they're blocking me I found this a few days ago it was there was a post on the subreddit and I remembered some of this as well so we came across this I have a link here alien abduction subreddit and here oh we should post the

(1:51:21) link to the web archive actually I don't want to post the link to the web archive I'll post in the replies I don't want to get it deboosted for posting like YouTube links or whatever Jesus this is weird dude this is weird yeah blue cheese is basically old moldy cheese I don't know why that's relevant but yes um he unblocked me afterwards so Ross kohart blocked me and then people were like spamming him and so then he unblocked me so I wonder if Lu zando will mysteriously unblock me as well the only reason why I was even

(1:51:57) checking Lu Ono's pages I went to go see who his followers were because he has like 25 people I have blocked he's following and he's only following like 120 people so he's definitely following he it definitely means he knows he's following the case I only made one post about him and James Fox and Ross kohart and I said I could prove that he's connected to the people attacking me and all of a sudden I'm blocked by him that's super weird and then I the only reason why I go here is because I was going to extend

(1:52:30) an olive branch and unblock no Ross hasn't blocked me right now he's unblocked me finally we're GNA have more followers than Ross Kart pretty soon how funny will that be to be honest I don't know what side of this L El's on my opinion is that Lou alzando knows the truth about how dangerous this technology is and he thinks he's hiding it for good reasons and he's playing koi with everybody that's my real opinion right now I mean I don't have any way to say that I don't know James Fox is being

(1:53:06) against me is just doesn't make any sense at all James Fox was one of the first people to comment on the videos back in like August and he said that the videos were fake is a \$3 bill James Fox we have James Fox on video thinking he saw an alien out at the window when it was a literal puppet a literal puppet like should we should we end James Fox's career guys James Fox made a video crying about how his career was being ended where is it here we go guys I want to share a rather devastating career inj uh issue I've

(1:53:49) been dealing with for the last 8 months I can't go into much detail at the moment but more will come out soon the support means the world to me 750,000 likes for some vague statement so should we figure out what it was we figured it out guys did we figured out what's threatening his career oh get the out of here that didn't just happen James come in James James James you copy what's going on James theam window there's an alien looking in the window of the office guys right now there just was there's an alien looking in the

(1:54:46) window guys this this is actually James Fox guys James James's James this is the guy that thinks our videos look fake is a \$3 bill guys that didn't justen James come in James yikes I think we figured out what's going to end his career guys I think we figured it out just I unlike Yik guys don't think this video is a m if you if you the woman at the end is the best unlike many people I don't think that this video is I don't think this is a mask that show aired uh 13 years ago I actually remember I think I remember

(1:55:38) seeing that it's called Chasing UFOs do you copy James do you copy unbelievable guys so brave so brave so brave guys James you chose violence James you chose violence [Music] James guys we're having fun we're having fun okay I'm gonna post this let's just do a spell check I am really really bad pika pika pikachu still better than the corridor crew cracking me up right now yeah does he have any big foot hunting footage that we could uh that we could get in there I don't know if that's really why

(1:56:36) he's canceled I it wouldn't surprise me though it actually wouldn't surprise me if that's really why he's why he's being canceled no my real opinion he's probably got some kind of uh Russell bran situation going on he's probably being blackmailed I mean and usually when people make videos like that going oh my career is being attacked everybody rally around me it's like almost always because they're being blackmailed by somebody who they like sexually harassed or something like

(1:57:00) that that I don't I can't I don't know again just for the record I don't know for the TR if that's true that's just my expectation yeah we need him to tell the truth apparently Julian Dory knows the truth he told me he knows the truth I didn't ask because I don't give a crap about James Fox but uh Julian Dory knows the truth so you guys can ping juli Dory for the answer as well if you want either of those guys know the truth so I imagine obviously he's being blackmailed right like that's how this

(1:57:30) works otherwise we would have the information okay Harris was a contractor for motor rooll in fre se4 haris speaks about the value of technology that existed in free scale being a key reason for it separating video clip he's ask things happen to the plane weirdest video man okay I think we're good stop being so arrogant stop being so arrogant I need to get can somebody clip that for me can someone clip that part for me I want I want the part clipped where he says you chose violence and I also want the part clipped where he's

(1:58:32) like basically crying talking about uh uh being so arrogant it's just too funny man the memes just make themselves man the memes just write themselves folks there's the interview for y'all okay wow just wow man I kind of have to listen to this again this is just blowing my freaking mind right now uh I commented on the L Lodge stuff

(1:59:36) yesterday but it was honestly such a bad joke that I there's really nothing to respond to I mean it's the L LOD stuff we're not up to 245 yet we're not at 245 yet not officially yet but one of these mess messages may put it up to 245 145,000 I'm going to add 5,000 myself when the bounty goes up I'm good for the money as well wait why are people sending me links okay

yep no no update yet 145,000 still still 145k so it's 145k we're waiting on somebody else to theor maybe put in

(2:00:39) another 100,000 I'll let you guys know when that goes official So Yesterday kim.com on the space said he was talking to somebody else he he confirmed with me who it was but we have not yet yet got confirmation of that yet so when it's confirmed it may go up to another 100K when the other 100K gets added I'm going to throw in another 5K just to round it out uh I'm good for that money as well yeah there was never any reference to begin with so this actually the fact like if we go here guys so on the all

(2:01:13) evidence review and I'm going to make this publicly available soon uh I've got to Ed I've got to clean it up maybe we should clean it up now actually although now I just finished a a dirty martini I don't know if I'm I'm ready to clean this all up um no reference copy to copy from we're drinking dirty martinis yo every dirty martinis all day that's the only thing I drink um no reference copy so what this means is if somebody edited something they would have had to blindly change it

(2:01:45) right they would have had to blindly change it without a comparison so let me bring up the VFX okay here it is so if they were to change this one in the middle here to the one on the outside they're going to have to blindly move it around why would you change the wave pattern here on the outside to match this other one isn't it just good enough doesn't it doesn't make any sense like oh I'm going to change the pattern here to make it match better and it would have to be a 100% match if it's

(2:02:21) not a 100% match it's not in our it's not in our video and so why would you change all this stuff about it it's not like they have the side by-side comparison they can modify it they would have to have blindly change this visual effect and this is just one frame they would have to blindly change this one frame and add all this stuff to it and then when they're done with it they'd also have to have this plane sticking out of it as well like it just doesn't make any sense at all and this is this **debunks** the lur

(2:02:51) Lodge like their stupid **debunk** attempts like lur Lodge you guys did okay but like you got to think critically man you got **Reddit** brain going on think critically there's nothing to copy it from with the **Reddit** this L Lodge guy sitting there he's like okay and now I'm going to add some red to try to get it to look a little bit closer like realize if somebody faked this they don't have the benefit of doing that they would have had to do it blindly so what you should do if you think you can make it turn into take

(2:03:18) this visual effect here white this exothermic event and then blindly modify it without comparing it to the other one and tell us how long it takes until you accidentally get it to perfectly match you're never going to be able to do so this is the equivalent of monkeys typing on a keyboard and randomly producing Shakespeare okay like I don't know why people don't understand this basic logic these are there's no '90s video game Graphics in our real MH370 videos okay like I don't know why that has to be

(2:03:50) explained to people in 2023 I thought people were smarter than this but apparently not we're not looking at video game Graphics here guys these aren't video game Graphics we're looking at there's no 90s video game Graphics in here also the plane was not shot down guys I know this is hard for people to accept but if you shoot down a plane there's going to be a debris field for tens if not hundreds of miles you're not going to be able to pick up all the debris in the middle of the night it's not possible

(2:04:22) man the next day the boats they're roding around are going to be finding debris everywhere like I don't know this idea like I'm going to do you guys a favor here CU I had to block this Cindy lady because she was like in my replies trying to like leech uh leech people what's her name Cindy what's her damn name Netflix Cindy this lady I was in a space with her and she just she doesn't have any credibility at all what's her name Cindy Henry there it is okay guys okay guys you Reas the reason why she only

(2:05:08) has 3,600 followers is because none of her stuff is credible at all okay like this the lore Lodge actually posted this picture this is not how it works man this is not how it works you can't just superimpose a picture over some white caps and say that we're looking at debris like I I don't feel like I should even have to address this it's so silly I also want to point out this is the South Indian Ocean here we're clearly looking at White Caps in the water or some other natural effect here that it's

(2:05:41) not debris the size and scale does not match you would also not just be able to see like M's like this like she's trying trying to do here they also looked with 42 planes and 39 boats and didn't find any debris no the US government didn't quarantine off thousands of miles of water and prevent them from searching that was searching the next day look at this scale on this like I just looked at this and I was like okay yeah this is this is silly of course it's Photoshop she photoshops the M onto it it's none of this makes

(2:06:20) any sense midsection luggage a fuselage like no we're not seeing that we're just literally seeing White Caps this is uh the same concept that people use to say that the VFX matches this is the same logical nonsense that people use like this is just it's not even laughable It's just sad it's just sad guys like I feel bad and people actually search like with good faith right but they were trying too hard like this lady was trying to make it too too much about her and her search that's weird for some reason my nephew's name

(2:07:01) showed up on my phone for some reason but it's not like a message from him super weird man this is probably the reason why that the families don't want to talk to us because they got weirdos like this saying I'm I'm seeing pictures of the debris in the South China Sea where they already searched and didn't find anything like like what is this what is this man this is the real picture right here zoomed in this is what she's saying we're looking at a wing like guys you you've this is the equivalent of what

(2:07:33) the debunkers are trying to do where they're just drawing lines and going it matches like this is just yikes man see what else we got what fam what this is this is the kind of this is

what we're dealing with here guys obviously we're looking at what what man I can't take this seriously this is what the L LOD is quoting what they think happen look it's an M guys yikes man the worst part was I was in the space with her and I don't like talking smack about people but she kind of deserves it I'll tell you guys the story

(2:08:34) here so I'm in this space with um shy Keenan who I actually highly respect shy Keenan and I get called in hey we've got this lady from that she knows about uh you know the the plane and I get in there and I'm like okay I'm going to give her a chance cuz I give everybody a chance right I'm not trying to judge anybody and so I get in there and I she's like hey you got to check out my evidence I'm part of this crew and I'm like okay I'm going to look at it right and I look at I see all this stuff and

(2:09:06) I'm like oh boy and next thing I know she's talking about she's referring to the plane is she like every time she talks about the plane she's like oh and this was uh you know it was really sad what happened to her I'm like are you talking about the the victims or are you talking about the plane like it doesn't make any sense I couldn't even understand if she was talking about the families of the victims or the victims or the plane and then she tells me like and this is before I revealed myself this was like

(2:09:37) three days before I revealed myself and I had just finished the confessionals podcast and I was waiting for it to drop and so I hadn't revealed that I have a a secret clearance or anything like that yet right and I I hadn't even revealed my full name and so then I'm like sorry but like you know I looked at your pictures and they they don't like the scale doesn't match and you can't like do this at all and um and then she's like well have you ever worked for the government she's like I work for the

(2:10:04) county clerk's office and if you haven't worked for the government then you don't have any credibility and I'm like oh boy like I wanted to be like yeah I have a top secret government clearance and I I've have a contractor for the government but I didn't you know I didn't because I didn't want to reveal it at that point so that was the part where it was like okay I'm just going to leave and then she just started like uh trying to say I have no credibility or something like that I'm like okay

(2:10:27) goodbye like good luck with your weird picture matching game that you're trying to play here you know like what is this man like what is this so and she was she's featured on the Netflix documentary featured on the Netflix documentary this is why the Netflix documentary was a total joke and why people just like couldn't take it seriously man that's why they couldn't take it seriously um would I ever go back on the Lord Lodge No definitely not after today n those guys I wish them the best of

(2:11:00) luck on whatever weird stuff they're trying to do but uh nah we're never going back on theirs sorry once you burn that bridge I actually block them after this Cu uh they can do whatever they want but if you're posting nonsense like this and then you're trying to do weird frame matching stuff with VFX that doesn't match like I wish you the best of luck on your

investigation I wish you the best of luck but it won't be with us that's all so and I answered their questions too they just none of their stuff is any

(2:11:38) sense one of the other things is like why do the two videos look different right so this one is a Electro IR camera with a thermal layer over the top this one's the cers system they have two completely different purposes the purpose of this with a thermal layer added over it is so that we can see the minute details and the color and the temperature differences this one is just for tracking boats planes and missiles so this one isn't a false color IR where the purpose is this is nighttime right and they're trying to

(2:12:06) illuminate it so you can see objects we can tell that it's not the same because we don't see the temperature changes of all the plane the engine the orbs right this is not being put in a thermal camera I think also did thing like why do we see the smoke well that's also silly too like the most likely probability is we're looking at dark lithium ion battery smoke that has a bunch of chemicals in it and that's why we can see it this is not like cooking in a I cooking in like your barbecue right so this idea that we can't see the

(2:12:35) smoke or whatever in an IR camera is pretty silly it depends on the exact chemicals that are being released I mean you know it's just everything that they said again just breaks down right away like you should do your your do your research do your homework like people get too stuck up on trying to **debunk** somebody else like go put in your own work go figure it out right if you're going to sit there and look at the Cindy Henry stuff like it's just getting silly yeah if you were smart You' just be on

(2:13:05) my side man uh that's the reality of it I mean it sounds harsh but you know we've got 12 pages of evidence if you want to drift sift through it and and look at it Point by point I mean I think it would be worth your time yeah I mean I think I explained it pretty clearly you know this is the cber system it's intention isn't for heat differences the intention of this is for tracking boats planes and missiles much like we're seeing here at nighttime right but it's all good it's all good and then a lot of

(2:13:42) people like why do you block people that ask questions well like dude should we go look and see the people who are quote unquote asking questions I have a feeling it's not just going to be asking questions right we dig down scroll down man uh like this like I'm not even blocking people to say stuff like this right like I just don't care people that are stuck on Sandy Hook stuff whatever man really doesn't matter someone says I think the satellite video talk with a global hawk okay I also don't care but there's no

(2:14:21) way we're looking at a a drone at 50,000 ft I don't think but maybe maybe I don't know because those are just basic questions because I I don't I don't care about that right um even people talking about a hoax right so what I don't care if you're not buying it right the stuff I care about when people are just like total douchebags right like let's see I'm trying to find somebody surprised we haven't found more honestly amazing job sure fantastic job sure I mean I'm surprised how positive

(2:14:59) everybody is this this leads me to think that I I the Banning people works pretty well pretty well man if Elon Musk even commented on any of our things that would just be game over probably that would be the equivalent of just going on Joe Rogan and Elon mus definitely definitely knows about this situation guys you think Elon Musk doesn't know about this situation oh did somebody just donate uh Rob Gage thank you very much for the Dono my man yeah yeah so the cber system here is just going to be for like tracking

(2:15:35) objects they're not trying to track temperature changes with the CER system and that's the reason why we're going to just see it in white and black right and it's not sitting there trying to judge the temperature differences in IR the CER systems just scanning the whole world global persistent infrared surveillance Global persistent infrared surveillance right so this is not the same situation as the thermal IR that we see from the uh drone at all when it's doing this they serve two completely different

(2:16:05) purposes militarily and intelligence wise and also it's just kind of silly as well to try to like assume that somebody like what's the logic here somebody accidentally colored it wrong when they were faking it even though they're both Perfect videos so they made two Perfect videos but they were like oh you know what we're going to color one of them white and one of them black like just to like mess with people people are too focused on trying to debunk the case rather than answer the questions logically is the

(2:16:43) problem look even this person respectfully have no credibility with me I I don't care right like I'm not really worried about CNN brain people who like think that oh because you literally talk to somebody with a huge audience that I'm not going to listen to anything you have to say I thought I thought Alex Jones was very respectful I even set him up I even set up he said nothing should we go to that part I kind of want to go to that part I don't remember where exactly it was but I set him up with the \$1 billion doll

(2:17:15) fine thing for people who are lying oh Robert Russell thanks again man thanks for your other donation earlier set this the other day but we have satellites to look at the Sun and multiple spectrums and can see different layers to it exactly yeah exactly we don't know the exact spectrum that they're using or the filter that they're using for the cers video that we see the site video so the idea that they're different colors doesn't really make any doesn't matter it's not a debunk yeah two completely different

(2:17:43) videos with two different systems or so yeah yeah and I want to say one more time just in case SEC comes after me I have invested in nxp semiconductors because I want to have my money where all the elites have their money I made a very large investment into it actually that was like a few weeks ago link to my podcast uh should we link my podcast folks yeah and I think if people are more focused on trying to answer the question and debunking they could come to the answers of their own questions that's what's like frustrating about it

(2:18:23) right when people are tring out there and they they're trying to debunk it because it's doesn't make sense to them that's that's like just not good guys you should check out uh Alien

addict by the way I like these guys a lot they're some of the coolest chilliest guys I've hung out with this is why I went and hung out with them today for like an hour and a half hour 45 minutes check out alien addict we had a good discussion on a lot of stuff today as well I'll show you guys npx in a second after I figure out where

(2:18:55) my videos are am I going to reveal information here I don't even care I don't even care did that say how much money I made how much money am I going to get actually didn't even say oh no oh no can't be monetized rip guys oh monetize uh where's my podcasts where's the one from today oh live oh no we haven't lost it yet we haven't got guys we haven't got copyright stried yet we have not got copyright stried yet yeah I'm not worried man I'm not worried I went on the only reason why

(2:20:00) I'm talking smack is because I literally was coming to stream and I see them doing a live stream about me and everybody's trying to talk smack about me and I'm like okay well that's what you want man that's what you want I I speak **truth truth**fully guys in all situations sometimes the **truth** hurts man sometimes the **truth** hurts I think a lot of people are more concerned about being popular than telling the **truth** a lot of people and I think that that's causes kind of a rot in our society personally darar rade thanks for

(2:20:35) bringing this evidence to life Ashen can't help but follow literally nothing else these days the **truth** of these videos is just so important thanks man I I agree and that just like I just said oh I think I'm supposed to start uploading my podcast I might be able to like actually make money if I upload them online or something uhoh uhoh okay well this is fine I don't mind if we reveal that um I was talking to Chad and Sherry do you guys know how many downloads I think it's okay if I mention this I

(2:21:07) hopefully they won't get upset they might get upset though hold on let me think about this no I think I already revealed it the part three just part three with investigate Earth the one I did with them had over 1.5 million downloads 1.5 million downloads on investigate Earth I don't know how much money you make from that but the answer has got to be a freaking lot man yeah I'm not really doing it for the profits guys but I do appreciate the donations and I am going to try to get some uh software if you guys have any um

(2:21:47) recommend commendations for what editing software I should buy it needs to be something that a boomer can use like Boomer friendly video editing software it's got to be like really simple guys it's got to be real simple right now we're at 145,000 okay so if you can find the hoaxer and you can bring the source files then you and the hoaxer combined will get \$145,000 if you made these videos these masterpieces if you made these masterpieces you would have a hard drive filled with the work that you had done

(2:22:29) to make them right you have a hard drive filled with it's not like you made these on the first try I mean heck look at this smoke that's stacking up perfectly right there so if you made these and you're that expert that nobody's been able to even recreate because they're so perfect then yeah uh go ahead and find that hoaxer 145,000 supposedly there's somebody who

might be ready to throw in another 100,000 uh I haven't had any more weird dreams recently no iMovies is isn't that I don't have a

(2:23:04) Mac though I have a a PC does can I still do that Boomer friendly I iMovie oh for mac and and windows okay we're going to do this one guys wait is it really free I feel like it's not going to be free though oh look at this look at this look at this should I be installing stuff while we're while we're streaming uhoh whatever we're going for it no FS given guys um thank you James McConnell for that for that uh thing yeah call up the Reps man call them up just force pressure send them this guys let's watch

(2:24:06) this guys I'm not going to get copyright strike for this right is that everything in the evidence points to a situation where fire they just didn't realize that it's really the the job over passengers enough op defense is one of the worst Liars I've ever seen I urge do you like when I said that the minister of defense is one of the worst Liars I've ever seen everybody watching to go watch his interviews and then potentially US government takes control or they were on show Harris for free speech and I

(2:24:36) said you guys gotta come it's so Weir I can't believe I talked to Alex Jones man I talked to Alex Jones on Infowars Alex Jones watched me interview with Harrison Smith on Thursday in the middle of it in the middle of it he comes on because he's listening to it and the producer goes Alex Jones wants you on tomorrow he wants you on tomorrow you guys should we should we play The Minister's interview again I don't think that's copyrighted come on SO introduce this and let's bring Ash and Forbes in

(2:25:10) yeah this guy absolutely and look I'm still bull he went in and checked all the satellite out of all of it and double checked it it all I i mean he was super nice man he was actually super nice and that's and that's here I mean there is no official time of surveillance also told other people not to talk to me this is a movement where we link it up with time of surveillance so Ashton Forbes good to have you here tell us about yourself a little bit uh and then let's let's dive into kind of

(2:25:37) give it to us at a you know 10- foot level then pull up you guys like I was wearing the red white and blue that was 100% intentional the 30,000 fot yeah well first of all I want to thank Harrison and Alex both of you guys are having me on I have a quick prepared statement I'd like to read here which is that people told me not to come on this platform but people have also told other people not to talk to me this is a movement where we don't base our opinions on what other people tell us to think we they want to divide us and we

(2:26:01) want to unify us I want to talk to anybody who's willing to listen with an open mind the only side I'm on is the side of **Truth** we are doing this to vindicate the families the pilot the witnesses and the leaker all of my **foas** have been blocked the government has never fought against a movement like this before we don't need to fear them they need to fear us to speaker Mike Johnson put me in front of congress with bersett Luna MTZ and Gates and we will rip the **truth** from the FBI NCIS nro CIA and every three-letter agency my message

(2:26:30) to those agencies is do not underestimate us my message to everybody else is follow a path of your own choosing and do it all yourself this is MH 370x yeah yo I was not playing at all dude I was so fired up for that you have no idea man yeah my headphones are too big guys they are a little too big they are a little too big for my head not going to lie they are they are let's watch the Minister of Defense my favorite interview ever that's how you just straight up tell people they're on notice that's how you tell people on

(2:27:11) notice 123 me reinforcements could literally make this in an afternoon guys could literally make this in an afternoon 1.2 million views on this holy moly 1.2 million views on this one from yesterday wow how many how many views do we have this week only seven million views this week that's still a lot that's still more than CNN yeah it's going to be Minister of Defense time here in a second guys 6,000 views on this already that was only 30 minutes ago I'm just going to like everybody's

(2:28:14) comments I can't even read them all I like this guy oh did somebody else donate it's nice headphones you got thanks Robert appreciate it buddy John Blaze thank you very much appreciate you too man appreciate all you guys

(2:29:53) I gotta make sure that I I make it very clear that I've invested in this company guys I really you know the Spooks are going to be looking for any reason to try to arrest me what's this what's this Search terms I don't know what that is hey Robert no this that's not my journey Mar I don't make it in a bottle that was a root beer I was drinking a root beer guys um see what gifts we can find here do we might have to watch it one more time yeah this is just wild dud see now this is how you get yourself

(2:30:58) blocked right this is how you get yourself blocked bye-bye manifest dude we're going to link that too uh this looks sketchy no no we're not doing that we don't do mh3 uh we got a lot I got to watch it again can I give you my best silly wild ass guest okay sure somehow somebody opened up an interdimensional portal and that plane went through it and and we don't know where it is or where it's going to come out at but somehow it's lost for the time being it will be found again fell in a hole okay all right well that

(2:31:42) would that please do stay tuned in that way we got a lot going on can I give you my best silly wild ass guest okay sure somehow somebody opened up an interdimensional portal in that interdimensional portal man you don't know where it is or where it's going to come out at but somehow it's lost for the time being it will be found again fell in a hole okay this is so one more time do stay tuned in that way um we got a lot going on can I give you my best silly wild ass guest okay sure somehow somebody opened up an

(2:32:14) interdimensional portal in that plane through it and and we don't know where it is or where it's going to come out at but somehow it's lost for the time it will be found again okay I'll give you guys a link to this if you want to watch it 10 more times like I might watch this 10 more times dude I might watch this 10 more times before I go to sleep because I can't come to terms with what the hell I'm listening to here guys is I love you chat I love you guys so much man I

have no you guys have no idea

(2:32:42) I think I love you guys more than you love me I love you guys more than you love me frankly this community makes my day and makes me smile every single day yeah they probably will I don't really care in terms of oh someone was asking be careful what you click on what I like yeah I mean I don't know I've been drinking dirty martini so it's it's hard I'm not going to click on this one though if I see some message like this I'm G to be very careful hateful conduct okay it's Min Minister defense time guys wait let me

(2:33:14) see let me see if Lex is messaging me guys maybe Lex is one of these four messages here guys maybe he's finally messaged me back oh somebody wants me to appear for a speaker holy crap is that real I think this is real people can actually do that with their eyes chat people can do that with their eyes Ashton four orbs baby oh yes yes yes wait we got to we have to

(2:34:21) respond to this guys we have to respond to this one uh we need some we need some Avengers maybe this one maybe I am inevitable no I think we just go with this one I love The Avengers Assemble one I love this one I just imagine all m370x just coming out the portals getting ready and then we're just going against uh Thanos and the and the government as the Spooks gets me fired up gets me fired up jeez blocked by Lu zando we hurt somebody's feelings somebody's feelings got hurt cringe guys okay it's Minister of Defense time

(2:35:20) guys okay where is he at where is he at here's Matt Gates formation for which there is uh a radar sequence that I and I alone have observed in the United States Congress he's the only one in Congress that's observed this one of the pilots goes to check out that diamond formation and sees a large floating what I can only describe as an orb again like I said not of any human capability that I'm that I'm aware not of any human capability that he's aware of not of any human capability he's

(2:36:01) aware of how can this be he doesn't know that he doesn't even suspect doesn't even suspect that it could be uh locking Martin guys okay wow is it possible for a trip 7 to turn off all of its diagnostic information that it regularly sends out I mean is that is that actually technically possible that it would disappear from the radar this isn't the ministry of defense yet this diagnostic information that's routinely sent out would just cease is there a button that you can press to do that I

(2:36:46) think that is something that we are all like to know the answers as well and we are we are investigating on that on that on that matter and we are we're investigating to figure out if there's a button you can press to turn off all the diagnostic equipment no the answer is no of course there's not a button you can press to turn off all the diagnostic equipment how is that not just a simple answer we are talking to the experts from the airline also we're we're talking to the experts aren't you the

(2:37:11) literal expert the transportation Minister get assistance from boing in fact on this matter that will be of the investigation that'll be part of the investigation this is like how many

days later there could be people on a boat somewhere basic just a basic question I love the New York Times guy wasn't that just like a basic question yeah it ispp can an aircraft disappear I just I just cannot speculate something that we you can't speculate it's just a simple question can you turn off the diagnostic

(2:37:40) equipment on an airplane no no you can't like the whole thing is just stinks guys uh where's my where's the one oh that's not the right one either here it is okay guys you ready oh boy you guys ready for this oh boy full screen full screen I don't care if we get copyrighted oh boy Mr when did you become aware that MH370 was missing M sometime that morning sometime that morning right out the gate what time did you become aware it was missing sometime that morning dude what time does it matter what time

(2:38:21) does it matter in a storytelling sense yes yeah but again yeah I'm not going to tell you again yeah the timeline uh will will will show and I I think when the timeline will show dude this is seven weeks later this is seven weeks later when's the timeline going to show shouldn't the timeline of shown it like the next day like the next day quiries uh actually um take place do you really think that Malaysia can hide the the the the way uh things have unfolded of course do you really think Malaysia can

(2:39:04) hide the way things unfolded I mean apparently not I mean you guys did a good job for nine years but I think we caught you it's not but this that is no no the smile on his face this is just super weird why don't we this is not a controversial question I'm literally literally in love with this woman I want to see her face again when she hide the way he's lying his ass off of course not but this that is why don't this is not a cont I would marry her is she married can someone find out if she's married I just I'm going to mail

(2:39:36) her a ring if she's not married this is not a controversial question I literally just asked you what time you became aware of the plane missing we're not even 5 seconds into this interview and he's smiling about no no we could not hide this noal question not and basically it's not controversial that's why I'm not going to answer it we're trying to coordinate 26 then he just immediately starts playing the victim we're trying to do all this work here we're trying to do all this stuff

(2:40:07) for search now I'm looking working into a deep SE search as we talk today the last thing on my mind yeah doing a deep sea search in the wrong spot seven weeks later this reminds me of the No No lady from like Mad TV no no it's trying to figure out what time that I got that information the last thing I'm thinking about is when I when I got that information dude what this is like he's acting like it was the next day or something this is seven weeks later you should have been prepared for this interview well I'll put it to you like

(2:40:34) this in a storytelling sense for a documentary right take us back to the take us back to that day March the 8th take us back you can see him now he's like okay what am I going to lie about here what are we going to lie about how are we going to explain this how were you informed that the plane had disappeared it's like okay so should you like okay so tell me who

talked to you then well uh I got to come up with something there were phone calls there was phone calls there was the US maps in Iraq and the maps um the DCA and I'm in

(2:41:08) a way quite fortunate that and then he just changes the subject there was phone calls she she like asked you specifically who contacted you there's phone calls and I'm I'm fortunate that this is I'm also the minister of defense I I'm fortunate that I'm also the Minister of Defense that's not even answer the question I just smile this smile dude this smile fortunate that I'm also the minister of defense this is not a trustworthy person this is not the face of a trustworthy person everybody this is wow I'm telling

(2:41:44) you guys put me in the room with this guy guy we'll have a full confession no one out there is holding two um this is divine this this is divine this is divine he invokes God here for some reason she's married oh man that just ruined my night that just ruined my night I'm going to delete your message so many lines of communication there so there's so many lines of communication I can't speak of anyone not convinc credibility you have to understand you know what time it happened you have to also understand and

(2:42:24) where it happened it was at the time in which they moved into Vietnamese airspace there was a period of time it's a national tragedy he's just smiling every five seconds figure out really between Mas the DCA why is he smiling all this getting information the best are the best of some of the comments I saw and if you looked at the YouTube video is like why is he they're like so pissed that he's smiling like this is so inappropriate that he's smiling I totally agree why the hell is he smiling

(2:42:52) so much prime minister this is such a messed up situation my hat on it's cuz he's lying and he can't keep his he can't keep his uh lies straight dealing with the military um in in that respect so there were many um ways in which information was coming in but for personally on my part like anybody else this information has got to be digested we have to look at now he just talking about that it was missing before it was due to land at 6:30 sorry were you were you aware before it was due to land is that a question

(2:43:26) what oh yes okay you were aware before 6:30 okay so when like he just says he's aware but he won't say Land There was um an indication that uh they were not in the radar you know um there was no more communication um we had to confirm with the Vietnamese authorities then we had to get the militaries activated so okay let's just confirm he says there was no communication they lost radar and they had to activate the military okay so he just says those three things he's going to contradict himself in like a minute

(2:44:04) unidentified not on radar had to contact the military then we have to get to um mes so I'm going to write those down just so we we don't lose track unidentified uh no communication contact activate the military I'm just going to put these over here uh to verify and corroborate wait what can't do both same time all those countries involved on this guy's lying this is the minister of defense that I'm sure they did does aircraft control try to contact them I'm sure they did what dude you're

(2:44:54) the guy seven weeks later but uh I think I cannot today uh confirm he can't confirm whether they they trying to contact them seven weeks later China hacked them the next day because they knew they did one we or the other Because unless I I have it in front of me today that sort of questions are so detailed so detailed asking if you contacted the plane is so detailed that he can't answer it I do not want to be cornered I don't want to be cornered with a question like have I contacted the do we ever try to

(2:45:30) contact the plane seven weeks ago and be misquoted air traffic controllers we I I argue that you should have just tried to go Miss be misquoted my man because this is not looking good knew that MH370 wasn't responding right to Radio Calls Etc from around 1:32 a.m. yes 4 and 1/2 hours pass what happened in those 4 and 1 half hours from the Malaysian perspective to try and locate the plane well I think that I want to know too and uh you don't know what happened I want to know too dude what this is seven weeks later you

(2:46:07) don't know anything she's like you don't know of course I've heard stories from I've heard stories this is the guy that has all the information and reports from all sources but based on other speculation and based on uh uh doubt um I want to be sure being the minister is based on speculation and based on doubt responsible what comes out there is credible and is corroborated and it is verified now if there are what does he mean if it's verified like this it just factual questions that we're asking

(2:46:43) we're not asking like where the plane like if the plane went into the black hole we're just asking like what time when where Lear from this I'll be the first to ad I don't want to be cornered line guys and verify and corroborate and that is why I'm you and I will answer with a panel of experts I will answer with a panel of experts he's the guy speculative questions they'll be asking whether these aren't even speculative questions she's asking like factual based questions standard or she's not

(2:47:10) asking about theories or anything she's just asking like what time did you hear the plane when did you activate it who told you nothing this is speculative procedures have been followed International standards of civil aviation this guy is like actually based on our investigation this guy's life might be in danger Cotes have been followed and that will come up he's so nervous quite confident of that will you confirm how many times DCA and air traffic control tried to contact MH370 well you have to actually you

(2:47:40) won't ask any answer any questions not today I can't answer that s week later give me time to find out yeah I'll give you guys a link because I'm not these questions were not given to me in advance you know there questions of course they not questions out there that been so detailed I don't think we can answer it all in this uh so detailed I'm not being defensive I've got nothing I'm not being defensive guys that's like anyone says they're not being defensive they're being defensive

(2:48:07) that's like one of those things that's just like automatically true really to um to um avoid because what we have done since the beginning uh everybody actually um that I've

spoken to including leaders from Nations that have got a longer history of um aviation history and said that this is something that is baffling to all baffling yes you as Minister ba then and this should not be controversial this is really a ke Point here and it was in my list of questions this is not controversial so you know this is going

(2:48:44) to be not not good MH370 flew through multiple military radar zones right did the Malaysian military detect MH370 in real time we detected an uh an airline but uh we I think we've got on record to say that was not identified he's like I think we went on record to say it's not identified this is just a basic fact like why is he so uncertain whether or not it's basic fact or not he's not being defensive gu aircraft unidentified was detected that morning that came out i' I've said that in the

(2:49:20) beginning and I think that's confirmed by the Prime Minister I think that's what did the military do when it was detected well I mean this anine that came oh yeah this guy's full of crap 100% And The militar actually said that they didn't consider it as a hostile so he just said okay guys he just said that as a commercial airline he after he just said let's look at our list he said it was unidentified now he said it's commercial and not hostile how does that work if you have no communication it's unidentified

(2:49:51) completely contradictory completely contradictory why what were they relying on we didn't even we didn't make it five minutes a call by the uh um officer that was in charge of it and like I said earlier there was an inquiry under the um turnning the volume up for you guys Air Force that will come out too she many I mean these sort of uh questions like I said is not going to get us very far well what we're trying to understand is I don't understand the level of knowledge I understand and Survey I

(2:50:30) don't understand I don't understand I understand fully right but you the experts you don't like the experts to answer how many people were involved I said there are we are talking about who's the expert that can tell me how many military people involved aren't who's the Minister of Defense oh it's you it's you this guy this is guy going through multiple countries of military airspace why is he smiling still talk to every single country out there about their mil yeah this video is on YouTube

(2:50:56) this is the funniest video I've ever seen on YouTube frankly by far what is more important is that's understand how we at moving from the South China Sea to The Straits of Mala what happened and can we just agree that those sort of um are going to come out anyway I don't think it's so controversial that it's going to um be something that will impact so much we are investigating definely told the hindsight is that unfortunate that the decision was made it wasn't hostile well it's not for me to judge you know

(2:51:35) it's not for me to judge it's literally for you to judge man you said well how is it not hostile mean how we determine that we we didn't go through a how DET this September 911 World Americans would not prepar then he just he just referenced September 11th guys did you hear that decision was made it wasn't hostile well it's not for me to judge you know I mean uh

do you want we we didn't go through a situation like the September 11th Americans would not prepared then he's freaking referencing September 11th this

(2:52:08) is just offensive as an American now it's just getting offensive right why are you referencing 911 dude like you and it took uh uh two planes to crash into two Twin Towers Pentagon and on the way to uh uh Washington this is just like you're getting you start lying and then you start getting like racist that's like what the equivalent of this is right now for them to have the present sop we are not at war with anybody right now so do you really think that I want to um put our uh suco on high alert

(2:52:46) uh with special Sops in that kind of situation um but why not send the Jets up if you you you have conceded earlier that you knew very early in the morning the plane was missing there were there was 4 and a half hours time in which to respond and find out it was commercial it was from our airspace we're not at war with anybody if they did go up he just said he activated the military though so why they we are now which is I don't so I don't think that's speculative that's speculative guys if we'd sent Jets up we

(2:53:20) wouldn't be in the situation that's speculative no I'm I'm 100% sure if we had sent Jets up to track the plane we would know where it went I mean that's just basic logic that's not speculative even would if we sent it are you going to say that we're going to shoot it down well you said that not me no I'm asking you you said that not me I'm asking you what what kind of response is that he smiling about shooting the plane down could not you're not going to shoot it down what's the point of sending it up

(2:53:52) to see where it's going well to see going I love her dude I love her if you guys can clone this woman I'll just marry her right away just clone her CIA I'll let this go uh she's too funny what what's the point of sending the Jets up to see where it's going wh Fighter for that you're a fighter for that why is he still smiling procedures and if I did shoot it down You' be the first to say how can you shoot down a commercial airline with 14 National smiling about shooting at plan

(2:54:27) right now Chinese he's sweating like crazy worst position probably why shoot it down though if it's not hostile why the Americans would this is some of the most offensive crap I've ever seen the Americans would look at this face dude why shoot it down if it's not hostile the Americans would look at this face dude look at this guy if you're from Malaysia I just feel bad for you man where is he looking where is he looking over here did I contact the military that morning yes you did what time you have to after this year and it

(2:55:04) will come out the details I think this are the dates because I do not want to definitely scared to death by from my experience in the last four Americans by dates by numbers by names by rank I don't want to get tracked by dates numbers ranks I don't want to answer anything that's you know factual well we'll give you the details Carol if you want I can get confirmation Carol name give you the details I can get confirmation give you details like isn't that the point of this interview dude for your documentary it has been

(2:55:31) reported OB once it is confirmed by DCA this is as much as I can take I something that I can wild because I don't have it in front of me wild but we'll give it to you before your documentary adds I'm not asking for an exact time I'm asking now during this interview at around what time did the DCA contact the military and and alert the military that there was a plane missing I'll confirm that I'm not she's like I'm not asking for a real an exact time just a rough time I I'll confirm

(2:56:03) that I don't have the details with me today you you're n seven weeks later guys he has not one detail to share not a single one was it before 6:30 a.m. I'll confirm that too not want to say something and then on record and then find out to be not the case how could you not know Weeks Later military detected mh317 real time they detected an a commercial what did the radar show it showed uh uh n that was um it's like this is somebody's just like trying to figure out what he can say what he can't

(2:56:43) say right's it's like this is a simplest thing ever how does someone like there's no way none of this is believable that's it it's a b what did the radar data show though it showed a blip but somehow we know it's not hostile guys what altitude I don't like I said having the details of the altitude and want what was is more important did it reach 45,000 but what is more important right is to make sure as I said from the beginning to find aircraft right we need to stick with the the facts at hand there this is

(2:57:12) a very simple factual question question did it reach 45,000 ft well what the military radar was coming I said the military have done uh uh an inquiry on this we having the panel of exp why why won't you answer that question why because I don't have it I don't have it you don't know what else I know there are many um information has come out inform I need to say today it will be depend very much on um I don't think he answered one question strcture and how we're going to move forward other than

(2:57:43) contradicting himself you know and this plan you cannot move forward without facts I know but the fact the facts will come out the facts will come out this is seven weeks later these people were trapped on an island they already starved at death nothing to hide so why not answer a simple question around it's not as simple as that it is simple as that why well because we have put structures in place where the NTSB the aib have all agreed to come on board and I come on to your docu uh your interview to to reveal things which are going to

(2:58:13) come out any anyway I think it just have to be fair to me why did he even go on this interview by this afternoon I find out how do you think this interview going toties that these two questions um can be answered these questions have been asked day in and day out so then what did the r out out a show what did the radar who's he looking at who's he looking at over here can we figure out who this guy was looking at in this interview like he's looking at somebody this is like the third time he's looked

(2:58:43) over here at this person smiling like this then what did the radar data show H what did the radar data show did it show location you're still going on about the details which radar you

the military radar data you know you got military radar you got civil radar you got satellite the Chinese satellite there 21 Chinese sat AR one of them actually gave me he definit look satellite images in the South chiny this is just super creepy confirm something when even uh sat is coming from a third party has shown to be

(2:59:18) negative so basically you're looking at a man satellite every lead negative from the first not even making sense a lot of these leads that was speculated by the media and wanted people wanted answers for which people conely forgot the three oil slicks the fact that there was a fireball on top of an oil rig the fact that fireball on top of the oil rig he's talking about Mike McKay's sighting there was no Fireball in the oil rig Mike McCay sees the plane the moment it goes dark 300 miles away so low that's

(2:59:51) just over the horizon because it's that cruising altitude he claims that this is someone sees a fireball over the oil rig this is wild man a live boat and let bre and the satellite you won't tell me what altitude not I won't tell you I'm you won't confirm how long it was on Military radar you won't confirm how many people were on duty you won't confirm whether the DC a contacted the military is in what time but are those questions going to be so critical to what because Yes Minister because they

(3:00:22) are about the process that the government followed at the time this plane went missing and that is what the world wants to know if that's what you want to know there are other people who want to know many other things much more rational much more rational than the lady just simply asking you straight up questions and just factual questions much more convincing to my uh pres uh for Focus there are people who are not looking at that angle only what angle like literally figure out how it works what happen really want to know where is

(3:00:54) the pl there are two things the world wants to know agreed where is the plan that's your absolutely and number two how was it lost great so what we need to do wow guys oh my goodness that's just that one just blows me away guys you could just literally put that on on um Saturday Night Live with no edits and it would be the funniest thing that's been on Saturday Night Live in 20 years buzzing buzzing um okay I think that's time for me to go to sleep I've got 71 emails to respond to 71 emails yeah that patent thing doesn't

(3:01:41) play out though guys I know uh William I think messaged me about about that the patent thing is a bit of a red herring but I mean wow guys just wow I mean that is that is a brutal one to get through man that is a spicy spicy spicy interview my goodness man my goodness okay we got more stuff to get through tomorrow I'm going to spend the next hour basically just answering emails I'm not going to make you guys watch me answer emails I'm going to try to set up a bunch more appearances of with people like Blurry creatures Etc oh

(3:02:18) our thing finished let's let's see if our editing software works okay uh well whatever anyway guys uh this was a good night I'm going to go do some other stuff but appreciate you guys stepping up tonight I appreciate all the huge donations again I don't ask for any donations but I appreciate that you guys have been feeling that uh uh you know that it's worthy of you uh

donating so just want to appreciate that very much um yeah all of a sudden we're sitting being bombarded with videos saying

(3:02:54) Ashton's wrong it's just H what a what a mystery what a mystery right bunch of people are trying to claim that I'm wrong while we literally putting out just Rock Solid proof that the videos are are are legit what an interesting uh thing that happens right all I know is if the CIA wants to mess around guys we will expose the CIA Spooks I'm not afraid of doing that either so if they if they want to keep uh pushing we'll push back man we'll push back thanks a lot Bernie thanks a lot everybody who's been helping out tonight

(3:03:27) and what what's been going on I'll I'll try to get some weird dreams for you guys we'll talk about tomorrow but otherwise uh have a good night everybody peace all

Hard **Truths** #4 Salvatore Pais & Dave Rossi & Ashton Forbes - Quantum and Macro Unification - YouTube

<https://www.youtube.com/watch?v=bR5ZJ58VqWQ>

Transcript:

(00:00) yeah OBS I don't know it makes you like wait 10 seconds before it goes yeah yeah yeah okay I think we are Live on YouTube right now we're going to start up the recording right now as well record on the computer recording in progress okay we are recording welcome everybody hard TRS number four the Epic podcast with Salvatore Pas who is a engineer with the Navy who has patents out there of advanced scientific Concepts that we're going to go into today as well as Dave Rossy DOD engineer self-taught genius as

(00:31) well as two of my favorite people on the entire planet I can't wait to get into it with you guys here today so let's just start it up and do it s we're gonna let you start go ahead thank you sir we just want to say right off the bat and I I think I can speak for for brother Rossi you are our favorite person put it this way without you uh the high frequency gravitation wave generator induced propulsion paper would have never seen the viral what you talking about what you mentioned one 1.

(01:01) 5 million I I yes that's like whoa that's the highest I've ever gotten for anything so God bless you thank you sir I owe you but anyway so let me just um give a disclaimer of the bat uh again I'm Salvador pz I'm um let's call myself for now a a Navy engineer and um I'm here as a private citizen and any of my opinions my statements and so forth are mine and mine alone they're not repres representative of the United States Navy nor the United States uh space force um that said also I would like to ask my

(01:39) brothers in arms over here to to make sure that uh uh we do not um Ebe in other words we do not um educate or Enlighten the enemy in anything we say that being said let me just go directly into the Super Force and this is something I found recently which which totally it boggled my mind I I didn't believe it at first but I did I I did the math again and it works out the beckenstein Hawking entropy expression the formula for it is on the order of the bolman constant divided by  $\hbar c$  times the Super Force times the black hole surface

(02:30) area in other words the area of the Event Horizon and I see brother Russy smiling because he knows what that means because it talks directly to the holographic principle it is the super force acting on the inventor Horizon that gives rise to the amount of information in the bulk of the black hole this is a first and new heart heart **truth** podcast this has not been published yet this is the first so if anybody publishes this how should I I say the wrath of God will come down upon them because the three of us we are The Three Amigos as they say

(03:07) so um put it this way this shows something very interesting because the Super Force Now talks to what remember the beckenstein Hawking theory is one of the things that string theory was able to show I believe that it is possible that the Super Force may actually Aid in showing that the string theory the string theory we're talk about the string as a vibrational filament of quantum stuff for lack of a better terminology but you understand what I'm talking about so again String Theory may be the final Theory and it may be proven

(03:46) with the Super Force the Super Force is essential in eventually possibly driving an experiment that who knows possibly brother rosi Ashton and I will put together down the road and um if we can actually show that string theory is the ultimate final theory if you remember what the great Weinberg said you know what this means we will be the Beloved of the academic Community forever more so this could actually what I just said right now could actually may may start a third revolution in string year the second being the great wh of course

(04:31) of course I'm I'm not saying that how should I say that I just gave it away this has a lot of work to do with it but the Super Force must be looked into again the  $C$  to the fourth the  $C$  speed of light to the fourth power divided by Big  $G$  is essential absolutely essential in even determining what the entropy of a black hole and remember that this so-called black hole this quote unquote portal that's that is open out by the orbs that we're going to speak to is very essential in determining quote unquote quantum

(05:09) teleportation and the ability what if for every black hole there is a white hole what if every entrance has an exit it talks to Wormhole yes but this is different and brother rosi I'm I'm pretty sure has a lot to say about it but before brother Rossi goes into a certain very important experiments let me just I have three points to make I like the number three as you well know can't help it it's the Tesla Factor now I called okay so the first one I'll touch on the tri of sension I believe that these orbs and by

(05:50) the way we have to speak brother Rossi we have to speak to your fourth orb hypothesis is right on the money thank you right on the money because you have an XY so in other words

you have the three orbs that determine the cartesian coordinate system XYZ or R Theta Phi in spherical coordinates and you must have a destination that must be your fourth orb so anyway so we'll go there for sure now the tri of sensation speaks to the possibility of these um uh of these orbs being um artificial intelligence agents as well so so in other words not

(06:29) only are they endowed with with Collision of avoidance capability which is something that most likely was in effect by 2014 for sure because I remember they were doing work on the uass the X-47B they called it that's when unmanned had class but I I'll just leave it there and and U okay so the track of sensation again speaking to the um the uh control of of these orbs possible self-control which is amazing I mean these are autonomous units once they're engaged once they basically switched on they're on their own and this is what

(07:14) makes them incredibly powerful now again the tri of sensation speaks to this first in my opinion uh you must have very high level computational power possibly achieved in a m in a miniaturized system using parallel processing of GPU GPU units graphical processing units remember that these are possibly to be linked in a certain way that could give tremendous power capabilities ah brother Rosy I I love when you smile because you know when you smile that means I'm on point so thank you I appreciate that b time now I'm I'm

(07:51) smiling because I think we're basically saying the same thing I just I I want I just don't want to say too much okay oh oh thank you for that right EQ it cubed it cubed but I never gave numbers keep numbers no no frequency spectrums nothing remember just keep it General keep it in the realm of possibility conditional possibilities now um so the second one speaks to these most likely were trained these units are based on a multimodal model so it's not just a large language system this must have Incorporated images must have

(08:30) Incorporated 3D objects must have Incorporated a sound so these uh particular orbs let's call them artificial intelligence agents most likely have AGI capability can you imagine AGI possibility in 2014 gentlemen you you you realize just by extrapolation that we might have we in the black we must have achieved Singularity but anyway I'm not going to go there I will not touch that now anyway Hot Plate now the third one the third one is Big the third one is Big because once you train them on textbook data which is the second part the second

(09:15) branch of the track of sensation you must train this multimodal models on on um textbook data highly approved ver validated verified data this is not internet stuff that you pull from **Reddit** it this is stuff that you put out of holiday and Resnik fourth edition uh Caron's Collective electrodynamics The Road to Reality by R sorry Lord Roger Penrose Charles in Charles hint hint now now U so that was the second Branch once it's trained by by textbook data these multimodal models must have the ability to generate an original concept that is

(09:59) the third branch that is a must if they cannot generate an original concept which has never seen never been seen before not in physical review letters nor any other great publication nature science none none if they come up with an original concept for example for example and I I know people will accuse me of great huus but say you take Maxwell's equations I'm not going

to go to the Super Force not yet even though that's you know I have a certain anyway so once you take MTH equation you realize just from from from Faraday's

(10:40) law the idea of the electric field strength equals  $c$  the speed of light times  $B$  the magnetic induction okay you take that you couple it to the fourth equation you know what I'm talking about I'm talking about the maxle Amper displacement current now right you you must come just those two alone will give you what basically the P effect was all about if that AGI is able to come up with that from just those four equations  $B$  based on what you fed it that's it that has achieved AGI capability and I'm

(11:19) not calling myself you know superhuman or anything like that I'm just saying you need a breakthrough of that nature to actually be called AI you need to originate a highly original concept never never to that point seen before okay so that's the tri of sentence now number two and this is very important I believe that physical mathematics must drive our current physics which must not be a physics of of Destruction must be a physics of creation what I mean by physical math mathematics I mean the physics must

(12:01) drive the mathematics not the other way around what we currently use is mathematical physics and yes the mathematics is beautiful it's usually uh this mathematics is usually there are four branches that are currently used that are AB beautiful and when fused together give for example rise to string theory one is calculus of variables then linear algebra then group Theory and then differential geometry and that's the genius of Einstein in general relativity Theory hence the the gravitational field equations so these

(12:44) four branches of mathematics once combined with the idea for example of harmonic oscillated what is this vibrational filament of quantum stuff for want of a better terminology I'm I'm pretty sure people such as Brian Green Brian King um um David Gross neemar Kan Hamed of course the great Juan malda Sena which by the way he said something um uh recently that totally took took me by surprise I did not know it it was in conversations on in quantum gravity the between him and Jac Aras Professor Aras of Cambridge of University asked um

(13:28) Professor Mal of the institute for advanced studies at Princeton University he they were talking this seems to be experiments back in 1968 they were based on trying to find um the strong interaction and there were experiments that actually showed that this physical entities may actually be experimentally solved and then for some reason they went somewhat quote unquote into the dark could it be ladies and gentlemen could it be that string theory is the ultimate final Theory and maybe something like the Super Force can bring

(14:05) it into how should I say maybe we need the greats like Whitten um malasa suskin um I believe his name is saskin sorry Lenny I yeah Queen's guy anyway the the the whole he's from Brooklyn you know can you believe the man started as a plumber and now he's one of the greatest we've got I mean he's one of the CH of string theory people like they they should especially the great win should engage into seeing whether this Super Force concept could actually be incorporated within String Theory eventually leading to

(14:45) experimental verification because that's all there is once One String Theory is even minimally or indirectly verified and you could say from the beckenstein Hawking entropy equation that it was verified through the um through the uh through the discovery of black holes I mean this Sagittarius A star that basically dictates the whole right  $H$  bar the sorry um the bolman constant  $k_B$  bid by  $H$  Bar  $C$  which is that factor Believe It or Not gentlemen and ladies that factor is on the order of 100 so you can just eliminate you know gently nudge it

(15:27) out of the way because what comes the super force acting acting on the Event Horizon surface area again the genius of Malena yes ads equals CFT I was completely wrong by saying certain things in the past I did not understand the the holographic principle is key because it shows it shows that information within the bulk actually resides on the Event Horizon surface area but what brings it into the Forefront what makes it talk is the Super Force that's what leads to the amount of of of of uh goodness gracious sometimes I I wish I had all

(16:08) the terminologies in the world sometimes I'm lost for words I I apologize but the whole idea is this look what the beckenstein Hawking it's funny because it's BH and that's way I Rec I remember it so the entropy of BH you know BH is in black hole that's interesting okay so the haing the the Hawking the the the beckenstein Hawking equation speaks to the amount of information that's within that bulk of the black hole which which is really what and brother Rossi knows this well what what is this it's basically the

(16:46) arrangement of micro States into the macro state that is representative of the structure we are talking here it could be that the Super Force will one day prove string theory and as the ultimate final Theory of physics a Theory of Everything String Theory so from people giving up maybe they will once again Revitalize this I think the Geniuses omala Whitten others David Gross oh my God Frank Wich bring in Wich oh my God bring in Wich will Che will between the four of them I mean if they can't figure it out

(17:30) you know what I'm saying but they will I mean these are four of the greatest we've got and uh of course Brian Green he has some very interesting ideas you have to see some of the some of the some of the podcast but anyway I digress I don't okay so that was the second Point okay eventually I'm pretty sure hopefully brother Ashton will have brother Rosy and I again sometime and then you'll hear some more crazy stuff now anyway so the third point is vacuum breakdown and that doctor hey I said

(18:06) Doctor then means I think of you as a doctor but you know what Dr Rossi all right so Dr Rosy no I mean it hey I have a PhD supposedly supposedly according to academic criteria I have the right well once I've achieved a certain level of professional ability which I think [REDACTED] sorry I did when you're when you're Ashton when you're done s Ashton if you can give me a couple minutes I want to stand on the shoulders of what s is saying before we go to the videos absolutely okay so so the third point is

(18:40) vacuum breakdown how do these uh four actually it's very interesting because I've I've been thinking how how how does the fourth orb know exactly where that white hole is to be

formed because that speaks exactly to how this warm hole is being formed that four the fourth orb hypothesis is essential to all this there must be a fourth orb otherwise God forbid MH370 will never materialize on the other side you know what I'm talking about right Dr RI okay so so so no from now on I'm not kidding I'm

(19:17) addressing you as Dr Ro I appreciate you're saving you you're saving me words and I tell you sometimes I'm lost for words and like brother sometimes I call Brother Dr Rosy there you go sometimes you know I'll go to brother Rosy but okay so the third Point vacuum breakdown you need what are these orbs doing they're depositing great amounts of energy around them because we have to discuss the nature of plasma plasma may not just be the fourth state of matter as we understand it you have to you have

(19:51) to go back to Origins who coined it Irving langu in 1932 Nobel Prize winner why did he call it plasma because it reminded him so much of what of blood this he believed that these could be actually um capable of life and it's I I know a lot of people say oh he's G of the deep end but no look into the work of of Hans alvan Hans alvan the father of Magneto hydrodynamics wrote I believe it was called Cosmic plasma it was in the it was in the oh goodness gracious sometimes I wish I I had another head but okay it was in astrophysics and

(20:33) space science volum 82 I think published in 1981 so again astrophysics and space science I believe volume 82 Hans alvan called it um the uh the monograph or whatever you want to call it it was called Cosmic plasma and in it in it Alvin speaks to plasma not only being capable of action but but intention intention gentlemen this is a theory of Consciousness this this is sence these could actually be a type of life form could you imagine not only capable of hii but a life form this would totally break the understanding of academic physics as we

(21:22) now under again I strongly believe that we are in the infantile stages of physics we may be a two or three or four mon Sol tops we're definitely not o octogenarians and hopefully we'll never meet with Dr Kissinger's end because he did achieve that end at 100 years so when physics is of 100 years old then it has a right to how should I say bring in new physics until then we talking about New Perspectives on Old physics because after all we very young okay I've said enough um of course the third principle

(22:02) of vacuum breakdown speaks to um the schwinger limit and we've already spoken to this so brother Rossi has covered I covered it with Ashton in number one so anyway yeah you've had enough of that stuff it's called the B effect okay never mind okay sorry brother Ashton the floor is yours yeah I'm gonna pass it to to uh brother Rossy here in just a minute I just want to address a couple coup things that you said there CU I heard a lot of really amazing stuff one AGI the way I understand it it's Advanced

(22:34) artificial intelligence that can basically get to a point where it achieves a singularity and becomes sentient in itself and that you know that's something that I'm very interested in learning more about um I also heard I think which was essentially a unification Theory of physics and Consciousness which I'm also very interested in as well when you were start talking about

plasma getting to getting more and more complex to the point where it obtains consciousness you know because the universe in my opinion

(23:00) is alive you know we may be part of a larger organism to some degree I agree 100% um and then the last thing I think I heard there was that we are still cavemen I think that we have this hubris amongst us as humans where we think we are at the Pinnacle of civilization and science where we're really at in infancy State you know we can get so much more advanced to where we are right now excuse my language but I sometimes think with a bunch of Apes clanking rocks sometimes yes sorry for the language playing without balls and calling it

(23:31) magic yeah okay I'm done yeah Dave Rossy and I on his podcast we're actually talking about this just the other day so I can't wait for that to come out publicly um and go ahead uh Dave it's that the floor is yours sir sure thank you so I just wanted to say that this is something that I I want to I've been writing down as s was speaking a beautiful Intro by the way s and this is for uh Ashton your of course yourself and of and your lovely audience because I know a lot of people I noticed in your

(23:56) audience Ashton they want to learn and so that's that's amazing so I'm not claiming here to know everything anyone who does in my opinion is full of crap but a couple of things I wanted to stand on uh Sal's brother Sal's shoulder on which is that again without giving specifics um a lot of what um s has been discussing seems to be supported by what's called uh Boman coherence and decoherence that Carlo relli has uh avidly looked into and I fully agree with you uh on the black hole white hole

(24:25) side of things largely because of Carlo rll's work s um the other thing that's very interesting in terms of you know uh we could say many decades ago literature that seems to have been suppressed is that Halper and Lauren in the 1960s had a couple of papers that basically were titled the gravitational radiation of microscopic systems and interestingly enough it was deemed by certain institutions that I won't say the names of we know them very well today the the attempt to even take it to an experimental stage was deemed not

(24:57) feasible so it it just makes you think why do they why are there certain you know yes men or no men saying what can or can't be experimented on that's another thing um the one thing also I want to point out too is that I I encourage uh your audience Ashton to when we bring these concept Concepts up whether it's Brother s or myself or even yourself Ashton one of the things I found in my in my self-learning journey is that you need even though it may be difficult you have to go back to the actual um authors who wrote the paper

(25:29) not what someone wrote about the paper because then that's where a lot of things get fuzzy you have to go for example to the original origin Origins Origins right right exactly there are a lot of things in for example I'm just gonna S I think you know what I'm going to say here but there's a lot of people that don't know what the source charge problem is for example I'm I'm going to leave that there um Dr Rossi you're a remarkable man I must say truly remarkable this is what I mean

(25:59) that's what no this is what I mean if you ever tell me that you weren't able to publish in physical review letters I will take apart that freaking Journal as much as I love it as much I I would love to publish in it I make sure that certain things are done to it period I appreciate i' very grateful s the other thing I wanted to clarify as well very quickly is that um just to respectfully say Ashton um I'm not a DOD engineer I'm a con contractor consultant just to be clear so I'm not employed by the dod I

(26:31) would just like to clarify uh for anyone that may have uh any misunderstandings there um the other thing that's very interesting is that Fineman said something that's very interesting which is that when charging a capacitor the actual energy is seen on the edges of the gaps and not from where you're charging it from which goes back to what s Brother s was saying about this Quantum vacuum if nothing is there then how is the electricity coming on the edges of the oh hey there we go the super exactly how is the electricity

(27:01) coming in through the edges and it's not coming from the part where you're charging it clearly there might be a sort of kinetic friction going on there now the final thing I want to say with regards to the fourth orb that I brought up which in my opinion sort of completes a quadripole uh system is and please tell me S if you think I'm wrong with what I'm about to say here but to give a visual for everybody what I Envision in my mind is the three orbs circling the plane and what happens is the same way

(27:30) you stretch an elastic band you have a fourth orb there and the second that that P the Super Force and P effect occurs it's the same way of letting go of the elastic and then it shoots back to the original point it's basically stretching and expanding space in that sense so we keep one orb here three orbs go to the plane once everything is locked in Let It Go Boom it's there that's and not only that think trajectory TR what we seeing a trajectory for black hole or quote unquote portal even though I choose

(28:01) black hole because I truly believe every black hole has a white hole there are no such thing as SpaceTime singularities I I I I apologize to Lord Penrose that's the only thing that I will disagree with him on the man is amazing my God Spinners twist Twisters oh yeah anyway now now the basically okay so so the the the the point of origin is described by what a cartisian system XYZ say in sperical coordinates would be R Theta PI right right your point of destination where you sending this thing has to be

(28:37) one point that's all you need is one point so hence this four orb must be there it's it it really is no it it needs no more explanation than that even though your explanation of the rubber I love that I absolutely love it that sounds like something that R would love to okay oh wow thank I appreciate that that's a philosopher have you heard him have you oh not too much but I can tell through his philosophy of physics is beautiful truly beautiful I think well if I could say as well in from a philosophical sense C I think your your

(29:12) eloquent description of the Super Force shows that the limited of the The Limited aspect of the Super Force once the vacuum is uh opened up gives rise to the Limitless so you have this

vast sort of you know the diria it's been called and uh the other thing I wanted to mention for your audience Ashton and the reason I'm not going into describing all of these things is because we can spend hours just on one of the terms I brought up but for those interested the uh the sagnak effect S A naac the SAG neck

(29:47) effect in certain conditions is an example of absolute rotation and what I what I mean by absolute rotation is again arguably creating a sort of bubble or void around you that voids reality or the space-time metric and this is why in my opinion as well when people see craft and on their cameras it's very blurry and things like that they're just seeing the flat intersection because you were not seeing from the external Observer point a three spatial Dimension and one time Dimension that the occupants in the

(30:20) craft are seeing which is why I'd love to give a quick thought experiment which is when people see Craft um you know for example in a certain spot how many stories where people have heard oh my gosh you know the craft was there for 6 hours and it was just moving just a little bit here just a little bit there what if I'm not saying this is what it always is but what if the CRA the occupants inside the craft are sort of like playing through a movie re different points in time in the same space but from the external observer's

(30:49) point of view time is just because time is just linear so they don't see they're just like what the crap has been there for six hours but on the inside what is time right Dr Rosia I want to ask you in you okay would you say time may be how should I um an energetic property of nature which which basically makes it in such a way that everything doesn't happen at once how how would you define time yourself would you say physical time is real it's not just something that's measured by clocks but very

(31:22) real 100 here's the thing there's a lot of stuff I want to say but well maybe after the stream s because I know basically if I the best example think the study of time is tremendously important well one example for your audience time crystals yes yes oh my goodness and you know what it talks to it's interesting how all of a sudden Professor wch is not in the public eye anymore I very very en tiing yeah let me just yeah the way the way so basically for Ashton's audience the best way I I visualize time uh for

(31:58) those that may have seen the film tenet by Chris dealing with entropy so the way I sort of visualized it without getting into the numbers and all of that is all around us right now there are these longitudinal waves that are there but they're also not at the same time now each time we do something there's sort of it's kind of like a long Slinky now every time I pick up my pen and put it down one Loop has been completed sort of like a film reel and then you move on to the next one and that these these Loops

(32:27) like fil res are moving like up and it's hard to that's the best way I can do it without giving away uh ecbe things if you know what I mean so you know what really gets me Stargate the movie the way they open up the way it actually shows what looks to be a watery effect remember yes my goodness my goodness whoever whoever advice for that movie yeah knew

something did you see that did you see that guy in Arizona open that portal allegedly on Fox News no no no but I just remember I it's just fascinating how how close the movie

(33:09) Stargate yes to the **truth** of exactly what would happen if such a portal was open it makes it makes you think because even for example it speaks to the possibility that there are anti- versions of us if that makes sense and all of these different yeah it gets it gets interesting but anyways Ashton um I I said all my little pieces and parts and this can go in a hundred different directions so wherever you'd like to take it brother so I think I want to start by saying that you know I want to shout out to Roy de Herbert who has his

(33:41) time dilation Theory out there we were just talking about or dilation what it's called right and um you know the big thing there is a time a fluid Symmetry and time flows differently depending on how much mass you're near right and so I just want to reiterate there for that for that for people because I think not a lot of people in understand that time dilation is a real concept and a real proven thing that's out there so when you guys are talking about time going slower faster for the Observer versus

(34:05) the occupant this is all real Concepts that have already been proven can I bring something up actually quickly Aston there have been cases of sence and what I mean by that is there have been investigators that have seen that when a craft is close to some plants in a garden and the craft takes off they go the the investigators approach the plants and the plants have aged three years in 2 minutes and that speak to acceleration that speaks to sell yeah yeah Dr Rossi let me bring it to something there are a lot of people that

(34:36) may disagree with my statement but there's great Geniuses in a certain man that is not over he is a doctor but he's not of what what I would call a physics pedigree but if it wasn't for this man I would have never known of Gabriel cron I would have possibly not even yes and I believe he knows Eric Dollard as well but anyway anyway I would have not really knew about Charles PR assments I would have not known of some very very great people his name is Joseph P farell I believe Farrell maybe yeah Joseph

(35:10) farell he writes a book called secrets of the UniFi field that I I would like every one of your audience to look into he has a latest book called the demon in the E I believe the pronunciation is Aur because it's Sumerian supposedly this was the Gathering Place of the seven gods of Suma the Anu Naki the children of Heaven and Earth but anyway I will not bring it there just look into what Dr Joseph farell frell I believe has to say about plasma it is extremely important because it talks to the orbs these orbs

(35:55) may not just be featuring AG I but they may actually be some form of sensient life form yeah the line gets pretty blurred right and when we start to figure out what what even is sentience at that point so I appreciate you guys in this intro kind of going through a lot of the scientific Concepts especially for our academics who are following along um and then you know I'm just been trying to break it down for our laymen who are out there as well like me and I think it's just been mind-blowing we AI also just

(36:22) want to touch quickly on the holographic principle that the idea that all all of this is only possible because our universe is a construct of sorts and that the science then supports this idea of there there being this construct of this if I could say quickly construct that can be perhaps infolded and outfolded if that makes sense yeah why not both a hybrid of the two right remember the great line from Ando oh I love this line oh please please indulge me Ashton I've alwaysed to go for it if if a certain Jack saot is known as

(36:56) a Wolfman to certain physic Circle then I'm a hybrid half lik half vampire but stronger than both that's uh thank you I I'm gonna throw another quote out here too from uh something you said early on S which you just reminded me which is this quote that first they ignore you then they laugh at you then they fight you and then they build monuments to you guys so you know we're somewhere in the middle at this point and we're working our way towards it you Ash do you a pullet surprise will not only be given will

(37:29) have to be given but I tell you you really have the tenacity and perspicacity over a shellock Holmes combined with a patient and perseverance of a St Augustine and why St Augustine because I love what he had to say about time it's all about that so sir we salute you both Dr rasia and I salute you thank you very much I don't know how you do I tell you I could not put up with some of your detractors yeah not name names I've seen certain things that really truly piss me off and we're talking about saf kind of

(38:04) piss me on but I won't I won't say that more than that you know not everybody's an idiot okay I I'll leave it there yeah um and if you're talking about s Augustine I'm just going to go ahead and quote that one of his quotes is that God is love um something to keep in mind and love is God so you know this all kind of comes together in uh maybe that's a little bit of a sappy way but uh I think that it's important that we treat one another with respect and dignity yes I think it's it's it brings

(38:33) up the question which is if we were to quickly Circle it back to these orbs if they're having some type of plasma deployed around them perhaps or you know a Bose Einstein condensator something like this is it possible perhaps that they are interacting with the we could say the daxy of the quantum vacuum that transmits information from the non-material to the material and is expressed through the actions of the orbs which then makes one think holy crap is this alive so to speak and I yeah yeah that's really interesting yes

(39:07) um yes so let's you want to go look at your scientific experiments first uh sure sure yeah I want to while Ashton's pulling it up I just want to be clear um to Brother s and to the uh and to the audience as well what we are seeing here is not anti-gravity I want to be very clear it's a form of Magneto hydrodynamics using a super super conductor and Ashton uh brother before you play it um if you could just let me break down what we're seeing before we play it sure go for it to give everyone um just want to make sure uh is it

(39:38) everyone could see it oh yeah I'm pulling it up right now so I thank you okay so very simple what we have on the uh is a bowl just a you know like from the kitchen an aluminum

bowl that has inside of it a super conductor with a magnet in its Meisner state above it filled with liquid nitrogen and that's it now the bowl with the white uh wire is connected to a high voltage DC generator and then it connects back with the red wire to an electrode that creates a spark gap U that we pulse the bowl with now we pulse the bowl and then

(40:13) at the below the bowl is an electromagnet we pulse the bowl with high voltage first and then we pulse the electromagnet and we're going to see the effect that we'll see in a moment if uh if you could play it brother yeah this looks pretty awesome and this looks like something that you get a knock on the door if you do this without permission just I'm not going to get I want to say very quickly that for those looking to replicate you do need a specific type of uh how can I put it superconductor geometry and I'm not

(40:42) going to reveal that detail when I Tobe when I hear to Enlighten or in any way educate the enemy right so when the electromagnet is then pulsed we'll see in a second wow there's instant now this is liquid hydrogen liquid liquid nitrogen in the bowl yeah you see over here now this thing's gone flying so is the idea behind this that we are seeing another mechanism of potential propulsion here that we're able to create by this force that is being exerted precisely yes yeah this my calculations have shown for example that

(41:27) this type of propulsion can get us to you know for example certain planets within days instead of months or years um do you see what I mean by far from equilibrium phenomena This is highly nonlinear this is what you talking about the secondary effect it's all about far from listen to me I have a feeling the the trick here is the engineering of the priorin effect and it's not easy it is not again plasma will not be subdued it it will not be coerced it's extremely hard to deal with right plasma has a

(41:59) mind of its own period Yes actually one of the things that I I unfortunately for the sake of ebed will not be showing publicly is it's interesting no numbers no yeah no no no yeah it's interesting to see if one implemented plasma into the setup what happens so I'm I'll just leave it there but yeah yeah especially a cold plasma right I'm not saying yeah right right right anyway this is really cool you very the my my idea with this was very simple very basic kind of like the AER andof bom effect you know it can very

(42:34) simple it's not some fancy you got all these things going on and uh just perhaps to show a second order effect now this is again same concept uh where it's uh the superconductor is is uh pulsed and we'll see in this particular case just a slow motion version of the instant liftoff yeah I love this slow motion one it goes backwards as well definitely the M effect this is not lens this is mner right y definitely but notice how it's almost instantaneous and it doesn't persist it's a transient phenomenon

(43:09) based on that particular yeah go y so one of the reasons I wanted to show these videos to your lovely audience Ashton is because I just want to show the how can I put it um I want to encourage people to to see that the Simplicity is really the complexity is in the Simplicity but at the same time I you know for for uh various genuine National Security and other reasons I can't

go past this point but yeah this do not mention the material do not mention anything else  
please thank you no no problem got you sir yeah and I'm

(43:45) not a spy none of us are spies here we all love our countries and uh you know all that stuff in general so well we also just love science right and we love we we I think we all believe that um the science behind this should be made available to the public because for various reasons but because it can change our world for the better um this is the physics of creation not the physics of Destruction what Dr rosi has just shown is exactly that case in point and again it actually shows I'm sorry brother uh Ashton to just jump in like

(44:18) this but I gotta say this in my opinion the most complex of problems has the simplest of solutions yeah depending on perspective the again the hardest of problems has the simplest of solutions depending on perspective yes but it is important it is important to do away with the Box obliterate the Box the thinking outside the box should not again open system just leave it there yes if you remember Brother s when I brought up on asht brother Ashton's show open Pac-Man's mouth basically I love that analogy that's that's very

(44:59) good very thank you well Ashton brother thank you for showing that um hopefully it uh it motivates some people in your in your audience to see that it doesn't um sometimes it becomes so easy to bridge from Theory to practicality if you take a different perspective on 1800s physics so yeah that's the other thing I think both you guys say that I um there was somebody in the space I did yesterday when was doing all review that you know couldn't believe that all this is true because it goes against

(45:27) everything they've been taught for Academia some people say this breaks their laws of physics it does not break the laws of physics we are taking the building block science is a matter of continuous learning and advancing on what we knew before and uh you know kind of changing our understanding of it and that's where I think we're looking at here is we're taking the old physics and we're looking at with a new approach with a fresh set of eyes and that's how we can achieve what we're achieving here

(45:50) in these experiments what both uh Brother s and Rossy are talking about as well as potentially what we're going to be looking at here in the uh MH370 videos yep yes so people are calling me now Ashton for orbs and to be honest with you I love it so please everybody if you want to keep calling me Ashton for orbs I really like it um yeah goad like I said Ashton I'm not I'm not a betting man I don't gamble but if I were to bet money I would bet big money there was a fourth orb in that operation you

(46:18) one I'm my my instinct and I tell you very few times in my the only time in my life that I didn't listen into my physical Instinct and I I went really wrong my instinct tells me you're 100% on the money there is a fourth orb this is not a hypothesis this is the real deal so yes AC for orbs I love it oh let me just discuss a little bit that black hole that you see this you you call it a portal I call it the black hole and it also talks if you see carefully there's like a refraction wave into the Su

(46:54) remember Curson w the idea the way he describes that we most likely are living in a super fluid Universe well if you were that that that second ring around the black hole is like a refraction wave into the Super fluid which is away once you do away with the atmosphere what you have is that super fluid that defines the quantum vacuum that you and I talk to it makes you think black hole look at the black hole carefully yeah I'm sorry Dr Ry I'm sorry as but I got to talk to this before I forget remember I'm of a

(47:30) certain age if you know you know what I mean that that certain level of senility kicking in know I try to do you know I drink espresso like some people drink water you know I'm not talking about the I'm talking about dop you but anyway yeah I know wait to have coffee with you guys it's gonna be great we'll have some dop oh it's gonna be epic oh I have if you have a a visit you know where I'm not going to mention uh we got to go to this place oh my God they make they give you they actually you know like certain

(48:04) people don't give you the espresso and those little ceramic cups you know the that you hold with the two rings oh my God they still have that they still have that and your mik it is you have to smell it before you drink it if you you're talking you're you're talking to you're talking to an IT s you're talking to an Italian you should see my grand oh hey I mean right anyway um okay so that black hole it speaks directly to the temperatures okay remember the genius of Hawking the idea think what a

(48:41) black hole a black hole a black hole is a structure A Spacetime structure it resides at the intersection at the intersection of quantum field Theory general relativity and thermodynamic and this was the genius of hockey he actually came up what the formula is what um  $\hbar C^3$  because that's how the Super Force eventually comes in  $\hbar C^3$  divided by  $8 \pi G$  Big G times the mass the mass of whatever creates this black hole so for example a a a solar mass say a solar mass black hole would give you

(49:26) temperature on the order of uh  $10^{7.4}$  degrees Kelvin so we're talking about again the CNB the So-Cal Cosmic micro back uh background is on the order of what 2.7 degrees Kelvin so above absolute uh zero that if if say if you were to to trans to basically put the mass of this aircraft just take that mass put it in that formula it be like on the order of  $10^{-34}$  degrees Kelvin  $10^{7.4}$  something of that nature I'm pretty sure your audience can check me remember the formula  $\hbar C^3$  divided by  $8 \pi G$

(50:10) G times that mass okay that's that's the genius that's a temperature that sorry times times the times the mass or the mass density sorry it's it um on the bottom in the denominator it's  $8 \pi G$  mass the mass the mass most likely in kilograms because if if you look at the units right yeah um  $\hbar$  is what is on the order of uh  $10^{-34}$  juw seconds because it's really a we talk about Quantum of action right that's what each bar is all about it's a reduced Quantum of action but it's got

(50:48) like  $6.3 \times 10^{-34}$  but if you do the reduced it's got two Pi on the bottom so bum bum right so you get  $10^{7.4}$  seconds on the top and you do the math on the C

Cube anyway the the idea being the idea being that this is in between CMB and on the order of 10 to the minus three Kelvin that's why you see that in that that incredible intrinsic Blackness because this thing extremely called it's called as it makes you it makes you think as it makes you think as well uh to Ashton and to brother Ashton and your audience

(51:28) brother it makes you think from the perspective of scaling in fractals what if perhaps these craft these things we see are inducing effects that are Miniature versions of what we may be within perhaps this is just speculation just the thought uh thought experiment but it speaks to this idea that perhaps again these are smaller versions the same way that these flat SpaceTime models are subsets of higher models arguing ably we have to wonder is it possible that when we scale this up the Super Force can then be tapped and do

(52:02) things way more than what we see here actually but oh yeah yeah say no more say no more yeah just one thing to add and and nothing else after that because I have a feeling that we're about to give numbers numbers are not required right right but but what if from a General Physics perspective what if there's a way to nudge the Super Force at a different scale than the plank scale look carefully look carefully at slide eight in that aiaa scitec 2019 that Ashton has um on the MH370 board look carefully at that um at that um AI

(52:42) presentation slide eight talks to something called solving the vacuum catastrophe there's something I want to say but I'm not gonna say yeah yeah yeah yeah I'm completely with you s by the way completely yeah and you guys didn't see this earlier but I was posting the flight path uh the MH 370x proposed flight path and I think it's very interesting that we've come to similar conclusions I just lost it now but I had it up a second ago um and that flight path we have in we can see in these videos actually it

(53:16) looks like in the final frame when this zap begins to happen the plane actually moves backwards a little bit and this I gotta talk to the zap we got to talk to the zap because we talk about cring disc remember black holes everybody saying how come you you know in the thermograph you seeing totally black but in the other one in the real image you're seeing this tremendous flash of light yes right chistian this look up black hole thermodynamics come on okay I'll leave it there I'm sorry I get a little

(53:47) yeah are you going are you speaking of Hawking radiation or are you speaking to just the accretion disc around a black hole when you speak when you say that because I was actually going to ask why you think there's a flash neg entropy perhaps as well that's possible as well yeah a couple possible reasons and yeah I was I'm going to try to pull it back up again but if we think sorry if we think one last thing if we think of the quantum vacuums as sort of like a negative resistor perhaps these effects on a grander scale could would

(54:15) explain that perhaps right POS yeah and I was showing uh the chat as well our proposed route you guys can't see it at the moment but it's interesting because in this zap right as it occurs and I'll go to the slowmo here as well so that you guys can see it a little bit better um you can actually see that the plane seems to move backwards a little bit which I think would go to

the point that you guys here's one um you can see this this is the plane here but look at it's getting sucked backwards if you do the

(54:43) overlay over it you can see it being pulled backwards slightly which could indicate that maybe the fourth orb is in the direction of travel that's backwards where it's being pulled back just as you like that slingshot you guys were just elastic elastic band right so that's interesting because we've got this flight path that I'm pulling up uh that is currently overlay over the screen on my stream and if this plane's going to the East and this plane's getting pulled back then it would be getting sucked

(55:09) back towards the West which actually puts it over here in the Indian Ocean which I'm not going to speak to exactly where this is but this uh happens to be near location where we think the plane might have gone so um that's just very interesting theory for our people in the chat people who are investors out there uh that are looking into this um so let's speak a little bit about more about the orbs CU I think the orbs are the most interesting part about these videos I mean obvious Z if I could say

(55:35) one more thing before we go into the orbs I say this very serious but also in a joking way uh Brothers I need we have to find a way one day at some point to get in a lab together or something yeah absolutely we must but uh it has to be done in such a way that maybe for a crew or something we we need we need the hups yeah in the Navy in the what whatever it doesn't have to be just the dod could be the intelligence Community realizing that we know what we're talking about right and bringing us in as a think tank

(56:12) right because I'll tell you right off the bat brother what I think is coming and I will not go into politics but I'm also a student of History right okay and I think what is coming is is is very very very almost surreal a things that you could not imagine the United States going through I think will happen to the United States and I am very afraid that our enemies are forming as we now H are having this this beautiful this beautiful Gathering of the minds they're forming an Unholy Alliance right let's just leave it at that but

(56:51) does this does this have to do I'll leave it I'll leave it very vague here does this have to do with an event starting with letter A I will give absolutely no clues as to what I have in mind my thoughts brother Rossi I know you and I and and brother Ashton we think alike in many ways you you know what I'm alluding to yeah okay so I got I got have vibrates on on a certain frequency I got you no without even words it's scary brothers it's scary because these people have us in the cross and I do not understand the

(57:25) hate yeah how can you hate this much we're all Homo sapiens sapien that's another thing that excuse my language pisses me pisses me to no end why must this be ET Tech are you saying that homo sapiens sapien is not is not capable of such Grandeur of thought no we are the skillcraft of En key and if you go back to Sumerian times you'll understand what I'm talking about has certain I creativity inventive purpose in mind we are capable of such things and maybe even grander so please enough with the

(58:06) ettech also said so it's funny what you say why you say this s because I was saying to Ashton just yesterday that uh in my opinion when Tucker Carlson a few nights ago did that big Premiere about UFOs um I would have preferred he said that laid out the different options maybe some of it's ours maybe some of it's not but not to take a jab at him but he seemed to be very sure that it's not ours and that's why I'm saying we have to we have to watch because I would make a bet humbly that some of it is

(58:37) yeah and if I can just jump in as well not only did I think the same thing as uh brother Rossi here about the Tucker piece with bersett I also had posted a piece from that Matt gates from these uip hearings and he posted the same clip just a few days ago and the part that astonished me was he said this is clearly nonh human technology and I'm just going looking at it not according to my evidence uh not according to the people I've been talking to that scared me because it told me that Congress is completely in the dark about what's

(59:05) going on Matt Gates was the one saying I'm the only person who's seen this and I'm going okay well then nobody really gets the implications here of what we have going on but I don't think people I think people have underappreciated how much progress has been made and how little the public has been shown that progress I think that's why I think that we need to form a new alliance right an alliance of people of the minds like we have here that can fight back against the Tyranny and oppression

(59:30) that's trying to hold us back that we can get this information out get it to our lawmakers who seem to be completely in the dark about it I don't think personally we need more UAP hearings I think we need conspiracy hearings to the people that are hiding this information from us and we need to get it out in a way to Sal's point that is safe that is going to not lead to the ruin that I think that you know ultimately that's the conclusion that I am coming to in my mind we need to come to a way where we

(59:54) use use it uh for the good and where we can set boundaries and regulations for the good of humanity as a whole not just weaponizing this technology to the destruction of Earth that will not benefit any of us we either unification not polarization that is the only way to save this Godly Nation I agree unification not polarization we must come together otherwise We Shall Perish apart period righted so um and in frame of that I want to talk a little bit more about the videos and then we can kind of philosophize a little bit more if you

(1:00:29) guys want um but I have questions for you guys that I want to I want to ask and I want to understand better so some people in the chat actually are mentioning they think that these orbs have two toids per orb in them so a toid is this doughnut shaped very um kind of continuous like uh doughnut within a donut type of shape and I'm just curious if if you guys agree with that or how you would explain the toroidal um could they be rotating could they be rotating they are there oh you can tell me oh Dr Rozi did I hit out

(1:01:00) something anyway please go ahead and elaborate for us because I think somebody mentioned that they're spinning counterclockwise let me I will let Professor RI discuss know

what I'm talking about oh my gosh you counterwise because I want to say something as far as I'm concerned you and I are no different you and I are of the same pedigree why because we vibrate on the same frequency we understand each other the three of us are truly put it this way all for one one for all remember Quantum coherence of the

(1:01:38) Musketeers Alexander Dumas was a totally creative genius and a great man a great man of philosophy because he understood her medic principle all is one one is all right without his belief everything goes to [REDACTED] yes yes um beautifully said to answer your question or the audience's question Ashton I'll be honest I I don't mean to be so you know maybe this maybe that but I would be certain there's toroidal geometries occurring now I would honestly I don't want to say that I know more about it

(1:02:18) unless I had a look at one of them like in the lab or something so I don't want to say I know for sure there's a there things I'm sure of conceptually but I don't know how those particular orbs were engineered so it's a little difficult for me to to say um I'm certain toroids are involved counter counter rotating toroidal is something that I heard that's just I'm just gonna keep that in back mind think why do you think do you um I'm sorry brother Ashton sometimes I will do that and and and and

(1:02:46) please forgive me I truly but I have this tendency and they told me at work too you got to stop interrupting I have a bad tendency you know you know and I'm I'm I'm I'm I'm going to try to do better but I gotta get this again senility sending in so I got to get it out before I forget it no problem now the whole idea do you remember how these orbs right before the event occurs right before that black hole opens up portal whatnot teleportation portal right before then the the the the prob the orbs start doing what

(1:03:27) they pulsate the medium around the craft right yeah yeah so I'm alluding to when they're spinning around it in the ring formation don't take it don't take it further yeah it yeah no I'm trying to sorry Ashton when I Ashton when I go like break down vacuum break down yes when I go like this Ashton it's basically me trying to find ways to describe it without giving away any Trade Secrets basically if we ever meet and and do you guys everever do do that that meet up where in the lab you know I'd love to be

(1:03:57) a conscientious Observer even if I have to sign an NDA I I might be willing to do it have to but will have to be careful it will have to be a skiff of some sort I know everybody look I like grush a lot I think what he's been putting up with is absolutely again yeah let's not forget alzado what he has been going through I mean these are people that one day will be called Heroes but until that point they will be called what they're called today right yeah unfortunately that is the way we are that's that's the

(1:04:34) way of humanity it's exactly what brother Ashton was saying earlier first they will call you a crackpot yeah then they will you know and eventually they will say that was their idea all along it's true it's it's like in it's like in the movie very quickly like in I think it was was Ford versus Ferrari where the the the the CEO of Ford or one of the big Financial backers he leaves before

the race starts and he only he said he goes I'm only coming back if we win and then they win he comes back and he pretends

(1:05:06) like he he's orchestrated the whole thing he goes hey yeah yeah um so I want to ask a few more questions on this and then we can kind of just talk off the cuff I appreciate all the discussion we've been having I think that people enjoy probably the discussion about disclosure as well we've got a lot of people that are part of those communities here um one first thing I want to ask that's kind of fundamental which is what is breaking the schwinger limit is this what's required in order to in this

(1:05:32) Frame here we see begin this uh Singularity that we're seeing if I could say very quickly for me visually it's you go and I'll go sure sure this is already out there so I'll give numbers because this as a matter of fact Eric W Davis dror Eric W Davis and Mar Miller speak of this in Frontiers on propulsion science which by the way wait wait right before we break off into what you have to say I have to say this for the glory of mankind and the ability as Homo sapiens sapien to to actually say you

(1:06:05) know what we can do this ettech and we can do better for that glory and that Glory alone we must learn of new propulsion methods to do away with these uh these these these oversized Action Reaction dildos for L for lack of a better terms I'm sick and tired of freaking seeing Starship whatever you want to call it I want to see Enterprise yeah I don't want to see you know anyway I'll just leave it there sorry I sure breaking the swinger limit and I say this just for the sake of trying to do my best to translate to for those not

(1:06:43) as scientifically oriented and please brother sell tell me if this is not a good way to put it to me the schwinger limit is turning is basically getting a square to spin fast enough to to where it eventually becomes a circle and I'm oversimplifying like crazy but that's kind of for those maybe not as uh the analogy is beautiful from a a spatial temporal geometrical structure point of view and I I I I agree with it in in in many ways but I like in this point of view since they have given numbers since

(1:07:17) Eric W Davis and Mar Millis have given numbers in Frontiers um FR Frontiers um of prop science it's an aiaa compendium it's a heavy volume but it's it's a it's a beautiful book and I know Eric W Davis is not exactly how should I say a fan of mine but but I I can say that in in some ways I'm a fan of his so there you go so so Dr Davis if one day you find it in your heart to say maybe this guy is not such a crack out anyway so the the whole idea is we're talking about energy densities really energy densities on the

(1:07:55) order of  $10^{25}$  Jews per meter Cub that translates again if you think of the point in Vector the man and and and Dr John brandenberg knows the the the the essential importance of the pointing Vector the um the Brandon Murad equations of GM Theory are very interesting they should be looked into and I believe Dr brandenberg will one day also be um hailed as a hero of of alternative quote unquote will become propulsion science Advanced prop let's not call it alternative let's call it Advanced propulsion science there you

(1:08:34) go so the whole the the whole idea being um your the magnitude of your pointing Vector would be on the order of of speed of light times  $\epsilon_0$  the electric field strength Square okay so basically your electromagnetic energy flux that talks to that energy density I gave before it's on the order of 10 to the 33 watts per met squ I ask you do you think that's easy to do in lab especially in someone's garage no no exactly not using an electrically charged system but there are ways there are again where there's a will there's a

(1:09:22) way there are no where there's a will there's a way there are no impossibilities there are no physical impossibilities just conditional possibilities the trick as you will know Dr RI the trick is to find that engineering condition whereupon you can actually do this in the garage but I strongly advise against it right because I think you will find a a team of of experts that are ready to um how should I say put an end to your experimentation that's funny that was my next question which was what would it take to

(1:09:56) reproduce this privately and how quickly would the government come down on us so it sounds like you just answered that question very I'm just going to be very open I this is one of the ways that actually the way that I practically got noticed was because I did exactly what Brother s said about two two and a half years ago and I I know this is going to sound crazy to some people but they they can pick up gravitational waves they have sensors course they can of course they can yeah and thank God for it could

(1:10:21) you imagine could you imagine the enemy on our territory engaging in anything else T forget that there other ways to to to achieve great harm right thank God they have ways of detection yes goodness listen to me we must be on the side of the good guys enough and that's why I'm saying ebed we must not educate and in any way Enlighten the enemy General General no numbers and for goodness sake don't try this in your garage right it I see that yeah who knows you see you know what I'm saying no don't to go wrong right and

(1:11:07) accidentally do something that we're not trying to certain things I won't I won't say here publicly but I I'm certain Brother s and brother Ashton I know they know for a fact but yeah there's certain things where if certain things went the wrong way I wouldn't be here I'm just being very honest yeah so the other thing I if I could point out very quickly from the science perspective quick for your audience Ashton is that um we have to realize as well from the theory side just the theory with no

(1:11:30) numbers or anything when we look at the pointing Vector is it possible maybe that the potential for the pointing Vector is maybe infinite because when you see some of these textbooks that talk about you know for example certain things like uh you know the magnitude of a potential for example both not the electric and the magnetic field and matter but what gives rise to those and you know yeah potentials itself this is the genius of Aron of bom yes again this is where relli is going great and Dr relli if you ever listen to this keep on going

(1:12:08) brother but be very careful because certain theoretical things could be put into practice by very nefarious agents yeah we have to watch out brother we have to watch out

because there are a lot of people who want to take the easy path and the easy path is always toward destruction it is extremely hard to create it is very simple to destroy we when we talk when we talk about macroscopic Quantum coherence that's particles making love when they when the particles when the particles yes when when the when the

(1:12:43) particles when the particles fight like I said on your show Aston when the particles fight they create what we call explosions and that's the thing we don't want to do basically yeah yeah harmonious resonance harmonious resonance remember remember what Tesla was able to do in his freaking apartment using what an acoustic hydraulically this is a Pneumatic a pneumatic device right oscillator oh my goodness he had to basically break it down and this thing was about yay B remember he was pneumatic it was pneumatic it was air

(1:13:20) driven look up look up what I'm talking about hear did you hear my rant did you hear my rant on Ashton's thing with the pneumatic the back yeah yeah yeah brother if you know what you're doing you can do Marvels put it this way a pencil can kill you if you know where to put it yeah if you know what I mean okay y I'll just leave it that but I would say if if Jeremy's out there we've been uh talking about trying to do experiments sounds like uh you know theoretically get done but we should be

(1:13:49) very careful if we do that and very careful what we well I wanted to actually ask S and this is also for everybody watching live too I I would love your opinion Brother s on the how do we and I'm not saying I have the answer too it's very hard how do we make how do we make scientific progress and publish in papers so others can see without you the you know what I'm saying like this is the problem I that's the this between you and I yeah and I advances of this nature that's why I keep everything I do

(1:14:18) theoretical you will never you think I don't have experimental know who do you think put together the high energy electromagnetic fi generator they ran and and trust me that team that team that team and we talk about 15 people tops they're the they are so smart a lot of them just out of college there was one guy out I I will not name names but this guy is amazing and his put it this way his last name is the name of a great great great actor that I love so anyway this this I I'll call him kid because compared to me he was a kid very

(1:14:58) intelligent dude and every one of them was so interested but again all we could do is get a 10 to the minor s kulam because it's not about solid electrically charged system as you well know it's about other systems and other things so I'll just leave it there yeah but again again please do not try this in your garage because all you g to do if God forbid what happens if you Neighbor Next Door is not exactly how should I say does not have the love of the nation in mind but is an agent of a certain foreign entity then what what

(1:15:34) are you gonna do yeah again there's no need to Enlighten and educate the enemy we have far too many right far too many no need for that right I stuff Starbucks can teleport the coffees to me so I don't have to go pick it it has could you imagine what Amazon would do oh you know you know you just think about it it's on your front door you know as a matter of fact

you think about it's in front of you anyway yeah all of the I that's why I brought up the the purse example for the ladies on Ashton's show because you

(1:16:07) know how often you know the both men and but especially women would love to go and say oh my gosh I forgot something at home and just reach in and they grab it through a portal or something that would be absolutely somebody was actually offended by that and then made a comment to you Dave and said that uh they said you need to trim your beard oh I saw that I left it up I didn't remove it that was funny after if it means anything your beard is absolutely great oh it's wonderful we we love it I I don't grow mine because even at my age

(1:16:35) believe you not I have such a fat face I got zets all over at my age can you imagine so that's what I mean 18y old and hot you know but you're what 45 oh 40 you you just want to be my best friend yes you do yes you do but anyway uh no no I'm all I'm all bro so a couple more questions for you guys and then we can just kind of shoot the breeze for a few minutes um one that has been asked by somebody who's been a top donator uh the last couple days that I feel like it's uh important and if you guys don't

(1:17:06) feel comfortable answering in detail it's fine but he wants to know is energy density achieved by amplifying plasma through a toroidal pattern containment field so that the free electrons resonate with the underlying temporal wave function can you guys speak to that at all dude okay let me go first and then you okay please again look at equation seven in the i e transaction on plasma science paper called plasma compression Fusion device equation 7 speaks directly to what this gentleman by the way very very arodi very intelligent man

(1:17:47) very highly educated in in the physics of things let me just leave it there R roazzi all you now could you sorry could you repeat the question Ashton I just want to make sure yeah yeah one more time um so where am I question there it is energy densities are they achieved by amplifying the plasma through a toroidal pattern containment field so that the free electrons resonate with the underlying temporal wave function hopefully I'm saying that correctly maybe I'm just gonna I I I apologize it's complicated

(1:18:21) yeah I apologize it's Poss there might be something there there might not we I don't know it's just it's hard to say okay sounds good than when you're talking when you're talking drive driving any sort of plasma especially a cold one a non-thermal so we talking about the the uh a plasma whose's electrons do not obey a Max or bolman distribution whenever you drive anything of that nature part from equilibrium especially at certain frequencies dot dot dot what do you think will happen

(1:18:51) especially remember remember remember I asked everyone to read the 1973 it's a short it's a short Nobel lecture by Ilia prosi yes chemistry Nobel Prize non equilibrium thermodynamics 1973 called time comma structure fluctuations read it and read it very carefully because this man was a pure genius and people don't realize the the strength of engineering the preion effect especially dissip structures remember that gentlemen and ladies dissipative structures think a plasma is a plasma is a nonlinear medium

(1:19:32) especially one that obeys a certain nonm anyway I'll leave it there I would say perhaps to your to your your um your lovely gentleman there Ashton that asked the question perhaps look into uh and what I'm the two papers I'm going to mention here um please read the original copies not what someone wrote about them you have to look at Le always go to the source do not yes I agree with you% lean Yang uh the the the the paper that won them the Nobel Prize in 1957 um as well as a paper very difficult to find by ET Whitaker from

(1:20:12) 1903 um I would say yes there's two of them yes yeah yeah yeah I know exactly what you're talking yeah yeah yeah that that interestingly isn't it weird how how people hardly even know of the their existence is it weird anyway yeah and again again Homo sapiens sapien are extremely creative just give us a chance it doesn't happen right right ready for the next question yeah sure this is one that I think that just from a investigative standpoint people want to know is could people survive this event that we've

(1:20:51) seen in these videos you know if you are inside this airplane are those people going to be able to survive this is there a potential where you can have a field around the object that can protect them and I'm now thinking about salvator P's patent for Trans medium craft and inertial sorry a is the question if they were in that plane or in any in this particular plane here or I mean I guess if we want to speak more hypothetically we can you guys can address the question any way you want I think that and I want

(1:21:21) to go ahead at this point as well extend my condolences to the families the reason why I do this investigation is because I want to get the real answers for these families that they haven't been given whether that whatever that answer is I don't know right um a great loss a great loss and my opinion is too that even upon getting to this point I think that the chance of survival is pretty low in general just because of the circumstances that we've uncovered from the investigation but people still

(1:21:46) want to know you know can you survive this now what I'll preface as well as saying is that I read a few Wormhole papers before or I even met you guys that said that we don't need exotic matter to create a wormhole that wormholes are humanly traversible in the sense that the gravitational forces would not kill someone and that the third one was that you could create a double-sided electromagnetic shell that could allow for an object to safely transport through one without being ripped to shreds so would you guys agree

(1:22:11) I guess with that concept and those theories uh yeah look at the latest papers on um written by Mala on the subject also sukin and also uh a certain uh Professor Lisa Randall very interesting lady very very intelligent let just leave it at that yeah one thing I can say in general all right one thing I can say in general is that you can be from the inside of the craft I mean people talk about you know these craft having all these G strong G forces and all of that it's of my opinion that you don't experience any of that from the inside

(1:22:46) now with that said I say that carefully because it also depends on it might depend on the outline of the craft and that's why it's hard for me to say about the plane in particular I

would not to put him on the spot but I would rather have Brother s maybe see if hypothetically s would would that be survivable in that plane or would you need more protective coding remember remember please remember remember that at the bottom of all this we talk about human life and we talk about families that have been greatly impacted by this

(1:23:17) if God forbid anybody that was related to would have been on that plane would not even be able to stomach listening to this podcast I will tell you the **truth** no matter how interesting the physics may be because it's a human condition man yeah these These are emotions we you know so I cannot comment I Fair my thoughts are my own just remember one thing exactly what brother Ashton said God is love God is love that's what may St Augustine so incredibly awesome I love St a not just because he said what he

(1:23:57) said about time but remember God is love there's no need to come and for okay that's fine I think I agree with that um now let's go into something that's a little bit more uh less controversial which is around the technology in terms of getting it out there I think that this is the big question the discussion that needs to be had which is how do we get this out there what type of treaty or International agreement do you guys think would be necessary in order to safely deploy this type of technology

(1:24:24) for just say the energy purposes um prot let me take this sorry to interrupt okay let me take this you remember I think in your first interview I brought up the idea of uh weaponization of the physicist how you bring them over in a special room whereon let's call it let's not use the ew very strong let's call it adversary potential friend of you just sit him down you show him certain things okay his physicist looks it over your physicist talks over goes on blah blah eventually again the physicist their physicist turns to the

(1:25:08) commander the commander salutes goes outside the political representative comes in and all of a sudden we have peace on Earth this is what I'm talking about an era an Epoch of deterrence is feasible by by basically bringing the adversary in on these things and actually saying look we either destroy each other or together we build a better world because I will tell you that I am 100% sure and I do not need the anybody of out there I don't need the well I will not name names but I don't need them for them to

(1:25:48) to let me know that possible the Earth has enemies out there in Intergalactic space because I'll tell you right of the bat this so-call Third Rock From the Sun it is such a beautiful place natural resources we have so many things you think the apple of the eye has not put it this way sensed a certain eye of saaron all of a sudden turning toward us to say whoa I want that so that's what I'm saying only by coming together will we be able to stop what I think is if not on the way already here in some shape or form or God forbid yeah

(1:26:37) I don't want to make it too Bleak so I'll just leave it there to answer the the from my perspective um sort of adding to what Sal was saying is I'm reminded of the scene in Oppenheimer the the recent film where uh Heimer goes to Einstein and there was at one I'm not spoiling this for anyone's just heads up there was at one point a calculation made by Edward

Teller which indicated that perhaps when they set off the bomb even during the atomic bomb during testing they would cause a chain reaction that would ignite the

(1:27:08) atmosphere so what Oppenheimer did was he saw teller's equations and he said holy [redacted] this may happen so what he did was he goes I'm going to speak to the one person in the in this field of physics I disagree with the most which is Einstein to get the which is the best thing if for example if s and I disagreed I actually want to work with Sal Moore because we disagree but anyways he then Oppenheimer goes to Einstein and says what do we do like what what do we do about this Einstein says if this is true the Chain Reaction

(1:27:38) he goes you stop now and you show the Nazis and you so both of you don't destroy the world basically now yeah yeah yeah yeah that I don't either come together or we shall definitely perish apart yeah and I didn't expect and I will tell you right off the bat I have a feeling I have a feeling that Earth has far more dangerous enemies than we have on it yeah right that's my opinion just an instinct a little birdie in my head and I don't mean to be so conspiratorial but what if maybe some of these adversaries

(1:28:15) have are right in front of us and we don't know it it's God forbid brother yeah God and that's fun I did not expect you guys to have those opinions although I mean I didn't know exactly what your opinions would be my opin why they say ignorance is bliss if I if I sometimes better be stupid I'll tell you the truth this here's honestly that Ashton I say this to you in your audience and I don't I'm certain I don't need s doesn't need to hear this because he knows better

(1:28:42) than me from where I stand from where I you and I equal footing remember I really mean what I say you and I have the same pedigree that's why I call you Dr Rossy I I believe an academic standpoint I have that ability now whether it's true or not I I leave it to my betters but I think of you as doctoral level I think you would have survived a certain PhD qualifying event that makes people cry makes grown people cry I qualif everybody should go through it one time in your lifetime to see what how should I say it puts you in your

(1:29:20) place yes right very well one of the things Ashton is I wanted to say and and forgive me to the audience if this sounds like a bleak sort of um answer but one of the reasons I think brother s and I are speaking publicly like this is because we're so frustrated with what we're seeing behind the scenes and I I say that carefully but um this is where it's it's a tough thing I I I'm of the view humbly I don't think any of this stuff for now is going to come out and everything's going to be happy and

(1:29:47) everyone's going to be fine I wish but I that's just have you have you seen something recent from um someone that I hold in great respect because I know his Origins uh Senator chak Schuman CH yes um they plan if you look at that Amendment yeah for the next 25 years am I wrong in in what I understand this will never see the light of day this this kind of physics will never ever see the light of day and trust me if a certain event in the past that I will not name but everybody and this stream will know exactly what I'm

(1:30:32) talking about if that particular event can basically go from epac to epac to epac never having been Declassified right you think this this sort of physics will just no need to answer that question maybe not not to put you on the spot but maybe one day s we should do a paper together on the Super Force a different different ver a different I'm trying to work with some uh now with Dr brandenberg him and I are are trying to come up with something on engineering the Super Force he he he knows a lot more people again he he's of

(1:31:06) the physics pedigree he's a plasma physicist he's done a lot more in the past and remember what he said about Mars remember Xenon 129 yes yeah if if just half of what he's come up with is correct y talking about that not only are we a civilization with amnesia a certain person says but thank God we are a civilization with Aman perhaps we came from Mars and we destroyed Mars and now that's where we're at now that's a theory that I've wondered about a lot I know that's what you're referring to Xenon right is the

(1:31:39) nuclear why did this is a sort of Prison Planet Prison Planet hypothesis definitely in an interesting one I think this is why I like talking to you guys because you're extremely smart and you come to a lot of same conclusions that sometimes I wish I was dumb as yes lot the same stuff that I think about last I would be a lot happier if I could address a couple of the comments you guys made as well and you guys can keep going is think that one thing is that I try to imagine if people are in there doing these Advanced experiments maybe

(1:32:05) you guys are some of these as well I mean just imagine the mindset of somebody who goes and SE I just say I'm so sorry I have to say this because you Ashton you created a beautiful environment for me to say this is not to anyone in particular do you know what it's like to be in a lab working on something dare I say magical and then you leave that lab and then you got to go on a in a car or in a plane run by oil and you see everyone it's I think I can relate to it I've been going under through that

(1:32:30) ontological shock myself just looking at this as somebody who was just a normal person four months ago right and then I I had this happened to me while I was sitting at the airport and I'm just looking at everybody staring at their phones realizing that the world can be a completely different place everybody just absorbed in their own little reality and you know this is where I thought of you Dave and and uh S as well where it's like we've got people out there that are looking at the technology that can change the world and then

(1:32:56) they've got to go back to their normal life In Reverse this is part of the reason why I don't think I can go back to a normal life after this either it's just it's so much to take in right and so much to think about what are the implications Brothers let me have your take on this I'm gonna put something out there's something that's being said a lot day to day that that bothers me somewhat see if you if you resonate with what I have to say they keep on saying that data is the new oil I believe back in the 18th century

(1:33:28) or rather 19th century at at the CP off at the transition thereof they used to say that oil or rather yes oil is the new call do you see the transference because I see Alternative Energy

being the new oil not data you see what I mean it's as if on purpose we're being derailed yes yes anyway I I want if I could say as well one of the things I find so interesting is when you look at that it's almost we're seeing for example I'm in uh I'm in Canada right now and in Canada they they're trying there's a business model

(1:34:10) some companies are trying where for example you buy the car but you rent the battery like a Netflix subscription and you can never own the battery and this this is interesting because this can go very good also very bad in my opinion U it's very yeah it's it's hard it's hard the idea that you're everything is like a Netflix subscription for me personally I I don't know especially when you look at and I brought this up before but it makes one Wonder before World War I we see these images the ones that

(1:34:41) haven't been edited World War II and even before of these pneumatic forms of transportation and it makes you think where the hell is that today like it it really makes you think and I say that carefully but people were sending messages and you know they you could see these old paintings and even schematics of they put their cat in a tube and this is just compressed air for transportation so it it makes you think and even that's not even talking about potential anti-gravity and all these other beautiful things just compressed

(1:35:13) air like yeah you could do a lot for example sound as you know something something that you said in your podcast with with with Ashton immediate at this point at that point in time when you said what what if the phone on is a spin to part it spoke I mean acoustic levitation again you are of a certain mindset sir I'm not kidding if I wore a hat I would take it off you and that's why I call you Dr Rosy I don't say that to be funny I I want to thank you I want to thank you so much pedigree a person's

(1:35:54) Origins mean nothing if what they have achieved it's what they have achieved the level of intelligence the level of intellect they have been able to achieve that should matter it's something that I hear Ashton say a lot that it's it's not who you are it's what you have to say that matters I would take someone if I'm hiring employees I would take someone with heart over someone with 10 degrees that's just that's just me but so so yeah well S one thing I want to say quickly first off thank you a million

(1:36:27) times over but for me it was very simple I I went on Google and I look and I go what is a a phone on what spin is it and it says Google says it's a spin zero and that made no sense to me at all I said what the hell is this and you know how how how can a vibration of a crystal Attis you know do you know who could settle all this and I I'm pretty sure in some lab somewhere maybe just Theory somewhere Professor Wich is doing some unbelievable work Professor Wich if you ever listen to this you ever hear of

(1:37:00) this if someone says you got to look at this whatever you're doing I wish I was involved with and Dr Rosy here was involved with and Ashton was involved with because we really belong in that world brother we really do yeah come couple more comments I want to make I think we can uh start to wind it down but I know we will definitely talk again and we can you

guys are welcome back on hard TRS anytime you want I do want to say a couple other things too just my own opinions on a couple things which is I don't think the government will ever

(1:37:29) give us disclosure like you guys mentioned with Chuck Schumer and the amendment going through there you know the time frame for this stuff happening it's never going to happen I think they may think that National Security um it's got to be forced by our hand and the other thing I want to say is if I was President I would be seeking peace with every country even our enemies because when I look at this technology as you guys mentioned I think the ultimate answer for how we get this information out there is we have to have peace

(1:37:52) amongst human race entirely because otherwise we there's no need for anyone to go hungry yeah there's no need for to be hungry there's no one no need for anyone to be homeless there's no reason why we should have wars and be fighting amongst one another which are just for money like this we should end this and we should be looking globally I want to just read part of JFK's Moon speech just a few lines from it for everybody right now and he says but why some say the moon why choose this as our goal and

(1:38:18) they may well ask why climb the highest mountain why 30 5 years ago fly the to the Atlantic we choose to go to the Moon we choose to go to the Moon we choose to go to the moon in this decade and the other and the other things because not because they are easy but because they are hard because that goal will serve to organize and measure the best of our energies and skills because that challenge is one we are willing to accept one we are unwilling to postpone and therefore as we ask go we as we set sail we ask God's blessing on the most

(1:38:48) hazardous and dangerous and Greatest Adventure Venture that man has ever gone I think about that almost every day with respect to this technology and why I think he was a Visionary at his time and saw what the world would look like a hundred years from then if he was allowed to do what he wanted to do I think everything would be different in my opinion that's my that's my opinion he was gonna do yeah yeah I completely it's sort of like the the quote from equalizer number two when the young kid asks Denzel Washington why me why me and

(1:39:20) Denzel he goes why not you exactly and that's my that's the way I see it why not if I ever if I was ever asked would you like to live in a par reality do you know which one I would choose one in which JFK is still alive too and that goes to one point that people had in the chat which is about time travel in general and I think that you can't break causality but if we're talking about String Theory which is what salvator Pas is talking about just now is that there may be alternate real not through the timelines right so we

(1:39:53) can't really rule anything out especially when we're dealing with what appears to be essentially to be looked into again please someone out there the great minds we're talking about Whitten we're talking about a Stringer we're talking about gross we talk about will Che we're talk about green we're talk about kak why not okay fine God equation fine have it your way if that's what it takes fine please look into this Super Force thing look into it and see

whether you can adapt to

(1:40:24) your ideas because I think this may crack it we may actually be at the cusp of a third revolution in strings and strings may actually be the final ultimate Theory and I'm sorry Dr Weinstein I know what you think of strings but let's give strings another another goal it might just be in Weinberg's in Weinberg's own words dreams of a final theory if I could say quickly Ashton with regards to the causality comment I um I would be I would revisit that in terms of the notion of uh you know reordering

(1:41:03) causality via entropy and to give a practical example very quickly there remember that case many months ago maybe you guys heard about it or not where um it was some family claimed there were aliens in the backyard and they heard all these footsteps and in Las Vegas I think it was what if it's what if I'm not saying this is what happened but what what if when they claimed they heard footsteps but it sounded like thousands of footsteps what if that was just the footsteps of two beings let's say but the PE the family was

(1:41:31) experiencing those events all at once and so they heard all of the footsteps that otherwise would have been linear you know step forward step forward step forward but they heard all of it at once in one sort of causal notion it makes you think about maybe you can reorder the arrangement of things for example I think my my and this is crazy ass speculation this is beyond speculation so please guys if the great ones will ever which I doubt but if they do you never know some sometimes we'll someday Stringer grows with we'll check again

(1:42:09) we'll listen to this podcast what if what if our understanding of reality is completely how should I say infantile what if our senses are not truly walking up to the possibilities of true existence what for example there's one incident that that there's one thing that that in my mind have you ever heard of the Jin d j i n n yes in Islam they're thought of as quasi the but not quite they were the first they were the first brought forth um by by God they were the first Creator before us before humans the Jin supposedly were creatures

(1:43:07) of smoke and Fire doesn't that sound like plasma to you any I'll just leave it there the things there things we must be open to yes but understand as Supernatural right I would love to you said it perfectly I just want to give one more point to what s said and also to the whole concept of causality Ashton so we view I just drew on a paper here we view time as you know linear so if we wake up we have breakfast you know we go to work now what if we took those same processes but in a circular sense you

(1:43:46) you went to work before you had breakfast you see what I'm saying and then so it makes yeah did you see geometric Unity by Dr Eric Weinstein yes yes yes the idea of multiple temporal Dimensions temporal Dimension yes yes yeah yeah what wouldn't it be a beautiful thing if all this could I don't want to give up on strings I think somebody should should look into seeing how Super Force can bring us out of this love would you say sell the Super Force would you say the Super Force is a semi classical unification of string this is

(1:44:24) why yes yeah why would the plan Force why would the pl Force why would the planks Force something that does not have  $\hbar$  in it reside in the theory of of the great Albert Einstein we talking about the gravitation the  $g$  equals right one divided by Super Force times Tabu right take it on the other side as a linear operator why is it saying why is it saying that it is possible it is possible that the super force acting on a spatial temporal geometric local structure give rise to energy density hence matter could we 3D print Under

(1:45:06) certain condition stop ban you understand what I'm talking about materialization dematerialization oh my goodness maybe the hick field but anyway yeah just leave through polarization operators and yeah yeah yeah so yeah I want to say on the time thing as well I just I put in the chat the egg which is uh I think Andy Weir is the one who made this video and that video I think describes time in the same way that uh Dave Rossy just did just now brother Dave did which is a beautiful concept that we only experience it as linear

(1:45:40) because that's how our minds process time moving forward but there's no reason why someone looking from the outside From Another Dimension couldn't see it uh flowing in other directions or completely sto entirely um so I think that if people want to understand it better watch that video I put in the chat I think it really explains it pretty well speaks to it speaks to the one electron universe theory and the whole notion of Fineman and Wheeler talking about how a positron is really an electron going but yeah that's that's

(1:46:06) and then that brings me to the film tenet by Christopher Nolan how we may be moving forward but we see the environment is backwards but from the environment they're going forward we're back yeah yeah so um guys I think we're going to uh you know slow this one down here now and it to an end but I want to give you guys each an opportunity to plug anything you want to plug we'll start with salvator Pas brother Pas here anything that you want to plug for uh the chat and for the the people watching I just want to say uh please

(1:46:34) guys uh look very carefully what Ashton has to say about the incident I think this may be the closest thing we've ever had to disclosure we should definitely we should not go the way of naysayers I will not name names but you know who I'm talking about a certain gang of hyenas but let's just leave it at that and and uh uh just just um how should I say there's far more important stuff to to to Natural phenomena than derision let's give it a chance let's let's look at it all of a sudden in a serious modality

(1:47:12) could this be it okay so this number one don't forget demystify sigh podcast would NASA and Shiloh great guys s doctors Dr RI doctors both NASA and don't forget alien scientists don't forget Jeremy RIS don't forget uh Jay Anderson okay Jay Anderson Project Unity don't forget Theory of Everything with KJ mongle he's doing something incredible oh my goodness I wish I was on it again too but I think uh I think brother brother J mongle forgot about me anyway it is what it is but but the the whole idea is

(1:47:54) this look into these things and don't dismiss them yeah don't dismiss them yeah think of how how could this be possible if it is possible why why was it done because that speaks to

the great heroism of this certain Lieutenant Commander that I will not name which is another you know right up there with Alexander grou cold heart the the whole deal put off the all these are heroes Davis yes I can't believe I'm saying it why not and you you know come to think of it even Safar in his own crazy Wolfman way and Jack please come

(1:48:34) on man if anything let's share the Super Force but I'm sharing with Dr Brandon right now you got to talk to him if he shares fine but anyway so in other words their ways to get past this this this this individualistic U uh man man doggy there's no need for that together we shall overcome unification not polarization this is the only thing that will save our Godly Nation otherwise gentlemen it's over it is over the enemy has Us in the crosshairs and I am afraid that unlike a certain Commodore Perry

(1:49:13) who said those Immortal words we have met the enemy and he is ours yeah this may not be so this time around that's all thank you very much Ashton for this tremendous opportunity thank you well if I could if well thank thank you that was beautiful S one thing I can say um to the audience maybe on a little bit more of a technical side is for those interested look into um the possibility that electricity and magnetism may be two different expressions of the same force and if we sort of view that sort of in a

(1:49:49) philosophical transitioning into a physical sense we may be able to see that some like the accessing the Super Force oh god oh my god oh Dr Rossi sorry to interrupt beautiful I just gotta say again senility somebody should look at the the one thing in Max Maxwell's equations that's already got me all you know anyway up in the twist it's that grab.

(1:50:18)  $b$  equals zero the whole idea that there no such thing as magnetic monopole but remember what the Rock said yeah yeah yeah what if that  $gr$ .  $b$  does not equal zero what if it's a different zero what what if it's a different zero than the one we're used to being taught after all the great canor said there are many sets of Infinities why not certain zeros that are not exactly zero just leave it there but yeah very interesting okay I'm sorry I'm done sorry Ashton okay fine I would like to leave your audience with one thought

(1:50:54) which is and this may sound out there to some some people but what if this goes all the way back to Pythagoras's theorem in terms of understanding this what if there was an understanding that pythagore had that when we see for I'm speaking to quadruple unification cell and that geometrically what if for example we think just basically looking at things in a different way I'm not saying they are but what if for example um you know those graft generators when you touch the capacitor and your hair goes up what if what we call lightning

(1:51:25) strikes are large versions of when you pulse a vandergraph generator as we see with we have if we start to think of things like this perhaps as you know people see uh you get a volt meter and you put it into the ground and there suddenly you get current and all that what if what if we start to view things as so in our face that it may work that maybe something does and that's I what what I would like to leave everybody with awesome yeah and again Dave Rossi is the generation Zed podcast so make sure you guys check that out make sure

(1:51:55) you follow him on Twitter as well Salvador Pas avoids social media so you have to just get in touch with Tim vura Tim vur yeah Tim's great yeah oh my God he's had come on man Lord Martin Reese oh my God if I was in the same room with him I think I'd lose it I'd talk all kind of speculation answer he start laughing and say goodness where did you get your degree from that oh one if I could say one more thing for those interested because I I would love to do sometime a space either with Ashton or or whoever but at podcast Zed

(1:52:30) no spaces no capital zed spelled Zed um on Twitter for anyone that's interested and uh also phas helix.com is the name of my company if anyone's interested um Consulting to anything in that regard with regards to the physics in certain areas and that's about it I want to thank you so much Ashton for doing this brother yeah no highly recommend both these guys if you guys are trying to get any opinions any uh you know contract work reach out to these guys 100% this is Ashton for orbs here of the hard I I

(1:53:01) work for the government only only Rossi yeah don't don't go the only way you reach out to me is through a certain gentleman in public affairs office at a certain office that works for the Navy thank you right so yeah just to close it out then Yep this is Ashen for orbs and this is the hard **truth** podcast where we bring you the hard **truth** the things that people have a hard time understanding to be real and thank you everybody here very much everyone in the chat for your time appreciate it and uh yeah have a

(1:53:28) great day guys recording stopped

MH370x - All Evidence Review Space 12/2/23 - YouTube

<https://www.youtube.com/watch?v=tZFUT69Nq0c>

Transcript:

(00:01) looking for my other co-host uh Santa Cruz mountain goat if you see him try to bring him up red panda otherwise uh we'll let yeah you're familiar with the the process at this point so I'm going to keep it pretty high and tight for this guys I'm going to go through all the evidence uh you can also watch My Stream we're going to be doing that at the same time and then after we go through the evidence we'll just take questions for a little bit I'll probably stop recording on my stream after that you're familiar with

(00:26) the process this so I'm going keep PR through all the evidence uh you can also watch My Stream we're going to be doing that at the same time and then after we go through the evidence we'll just take questions for a little bit I'll probably stop recording on my stream almost ready probably one more minute guys uh so that I can kind of have it be a little more Consolidated okay sounds good almost ready probably one more minute guys see yeah I'm

struggling to be able to figure out how to do the stream at the same

(01:18) time there doesn't seem to be a significant way I don't know how people pull this off when they're host yeah I'm struggling to be figure out how at the same time doesn't seem to be a significant way I don't know how people pull this off when they're host um how are we going to pull this than that one day with I think what I'm gonna do is I'm going to just have to do it uh through my phone and then I'll have to try to sync up the audios afterwards which I think should be

(01:54) fine okay uh so yeah so either you can you can either listen on the space here or you can watch on the YouTube stream and and check it out either way uh so give me another 30 seconds I'm just getting finally prepared here and if you guys saw looks like uh kim.com had replied in the message to one of my most recent posts I do want to give him a shout out because he was one of the first big uh um I guess influencers to kind of take the information seriously and give you guys a little background that you know I

(02:29) talked to him personally he's somebody that wasn't just a believer you know this uh UFO kind of unknown Advanced phenomenon uh technology phenomenon was not something that he was just you know interested in he just saw the weight of the evidence and wanted to talk to me and we had a discussion about it similar to what I'm going to go through with you guys today and he be became convinced of the authenticity and that's why he's put out that huge Bounty for anyone who can you know show and prove that they're the

(02:58) ones who theoretically hoax these videos and that provide the source material to go along with them but we'll talk about that here in a minute as well the outline the way this is going to go down I going to go through the evidence uh I unpinned this from my profile I've added some more stuff to the evidence list most likely it'll be a new version coming out next week of all evidence and some theories as well after I run through all this I bet it'll probably take 30 to 45 minutes there's about 13

(03:26) Pages or so then we'll go ahead and we'll take questions um so this is going to be a little bit of a different format than what we've done in the past and then you guys can ask me whatever you want to know but just keep in mind as well that you know I have a lot of appearances out there that you can watch to make sure you know if you if you have questions a lot of stuff gets addressed but not in any one particular uh piece so we'll get started one minute yes and thank you as well to people like uh Cliff High also known as

(04:02) uh Uncle Cliff supposedly by people uh and other big influencers who have been following the evidence retweeted it I know uh Chuck uh I believe it's Costello is his last name I could have that incorrect also has promoted a lot of our stuff people have been getting tagged with Community notes that are incorrect I appreciate everybody fighting back against those uh Community notes Community notes should never be for subjective opinions Community notes should only be for factual content so people that are out there claiming that

(04:34) they have their opinions that should be stuff that gets put into uh you know replies not stuff that should be tagged for Community notes that's how we get fake fact checks that's how disinformation happens so we'll get started about 30 seconds here okay guys welcome to the all evidence review this is Ashton Forbes of MH 370x we have a big team of people that have behind the scenes been putting in a lot of work and we this thing has been picking up we have been going uh viral we have been trending with MH370

(05:13) and m370x recently uh so I want to thank everybody followers supporters uh out there who have been making sure that this uh the story that these videos Do Not Fade I think that we are potentially dealing with the largest verifiable conspiracy of all time potentially the most important videos of all time as well and what we are talking about here are two videos that reemerged on the subreddit UFOs back on August 7th or 8th depending on your time zone that are uh have been proven to be on the internet archives dating all the way back to 2014

(05:47) the first video which is referred to as satellite video airliner and UFOs has a received date March 12th 2014 uploaded date or published date if you want to think of it is that May 19th 2014 The Source says protected on it this information is very relevant because it incre it sets us a window of time of opportunity to be very narrow between 4 days and 72 days for production of these videos the second video that was released Again by redid aan and there may be earlier versions but these are the earliest ones we've

(06:23) been able to find now almost 10 years later is the archived mq1 C Gray Eagle with a thermal layer added with a Ron um multispectral Electro IR camera this version has a received June 5th uploaded June 12th date on it so the window of opportunity for this one it appears in the first video uh they potentially had to be convinced that what they were looking at was real or what they were looking at at all and then the second video the time frame is only one week after they received that second video now the requirements to understand these

(07:02) videos to even be authentic we had to have several things even to get to the point we're at today in 2023 to understand the videos to be real we had to see the 2017 DOD Navy UAP videos that were Declassified that show drone Fleer forward looking infrared the videos that we see in our mq1 C Grey Eagle has the HUD data that the numbers and everything on that you see on there removed and it has this thermal cust layer that is from the software added in over the top of it without these videos we wouldn't even

(07:35) know what military footage would look like unless you worked in the military on these uh these type of equipment we needed the Trump satellite image from 2019 that he posted on Twitter which showed an Iranian I believe it was a missile silo or a rocket launch that we had uh attacked or destroyed and the satellite image had been reverse engineered that the data came from USA 224 which was sent up in in 2011 this is relevant because we have also been able to figure out that USA 229 with its sister satellite was in the correct

(08:07) location at the correct time to send the data that we need in our satellite video now we can see similar resolution capabilities in that Trump satellite image which is very important a lot

of people thought that Trump picture had to be fake because they expected more atmospheric Distortion and what we've come to uncover is there's a system called cbers space-based infrared system and that this system is essentially a Google Earth video playback Global persistent surveillance monitoring that the Trump

(08:37) picture is most likely just a still from that system and it's sending data and it's not actually looking through the satellites sending data to a computer program that's able to build that Google Earth video playback we also needed Advanced theoretical physics Concepts that have only emerged from 2020 and Beyond macroscopic Quantum coherence Bose Einstein condensates and then the Wormhole papers which tell us that to induce a wormhole we don't necessarily need exotic matter that they could be

(09:07) humanly traversible meaning that if a human were to go through a wormhole the gravitational effects are not going to kill them and then lastly which is very important with respect to the science we're going to be discussing is that you might be able to create a double-sided electromagnetic barrier around an object that would allow it to transport through a wormhole without being destroyed we also need to understand super conductivity more importantly room temperature super conductivity which became part of the Zeitgeist in the last

(09:35) few months from 1k99 which is a metamaterial produced from copper and Lead that when cooked together theoretically will produce a room temperature super superconductive State now what we are going to present is an alternative hypothesis that we don't need metamaterials to induce room temperature super conductivity that's what we've come to learn as part of the investigation talking to scientists and Engineers like Salvador Pás but without that we would not be able to understand the requirements in

(10:00) order for the orbs in our videos to be floating lastly we need to understand AI Advanced Computer processing Advanced Computer programs we believe that in our both of our videos we are not seeing any types of beings or humans inside these orbs these are being either remotely controlled or controlled by a computer program that is why we see this 120° 0 point sinusoidal pattern as these orbs Traverse around the airplane using the airplane as the center of mass we also potentially need quantum computers to be able to store all this information

(10:32) that they are processing to fulfill the role and purpose of that they are conducting now going to the videos starting with the video facts the videos have been proven to date back to 2014 from the archives as well as people who saw them including myself I saw the Drone footage the colorized one I had no idea what I was looking at back in 2014 this is why I got very interested when I saw the footage recently in August I said oh I remember seeing that and then when I saw the second video this is one of the first times ever when I had seen

(11:01) any types of UAP videos over the last 6 years that I had seen two different videos from uh different perspectives of the same exact event the satellite video has perspective changes eight different times in it part of the reason why it's hard to see the cloud movement is the perspective changes eight times so each perspective is only a few seconds we can see satellite

coordinates on the bottom left visible in six of those perspectives those satellite coordinate shifts prove the location is in the nicobar Islands even if you were able to

(11:32) invert or mirror the footage you would not be able to invert or mirror the satellite shifts those satellite shifts indicate that the plane is going generally in a South and then Eastern Direction this means that the location cannot be in the South Indian Ocean assuming that we were somehow able to add a minus sign it has to be in the nicobar islands in our satellite footage we see two perspectives or two side by-side videos these are not duplicated this is 3D stereoscopic video which would require two satellites in close

(12:04) proximity on the same orbital trajectory we have recreated the the orbital trajectories of USA 229 which have this criteria met that are in the right location in the nicobar island staring down at the agreed upon flight path of the plane at 1840 UTC in the exact location where the plane supposedly turned into the South Indian Ocean the mq1 C great Eagles are General atomics uh m we actually have somebody who knows the experts in general atomics and says that they believe that this is exactly what what these uh drones look

(12:37) like the mq1 C thermal is added using this Advanced Electro IR camera from raon the purpose for cers space based infrared system and Sig signals intelligence is tracking boats planes electronic signals monitoring intelligence and Battlefield awareness alternative sources indic are exist in higher quality they were posted later online that point to none of the users being the original Source there's a hole that forms in a cloud to the left of the plane in the satellite video after the zap which is very small but could be that something

(13:17) has flown through the hole there or could be something else related to our event the videos uh the video coordinates uh in them change but they don't change when the mouse moves it only Chang when the perspective moves this is important because this indicates that there's a second analog being used to move around the coordinates in our videos the video coordinates also have a satellite designation to them next to them nr22 nrl22 is USA 184 which was sent up in space in 2006 which is consistent with the first time the cber system was

(13:53) brought online nr22 has a millennial orbit the millennial orbits are useful for uh relaying sensitive or relaying electronic communications so we believe that this is our Command satellite one of the first ones set up in space related to this system the mouse in our satellite video Moves off the screen both in the bottom left and in the top right indicating a large field of view uh we are the civer system is viewing custom video software it displays only coordinates with two axes indicating we're tracking the

(14:23) ground it's not looking at the plane in space otherwise we would have a z-coordinate axis the satellite video is in six frames per second indicative of a high field of view which requires more resources in order to render it the plane is making a left-hand turn and descending in both videos consistent with the maximum capabilities of a 77700 this is some of the most difficult part to fake according to a VFX expert that claimed to have worked on uh top gun Maverick the plane's altitude is low based on how close they are to the

(14:56) cumulus clouds which only form between 1,000 000 and 5,000 ft the mq1 C drone is cropped out of the satellite video just at the top of the field of view the user closes the window in the satellite video after the plane disappears indicating that this was actually not recorded in real time that they came back and they recorded this later on to to uh uh leak it to us Googling the Sig int payload quote unquote the top hit references the mq1 C Great Eagle which is our drone Reg sideen on defended the veracity of the videos in the later

(15:32) uploaded videos by other users when the Drone video Zooms in we can see that the clouds change size and there's clear Parallax the Drone is most likely deployed from either car nicobar or Port Blair and the direction of travel is consistent with the angle of the camera view from the Drone video we believe the rathon camera is an a das2 Electro IR camera that has has the capability of onboard software that can add the thermal rainbow pallet that we see now some additional speculation we speculate that the cber

(16:11) system is producing this video using the data from USA 229 it could also be using other data as we've shown from the CRA video it is using Geo geostationary satellites that are constantly scanning the whole earth Millennial orbit satellites that are relaying information and low earth orbit satellites that can get very high quality uh data that is high resolution The Smoking Gun is USA 229 again at the right location time apparent angle with sister debris satellite capable of taking stereoscopic video at 1840 UTC in the nicobar

(16:43) islands the cameras on both of these equipments are made for filming these events the original Source may have come from a private Forum the mouse acceleration that we see when the mouse moves is consistent with a plural View 3D mouse with stealth or soft Mouse 3D controllers it could also be some type of track ball or some type of laptop uh center button as well the key point being there's an acceleration there that is different from standard Mouse acceleration that we see the screen capture of the terminal is

(17:17) running at 30 frames per second there's a Citrix terminal running at a default of 24 frames per second streaming a remote virtual desktop at a resolution of 24 frames per second this we can see from the mouse which is had a 24 frames per second and then it's remotely navigating around this very large resolution field of view that's playing at 6 frames per second what this all means is that somebody was actually logged into the actual database doing a screen recording uh while in the Citrix session looking at that background they

(17:48) weren't using a camera and they were not using a camera phone or anything like that what this also means that the leaker of these videos was likely caught and went to prison because this information would be logged the leaker was likely a US military operator who saw the event in real time and had emotional reaction now what it would take to fake these videos first of all I want to start by saying we have a \$145,000 bounty 100,000 put in by kim.

(18:16) com 20,000 put up by the investigate Earth podcast Chad and Sherry and 25,000 put in by an anonymous follower who is uh clearly wealthy and ran for higher office once before and I verified their identity but I'm not going to make that public at this time the requirements to

collect this money is that you need to find the supposed hoaxter of these uh Masterpiece videos and you need to provide the source material they would not have produced this final product in the first try they would have had to have an entire hard drive filled with their work

(18:45) efforts leading up to it and all you have to do is bring that with proof that that stuff comes from 2014 prior to these videos now in order to create the videos you would only have between 4 and 72 days to create them whether or not you believe that the reg side non receive date of March 12th is accurate or if you believe that somehow reide non lied on the receive date or somehow implicated in the cover on the hoax then that would be May 19th which is the confirmed publish date of the satellite video there's no reference to copy from

(19:15) this is very important you see a lot of people promoting a fake VFX **debunk** out there saying they can convert the VFX into our video if somebody created this they would not have that luxury so what those people would be required to do is if you want to confirm you can do it go ahead and take that VFX without looking at our videos try to blindly convert it into the effect that we see in our video this is essentially equivalent to taking a monkey and giving them a typewriter and waiting until they're able to

(19:44) produce Shakespeare so this is a very difficult event this is not a situation where you're copying the monol Lisa you'd have nothing to compare it to you'd have to know how to uh create these realistic volumetric clouds that we've talked about how to accurately animate the camera cameras that we see how the clouds form at low altitude because we have these cumulus clouds out there you would have to know how to accurately light the volumetric clouds the zap that we see in the satellite video accurately

(20:10) illuminates the clouds in the foreground and in the background which I'll say right now we speculatively believe that that's because the electrons in the area are being energized by the event you'd have to be able to recreate exactly what MH370 looks like you'd have to know what the turn radius of a Boeing 777 is at a certain altitude wall in descent you have to know where the plane would have been at the exact time accurate coordinate shifts relative to the location to five decimal places how to animate those coordinate

(20:41) shifts what the weather was like in the nicobar islands because we've proven that it was accurate low altitude clouds in the area how to accurately create the smoke trailing the plane using particles in both videos what the thermal looks like at a level that would fool the experts how to animate the heat signature in the AC units that we believe are showing the heat signature in the belly of the plane they would have to have knowledge of military classified systems completely unknown to the public that the military is using a

(21:12) Citrix environment you would have to know the frame rate difference captured by or created by capturing the satellite footage during a citric session you'd have to know the specialized mouse that they're using relative to that acceleration we discussed what satellites the US has in operation and what their payload is you'd have to know what false color IR looks like a lot of people have wondered why is the satellite video show this zap in a white effect

that's because we're not looking at thermal there we're looking at an IR

(21:41) camera in false color IR at nighttime that is able to produce it in whatever visual color spectrum they want because the purpose there is not for that detailed information like we have in our drone the purpose there is for Battlefield awareness and monitoring you'd have to know how to create the 3D stereoscopic imagery we see in the satellite video how to animate the orbs how to create the particle system for the orbs in their forward-facing gravity engine where they're creating their own geodesics how to animate the final

(22:09) frames where the orbs flatten showing a gravitational lensing effect and the plane blurs showing acceleration you'd have to know what the mq1 C drone even looks like what the payload on that drone is where the payload is located to get the exact camera angle you'd have to have better VFX skills than the lead VF artist of top gun Maverick who said that this person would have front ran their work by 4 years and that the hardest part is recreating the actual capabilities of the plane to scale Marvel VFX expert says it would

(22:42) take at least 6 months four to six months with today's technology that's Jeffrey Ford better understanding of physics than most phds You have to have understanding of advanced mathematics including the sinusal patterns that we see from the orbs and then sort of as a joke to be koi you'd have to know how not to use lowquality '90s video game two-dimensional VFX in a 3D rendered environment you'd also then have to know that we would never find a plane even 9 and a half years later otherwise the

(23:10) entire hoax would break down now the flight path let's talk a little bit about that now I want to start by noting that we started by trusting all the official data and systematically ruled it out as not factual or itself riddled with inconsistencies I will add that I read all 300 p P of the whisper route all 300 of them and I initially trusted it to be true and if you go back to my earlier spaces you'll find that I was never comfortable with the information on the whisper route after the radar data went

(23:40) away is essentially nonsensical I don't think that a plane would be hugging the coast that's not how you avoid radar I don't think it would do a cut back to see if anyone's behind it nor do I think that that would even be able to be deduced from this type of radar from these types of pings the most important part that I thought was silly is that the whisper route has this plane doing a holding pattern which is very obvious that what happened here is they didn't have a way to explain why there wasn't

(24:05) any additional ping so they just said oh it must be sitting in a holding pattern the more logical answer is that the data after 1840 UTC is uh not accurate either or misinterpreted or potentially spoofed so we lost trust with that whisper data and the iMat pings after 1840 UTC which is the location and time that we believe that our satellite videos are occurring uh the satellite ping switched to I uh at 1559 UTC 30 minutes before the plane takes off and never switch back to P despite the plane flying East towards

(24:45) it what do I mean by this there are two satellites that imrak could be pinging one in the Indian Ocean and one over the Pacific near uh near Japan even though this plane is flying towards the P satellite it never pings it ever again this is important because what happens is now we lose the capability to triangulate the position of the plane if we have pings from two different satellites we can tell exactly where the plane is at any given point in time with just one ping this means that we have to use an arc to determine its location the

(25:14) plane goes east until 1721 UTC and the plane should have pinged that P but it never did the pilot says good night MH370 at 1719 UTC this is 1:19 in the morning 64 later 1721 UTC the plane disappears from all civilian radar due to both adsb and acars data being shut off 1730 UTC last radar contact according to the transport Minister from one of the press conferences radar says that the plane makes an impossible altitude changes from 5,000 to 55,000 ft meaning that the radar data including the altitude data becomes unreliable because a plane

(25:55) cannot make those types of altitude changes plane can't even go to 50 55,000 ft the radar data was not released for weeks but yet it was sent to the Americans within 5 days according to the press conference we found the Armed Forces knew much earlier that the aircraft could have turned back and that is why the search was expanded to include the Straits of malaka within a day or two and yet they still continued to search in the South China Sea for days after the event wasting resources knowing that this plane had

(26:24) turned around because they had it on Military radar the military the military did not confirm this until much later due to resistance from senior officers and government needing to step in quote unquote we wasted our time in the South China Sea the defense minister claims they knew it was civilian airliner but they didn't know it was mh37 the same defense minister claims that they knew it was civilian somehow but it was not hostile the only way this makes any sense is if they had communication with the plane because

(26:54) otherwise you could not rule out a hijacking scenario or even a rogue pilot scenario in order to know it's not hostile you would have to have had some communication with them I will add as well that the same defense minister argued with an interviewer who questioned why they didn't send up Jets and he said well would you send them up to shoot it down which she says well I didn't say that you did and he ask why would we send up the Jets and he and she says to track the plane especially if you have a rogue plane why

(27:24) wouldn't you send it up there uh and that seems to be the most logical course now why did they not send the plane up potentially because they knew it was an emergency event therefore they knew they didn't need to send a plane up it was not a hostile situation the plane changes directions when it goes dark it heads directly to panang Lan CWI airport the closest airport that can accommodate a 777 in emergency there's a wired article out there that says that this would argue be the correct destination G

(27:49) uh correct decision in an electrical fire when the plane gets to panang the co-pilot cell phone pings pings a local cell phone tower now we have speculated that it may be that the L the

lights on the runway were turned off if the lights on the runway turned off it would not have been safe to land it could also be possible that if the uh plane was on fire the landing gear could have been damaged and it could be possible as well that they couldn't dump Fuel and land on their belly uh because of the fire on board

(28:20) the plane the last Malaysian military radar is between 1815 or 1822 UTC 200 to 130 Mi West by Northwest of panang but reports the next day had indicated that the loss of contact from subang ATC was at 1840 UTC which is the location and time of our videos there's anomalous ping data at 1839 UTC and subsequent limited data for the 5 hours afterwards this was first reported by myself now why does this plane not crash into the South Indian Ocean no debris field found that's the biggest piece you can't not have a debris field for a 777

(29:05) crashing into the South Indian Ocean we should have found it the very next day we had satellites everywhere we were even able to find the Wagner uh Wagner Chiefs or generals uh jet that had crashed which is much smaller than the 777 most expensive search in history and most extensive search in history did not find a single piece of the plane above or below there was no black boxes found despite them being able to produce a signal for 30 days at depths of 20,000 ft at a very specific frequency that cannot be misidentified the Sosa system would have

(29:39) heard it like they heard the Titan sub pop where the Navy said nothing for 5 days while oxygen counters were running on television Western Australia and uh Diego Garcia both have hydrophones that also did not have any acoustic detections Indonesia as well as Australia and now we're also add in India have radar systems that should have seen the plane either turning into the South Indian Ocean or flying in the South Indian Ocean none of them did it's an active shipping route there's no witnesses that saw the

(30:12) plane there despite supposedly crashing in the morning in the daylight hours some people might argue the ocean is really big well the official flight path has it running out of gas with fuel exhaustion there's actually nowhere else for this plane to go the official search searched everywhere along the final Arc along the flight path in the South Indian Ocean malaka Straits and MNC and South China Sea the initial narrative claimed that this plane did a 90° Swan Dive which is not possible for a plane and even if it

(30:44) had it would have exploded when it crashed into the ocean like that it's not going to go flying or uh uh pouring right through the water and and not break apart this was very quietly later to a 14 degree change none of the Redundant elt beacons there's four of them activated on Crash despite the fact that they should have 19 families the victims signed a statement saying they could call the cell phones for up to four days of the victims one of them even proved it on National Television a CNN expert went on

(31:15) and claimed that oh this could happen because it might be pinging the old cell tower well not for four days and not for 19 of them in fact those cell towers only go out into the ocean several miles and if a phone is underwater for about 30 minutes in the salt water it's going to die and after it's under a few feet of water you're not going to be able to get a radio frequency

signal anymore some social media sites also had the passengers still being online now somebody argue what about the debris we did find some debris right

(31:43) well again I just want to reiterate no debris found by the official search above or below water that's a fact the debris that was found was found by people not related to the official search they search with at least 42 planes and 39 boats from over 10 different countries and they found nothing the debris that was found and only three pieces had been confirmed tied to to MH370 is consistent with a fire and teleportation event that we've put forth from this Advanced science some of the debris that was found actually even had

(32:18) Scorch marks on it and the debris that had Scorch marks it had a honeycomb consistent with a Boeing airplane there was even a b77 7 fire suppression device that washed up in the Maldives several weeks after the event that didn't go reported even though or didn't get investigated even though it has a serial number on it the flapper on the piece that essentially set the narrative that this plane had crashed into the ocean was not matched with the unique serial number the unique serial plate was missing despite being

(32:51) screwed in to the flaperon so this piece could be from MH370 but there was also an exact replica a 9M MRK that was purchased by GA thesis scrapped in October of 2013 just 6 months before the plane went missing that's an exact same model as MH370 also purchased from Malaysia Airlines so it's possible that the flap round could have been from a similar plane that has similar part now why is this MH370 some might ask which I think is probably the least controversial aspect of all this it's the only missing 777 the thermal is an

(33:27) exact match of the silhouette of a 777-200 ER this is actually the banner in my Twitter profile the color tone matches MH370 you can or matches Malaysian Airlines it's white on the top dark on the bottom which we can see from the satellite satellite coordinates actually put it on the real agreed upon flight path of MH370 at around 1840 UTC in the nicobar islands again this is the Smoking Gun note this is the suspected location of the turn into the South Indian Ocean once again I'm going to repeat that

(33:58) purpose of Sig signals intelligence and cbers is to track airplanes just like this US Government had to be tracking a rogue 777 in a post 911 world the Malaysian Minister of Defense in the day five press conference is asked us spy satellites are in the regions have we have contact with them to which he replies yes yes the US military has been proven to have the satellites in the air we've proven that conclusively and we have the US military confirming that cbers provided data to the intelligence Community to help solve the

(34:34) mystery of MH370 I ask you how did they solve that mystery now let's **debunk** the suicide myth despite the fact that I think that it not crashing into the South Indian Ocean already **debunks** the suicide myth everyone stood up for the pilot zahari including officials wife and co-workers 18,000 flight hours he loved his job extremely experienced pilot there's no indication of suicidal intent anywhere in the flight path uh a similar suicidal event German Wings 2015 pilot crashed the plane within 10 minutes of locking out the co-pilot if

(35:14) it was suicidal he would have crashed the plane immediately knock on on an 8-hour Joy Ride The Crew oxygen has one or two oxygen tanks at 100% flow the estimates of this oxygen lasting are between 30 and 120 Minutes not long enough for an 8h hour joy ride there are several ways to enter the cockpit including a keypad override disabling the electronics Bay and panels that break out when the plane depressurizes to equalize the pressure Captain bellany suggested that whoever was in command of the aircraft would have had intentionally

(35:47) disconnected all four electrical generators and Apu simultaneously practically impossible for a single person to disconnect all four generators Within 64 seconds zahari was actually rostered to fly mh150 to Jetta on February 4th 2014 the route in his simulator closely matches mh150 to Jetta with a diversion potentially to the South Pole or South Indian Ocean what this means is that the indication that he practiced the flight path for this route is false flying over your hometown panang is silly the flight path indicates an

(36:26) emergency of event not a suicidal event the passenger oxygen Mass would only last for about 25 minutes so in order to keep the passengers alive they would have to fly low which we'll talk about when we talk about our Witnesses narr The Narrative again of running out of fuel is contrary to a suicide event suicide you would crash the plane immediately you're not going to have it run out of gas now why is this a lithium ion battery fire 221 kilograms of lithium ion batteries put together the same day the plane took

(37:00) off the battery skipped two security screenings this is 500 lb of lithium ion batteries in the cargo bay the fire event is corroborated by 19 Witnesses the cargo compartment Bays were designed to withstand flame source of 1700° f or over 900° C for at least 5 minutes a lithium ion battery fire could Escape containment from the cargo compartment the fire cannot be extinguished by the cargo containments hon fire suppression system there's a heat signature that we see near the exhaust panels by the landing gear the

(37:35) AC units may be flushing smoke from the plane smoke Trails coming from the back of the plane in both videos altitude again is too low for contrails I have a source who hasn't has experienced testifying on Capitol Hill who's willing to confirm that the plane could last for over an hour while battling the fire the batteries may have been packaged unsafely based on the atsb report pictures the b777 fire suppression device that washed up in the Mal Dives could be connected to MH370 and could be one of the fire suppression devices they

(38:08) were using to mitigate the the ion battery fire the key witness Katherine T had a sighting of a glowing glowing orange plane consistent with a chemical reaction from the hon fire extinguishing devices releasing bromine which is a hallogen gas that glows orange there's a Mayday at 243 a.m. only reported in Chinese news 2:43 a.m.

(38:33) is is converted to Malaysian time is 1843 UTC within 3 minutes of we think our videos happened of an intercepted communication from MH370 that the plane is quotequote attempting an emergency landing and disintegrating which is consistent with our videos consistent the event we've put forth and the witness the FAA changed the rules to no longer

allow lithiumion batteries in the cargo of passenger planes in 2015 just one year after after the event of MH370 even after this there's more than one lithium ion battery fire in

(39:01) passenger planes per week in the United States covering up the fire event is only explained by the technology that was deployed otherwise there' be no reason to cover up such a mundane events now the main witness Katherine T she had a blog post in 2014 and another blog post in 2018 her sighting was recreated by automatic GPS I spoke to her personally uh a few months ago and she told me that she thought her sighting was at 1840 UTC she told me she felt pressured by the experts to change the time of her sighting in her sighting the plane was

(39:37) descending from the beginning to the end of the sighting the plane was flying low and it was recreated to be between 2,000 and 10,000 ft the glowing plane had no navigation lights meaning the power was potentially still out she saw two other planes with navigation lights at cruising altitude her sighting lasted between 5 and 10 minutes the plane had a glow orange glow as we've discussed she also saw black smoke resembling a contrail coming out of the plane she could not see any fire or flames consistent with our videos where we do

(40:05) not see any active fire I asked her about the silhouette she said the silhouette of the plane matched the thermal from MH370 she did not see any of their boats in the area though she mentioned to me that if the lights had been off in the boats she would not have been able to see them because there was it was essentially pitch black she did not have her radio on to hear Mayday calls she went in to put the kettle on and when she came back out the plane was no longer there anymore and all she saw was an orange Halo the recreation of the sighting has

(40:38) the plane circling around the boat in a counterclockwise location coming from the East consistent with the direction of travel of the videos and the direction of travel of the known flight path of the plane now all the other Witnesses Mike McKay sees the plane on fire at roughly 1720 UTC within 1 minute where the plane goes dark he sees it it low on the horizon from roughly 300 miles away at the maximum distance uh likely due to the fact that this plane that there just rained making it perfect conditions to see as far as he could he

(41:09) sees it on fire for 5 to 10 seconds and then it stops his sighting is misreported as the plane he seeing the plane crash he later on says clearly that he did not see the plane crash that was just an assumption that he was making um people along the coast of the South **China** Sea hear loud noises at the same time roughly 1720 UTC this is going to be consistent with lithium ion battery fires exploding those 500 pounds of lithium ion batteries in the cargo 10 minutes after the plane goes dark there fishermen eight fishermen 10

(41:41) miles off the coast of the South **China** Sea that see a unusually low flying plane this would be consistent with the the uh Pilots trying to fly low to give the passengers enough oxygen to be able to breathe in a depressurization event completely counter to the official narrative that the pilot would have been trying to suffocate the passengers there's also communication at 1730 UTC received by an unnamed 777 pilot going to Tokyo claiming to hear the MH370 pilot or co-pilot this cast doubt on whether or not Communications

(42:13) were really disabled there's a Chinese hack **China** actually released satellite images which appear to show three orbs the official explanation is that these pictures came one day after The Disappearance and that they were of the South **China** Sea however they searched in the South **China** Sea and did not find any debris it is speculated that this could be spycraft that the **China** was telling the United States we know that you did something we checked the satellite and the satellite actually would have been able to see the location in the nicobar

(42:45) islands of our videos the same day March 9th **China** hacks the Malaysian government stealing crisis minutes as well as classified information on mh3 370 I can't understand why there would be classified information on MH370 the day after the plane goes missing unless **China** knew there was a cover up at play other pertinent information relative to the case two fake passengers using stolen passports that changed their appearance Iranian Nationals supposedly the cover story is they were trying to find Asylum and head

(43:22) to Amsterdam from qual lumur but it doesn't make any sense that they would be flying to Beijing this just increases the risk there are direct flights directly to Amsterdam they were spending enough money that it wouldn't a matter of trying to save money either the satellite coordinates only indicate the nicobar islands because the videos are the videos predate the South Indian Ocean narrative on March 13th 2014 one day after the receive date on a red side of non video unnamed us officials started leaking information to the media stating

(43:54) that MH370 flew into to the South Indian Ocean they started to build a narrative cers builds 3D Battlefield which ignores satellite movements some people wonder why the satellites are not moving again the same reason why when you're looking at Google Earth you don't see the satellites move because it's taking data and building building it and through a computer program satellites can see in the dark false color IR total darkness moon was down sun was set there's no Shadows visible in our satellite video

(44:27) the zap again indicates nighttime because we can see this zap accurately illuminate the clouds in the foreground and in the background from our satellite video if it was daytime we most likely would not see that zap or the illumination come from it uh very clearly at all the White House was calling Malaysia every single day after the event despite the fact there's only one American passenger on board Obama visited April in April and this was the first time in 50 years that an American president had visited Malaysia he spent

(44:56) several days there I had a source that reached out to me that I deleted this post to protect the source and the P The Source mentioned that there's a general who was in charged at the time who has shown the videos by their nephew and reacted in a way that confirm their authenticity this General went on to be promoted to be the highest ranked military officer despite the fact that we never found anything about the plane was adviser to the president Joint Chiefs of Staff the Secretary of Defense and then later later on went on to be

(45:27) board of directors at locked Martin Rolls-Royce silence in the same video where the Minister of Defense admits that spy satellites were in the regions and they have in contact with

them also admits that Rolls-Royce had engineered data and says that they were in they were in communication with Rolls-Royce about that Rolls-Royce has never released this data publicly both engines transmit data and there was a source in one of uh one of my replies that I believe mentioned that this data is transmitting every few seconds so

(45:57) Rolls-Royce would have the data that would either confirm or dispel the conspiracy AC car's data sets were really the only Footprints left after the at adsb and ATC radar data and audio were lost so it became very difficult to find and track this plane now the motive I know a lot of you guys want to know why would you do this okay 20 freescale semiconductor scientists and Engineers on board free scale semiconductors broke off from Motorola which is the ones who actually owned the batteries that were on board

(46:30) the plane in 2004 20 people flying in the same plane from the same company breaks almost every company's policies for exactly situations like this this plane was likely doomed it couldn't land a panang for whatever reason Landing in the ocean would have broken apart the plane and most likely everybody would have drowned in the middle of the night we found a 2005 National Security Agency report on Commercial room temperature superconductivity development chips that references free rescale semiconductors nine times this

(46:59) report also says in it that this technology could be available by 2010 or 2012 but only if the US government uh provides funds to make it happen freescale semiconductors also launched a major initiative dedicated to serving RF power needs of the US Aerospace and defense sector directly tying these engineers and scientists to the pl to the US defense so the motives then are possibly preventing the intellectual property from going to China if this is somehow an Espionage event that was set up from the beginning and the fire was

(47:30) started intentionally it could also be preventing the loss of this intellectual property that is directly related to the technology we see deployed it could also be testing the technology on a doomed plane as many podcasters have speculated to me personally now the orb analysis we see three orbs in our video approaching the plane at estimated Mach Three speeds they are using super conductivity room temperature superc conductivity potentially in order to obtain Quantum properties and ignore gravity if you reduce your mass to zero then gravity

(48:06) you're no longer affected by gravity we see a non-radiating barrier around the orbs this is the field essentially like a bubble underwater that is displacing them from SpaceTime they're generating their own geodesics uh possibly by an accelerated vibration through a pulse current as explained in Salvador P's patents the dark cold lines are in front of the orbs not behind the orbs there's no V visible known propulsion mechanism that we can see in the videos the dark lines may be changing the pressure of the

(48:39) atmosphere the heat signatures in the orbs are actually spinning on their axis the orb triangle pattern is consistent with a three-phase sinal 440 volt electrical system at 120° that creates a zero point at the center sinusal waves tipler cylinders are predicted to produce sinusal distortions in SpaceTime emitting gravitational waves in a repeating wave pattern the orbs

pattern encircles the plane over time we believe this could be mapping the plane or preparing it for what's about to occur that orb pattern

(49:14) changes to become vertical ring around the plane before the phase transition Begins the phase transition occurs as the orbs Bend and move towards the plane in the final frame we can see gravitational lensing in the frame before the phe transition as well as we can see the plane accelerating and blur so why is this teleportation or super luminal speeds as I'll refer to it moving faster than the speed of light we see the plane disappear from SpaceTime instantly in both videos the zap is a cold endothermic event in the thermal meaning

(49:48) it's an absorption of energy this is not a release of energy like an exothermic event that we would see a again this is a transitional phase State change it's not a black hole because nothing gets sucked in it's not cloaking because the smoke Trail stops when the plane disappears eal  $mc^2$  rules out Annihilation because the mass and energy has to go somewhere teleportation could be to another dimension Planet future or just another point on Earth which is what we have speculated we cannot break causality

(50:25) travel to the Past unless you were to change timelines or Dimensions otherwise you would have the Paradox of you know uh you know killing one of your parents before you were born but time dilation is real you can travel to the Future you can also potentially hold the plane in super position where it could be released at a later point in time according to physics there may be limitations to this technology may not be unlimited you may need an open area I.

(50:54) E an object in the air in order to pull this off the teleportation may be to hide the plane it may be to put out the fire because this cold endothermic event can absorb energy runaway lithium ion battery fires are so dangerous because they have a huge amount of latent energy and this is why when you put them out they keep coming back up and up and up again because the family's the victims of the family's uh phones were ringing this makes it most likely that the plane was still somewhere on Earth in the four days after the event

(51:27) now let's dig a little bit into the science at least my favorite part the double slit experiment is the greatest mystery in physics which proves quantum teleportation is real uh what we get from the double slit experiment is non-locality quantum entanglement and quantum teleportation of information in order to scale this up we need a unification theory of quantum and macro time dilation is real more mass equals slower time now what I mean by this is has watched the movie Interstellar when Matthew mccon and Anna

(51:59) Hathaway go to the planet that's near the black hole and they come back an hour later 20 years have gone by for the person who's on the space station this is because they when they move near the mass of the black hole their time is slowing down if they were to look at the space station they would see the space station moving at very high rate of speed relative to them to their frame of reference contrarily if the person on the space station is looking at the planet they would see the Matthew Mah and an hathway moving in slow

(52:27) motion wormholes have been shown to be theoretically possible by at least three scientific papers but again syntax is very important here and we don't believe that what we're looking at here is a wormhole but we do think that the effects that we're seeing are very similar and somewhat related all these Wormhole papers show that exotic material is not necessary that you could create a thin shell double-sided shell that could safely transport an object out of SpaceTime room temperature superconductivity can be induced via

(52:53) metam materials Ikk99 is one example potentially or repeated pulse vibrations from transducers we don't think that we need metam materials in order to achieve room temperature superconductivity the orbs may be mapping the plane in their spherical pattern computer program explains the pattern they're not being manually controlled the orbs are a field what we're seeing is the non-radiating boundary this is not a solid object that we're seeing now there is potentially a solid object within that

(53:19) boundary but we cannot see it visually because the boundary is blocking our view these combined orb teroid moments can cohere electrons so orbs become part of the relationship at the plane acting as electrons around the nucleus which would be the plane which extends unshielded electrons at the point of transition when the electrons are driven from equilibrium they begin to self-organized into a matter wave solid state objects may be able to achieve Quantum macroscopic Quantum coherence when the orbs converge at the

(53:51) last minute they create an aouth as they collapse on the plane the orb or S converging are what's triggering the transitional phase State change of the plane low temperatures allow the electrons to couple and move as one in that uh that matter wave the fractal tral orb moments create a unification of forces that induce the phase Singularity the properties of an object denote the behavior regardless of size Quantum properties may include Mass reduction since time is a fluid symmetry as indicated by time dilation a faster

(54:24) flow of time no inertia then equals no gravity the plane again the plane and the orbs blur in the final frame indicating acceleration and possible Mass reduction as the final frame has a slightly smaller silhouette than the frame beforehand less Mass equals faster time which means the ability to achieve high speeds zero Mass objects require very little energy to move even to the speed of light after the phase transition the object can be placed anywhere it will not adhere to the laws of conservational momentum the technology may be capable

(55:02) of destroying the entire planet and now I want to go into a little bit of Salvatore Pi science and some of the patents that he's put out there and scientific papers that will corroborate what I've just said high frequency gravitational waves these can generate high power high frequency gravitational waves H fgws by high frequency accelerated axial rotation Spin and or accelerated High frequency vibration gravitational wave production by propagating electromagnetic radiation through strong magnetic fields this can

(55:33) enable macroscopic Quantum coherence namely possible Quantum mechanical behavior of macroscopic objects multiple high power high frequency gravitational waves were

to be focused on a particular point in SpaceTime locality they can induce the SpaceTime curvature Singularity generating a gravitational well is possible in the flight path of the objects controlled motion of charged matter under rapid acceleration transients may lead to room temperature superconductivity nuclear fusion may also be engineered Energy may be

(56:08) Amplified to such a high degree as to generate a space-time curvature Singularity leading to the total Destruction of a planetoid or asteroid I want to at this point reiterate these papers predate any of my investigation and I only became really aware of them after the investigation after we had already put out the science that I read previously they corroborate much of the science that I've mentioned the next one is high energy electromagnetic field generator H MFG the artificial generation of gravity waves in the local locality of

(56:43) the spacecraft can result in energy Mass removal it is possible to reduce a spacecraft inertia allowing for smooth sailing through the negative pressure repulsive gravity of the Void the utilization of such high power sources for space Power and propulsion generation now that's the science part of it the next part is I think what I'm part of the investigation that I'm most proud of which is Agent 370 the identity we believe is Lieutenant Commander Edward C Linn I'm going to reiterate the leaker

(57:20) was most likely the US military personnel most likely an operator probably had an emotional reaction to see in the videos because reese and andan received the footage 4 days later after the event they removed the HUD data they cropped the Drone out of the satellite video they used the rainbow pallet on the HUD data so that we could see more information they likely had to convince reese and andan that the videos were authentic and that's the reason for why the publish date is 8 to 9 weeks later they may have thought they were actually

(57:47) looking at UFOs only later to be revealed that it was actually us technology they potentially didn't think that they were damaging us intelligence to the degree that they were Lieutenant Commander Edward C Lyn was part of the special project squadron 2 the vpu2 Wizards he flew in the Poseidon p8 as well as the locked Martin ep3 Aries 2 which has realtime tactical Sig signals intelligence again and full motion video intelligence the crew fuses the collected intelligence along with offboard data for Battlefield

(58:20) situational space awareness and Lieutenant Commander Edward C Lyn's P specific role was to relay that information to Upper command he had a code name for the charges against him in the case against him called Rogue Archer every article essentially mentions signals intelligence in it the last deployment was February 2014 but he gets reassigned March 25th 2014 Just A month later just two weeks after the events of MH370 disappearing the investigation into him began April 2nd 2014 a week after his reassignment his

(58:55) next assignment was the brig in May 2014 he left two flight manifests in his flight suit from a deployment that included search and rescue code names the defense argued that the classified information in question is available on the internet he was arrested in September 2015 MH 370x uh investigators have speculated the reason why he wasn't arrested so much later is

because they were trying to throw people off the scent if they had arrested him earlier people would have been able to connect that he was connected to m370 they might

(59:28) have been able to connect him to the videos there was an FBI sting against him in August of 2015 just one month before he was arrested they did a honey pot tried to get him to give information away where they could use it against him charges would have resulted in life in prison first major incident of Espionage by an active duty member of the US Navy since the end of the Cold War he had a heavily redacted charge sheet we weren't able to find anything about the dates or any information about the charges he was

(59:53) privy to the Navy's black program portfolio he had top secret and compartmentalized access on Facebook he's friends with General Flynn he had knowledge that could be extremely useful to potential US adversaries the government had to come out and admit that it wasn't really a spy case and that there was no evidence he exchanged any sensitive information with anyone from China he was abused while in pre-trial detainment the agents didn't properly advise him of either of his crimes uh or his right to an attorney

(1:00:24) that he was any of the crimes he was suspected of or his right to an attorney and the emails listed for why is pre-i detainment should be upheld it was just fairly mundane events it seems as though they couldn't show the real evidence for why he would he couldn't be released the judge said he showed a dangerous pattern of disclosure of classified information but didn't point to any disclosures of classified information in their judgment the defense uh the all the charges against him had been offuscated for some

(1:00:56) reason he was given a uh prostitution charge despite the fact he was facing life in prison over Espionage after they were unable to prove the Espionage case he was essentially forced into a plea deal where you got a 9-year sentence where he admitted he accepted responsibility for just the two charges of uh mishandling classified information that he was actually guilty of he ended up working with the NCIS and FBI and had the last 3 years of his sentence suspended so I Foy the FBI and the NCIS my Foy to the FBI has never been

(1:01:33) returned my Foya to the NCIS was returned within a week a search of our Collective databases is an identified 1 2014 investigative report response to your request we have carefully reviewed the documents and withheld them in total under Foya exemption one exemption one protects disclosure Pro protects from disclosure information about quote unquote matters specifically authorized under the criteria established by the executive order to be kept secret in the interest of National Defense or foreign policy this was an Obama a executive

(1:02:10) order Obama actually loosened foyer requests but only a few exemptions prevent them or allow them to be withheld since this wasn't a spy case the foreign policy angle makes no sense it most likely has to be related to National Defense which is what the technology we see in our videos implicates now the disinformation angle the videos were censored on August 19th from the subreddit UFOs people constantly make fake compassion arguments trying to find the truth hurts the families of the victims manufactured consensus to use

(1:02:48) sock puppet accounts to post fake content and have it get upvoted narrative control censoring those telling the truth breaks down the brainwashing can't have that Forum sliding the account that posted the VFX debunk that everybody to this day still scks behind was called icy slide literally a play on words intelligence Community Forum sliding Forum sliding is using fake accounts to post and then replying to pre-positioned postings with simple comments such as thank God this has been debunked this brings the

(1:03:21) unrelated postings to the top of the Forum list and critical postings slide down social contagion fake content spreads through word of mouth and peer pressure individuals adopt the beliefs as their own without even knowing the source many people don't even realize that the only person to have claim to have found the VFX is a guy named Mick West addressing the VFX debunk the icy slide account that posted it was a one-day old sock puppet account that did not defend anything in the post they had to get manual approval rule from the

(1:03:55) moderators of the UFOs subreddit to post it uh the simple answer to anyone who claims that these this visual effect matches on even a single frame is to Simply say how many pixels match to date not a single person will answer this question because in doing so they would have to admit that they are not a match even the corridor crew says it's a perfect match and then right after says of course it's not a perfect match contradicting themselves a 2d asset would not be used in a 3D rendered environment the videos are perfect

(1:04:25) there's no discrepancies anywhere then there's no reason that they would use a no lowquality 9s graphic in such masterpieces the videos would actually still be real even if VFX matched on a single frame which it doesn't prosaic comparisons of the zap had already included an ink drop a supernova an energy field a video game from the 90s and a donut which actually I would argue matches better than any of the others none of these show that the videos come from these things there was actually an old Reddit post that they

(1:04:54) originally tried to argue that the ink drop was what our effect was for our old school investigators out there until they found a VFX that gain more traction most likely they are attempting to debunk the zap because they know that they need to be able to deny the technology in order to admit that the videos are authentic which will eventually come out now addressing some of the other debunks that are out there again there's no discrepancies despite hundreds if not thousands of community individuals searching frame by frame you

(1:05:25) need a full story to explain the videos as hoaxes beginning with regicide and non somehow being in on it or otherwise lying about the date they received it 4 days after The Disappearance Which is far too short for reproducing these videos people claim the clouds don't move they do move they just move slowly you can actually see the clouds move we've proven that several times over there is Parallax we've proven that as well it's not daytime it's nighttime the smoke flows naturally the Jitters people

(1:05:54) said there's Jitters in the cont contrails they're not contrails it's smoke there is no jittery uh effect the stabilization or any editing to the videos will allow you to see things that

aren't really there you have to use the original videos there is no duplicate frames either that also required editing in order for them to get to look close we've actually also proven that the duplicate frame thing even after they modified the frames still are not exact matches the mq1 C gary Eagle does experience turbulence as flying after

(1:06:25) flying through the wake of the plane prosaic **debunks** are all countered by the fact that there's a citric session logged into the actual spy satellite database indicating that the base footage is real now why is this reverse engineered versus non-human intelligence or even potentially just our own technology first of all I just can't believe that we could be this secretly Advanced without some sort of help there's no reason to do such an extensive cover up for just an anomalous event most likely Edward C Linn was put into prison

(1:06:53) because it is our Tech technology if it was just UFOs or even if it was fake they wouldn't have thrown Edward C Linn in prison they wouldn't have tried to charge him for life in prison and they certainly wouldn't have put him in prison for 9 years on a plea deal the assets filming are both US military they either got extremely lucky filming this if it's non-human intelligence or it's just an operation they're filming before the orbs even appear the orbs are moving at Mach 3 speeds roughly 2,000 mph so the plane is

(1:07:23) not out running these orbs at all the pattern is explained by a computer program the fire event indicates a rescue motive a human motivation in my mind you can't attribute human motivations to a non-human intelligence and perhaps most importantly science and our investigation can explain everything we see in these videos so people want to know where they take the plane now I'm going to go ahead and preface this is all speculative at this point I'm also going to say at this point that I want to

(1:07:51) extend the deepest condolences of the families of the victims who've been lied to uh and never told the **truth** over this whole period of time if I had to bet I would say that this plane somehow got to Diego Garcia military base this base has 1700 military personnel 1500 civilian Personnel Mark Duan K T the witness and basically every conspiracy theory said that they flew This Plane somehow to this base but they couldn't explain how it got there it has enough space to hide a 777 there's a maldiv sighting at

(1:08:20) roughly 6:15 a.m. local time where the Islanders see the windows and the blue and white a blue and red stripe of MH370 the pilot had Diego Garcia in his simulator it's not open to commercial aircraft there was no departure 72 hours after March 8th 2014 according to a Facebook post that we found the flight logs were destroyed by water damage on Diego Garcia in July of 2014 that's pretty weird it had underground facilities according to a Black Vault fo **Foya** request that it was a CIA black site that could

(1:08:57) hold and transfer prisoners there was a message posted from somebody claiming to be Philip wood on the website 4chan of a black picture saying that he's been held captive and the picture exf data points it at Diego Garcia military base there's tens of millions in construction to Black construction for dredging and other activities labor in South in Southeast Asia is very

cheap as well if you look at the uh the base in Google Earth Pro very little changes on the surface this over the last 20 years indicating the constructions happening

(1:09:33) underground loed Martin even got a contract for upgrading Power and Water there are photos of Diego Garcia that uh on the Facebook page that looked vaguely similar to The Crew there's sources that claim to me that this place is magnitud is more important than Area 51 its location makes sense they supposedly have radar data that can can see for 3,000 Mi they would be capable of tracking the plane from its takeoff throughout the entire path of the plane they also have groundbased Electro Optical deep space

(1:10:02) surveillance at this base as well one of one of the few sites in the world that has this now what about the passengers the families of the victims never believed the official story a lot of them are on CNN and other uh large news organizations months after the event saying that they never believe the official story settlements likely forced the families into silence uh in the United States there was a lawsuit that was put in against Boeing uh and against Malaysian Airlines and the judge that ruled against this lawsuit uh being tried in

(1:10:39) the United States is now Supreme Court Justice Kenji Brown Jackson if the passengers survived they could have been returned to their home countries in exchange for their silence some could have been living in Diego Garcia the American passenger Philip wood most likely would have gone into witness protection and assumed a new identity according to Florence a changi's investigation a nephew of the pilot was told that his uncle was quote unquote collateral damage the French father was told that there was two awaks in the area and the

(1:11:12) Americans knew exactly what happened to the plane a former head of Indonesian police was told what really happened to the plane by his counterpart in Malaysia so I want to thank you guys all for listening to this version of all evidence now we're going to open it up to questions I'm going to go ahead and let my uh my co-host here start bringing people up and uh we'll start answering questions um okay so thank you guys I'll take a look at the chat as well from my live stream and people can tell me if they

(1:11:51) have any questions that are coming here as well someone's asking in the chat how come cell phone data wasn't pinpointed days later if they're still ringing again 19 families signed a statement begging the countries to actually look into the fact that cell phones were ringing and they didn't look into them red panda go ahead um great question uh I think I would like to see the Rolls-Royce data I think the Rolls-Royce data if it's still available could prove what really happened in this plane that's probably

(1:12:51) the most damning evidence that might be out there but I think that I'd use this as a springboard to say that there's people that know what really happened to this plane just like potentially Lieutenant Commander Edward C Linn and if any of those people were to step forward especially at this point given the totality of the evidence that we've put forth I think it would break the whole case wide open we just need somebody to be brave and speak up good question mhm

(1:14:04) yeah and so again that because of the scenario we've put forth that all that debris could be from MH370 um you know I think that our scenarios one of the scenarios that put takes by far the most amount of evidence out there and can explain it um but again that could also again be from this other replica that was created that was bought that was scrapped you know at least 10 or 20 years too early by GA tesis so really the strongest evidence is that we never found a debris field and the official search found nothing

(1:14:34) which is just impossible I think that a lot of people don't wrap their heads around the idea that a 777 can't crash into the ocean without leaving a debris field yep oh wow thanks a lot ocean appreciate it yeah we've **debunked** all the VFX uh stuff it's not there's no Pixel Perfect matches I I'm not sure why people keep imagining this so this seems to be like a a red and black dress versus a blue and uh whatever blue and white or whatever um there there is no pixel perfect match on any of these so I think

(1:15:37) that uh they would have to produce their work on this um there's a lot of disinformation out there right now people pretending that these things match so you know the biggest thing out there in general is that if you think these videos are fake you should not be attempting to **debunk** them in any respect other than trying to find the person who is the hoaxer if they're fake then there's a hoaxer out there that produced it so yeah now so I'm saying that there is no VFX in these videos at all so just

(1:16:13) because two things are similar does not make them the same these types of effects are very are effects that happen in nature all the time we can see them from um uh super novas and there was somebody that actually did level 39 if you go take a look at their posts they found a bunch of different effects that you can match up like that so the only way that somebody can disprove these videos at all right now is finding the supposed hoaxer we have hundreds of millions of views we have \$145,000 on the line there is no excuse

(1:16:42) we're not going to be entertaining any more VFX or prosaic explanations for them okay for this some hands um beg your pardon we'll

(1:17:55) just get the hands first and then we'd love to great to see you again TIG we had a wonderful conversation the other day or earlier today I guess who can keep track but um yeah as mentioned Benedict had his hand up first and then shy so let's get to Benedict yeah sorry about let you know I I don't have the hand up thing I'm on a desktop right now so I'm not trying to be a dick no problem buddy yeah I understand that the desktop experience is brutal um but we'll get you in right after sh I

(1:18:19) promise okay y thank you Ashton by the way I mean like once the **truth** has all been revealed right what's next what's next for us what are we going to do next yeah so once this the **truth** has been revealed here I mean we we haven't gotten the **truth** admitted to right and I don't know that the US government can even admit this footage to be real so we have to make it self-evident we have to get the information out there as many people to the point where everyone just knows the official Nares nonsense we've

(1:18:45) proven here with the evidence Beyond any any doubt now what I want to try to do is I want to get a congressional hearing the reason why I want a congressional hearing is that we can have an official investigation open up I don't ask anyone to believe anything I'm saying this evidence is verifiable if we can get the nro the FBI NCIS or even the CIA potentially to open up the classified information we can authenticate this stuff all we need is know the data about something like USA 229 or see their official records as an

(1:19:14) MH370 it's just being classified from us right now so what I think is we don't need any more uip hearings this might be controversial to say but I don't think there's an appetite for more UAP hearings what we can do is if we can confirm the conspiracy as a byproduct we can get the technology to be revealed which will reveal the reverse engineering programs related to those uip hearing okay but after that once that has been done what's next well then we we get prepared for what's next we

(1:19:41) change the world right we take this technology and we reshape the world with it we don't need cars that run on fossil fuels anymore we're not going to need planes that use fossil fuels we can have new sources of power that are Perpetual we can have free energy we can have fusion power so for the people that are younger this technology will change everything about their future and those are the people that I want to reach out to the most because if you want to live in a world that is completely different

(1:20:06) than what we have today we need this technology to be made public but it's very important that we use this technology in a responsible way as I've said before this technology could lead to the end of the world you know I think that a lot of people think about uaps and the disclosure process in terms of nuclear power we need to think about in terms of something that's scaled up a 100 times more powerful than nuclear weapons and if we think about that then we can start to write uh write legislation that will um you know make

(1:20:35) sure that it's used responsibly and that's what I think that we have to be doing that's the discussions that we need to be having and that's really where this is all going to lead good questions very cool you had a yeah sh you get a hand up are you still wanting to speak yes I'm sorry hello I lost my hand there for a second hi Ashton hi red panda hi Mello I have got a question for Ashton actually I mean I've been I've been following him since he started speaking and he's doing brilliant isn't

(1:21:09) he he's getting better at it every time um my question would be sweetheart if there are a couple of people that you could speak to no matter who who would you who would you love to put in front of you that's a good question sh I appreciate you very much I appreciate that we've been having discussions since I had less than a thousand followers I think um yes we you grow up yeah you did and everybody else has been following from the beginning I appreciate it but everybody who's been coming along for

(1:21:39) the ride as well but um the people that I want to talk to the most are obviously the people that can get the information out to the biggest audience so I'll use this to say that you

know a lot of people didn't want me to talk to Alex Jones because he has a lot of baggage that comes along with him but he has a huge audience and people that are willing to listen to the evidence we are not going to prejudge anyone based on what the media tells us so people that I would love to talk to are going to be people like that the Tucker Carlson of

(1:22:02) the world the people that are like Lex fredman who can have a very strong intellectual conversation uh Joe Rogan if we go to Joe Rogan then the whole world's going to end up knowing the truth his audience is that large and I don't want to make this a political thing as well so if there are people on the other side of the political Spectrum I would love to be on a show like Bill Maher where there's a panel where we can actually talk about the implic of this type of technology in front of an intellectual audience um but

(1:22:28) ultimately I'm willing to talk to anybody who is going to put the evidence out there big or small um and I appreciate alternative media in general because I think that alternative media is the truth now with respect to the government side I'd like to talk to anyone from senate or or congress um I do have people already trying to back Channel me into some of those types of conversations but just as you guys can understand here this is a lot to take in this is a huge conspiracy that has huge implic and consequences for lots of

(1:22:55) people that are out there that are covering this type of stuff up so it's not going to be an easy just getting in there it's a it's a whole baggage that has to come along with these videos as well hey as the more I see people trying to shush you up the more I want you to win more I can't help it it's it's just the advocate in me but and the more and the more I'm grateful that you've got the the vocal testicles to stay in the game and don't let them beat you down mate the the harder they scream about

(1:23:23) you the more you probably H something so I leave you alone yeah thank you and um keep going so hey Ashton I I have a question for you has there been an aircraft the size of a Triple 7 or 747 one of these uh heavy duty uh large aircraft that disappear in no parts and nothing has found of them they're completely gone yeah I'm not sure so you know I'm just a normal guy that has been investigating these videos I know a lot of people have given me historical references to things that are similar I can't I I really don't even bother

(1:24:02) trying to look into a lot of those because there's already so much here to unpack it's already too big so trying to connect this to any other incidents uh really only gives an opportunity for people to try to discredit the situation um and try because then if they can discredit those other situations then they can discredit this one as well um but you know what I do say always with these types of events is that if we can prove the videos to be real and authentic then obviously will lend a lot of credit towards any other historical

(1:24:27) events and any other anomalous events that people have seen great thank you let's remember to keep to hands and we're next going to go to TIG and if anyone else is on desktop I guess just let us know if you can't raise your hand TIG cool thank you thank you thank you so much folks um Ashton thank you so much um I appreciate you being here and um I appreciate

your candor and you're like super articulate so I appreciate that very much too um I'm just going to go over a couple things real quick and then I'm going to ask you

(1:24:56) a question um what I want to go over first is the first podcast that you went on to with the concrete boys uh the first one was with Julian okay I admittedly did not see that but what I did see was the reaction from Julian and by the way Ash I am on your side so stay with me here bro um the reaction was a very bold loud frequent set of tweets that proclaimed their victory over you like 100% I was like oh this Ashton guy must be full of because these guys are so confident um and they they it reminded me of how Bush

(1:25:35) um uh reacted to um their quote unquote victory in Iraq in like 2006 after they had been there and won nothing yet he was on a massive ship Battleship with a huge Victory uh banner and everything that's what it reminded me of now let's go to the second one the one with uh Danny um I watched that one actually it was grueling because he was so obviously abrasive biased and un uh like totally unopen to anything you were saying it was to me the most obvious shutdown job I've ever seen in my life between these two podcasters who were

(1:26:14) definitely very good friends and definitely work together so um my question after this is I don't think that the CIA or anything like that would be heavy-handed enough to be like oh let's go squash this let's go pay these two right that would not happen but as we've seen through other um censorship to uh type of um businesses through or I'm sorry censor censorship I can't speak apologize censorships type um executions coming from uh the government what they do is they use non-government third-party

(1:26:47) either NOS or like we just saw in the recent files that were released by um Michael shellenberger they use thirdparty um intelligence communities like the CTI League which was just um brought up by um Michael shellenberger now my question is do you think that those two gentlemen did that on their own volition or do you think that there's a thirdparty sort of NGO sort of situation happening here that people want to shut you up yeah great question um no I think there's definitely influence there uh especially when it

(1:27:24) came to Julian I mean he's connected to all kinds of Spooks uh I could tell right away that he was a wannabe FBI agent you know um in the way that he was acting it took me till later that night when I had checked into this garbage hotel that I realized that it was clearly a setup interview from the beginning um and I was already prepared with my statement um you know I think that he just he discredited himself completely in his reaction like you said you know when you boldly Proclaim something like that and then you end up

(1:27:51) just being completely wrong uh that's how you completely destroy your credibility which I think happened to both him and Danny unfortunately Danny you know he's best friends with him and I think that uh a lot of these people think that the **truth** is determined based on popularity and uh you know agreeing with people which is kind of like a mental rot that we have in society today especially with younger people unfortunately that seem to be succumb to peer pressure in that way now do I think that CI directly reached out

(1:28:18) to Julian Etc no I think that they reached out through their cohorts people like James Fox you know um potentially also people like Jim diorio who uh Julian was talking to literally on speaker phone right in front of me which was super weird so so weird that I took down the guy's name while I'm looking at the phone in front of me um I do think yeah Jim diorio is a legendary spook uh from the FBI who's now you know third party but once you're a spook you never stop being a spook from what I've

(1:28:48) learned from my own back channeling now and as people have reached out to me is part of this investigation that yeah there's a lot of money that changes hands for people to do certain things and be influencers out there um and this is how they manipulate them and they know how social media works so they manipulate these YouTubers Etc wouldn't surprise me at all if the corridor crew is also directly implicated like this you know Julian told me firsthand that a major Studio was going to recreate the

(1:29:14) videos he was referring to the corridor crew obviously they failed miserably in that attempt and realized that they weren't going to be able to do so and that was the reason why they then decided to try to like you know just admonish me try to claim me to be a UFO guy which couldn't be any further from the **truth** of course um and so I think that we have to be very careful when we see these kinds of attacks like this is exactly what I expected is this type of discrediting you know what they realize that it's it's a game of psychological

(1:29:40) warfare where they are trying to attack me and not the evidence because they know that the body of evidence is so overwhelming and that they can't address it you also notice that they don't say my name unless they really have to um you know they'll try to call me something else they won't try to use my name at all because if they use my name then they just draw more attention to the evidence and like you had you re they realize that oh what those people are saying is all nonsense right so this

(1:30:04) is very Advanced disinformation Techniques that are being used but the good news is like these Spooks or whatever they're they're outdated their techniques are very transparent and I don't think they've ever seen a movement like this ever before where we have such a strong following of people that see through this type of stuff that see the weight of the evidence and keep battling for it and I think that they're just kind of shook in terms of what to do and I think that when you saw Julian's

(1:30:30) emotional reaction afterwards really gave away the game I mean if you listen to I urge you guys to listen to the space that I was in with uh him and Danny and uh TJ I mean these guys are just completely delusional they they have no concept of what real people are like you know in their minds I call it **redditor** brain where **Reddit** has been so censored and so much misinformation that people don't know what's real anymore and they think that they people on **Reddit** agreeing with them are reality and then they get to the real world

(1:30:59) they're shook because they realizing wait everybody doesn't agree with me so that's my official uh answer to all that hope that helps and to that point real quick thank you very

much love and you can kick me off whoever's the host by the way you can kick me down I'm good okay well there's an active smear campaign against Ashton basically since he came out and in that space he just referenced Julian did uh tell us that like he was kind of being influenced by like multiple people with data points that

(1:31:26) were propagated by the smear campaign like right before which is something they do and I think a lot of people recognize that both of those dudes have a bunch of conspiracy people on and they've never had an episode like this where they're kind of like ahead of time like uh taunting Ashton and like we're gonna take this guy down it's over for him you know and they've had like Bigfoot people on so I think a lot of people did recognize there was some fishiness going on and uh like I said even Julian Dory kind of said that like

(1:31:50) yeah multiple people reached out to him to say like oh you're going to get get bots swarmed and ashton's never bought Bots that's something that they this group does so so want to point that out too yeah I want to add to that real quick too is that yeah of course I've never bought Bots before you'll realize a lot of people project their own actions so when it comes to these Bots it's most likely they actually use Bots themselves and that's why they think everybody else uses Bots um I've been

(1:32:13) told by multiple people every podcaster I talk to has people talking to them telling them not to talk to me making up claims that I've stolen somebody's work it was actually a podcast today right after they post on Twitter told me they got a message claiming that I was CIA disinformation I mean there's literally an army of people out there trying to prevent me from getting the word out to people trying to prevent me from talking to people um and then trying to convince people I think Julian admitt there was

(1:32:39) five different people that told him that I was using Bots like this is a coordinated effort of disinformation that's being pushed out there and that's how it manipulates people's mindsets so um this is the reason why I stream dream uh in real life this is why I'm so open and honest about everything I do and why I do so many podcasts because you'll be able to see direct and consistent and um consistency from me in everything that I say let's do some more questions a fantastic next we have a semi-attractive

(1:33:09) guy um who can try to make you laugh his name is vinc what's up man thanks for the introduction man yeah I just needed to ask you something uh I have a question and I have a theory first I'll get to the question basically obviously Mr seeing the video which the corridor cre has uploaded on their channel right so one point which I could not understand is they say that corn TRS or smoke I'm not I obviously know that they're not contrails okay Contra for at 26,000 ft they are that is smoke which

(1:33:37) we see in the videos so the person says that you know smoke should not be showing up on the thermal videos is it true yeah so they quarter crew one of their **debunks** was that smoke wouldn't show up in the videos but they're looking at something cooking something so we're talking about lithium ion battery fire which is spewing toxic chemicals into the air which is

not going to be the same as if you're just cooking a steak and watching the steam come up it's completely different elements that we're seeing there so I

(1:34:03) actually was able to even find an article that mentioned that you have to use IR for lithium ion batteries to determine when they are going to be um uh destabilized or what's the right word I'm looking for here um or the potentially could have an explosive event so I do believe that the lithium ion battery smoke would be visible in ir and we've been looking into that more but ultimately the answer is that yes we are going to be able to see whatever we're seeing here is real so we know it's not uh contrails it can't be it's

(1:34:35) literally impossible the only other possibilities are exhaust which I believe would dissipate much quicker or again this smoke this dark smoke that is that is corroborated by a witness who's on a boat right in the same area so I think that this idea of comparing and using something else is different is yet another mechanism of disinformation where it pushes away from the fact that we have these lithium ion batteries spewing all kinds of toxic chemicals and then claiming that oh when I cook something I don't see it in this IR is

(1:35:03) not the same as what we're potentially dealing with in our videos but that's a good question okay so now the theory part so basically I was looking over the videos over over and over again okay I have been obsessed with this conspiracy so basically I was looking at the thermal videos and what you see is the plane is leaving not one but two Trails okay I will send you the screenshot I could I wish I could share my screen right now but okay yeah so basically uh what I saw was that the plane was leaving two

(1:35:33) Trails so is it at all possible that instead of you know the smoke leaving a trail because of the fire is it at all possible that the plane was dumping fuel maybe that also explains the uh not landing at bang uh what do you call it narrative basically they did not land land at Pang because the plane was full of fuel and you just told us that you know you can't do Ben Landing if you if the plane is full of fuel so maybe what they did was they just followed protocol they said okay you know what we'll off towards the ocean and we'll be

(1:36:04) dumping Fuel and then you know what maybe sometime later we take a U-turn once we have dumped in enough fuel and head back to panang and make another shot at Landing is it at all possible yeah so this is been asked I don't think this can be fuel fuel is going to be affected by gravity it's going to fall to the ground um and what we see our smoke Trails here is it's staying stationary in the sky so it's very unlikely I do think it is possible they would have dumped the fuel upon trying to before trying to land in the ocean uh

(1:36:31) for the same reasons why you would need to dump it before you land in the in the ground because if you don't I think there's a very high risk of there being a chemical reaction um right now on my stream I'm looking at pictures of the plane where the problem is that these trails are not coming from the engines you can see very clearly there's nothing right behind the engine after the Heat Signature this the the smoke Trail actually doesn't even appear to really line up with the engines very well um so

(1:36:54) it does appear in my mind to be coming either from the vents that we see there's two vents on either side there's actually several vents underneath the plane but ultimately right now we haven't confirmed that and it's going to be very difficult to confirm in general I think that the key evidence is that we see something coming out of the back of the plane can't be contrails um it being exhaust doesn't make a lot of sense because it would dissipate much quicker and we have a key eyewitness that sees

(1:37:17) dark smoke coming out of the plane so ultimately um you know it's going to remain a little bit inconclusive and speculative but we can rule out some of those things okay man before I go off I just want to say I'm huge fan of your work basically I genuinely regret that you know **Mick** West and Danny Jones have and even the corridor group for that matter have released these three videos on their own YouTube channels which has been spreading this misinformation so anytime I try to approach any person with you know the

(1:37:46) idea that you know what m370 might have been involved in a conspiracy or cover up they just shoved that video in my face and it is annoying but good work on your side man just keep keep on going and just keep on going man I'm a huge fan of keep on thanks tell you what Vin sounds very attractive not just semi-attractive love you V being so humble helps attractiveness not to be weird about it okay we have thank you sir we have or rich nice to see you again friend thanks for having me on a good hey hey what's up guys can you hear me

(1:38:21) all right I have to use my airpods sometimes the audio is really bad uh you're you're a little quiet but but it's working out just fine all right I'll I'll try to speak up extra loud um yeah Ashton like uh thanks for putting in all that all that work uh it's it's a ton um it's awesome for for people to follow I want maybe I missed it but the um there's some lensing some Optical lensing around the plane right after the orbs slingshot around it um did have you looked into that have you

(1:38:54) noticed it and does it maybe suggest that the orbs are not functioning as electrons themselves but radiating the plane maybe through sound maybe through electromagnetic thing to sort of turn the plane into a spaceship rather than themselves functioning as some sort of resonance yeah thanks for your question um the reality is I'm still learning about the science that's probably the area I'm the least com with in general um and on my video right now actually I think I snapshot it I froze it at the

(1:39:26) exact moment you're talking about where you can see the flattening of these orbs here as well I think there's definitely still more to be discovered in terms of what these orbs are exactly doing if it's just mapping it or they're doing something else Ashton I'm so sorry to to like interject maybe people miss this or maybe you miss this I'm not talking about the flattening of the orbs um there's an actual like Optical lensing kind of you would have like you know if you're looking at through something

(1:39:51) through like a full glass of water you know like um a refra you know what I'm video yeah I mean you may have to send some screenshots you're breaking up a little bit go ahead

yeah yeah so you you can actually find this yourself unfortunately I'm driving but I'm happy to send you screenshots later right after the all three orbs are orbiting the um the plane there's a moment when you can see the plane pass in front of a cloud and you'll see an optical Distortion which suggest yes that there's a field being created around the

(1:40:23) plane it's clear so I'm not talking about the the Drone you know with the colored fsar I'm talking about the one that looks daylight but isn't dark there you'll you'll see when the P plane goes in front of a cloud there's a lens Distortion would would which would be consistent with like um some sort of field that's being generated around the plane due to the orbs and you also see the absence of that Distortion as it passes behind the cloud shortly after that um I would look I would look into

(1:40:52) that and it will also help you with any sort of like uh attempted **debunks** in in the future um I just I I was just interested about that I didn't know if you had addressed it or if somebody had mentioned it but it's it's absolutely there then I wanted to know like what are the what are the indications that I mean it sounds crazy but this whole thing might have been planned I I I know it's easy for a lithium battery to catch fire um but nothing is really charging them right they're not in a phone and

(1:41:24) the fact that they purposely pass two security clearances you know like how far have you gone into considering like that the whole accident or the incident may have been intentional yeah I mean I I'm just trying to stick to what I can prove right digging into the speculative side of it especially kim.

(1:41:42) com gave me some advice on this FL Florence Chang is when you're doing an investigation you really try to stick with what you can prove I really don't even like digging into a lot of speculative side um because that's the type of stuff that's going allow people to discredit the case right what you'll notice is that nobody all these people that are trying to **debunk** stuff nobody is actually attacking the evidence that no one is not a single person for the most part what they do instead is they try to speak past me

(1:42:04) about stuff that I don't generally try to claim so yes there may be some more there but ultimately I'm not the one who can answer those questions it's got to be the US government who's got to come out and explain give us a story right and then we'll take it if they want to say oh yeah we we sabotage the plane then you know sure we'll run with that if it fits the narratives uh I'm just trying to make it that the narratives are so narrow that there's very little that they can come out and admit to yeah

(1:42:27) that's totally fair man like just awesome job and and uh yeah thanks for for for sticking sticking with the whole thing um I also think maybe maybe we're looking at a loss of light right rather than a zap an endothermic event I don't know why we couldn't just have have a loss of light and the white balance is just compensating for it so those are just my thoughts and um keep it to good work man thanks or appreciate you very much man appreciate it yeah thank you oric that's very interesting U we got penguin

(1:42:56) next and then I'm gonna um if you guys want to put hands up um we have a bunch of interesting people who want to also ask questions so if you want to keep asking questions just try to stick a hand up uh penguin you got the floor hey man Ashton bro thank you first of all I just want to say thank you for the work that you're doing and sticking your neck out in the ways that you are for it like I ain't seen a genuine research start getting platformed and that's just like this in a minute that just goes to show how like you said

(1:43:26) you're narrowing it down it's really commendable makes me make my make my want to research better all that thank you for that um my question is kind of two prongs kind of asking for a little bit of clarity and then it's also a little bit of speculation after that clarification um I I'm with it all I'm with it all like it's it's almost it's it's pasted it's ped a point of [Music] inconclusiveness and it's a lot and it can kind of go over the head but I was wondering if you could clarify I've

(1:44:16) heard you mention before that you would describe this technology as a teleportation and then there's also and I understand you're figuring things out as it all comes together right so um I've heard it you describe it as teleportation IO after that salvator pise breakdown we've started you've started to pinpoint on focusing on how this could potentially be World destroying but that makes me Ponder where did the plane go did it go anywhere throughout all of the hogwash that you've had to deal with these pod

(1:44:51) casters and dealing with VFX BS like let the hoaxer come up at this point but it's like what about that point where did the plane go and that's that's where it's like I feel like that salvator pis that's where it's like I'm asking for I guess clarification there on kind of like the super conductivity and how what you understand of it right now to be able to say like okay what what are we what are we seeing happen are we seeing inter dimensionality travel things like that and that's where it gets into the

(1:45:18) speculation and I was just wondering where your mind sits at that in this point not trying to speak in any affirmatives past what you know what the science can observably show us thank you so much for the space man thank you so much for your time and all your work bro keep fighting the good fight live long in the Free World rock on bro thanks B man appreciate you yeah definitely guys check out my uh hard **truths** podcast tomorrow with Salvador Pas and Dave Rossy we'll probably dig more into that so in the last hard **truth** podcast Dave

(1:45:48) Rossy speculated there might be a fourth orb entangled to the other three orbs and then what would be happening here is we're seeing a quantum entanglement effect quantum teleportation at the macroscale level that is allowing this plane and the orbs to instantly travel essentially to the location of the fourth orb which could be anywhere doesn't even have to be in the direction of travel of the plane itself we actually see the plane get sucked backwards slightly from the frame the last frame that we can see it to the

(1:46:16) first frame where we see this uh Singularity form so it could be that's being sucked back W in that direction travel but we just don't know ultimately and again that's going to be

speculative we just we don't know exactly where this plane could have gone it could have gone anywhere now if there's two other videos or other videos come out or we have some other whistleblower come forth and say hey I was in the malds and this is where the fourth orb was then we could figure it out but the circumstantial evidence

(1:46:40) says somewhere near the Maldives because we have a a sighting at 6:15 a.m. where a bunch of Islanders all see the plane there at that time uh that's the best I can do for you guys and one thing I want to say two on that is that I'm not like these other people that are out there let's say just in the UFO these UFO um you know uh people that are like prominent that try to like you know tell you they have all the answers that's not the case for me I just tell you what the evidence shows and what I think

(1:47:07) personally um and then we just try to take the evidence from there hey can I get one real thank you for that and focusing on the victims especially I'll leave it there and drop to listener thank you so much for Focus I don't have a hand I don't know get one in yeah let's get old all right yeah and then I think praying also was waving which I think is also a hand up so we'll get to him soon after nice to meet you so yeah Ashton amazing job I'm 55 I've been lurking ever since I was like eight

(1:47:36) years old and honestly this is the first thing that brought me out into the internet you can look at my Twitter it's been bare until you started doing things I've never seen anything like this um so amazing job I've I I can't say that I'm convinced because I'm such a cynic but I've never seen anything like it so amazing job all your evidence is just really compelling um yeah thanks my question is when you start looking at the payload like you said in a podcast or several times I believe you wouldn't

(1:48:12) pull you wouldn't show this hand unless there was a really compelling reason um to to risk everything to you know to show that you have this technology and so you you see that that these connections to room temperature superconductors and then it starts to connect the Rothchild pretty soon and then you know you're entangled with Lockheed and CIA like first of all be careful my friend be very very careful yeah and then next of all I really think the people you need to be talking to are the disclosure people

(1:48:48) this is this is exactly what they're p pushing back against in Congress right now they don't want people to know that we have this Tech already yeah yeah so I want to speak on some of that first of all I have a feeling that I'm not going to die of old age but that's okay I've come to terms with the consequences of all this I do try to avoid talking about some of those contractors because I think that's the way you get disappeared um and I I agree I think that this needs to be in Congress I think this does go hand inand

(1:49:15) with disclosure uh what I was just talking to Dave Rossy on his podcast Generation Z earlier today is we actually in some of those points you just brought up which is I I don't know the Congress even knows what's going on like I watched the Matt Gates uh uip hearing piece I actually had quoted it and then just two days ago he put the same clip up on his his Twitter and

the clip basically says that he's the only one in Congress who's seen these videos and he says it must be alien technology and I'm just going wait dude do you not

(1:49:43) know who locki Martin is do you not know what these guys are doing like this is not I think this is them not not not aliens so that's thec me either an idiot or you're compromised it really feels like you're one or the other you're either completely clueless or you're on the payroll or comp you know or afraid for your life yeah in terms of the Congress you mean right yeah yeah like whoever is able to have any sort of squ um you know because these doors are closed we have the president can't go there Congress

(1:50:17) people with top secret clearance are shut out of these places they it's like they have their own government not like they have their own government they do have their own government yep and I was trolling the doe last night well I had too many drinks uh but what I've been told too is that the doe has more power than the president they can shut the president down and I think that if you look at the presidents uh from my lifetime going all the way back to Clinton it seems like everyone that has come out for

(1:50:43) disclosure like gets the call the moment they go into office right and then they start getting Coy and weird and Silent about it it's been since that money either side of the spectrum yeah and that's yeah probably much further right just that's my experience from me personally you guys are probably a little bit older than me one thing I want to say as well though is I've hear a lot of great stories that give me a lot of strength especially ones where people talk to their older family members and they tell them hey this

(1:51:06) guy's been disclosing this information and they go I knew it was out there the whole time right and they've been lied to their whole lives like that's the stuff that gets me emotional so I really appreciate your Insight thank you I'm going to need it probably but we're going to do our best here we've got what I will say that maybe give people hope is that I've got very powerful allies that I have started to connect with that are trying to back channel into talking to some of these

(1:51:31) congressmen and um other prominent figures uh again you guys have seen s some of the influencers and if we can convince them that like hey you know this is something that needs to be talked about I think the approach is again we don't need more uip hearings we need conspiracy hearings about these third party contractors that are hiding this technology from us and that I think will open the door to these reverse engineering programs that I think must be out there that they are you know that's how they're able to get this

(1:51:57) technology so thanks a lot for that question old Shu appreciate you man let's get a few more uh yeah pran you were waving put your hand up if you like um but would you like to speak at this time yeah thanks sorry I'm not on the app so I'm not able to wave uh yeah Ashton just want to let you know um three things and I'm just going to be real quick with this uh my wife and I caught your interview the space with kim.

(1:52:28) com that you did a few weeks ago uh we were blown away just really amazing presentation uh we love the way that you do your research I've been doing research uh on other subjects for years and I always respect people who do solid research come to good conclusions take the evidence put it together make logical conclusions don't jump unnecessarily to you know unfounded uh conclusions and ideas and sensationalize things think your presentation was really good and I also want to let you know I took the audio from that space with kim.com and I downloaded it and I

(1:53:08) synchronized it with your YouTube live stream which has all the graphics and and the images on it and I produced a a three-hour video if you'd like I can send you a link to that video so you can download it and upload it to your YouTube channel because the conversation with kim.

(1:53:28) com was really good but it didn't have any any videos or images to go with it so that video that I did has has the video from your YouTube and the audio from the from the space together um and if you want just you know hit me up and I'll send you uh download link to the video that's a second the third thing I wanted to talk about real quickly is just um the discussion about the smoke coming out of the the aircraft on the infrared I don't think it's smoke and I'll tell you why um and I don't have a degree in fire science but I did

(1:54:02) work as a firefighter paramedic if you look at um a fire with your natural eyes what you see mostly is you see a lot of smoke especially during the daytime and you see a little bit of fire but if you look at uh put on some infrared Imaging and look at the fire with the infrared you're not going to see the smoke because relative to all the gases that are burning and and products of combustion the smoke is cooler than everything else around it so in in an infrared Imaging the smoke you don't you don't see the smoke infrared what it

(1:54:38) shows is it shows the products of combustion and if you know anything about chemistry lithium Metals magnesium and lithium burn at a very very high temperature so I suspect that what you're seeing on that infrared Imaging is actually just the Heat Signature coming off of that very very hot fire with those with the lithium batteries and not really smoke um I just don't think smoke would show up on infrared and that's all I have to say thanks man yeah no thanks a lot and I just followed you so you can send me that

(1:55:10) link if you want I think that we will probably will look into that more I am very confident that what we're looking at is smoke and I think that when we can't compare this to smoke from a fire we can't like if I'm making if I'm burning wood right we're talking about lithium ion battery fires that uh produce a very toxic chemicals and smoke that and smoke that come out of them that's very dark smoke as well my guess is that when we dig into those chemicals we find that those chemicals do show up

(1:55:36) on IR um but again with something we'll dig into a little bit more ultimately the other reason why I'm so confident is that we've ruled out everything else right is it exhaust that we're seeing there I'm not sure that we would see that type of exhaust there but it's certainly still

possible I'm not going to completely rule it out um so more to come on that for sure I appreciate all the input that people have on on these uh details cool if you don't have a followup in the meantime stick around if

(1:56:04) you have more questions um we have uh NC boy uh you have the floor real quick I'll just say if you I'm sure Ashton would appreciate if you did that same thing for this space too because I think he was having trouble streaming it just thring that out there hello Ashton um obviously nice to to chat to you on the space um obviously I've texted you on um X quite a lot about this and my interest um has has been into the car gr it's different different to the the whole Theory that's on going about um why this occurred who

(1:56:38) who done this but um I do think the fact that agilent who were um H pord I think because of the we bills been missing from the inv investigation and there there only two missing I only feel that they must have had some involvement either in the tech involved because if you look at their capabilities they the they make NMR technology which is um nuclear magnetic resonance machines such as spectors they make a lot of satellite equipment um transponders receivers things like that make equipment for inat they make

(1:57:18) equipment for the do way and also they involved in infusion as well you know they've got a lot of capabilities out there um the fact that as I say I think you will have been looking at the cargo and those two w bus are missing my thoughts against speculation is either it's their cargo that's caused the fire and they're trying to cover up the fact that they brought the plane down or they suspect they brought the plane down perhaps they're not aware that something else happened to it uh um and because they

(1:57:53) are involved in in Marat software the satellite software with the signaling um I would have thought they probably got backo access to the data you know that inar has got so there's a good possibility that let's say the their C was the cause of the fire then they could easily try and cover that up with a spoof data and a HK story put it in the engine ocean you know and I think as you as you found out yesterday when looked at the in Marat data the fact there's only two telephone calls to the cockpit and the numbers if you actually

(1:58:28) do a Google search come back to the Bobcat team Malaysian Airlines you know so it's all verifiable if you were invested getting a missing person or looking for a missing person or a missing child you would ring the phone every minute you wouldn't wait 6 hours and just ring twice so you know I think um aant I think their involvement in this is put more than what we we'll probably know and the fact that they moved all operations to Malaysia in 2014 it could be that the government's looking after the economic interests of

(1:58:59) the company um that's my thoughts um and there was one other thing with regards to that as well um sorry just um skipped my mind at the moment but yeah it was I think was to do with the data you know the fact that um the Bobcat team there was a lot of data going through to them throughout the flight cuz it's their job to make sure they hit the slots but they forward an airport or they leave an airport so they're con Ming the data and both calls there was

anomalies just before the the calls were made there was those zeros uh

(1:59:33) they just after the zap 4 seconds later the WR the cockpit and a 2315 for some strange reason there was 60 lines of data transmitted from some way which I'm surmising probably got through the Bobcat team and hence they thought oh the plane's not dark anymore hence they made the second call and um so they've rang the cockpit again you know but I see if that was perhaps underground perhaps there's a reason why there wasn't a full handshake but it just seem strange that that 60 lines of data in M were unable to use their

(2:00:12) algorithms to put a distance of where it was at that time where they're quite confident that the algorithms work work on the hour every hour after 1840 um but for some reason was 60 lines of data bursts were unable to resolve um which I say just seems strange so I think that the fact a have since changed their name again um six months after this incident in October 2014 that Chang the name to to key site from my point of view a multi-billionaire multibillion pound company doesn't change names if they're successful and if you look at

(2:00:48) what they're involved in they're very successful company unless they one to sever links from the past you know so um I think that's quite intriguing also but top work again Ashton yeah thanks n boy so I just want to cover a couple of things you said I appreciate all the hard work that you've done as well it's actually hard for me to keep up with all the investigation you've been doing given all the uh comments and stuff that I get but you did present really two great things recently that I'm probably going to be

(2:01:12) writing up uh I just took some notes just right now so I don't forget one is that there appears to be only two phone calls made to the plane one is at 1839 UTC and then the other one is at 231 15ish and if this plane was going rogue or whatever you know why are they not calling more often right why are there only two phone calls doesn't make any sense at all so this again is going to corroborate this emergency event where they know what's going on they potentially even have communication with the plane um and then the other thing

(2:01:40) that you said is that the Ping at 2315 so we have this anomalous data that happens and uh the anomalous data starts at 1839 UTC and we see all these zeros go down the board and then all of a sudden the next one after 1840 is this 1941 20 uh 2041 2141 2241 and it's just 10 rows of data after we've seen hundreds of rows of data for all these other time stamps and then after 2313 the data seems to go back to normal around 2315 but as you just mentioned they didn't graph this ping data for that time almost as if they knew that

(2:02:22) didn't make any sense so that's definitely something that we should look into more because this could be evidence that they spoofed all the pings after 1840 UTC it could also be that it's just misinterpreted that the plane was somewhere else right but this ping data is very sketchy I'm showing it on my stream right now there is definitely something going on here at 1840 UTC so thank you NC boy for all your investigative work greatly appreciate it sir no problem keep the good work I'll I'll catch you um in the in the in the

(2:02:52) DMS sounds good yeah thanks Cy boy that was really fascinating I want to yeah apply your investigative skills to many things uh but this first of course Shai you got your hand up yes sorry I promised to be quick um look um you know I do well sorry you know I'm a CGI I do CGI and I understand that you can't mix up 1D 2D and 3D without well you can you can mix it up beautifully but another cgis will spot you a mile away so if the airplane was 2D you couldn't turn it into 3D so the airplane has to be real the stuff going

(2:03:32) around it and this is what I tried to explain I even made a video a show people a CGI video and it wasn't a minute before they were taking it the wrong way I was trying to explain that if you try and Tuck something behind something that's 1D on a 3D image there's a point at which you'd have to to stop and start it again at the bottom of the airplane to spit it around and whilst you might not be able to spot that another cgis would spot it in a heartbeat but these items are actually floating all the way around the plane

(2:04:03) and the smoke and the smoke should be the well what's supposed to be the Contra whatever that is the orbs are going around that as well which wouldn't be possible in a one two 3D CGI so that's what I'd said and that's the video I put out but because it was attracting it I un I un I deleted it but I'd be happy at any time to put it out but I don't think you need it darling the arguments but sorry the debate has moved way on from there it's now honestly about more about the facts and

(2:04:35) the evidence around what you're looking at and then around what you found outside of this video and it is enormous and I as far as I'm concerned I've signed the petition by the way to get your um get the case before your Senate I don't know if they allow British voices but I've signed it and I hope they do and I hope everyone else in the room goes ahead and signs it because what I think Ashton's only been trying to do from the GetGo is put all the evidence he's found in front of the

(2:05:05) people that can make the difference about it and that everyone well literally everyone should be helping him do that that's all thank you darling I'll not I'll I'll slip down to listen so let someone up I appreciate you shy I appreciate it so much one of the things that Shai just mentioned is that really the most difficult part is trying to fake these orbs traversing around the plane uh we can actually see that they get distorted when they go through the trail of the plane whether that be exhaust or smoke as well so you these

(2:05:31) there's so many small details in these videos is what make them just fully authentic and extremely difficult to fake in addition to the fact there's no discrepancies on any of these like somebody would have made a mistake somewhere right so thank you very much Shai appreciate everything thank you for speak you soon great we got uh secret rare waffles uh video game store I believe how's it going doing good doing good I just uh I just had a quick question I hate to stick on the the smoke and and all of

(2:06:01) that I'm just curious if there was a a cabin fire somewhere would would that not show a hot spot on the plane through the IR yeah good question so the thing about this is that these

batteries were in these cargo Bays that are built to withstand the fires so it's most likely several layers that is preventing it from showing up in the IR in there I would agree if the fire had spread to like the passenger cabin then definitely we should be seeing something on there which we're not so that would indicate

(2:06:29) to me that the fire had not spread throughout the entire plane and also because if this fire had spread significantly outside of the cargo Bays this plane's going to come down really really quickly um within like 15 minutes so the fact that it was able to stay in the air for an hour and 20 minutes is already pretty impressive and really means this fire had to be actively being battled non-stop probably by the crew good question yeah yeah thanks I I appreciate that that does that does answer a little bit of it you know just

(2:06:57) the amount of smoke coming out does seem like it would be a fairly large fire you know and that's that's that's the reason why I would question that yeah and so and again I think we have to figure all that out a little bit more but we've had people hypothesize Engineers Etc that it could be that the smoke is flowing through the air conditioning units as it's coming out of those fire those cabin or um uh cargo base where it's being battled because they have to open the door and get in there right and

(2:07:23) battle those fires so it's potentially moving around through the air conditioning units and then going out through the AC exhaust ports that's one possibility that had been proposed to me but ultimately it's going to be pretty difficult to tell and I'm not super concerned about it because we do have a witness that's corroborating the same event and we have 19 other or 18 other witnesses that all corroborate a similar event as well I think that this event even given just the evidence we have now

(2:07:45) still explains what happened in this plane far better than any other story today but thank you very much I appreciate that we'll look more into it cool thank you feel free to put your hand back up if you have a followup um but in the meantime we got Rick with a lovely car how's it going yeah doing good how you guys doing tonight doing great sir okay yeah uh uh Ashton I'd like you to follow me back if you would uh I'd like to go over some stuff maybe I can talk to more off uh this side but I'll go over a little bit

(2:08:20) uh I've got a background of laser Technologies uh set several World Records in high-powered lasers uh the part of your video that really interested me was the orbs the uh well a little bit of my background I'm an inventor like I said helped me to create these world records and lasers I've studied uh warping space anti-gravity using magnets uh other uh super fluids but I've done a lot of research into this kind of field but the orbs casting the the coldness in front of them I think that's what you was

(2:08:56) referring it to with the infrared showing that actually it looked like they were warping the space as how they were traveling around the ship is what I noticed uh I thought that was very fascinating but uh one thing in my studies is it would be impossible in teleportation to copy every cell in an object to do that deep of probe or penetrate an object you would almost destroy

the object try to to analyze it to copy that object reform the atoms which is some people think that's why you're going to teleport

(2:09:29) that's not possible my theory in teleportation would be you would have a large frequency working space and time at exact frequency and you'd have to recreate that exact frequencies at another point in space and time U not NE necessarily frequencies there's wave flints and all other kinds of stuff that we go into that but you know there's a lot of people think you can copy no I don't think that's ever going to be possible you would actually have to open a warp field to create another Point another location

(2:10:04) in space but anyway seeing your orbs going around that and it was like they were warping the space and that's how they were traveling around the object I thought that was so neat but like I say uh I have done some experiments I'd like to talk to you off the space I don't want to give too much of what I know out to the public I don't want people looking into me but I know uh with stuff you're bringing out I'm sure people's going to be on you so but uh yeah like I say about eight years ago i' set several

(2:10:30) world records and high powered handheld lasers and the government basically shut me down so I haven't done it about eight or nine years now so but uh I like your work and keep up the good work thanks I'll land my UFO there yeah thanks Rick uh a couple comments I want to make is that I mean people say they're my videos and I know you don't mean that literally but I I I do want to say that you know these aren't necessarily my videos I'm if anything I'm just a voice for this movement that's out there you know these

(2:10:55) videos have been out there for N9 years you know anybody could act like me and if for some reason I were to disappear I would hope that you guys would rise up and take my place um I love the comment about the lasers Rick one thing that I have heard is that if anyone does do technology and advancements that broch on this National Defense that they get a knock on their door and that they either get sucked in or they get told to stop um and that's how able to keep this stuff quiet for as long as they've been

(2:11:20) able to keep it quiet um I think this technology goes back even further than N9 years I think that potentially we've had this technology for decades and that they've been keeping it under wraps using very sophisticated disinformation and censorship techniques so definitely uh wouldn't mind hearing from you I do want to keep in mind that I'm at least 50 or 60 emails behind right now on requests on people speaking to me and it's harder to keep up with the messages but I will do my best guys and I

(2:11:43) appreciate everybody who reaches out to me with information yeah you're exactly right the government well they had some Governor government contractors got a large order from me pretty much on almost every laser I was working on and then next uh about a month later the Food and Drug Administration gave me a call so I'll just leave it at that I'm no longer doing it now yeah that lines up with what I've been told so awesome thanks for your efforts though Rick and and everything you've done in the

(2:12:11) past okay I'm G do just about 15 more minutes um because I'm gonna have to go get some food it's been a really long day for me as well but let's try to do as as many more questions we can if everybody can just kind of keep it as brief as possible so we can get to as many people that are out there and as a few more people requesting as well excellent we'll get right to Jim Bob welcome hey uh thanks um Ashton my my question is uh have you gone over um all of your you know data that you have have

(2:12:40) you sat down with a commercial airline pilot uh to go through this step by step yeah so I haven't gone through like step by step but I've have talked to several Pilots I have several that have emailed me as well um and I I've learned that's how I've learned like quite a bit about like the procedures that are out there and that's how I learned that the first procedure is that you would try to land at the nearest airport first thing you try to do is just navigate the plane like the third thing that you do is try

(2:13:08) to communicate um and that you would first try to land uh with your landing gear if the landing gear is damaged you're supposed to try to land on your belly and then after that you're supposed to try to dump the fuel if necessary as well and then you know the last thing as well would be trying to land in the ocean they've also corroborated that these types of events would basically mean the plan is doomed I mean there's very low hope of survival in a lot of these types of situations but you try to do your best with them um

(2:13:33) and the fire scenario as well I think that people have told me that it's going to be very risky to dump the fuel at best it's an extremely risky situation to try to do that um and I've talked to Engineers who've worked on the planes as well so we do have quite a few people that are corroborating this this isn't just me out here speculated on all this stuff it it does come from people that are very knowledgeable yeah the the reason why I ask you I I have a dear friend of mine uh uh him and his wife are both

(2:14:00) commercial airline pilots um flown this exact same aircraft um for for years and years and uh we we've been I I mean since since the the day MH 370 uh vanished um I mean we've been going round and round and round for for years and um you know so if you would like a commercial airline pilot to go go through this with you step by step by step man I'm more than happy to hook you two up yeah I appreciate it I mean they can reach out to me an email my email is uh MH370 xpron uh just keep it mind like like I

(2:14:43) said to the last person as well like I'm doing my best but I've got far more requests and people reaching out than I can deal with but I do appreciate every single person who has been reaching out to me with information around the case I am trying to get back to them and all the emails that I'm behind on it's probably going to take me a little bit but uh you know as things grow it becomes more and more difficult but I I just want to repeat again that I appreciate everybody that's out there

(2:15:05) that's supporting passing information corroborating information you know trying to confirm things as well so thank you very much Jim okay who's next it looks like uh abdurahim

you got your hand up yes uh can you hear me now yeah we can hear you yes uh so hi everyone uh thank you for L uh hi Aston um uh so yeah I like what you did like your work is amazing um I have a question concerning like the original video you guys found I'm wondering if it has any audio or like any sound uh just for like uh the forensics

(2:16:07) concerning the mains because if it has like some audio you can use it uh forensically for dating like uh to the video and it was done yeah so that's my question sorry yeah um we have people looking into it pretty heavily now I would say out of all the investigators uh the person who's probably contributed the most is a guy named pujabi Batman from [Reddit](#) who is not on Twitter at all uh I have direct communication with him though and he has looked into the videos in a huge way um I don't think that we

(2:16:44) have seen a lot of forensic data related to I mean there's just not a lot to pull from it it's uh but we've tried to pull as much as we can and we also don't necessarily have access to the source as well we have access to the ones that have been uploaded so I am going to be probably posting some more additional information that has been uncovered recently where the uh there's like a distortion or like graphical effect that happens when they close the video um which is pretty interesting as well as

(2:17:13) when you after the video goes dark in the satellite video which is about halfway through there's just black screen but if you change the contrast you can actually still see the borders of the two sidebyside stereoscopic videos which may indicate something but I'm still digging into that to figure out if there's that's anything relevant or if that's just red herring um out there so yeah we have tried but right now nothing's super conclusive um can one of my co-hosts bring up audit to audit as well uh yes I've been trying to

(2:17:42) we will get this done he may have to rejoin because I we can't seem him to get you up audit to audit um okay top rad I think you're up next hi Austin hey I uh appreciate all the hard work that you've done it's it's been phenomenal I'm um I'm 64 I've been sort of on the sidelines since 1972 there's no doubt in my mind that there's something out there that they're not telling us everything that of the world we live in let let's follow this to the conclusion let's say that and and I

(2:18:10) believe all this and it happened we have a world that we live in right now with seven countries that have the ability since 19 45 for just the nuclear capability now we're going to release to the every human being the ability to to do what we're seeing here with the with a contract we're going to be responsible I think we also need to start having conversations at a higher level as to how do we do that we're you're going to live in a world where every human being potentially can get mad at somebody else

(2:18:44) spin up some orbs and zap the earth I mean you know I'm I don't mean to be flipping here but we I think we start need to have we're starting to understand the complexity of this disclosure thing how do you release this how is every human being potentially going to have what we're seeing here that's all I have to say thanks yep so top rad you're one of the first

people I've heard bring that up with the type of passion that I want to hear about it because this is a real real tough question right everyone on

(2:19:16) the earth potentially has ability for ORS potentially has the Earth the ability to destroy their own City potentially has the ability to destroy the planet you know how do we prevent our us from destroying ourselves right this is scary stuff that we need to be talking about and that's the point of these discussions that's where I want this stuff to lead to that's the stuff I want to be talking about is do we create laws legislation how do we make sure that we use this stuff responsibly ultimately what you mentioned is what I
